Mr. Ballantyne—I thought I had made it quite clear. The government has nothing whatever to do with the operating of the ships or the fixing of rates. The government took care to see that just such a case as the hon. member has mentioned should not arise, as it possibly would arise if the government operated the ships and fixed the rates. But the operation of the ships and the fixing of the rates is entirely in Mr. Hanna's hands. The government did not carry that sugar; the government did not fix the rate; the government had nothing whatever to do with it. If the facts are as the hon. member states, I am quite sure that the Minister of Railways will be glad to take the matter up with Mr. Hanna. But I know that the Minister of Railways, like all the other members of the government, does not want to interfere with Mr. Hanna; we want to give him a free hand to operate the ships just as we give him a free hand to operate the railways. But I did hear Mr. Hanna make the statement that he was quite prepared to carry raw sugar to Halifax and St. John at the same rate that he carried it to New York for Montreal sugar refiners. Mr. Hanna would naturally be glad to get a return cargo, and sugar is about the only cargo he could get.

F. S. Cahill, M.P. for Pontiac, Ont.—I understand that these ships were to be built for the advantage of the Canadian people, but we are told that the ships have been handed over to Mr. Hanna and that he may do as he sees fit; that he may suit himself, not the Canadian people. It seems to me that we could do without this item of $10,000,000 if it is of no advantage to the people.

A. B. Copp, M.P. for Westmoreland—I am not quite satisfied with the explanation made by the Minister of Marine. He tells us that the management of the government steamships has been handed over to Mr. Hanna; I suppose he means that it has been handed over to the directors of the Canadian National Railways, not to Mr. Hanna personally.

Mr. Reid—The board of directors, of which Mr. Hanna is President.

Mr. Copp—That is what I understand. The Minister of Marine says that the government has no control of the rates; that that is all left to Mr. Hanna; that the government does not want to interfere with him in regard to the steamships, any more than with him in regard to the operation of the railways. We were told by the Minister of Railways last night that when any complaint was made with regard to railway rates those who were interested could appeal to the President of the Canadian National Railways, and if they were not satisfied with this decision they could make a further appeal to the Governor in council, who would take the matter into further consideration and see that a decision was given which was in the interests of the public. If that is the case with regard to the Canadian National Rys., surely it ought to be the case with regard to the steamships built by the Government of Canada and operated by the Canadian National Ry. Co.

Mr. Reid—These government steamships have been handed over to the company of which Mr. Hanna is the President. Under our new Railway Act the Canadian National Rys. come under the Board of Railway Commissioners the same as any other railway, and we have the right of appeal in these cases just as any other railway has. Some of our steamships may be under the Railway Act and thus come under the Board of Railway Commissioners. But the hon. member knows that in any case where an injustice has been done there is the right of appeal to the Governor in council, through the department of which I am the head, and any appeal so made will be taken up and dealt with with a view to doing justice to any member who makes complaints, or to any individual. But until it comes before the government in that way, of course, we leave the responsibility for chartering and operating those vessels as before. The only difference is this: You cannot fix a general rate, as you can with the Board of Railway Commissioners. A vessel may arrive at Montreal, and you may want to charter it to China, Japan or Liverpool, and the rates may differ from time to time. I do not think it is easy to get a standard rate. I rose only to assure the hon. member that at all times there is the right to appeal to the Governor in council, to the management of the vessels, or to the minister himself in connection with either government vessels or railways.

Mr. Copp—If the information which Mr. Sinclair has given to the committee is correct, viz: that there has been this discrimination of 20c in the freight rate as between Montreal and Halifax and St. John, the Governor in council should not wait for some one to make an appeal, but should take the matter in hand at once and see that justice is done.

Mr. Maclean—The rate to Halifax and St. John was not fixed by the government steamships nor by the Board of Railway Commissioners; it was fixed by the International Sugar Commission, which owns and controls all the sugar production of the British West India Islands until next September or October, and in some way or another it controls the freight. Two years ago it fixed the rate from the British West Indies to Halifax.

J. H. Sinclair—What has the government done to rectify this? Has it taken any action at all?

Mr. Maclean—It could not be rectified because it is a rate fixed by an inter-allied commission.

Mr. Copp—I understand the Board of Railway Commissioners, knowing that raw sugar was being taken to the sugar refineries at Halifax and St. John at 58½c per 100 lb., afterwards entered into a contract, using government ships, for which the people of Canada pay, and gave the benefit of that 20c per 100 lb. to Montreal, and that means that for the benefit of some people in Montreal, absolute disaster is threatened to those two enterprises in the Maritime Provinces each having an investment of some $10,000,000.

Mr. Maclean—Unintentionally a discrimination was worked against the Halifax and St. John refineries. They presented their opposition to this to the railway. Then the railway undertook to place Halifax and St. John in the same position as regards Cuban importations of sugar. A mistake was made, I think, in the first instance.

Mr. Copp—What steps is the government taking, in the interests of the people, to correct that mistake?

Mr. Maclean—The government has had the matter up before the management of the Canadian National Rys. and this matter has been placed before them. Parliament cannot correct it by discussing the matter here; it might well be left to the business interests involved and the good sense of the management.

Mr. Copp—In spite of what my hon. friend says, we are all interested. This is not a matter of whether I have money invested in that enterprise or not; I am interested just the same, and I do not think it is becoming to my hon. friend in a veiled way to insinuate that I have no right to discuss the matter here.

Mr. Maclean—I do not say so.

Mr. Copp—That is what the hon. gentleman intimated, viz: that I had better leave the matter to the people who are directly interested. I am interested in this matter as a representative from the Maritime Provinces, and if a mistake has been made, while my hon. friend says that the matter has been referred to Mr. Hanna, that is all very well; that may be the proper way to get this matter adjusted, but when an item like this is before the committee, people who are interested in enterprises in the Maritime Provinces, which enterprises are being driven out of business by circumstances which spell disaster to those enterprises, we should have some assurance from the government that something will be done to see that those people are given a fair and proper settlement.

Mr. Ballantyne—I do not want wrong information to get on Hansard. The Montreal Sugar Refineries applied to the Canadian Government Merchant Marine to move the sugar. They had to move it at the New York rate, and they did so. Had Halifax or St. John made the same application to the Canadian Government Merchant Marine, they would have received the same rate. I am sorry to disagree with my colleague Mr. Maclean, but there has not been any error. When the other two refineries make application, they will get the same rate. There is no discrimination whatever.

Mr. Copp—Then we are to conclude that there is to be nothing done to straighten this matter out and to see that these industries in the Maritime Provinces are not discriminated against.

Mr. Ballantyne—The matter has been arranged.

Mr. Copp—How?

Mr. Ballantyne—I stated a moment ago that Mr. Hanna is quite willing to move sugar at the same rate for St. John and Halifax, as soon as the industries in the Maritime Provinces ask him to do so.

Mr. Copp—Are vessels available to engage in the trade?

Mr. Ballantyne—Yes.

Mr. Maclean—The St. John refinery has already received a cargo.

Canadian Manufacturers Favor Canadian Merchant Marine.

The Canadian Manufacturers' Association passed the following resolution at its annual meeting recently: "Whereas, the farmers and manufacturers of Canada will suffer great loss if adequate tonnage is not available during the coming autumn for the shipment of agricultural and industrial products to Europe, and whereas, the possibility of increasing our export trade is largely dependent upon the volume of available shipping be it therefore resolved, that the Canadian Manufacturers' Association endorse the policy of the Dominion Government to create a Canadian merchant marine, and further, that the government be urged to take the necessary steps to build, purchase or lease sufficient ships to satisfy the demand for tonnage.

The Eastern Shipping Co. Ltd., has been incorporated under the Dominion Companies Act with capital stock of 1,000 shares of no nominal or par value, provided that the amount with which the company shall carry on business shall be $5,000, and with head office in Toronto, to own and operate steam and other vessels for the carriage of mails, passengers and merchandise, and to carry on a general navigation and steamship management business.

Steam Navigation Co. of Canada Ltd. has been granted supplementary letters patent, increasing its authorized capital stock from $2,500,000 to $3,500,000.

Harbor, River and Graving Dock Estimates for 1918-1919 and 1919-1920

In addition to the estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 276, the supplementary estimates for the year ended Mar. 31, 1919, submitted to the House of Commons during the recent session, included the following public works items chargeable to income:—

HARBOR AND RIVERS. NOVA SCOTIA.

Battery point, breakwater repairs and reconstruction, further amount required	$ 690
Margaree harbor, repairs and improvements, further amount required	5,350

The supplementary estimates for the year ended Mar. 31, 1920 contained the following items chargeable to capital:

Esquimalt, B.C., new dry dock	$500,000
Port Arthur and Fort William, harbor and river improvements, further amount required	200,000
Quebec harbor, Champlain dry dock, to complete	207,000
Quebec harbor, River St. Charles improvements	55,800
St. John harbor, improvements, further amount required	250,000
Toronto harbor, improvements, further amount required	200,000
Toronto Island, breakwater protection	200,000
Vancouver harbor, improvements	18,000
Victoria harbor, improvements	21,000

The following items are chargeable to income:—

NOVA SCOTIA.

Bass River wharf	$ 21,000
Boulardarie Island wharf	1,650
Chebogue harbor, repairs and renewals to beach protection work	3,000
Cheverie, repairs to wharf	2,750
Church Point, repairs to wharf and groyne	2,100
Comeau's Hill, breakwater improvements	1,100
Cow Bay (Point Morien), repairs to breakwater	6,000
Friar's Head, harbor improvements	3,800
Glace Bay, harbor improvements conditional on transfer from Dom. Coal Co.	50,000
Halifax quarantine station, repairs to wharf	2,000
Iona, repairs to wharf	1,000
Jersey Cove, repairs to wharf	1,000
Little Brook, repairs to breakwater	3,000
Little River, repairs to breakwater, wharf	900
Lower Kingsburg, breakwater skidway and boat shed	4,100
Malagash, wharf extension	3,000
Margaree, repairs to breakwater	20,000
Meteghan, to rebuild L of breakwater and part of wharf	13,800
Mira River, to repair and extend jetty	2,000
Mosher's Bay, repairs and improvements to breakwater	6,650
New Campbellton, reconstruction of wharf	4,000
North Ingonish, reconstruction of breakwater	7,800
Oyster Ponds, to repair and rebuild harbor works	2,700
Port Greville, repairs to beach protection	900
Port Hawkesbury, to complete repairs to wharf	800
Port Maitland, repairs to breakwater	2,780
Sandford, repairs to breakwater	2,200
Scotch Cove (White Point), extension of breakwater	3,600
Seaforth, raising breakwater and extending shore protection	3,800
Skinner's Cove, repairs to piers	1,300
Seaside, repairs to wharf	900
Shenacadie, wharf	9,750
Sober Island, extension to wharf	6,000
South Ingonish, reconstruction of beach protection works, revote	900
Sydney, wharf	100,000
Three Fathom harbor, repairs to breakwater, further amount required	3,240
White Point, to complete breakwater	2,250
Whycocomagh, repairs to wharf	600
	$302,370

PRINCE EDWARD ISLAND.

North Lake, boat harbor	$ 27,000

NEW BRUNSWICK.

Cocagne, repair to wharf	$ 1,500
Fairhaven, Deer Island, repairs to wharf	850
Great Salmon River, wharf	2,500
Indian Island, wharf	4,600
Quaco (St. Martins), reconstruction of breakwater	22,000
Richibucto Cape, completion of pier and breakwater	2,000
Two Rivers, repairs to wharf	1,100
	$ 34,850

QUEBEC.

Bersimis, repairs to wharf	$ 600.00
Bic, repairs to wharf	1,000.00
Buckingham, wharf	8,000.00
Fabre, wharf extension and freight shed	2,300.00
Fassett, repairs to wharf	1,000.00
Grande Riviere, repairs to pier	6,100.00
Laprairie, protection work, to pay claim of Carlton Construction Co. for work done	2,788.50
Laprairie, to complete protection works	82,000.00
Levis, repairs to deep water wharf	2,000.00
North Timiskaming, wharf	13,000.00
Notre Dome des Sept Douleurs—(Isle Verte), completion of landing wharf	5,000.00
Pointe Shea, Amherst, repairs to pier	10,000.00
Poltimore, wharf	3,000.00
St. Alexis (Grand Baie), freight shed and repairs to wharf	1,440.00
St. Alphonse, repairs to wharf, further amount required	2,000.00
St. Etienne de Malbaie, wharf	12,000.00
St. Francois du Sud, repairs to wharf	27,600.00
St. George de Malbay, repairs to breakwater	850.00
St. Jean Port Joli, repairs to wharf, further amount required	715.00
St. Omer, repairs to wharf	800.00
Sorel, wharf repairs and reconstruction	8,600.00
Ville Marie, repairs and improvements to wharf, to complete, revote $600	1,000.00
	$191,793.50

ONTARIO.

Belleville harbor, improvements to wharf and warehouse, further amount required	$ 500
Bronte, repairs and improvements to pier	5,600
Burlington channel, repairs to pier, further amount required	6,900
Collingwood, breakwater reconstruction	50,000
Depot Harbor, wharf renewal	34,000
Hamilton, harbor improvements	100,000
Kenora, extending wharf	1,400
Kincardine harbor, contribution to municipality towards protection of government piers	1,050
Little Current, rebuilding wharf	54,000
North Bay, repairs to wharf	800
Port Stanley, harbor improvements, further amount required	33,000
Oshawa, repairs to wharf	12,000
Owen Sound, wharf reconstruction	86,000
Parry Sound, repairs to wharf	4,500
Port Dover, harbor improvements	50,000
Portsmouth, repairs to pier	4,000
Rideout Bay, wharf	4,000
Thessalon, breakwater extension	48,000
White River, wharves	6,000
	$501,750

MANITOBA.

Big Island (Hecla), wharf	$ 2,100
Goose River and Rat Creek, removal of boulders	5,000
Red River, closing channel at Netley cut	800
	$ 8,200

BRITISH COLUMBIA.

Bamfield, repairs to wharf	$ 1,920
Belmont, repairs to wharf	1,000
Boswell, floating wharf	6,500
Campbell River, repairs to wharf	15,800
Carroll's Landing, wharf	7,000
Coal Harbor, reconstruction of float	2,500
Courtenay River, repairs to bank protection	2,200
Cowichan Bay, wharf	11,700
Cultus Creek, floating wharf	6,500
Egmont, float	1,400
Fauquier, wharf	7,000
Fraser River, dredging North Arm, further amount required	50,000
Fraser River, improvements at Nicomen Island	36,000
Fraser River, protection work at Steveston, to complete (revote)	20,000
Graham, wharf	11,500
Hardy Bay, landing float, revote $1,250	2,700
Kincolith, new wharf	11,000
Long Bay, Gambier Island, float	800
Naramata, wharf	6,400
Naas River, removal of obstructions	10,000
New Massett, rebuilding wharf, further amount required	3,100
Port Alberni, new float and changing position of present float	[illegible]400
Port Moody, float	750
Princess Creek, floating wharf	6,500
South Gabriola Island, wharf	3,500
Stickine River, removal of obstructions	10,000
Ucluelet, repairs to wharf	3,350
Victoria, in full and final settlement of claim of T. C. Sorby in connection with harbor improvements	3,000
Williams Head, quarantine station, repairs to wharf	2,000
Williams Head, quarantine station, repairs to coal wharf	4,700
	$251,220

DREDGING.

Maritime Provinces, further amount required	100,000
Ontario and Quebec, further amount required	100,000
	$200,000

Canal Estimates for 1918-1919 and 1919-1920.

In addition to the estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 277, the supplementary estimates for the year ended Mar. 31, 1919, submitted to the House of Commons during the recent session, included the following items:—

Soulanges Canal, repairs and improvements to lock 4, Soulanges, to repair break	$ 50,000
Lachine Canal, rebuilding and replacing plant and materials destroyed by fire at Wellington basin, May 21, 1918	33,700
Ontario-St. Lawrence Canals, to replace bridge at C.N.R. crossing over Murray Canal	35,000
St. Peter's Canal, rebuilding of highway bridge, further amount required	3,100
Trent Canal, to rebuild wharf at Lindsay	10,000

The Beaver Steamship Co. Ltd., Montreal, has purchased the s.s. Cherokee from a U.S. owner and has transferred her to the Canadian register under the name of Maplegrove. The Cherokee has a wooden hull and was built at Marine City, Mich., in 1889, and was practically reconstructed in 1913. She is of the single deck type, with diagonal strapping on frames, steel arches with bow sheathed for ice, and is of the following dimensions; length b.p., 208 ft., breadth moulded, 35¾ ft.; depth moulded, 14 ft.; tonnage, 1,177 gross, 636 net. She is equipped with fore and aft compound engine, with cylinders 25 and 50 in. diameter by 40 in. stroke, 575 i.h.p. at 86 r.p.m., supplied with steam by one firebox boiler 11 ft. 4 in. diameter by 16 ft. long. She was registered as owned by J. C. Garey, Saginaw, Mich.

Beeson's Marine Directory of the Northwestern Lakes, for 1919, has been published, this being the 33rd consecutive year of its issue. The list of vessels trading on the lakes covers both Canadian and U.S. vessels and there is complete information as to the general lake traffic, arranged for easy comparison with the statistics of previous years. The book is well illustrated with views of some of the important works on the Great Lakes, and some vessels, including the Ontario Car Ferry Co.'s car ferry Ontario no. 2, and the Northern Navigation Co.'s s.s. Noronic.

Naval Service Department Vessels—The supplementary estimates for the year ending Mar. 31, 1920, passed at the Dominion Parliament's recent session, provide $150,000 for new vessels for fisheries protection service on Lake Erie. It is proposed to build three, each about 80 to 90 ft. long, for patrol work, and to have them ready for operation in 1920.

Electrification of Montreal Harbor Terminal Railway.

The Montreal Harbor Commissioners' report for 1918, issued recently, contained the following:

"The Montreal Harbor Railway Terminals consist of surface lines situated between Victoria Bridge and the end of the piers on the south side of the canal; and the marginal lines from McGill St. down to the Imperial Oil Co.'s wharf at Montreal East; having a total trackage of 55.35 miles. Regularly, during the summer the shunting amounts to from 1,000 to 1,800 cars a day. In case of a breakdown in this service, the economic loss would be severe, as the car unloaders, longshoremen, and the various organized staffs would be immediately thrown out of work, with a resulting general loss of dispatch. Much of the success in Montreal harbor is due to dispatch in loading vessels and unloading cars, and effort is made by direction of the commissioners for a prompt and efficient service. So successful has this service been, that there was not a single complaint, although many might have been expected, during the 200 consecutive working days in the Montreal harbor navigation season. In 1908, the commissioners operated the traffic on the harbor terminals with three steam locomotives. During 1918, nine locomotives were in service, and the limit of car handling was reached at many times during the summer, and prompt steps must be taken by the commissioners to avoid inevitable congestion in their terminals. For export alone, day after day, 30 trains of from 25 to 30 cars arrived for distribution and unloading in Montreal harbor.

"The commissioners, fully alive to the situation, visited the important electrified freight terminals in New York and Philadelphia in 1914. From information obtained, it was found that an electric locomotive could handle, summer or winter, at least 25% more than a steam locomotive, and the operation was much more under control and therefore safer. It was found that electrification was economical in freight yards and terminals, as well as much more satisfactory. The commissioners called in an electrical engineer in 1914, who, in conference with the commissioners' engineering department, made a study of the problem and finally a report was submitted by this engineer to the commissioners, but owing to the financial condition during the war, construction was deferred. The report, 'in view of the operating condition,' recommended the use of 2400 volt, direct current, for operation of electric locomotives, the same high voltage direct current system decided on and now being operated by the Canadian National Rys. in connection with the Montreal tunnel terminal.

"As the Superintendent of the commissioners railway terminals has pointed out, the urgent need for more locomotives for next year's operating work, the commissioners consider the immediate commencement of electrification is of very great importance. The commissioners have consulted with the electrical experts of the railways having their terminals in Montreal, and it is understood that the system now in operation in connection with the Canadian National Rys. and the proposed projects will all be interchangeable with the system proposed for the harbor.

"The extension of the commissioners' marginal railway eastward along the river front of the harbor has already resulted in wonderful industrial activity from Hochelaga to Pointe-aux-Trembles. A few years ago the Montreal Cotton Co.'s mill was the limit of the industrial development along the water front in the eastern part of the city. With the development of the harbor and the extension of the high level railways and the active operation of the railway terminals, this valuable manufacturing district has entered upon a new era of prosperity."

The Commissioners received tenders up to July 14 for railway substation, switchboard and control equipment, overhead catenary line and bonding material, and wood and steel poles.

It is said that at present only the eastern section of the Harbor Terminal will be electrified, viz. from Beaudry east to the terminal at Pointe aux Trembles, and that steam locomotives will continue to be used on the western section for a time. A sub-station will be built at Beaudry St., where two units are to be installed, but at first only one will be put in, viz., a 1,500 h. p. synchronous motor, direct-connected to two 500 k. w. 1,200 volt generators, connected in series, and, of course, switchboard and control equipment. The overhead catenary will be of standard type. A transmission line, with wood and steel poles, will be erected to supply power to the substation. Provision will be made in the substation for a power supply for the cold storage warehouse to be erected at the east end of the harbor.

The commissioners are negotiating with Canadian National Rys. for renting two of the Mount Royal tunnel electric locomotives.

Demountable Wooden Ships to Be Built in British Columbia.

Some particulars of this project were given in Canadian Railway and Marine World for July, pg. 400. The Trade and Commerce Department's Weekly Bulletin has published the following in the same connection:—Sir James Ball, British Timber Controller, has given an order for 2,000,000 ft. of cut lumber to be shipped from British Columbia to the United Kingdom in the form of a demountable ship propelled by its own steam. The scheme is to build the cut lumber into a ship and after arrival at destination to remove therefrom the machinery, which can be sent back for use over again. If the scheme works out as expected by its promoters, it is likely to revolutionize the whole system of offshore lumber trade and will greatly increase the lumber possibilities for B.C. timber in foreign countries by reducing considerably transportation cost and by automatically solving the tonnage problem.

The method of construction is very simple. Blocks will first be laid for the keel, and fore-and-aft and cross timbers will then be placed in position. When sufficient material has been thus put together to ensure buoyancy enough to keep the bottom high out of the water, the vessel will be launched with donkey engines on board. These are to be used to lift the lumber out of the water and to place in the ship. The lumber will be clamped down securely with bolts and nuts for every 8 ft. of depth. On arrival at destination, the fastenings can be readily taken off so as to leave the lumber and timber composing the ship immediately ready for distribution. The ship will be fitted with schooner rig and auxiliary engines, which will be taken out on arrival at destination and either sold, or shipped back for further use. The promoters believe they will be able to put B.C. lumber into the European markets at prices that will beat Norwegian and Swedish competition.

The ship was designed by John Arbuthnot and J. H. Price, both of Victoria, B.C. This type of lumber ship will probably be known as an Arbuthnot.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Brown's Copper & Brass Rolling Mills Ltd., New Toronto, Ont.—Robert K. Newton, heretofore Assistant Manager of Sales, has been appointed General Sales Manager.

Davis-Bournonville Co., Jersey City, N. J., has resumed the monthly publication of "Autogenous Welding," which was suspended during the war. The July number is devoted largely to the use of oxy-aceytlene welding and cutting in the war.

Whiting Foundry Equipment Co., Harvey, Ill., has issued catalogue 145, "Whiting Railroad Equipment," describing and illustrating various railway specialties.

Wonham, Bates & Goode Inc., engineers, manufacturers', representatives and exporters, New York, N.Y., have opened a Canadian office at 145 St. James St., Montreal, in charge of A. G. Nutter, who prior to the war was with Mussens Limited, Montreal, and who, after having served at the front in Belgium and France, finally as Major of the 25th Battalion, was attached to the British Mission at Washington. Wonham, Bates and Goode, Inc., have sold to Canadian Rolling Mills a 15-ton, 8-ton wheel, Orton & Steinbrenner locomotive crane, with 40 in. electric magnet.

Transportation Conventions in 1919

September.—Master Car and Locomotive Painters' Association of the United States and Canada, Chicago, Ill.

Sept. 16-19.—Traveling Engineers' Association Chicago, Ill.

Sept. 16-18.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

Oct. 6-10.—American Electric Railway Association, Atlantic City, N.J.

Oct. 21-23.—American Railway Bridge and Building Association, Cleveland, Ohio.

Oct. 21-23.—Maintenance of Way and Master Painters' Association, St. Louis, Me.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pingston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway and Marine World

September, 1919

The Canadian Overseas Railway Construction Corps' Organization, and Service in Belgium and France.

In Feb., 1915, a request was made by the Militia Department at Ottawa to Lord Shaughnessy, then President of the C.P.R., to prepare details of establishment and equipment for a railway construction and repair unit, having a total approximate strength of 500 men, all ranks, for service in France. An outline of such an organization was prepared and submitted to the department and, with the exception of heavy standard gauge equipment, was approved by an order in council, on Mar. 11, 1915.

The C. P. R. management was then asked to appoint the officers and recruit the personnel for this organization. This work was undertaken, and as the information available, as to the requisite classes of men and equipment for such an organization, was at that time decidedly limited, authority was obtained to send an expert to France to report on conditions, and in the meantime recruiting was proceeded with. H. F. MacLean of the Cook Construction Co., undertook the mission to France, proceeding overseas in Mar., 1915, and returning in the latter part of May, with very complete and valuable information.

Headquarters were established at St. John, N.B., the C.P.R. providing barracks for the men in colonist cars there, no other accommodation being available. Recruiting was carried on through the agencies of the C.P.R. general superintendents from St. John to Vancouver, and eventually some 540 picked men were selected from a total of approximately 3,000 applicants.

The establishment eventually decided upon was as shown in the table attached and proved highly satisfactory for the work for which it was intended, being followed in great part by the large body of some 15,000 Canadian Railway Troops, which began to arrive in France during the latter part of 1916 and early part of 1917.

Recruiting was started Mar. 12, 1915, and was practically completed by May 1. Military training was carried on at St. John, unfortunately without Militia Department assistance, none being then available, until June 14, on which date, after inspections by the Minister of Militia and General Lessard, embarkation for England in the s.s. Herschel took place. After a very calm passage, the unit landed at Plymouth on June 25, and proceeded to Longmoor Camp, in the Aldershot district, which was then the headquarters of the British Railway Troops. Training was continued until Aug. 25, 1915, on which date, after an inspection by the King, the unit embarked for France via Southampton and Calais.

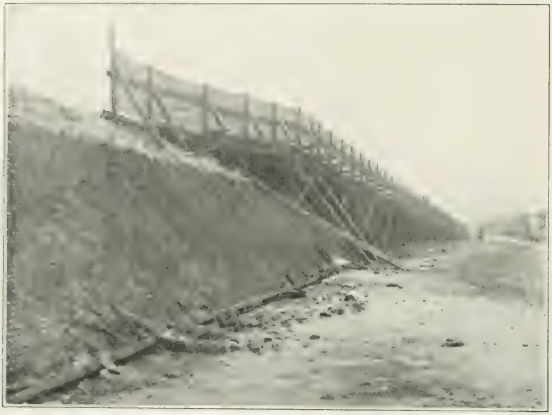
In Sept., 1915, authorization was given for the recruiting of a reserve base, consisting of two officers and 140 other ranks. This work was undertaken by F. L. Wanklyn, General Executive Assistant, C.P.R., honorary Lieutenant-Colonel of the corps, who, from its organization until demobilization, had charge of all Canadian matters pertaining to the unit, rendering most valuable assistance in the supply of men and equipment. Capt., now Major, Wellwood, returned from France to take charge of this base and took it to England, after which he rejoined the unit in France. While in England and until its strength was exhausted, the reserve base was employed on railway work at various points, including some considerable revisions and additions to yards at Newcastle, being thus usefully engaged throughout. After the strength of this base was entirely exhausted, further re-inforcements for the C.O.R.C.C. were supplied from the general reserve of Canadian Railway Troops, which was established in 1917.

On arrival at Calais, the C.O.R.C.C. proceeded to Alveringhem, Belgium, some six miles west of Dixmude, and took up billets in that vicinity. It was then attached to the 2nd and 5th Divisions of the Belgian Army, through the medium of the British Mission with the Belgian Army, for ordinary field engineering work, and engineer parties were also furnished for work with the naval siege gun batteries then situated on the coast. The work in this vicinity consisted of the construction of reinforced concrete machine gun emplacements, observation towers, artillery emplacements, shell proof shelters, standard gauge railway mounted gun emplacements, 2 ft. gauge railways and trench train lines. A mechanical plant was also supplied and operated at Forthem for the transhipping of materials from barges to the light railway system.

In connection with this work the following points are of interest. Two concrete observation towers, some 30 ft. in height, were constructed in the shelter of old buildings, one in the Town of Nieuport, and the other some distance farther south, within 600 yards of the front line trenches, which, while somewhat battered by shelling, served usefully as artillery observation posts for more than two years. The artillery emplacements constructed were of such a nature that they withstood successfully direct hits from 11 in. armor piercing shells, in one case a shell, striking directly in the embrasure, cut 1 ft. from the barrel of

Canadian Overseas Railway Construction Corps' Ballast Train, handling chalk ballast between Velu and Havrincourt, Nov. 22, 1917.

a 6-inch gun, without serious damage to the emplacement. A light railway system of 2 ft. gauge, 9 lb. rail was constructed for the carrying of supplies, ammunition and R.E. stores from Forthem, some 5 miles behind the lines, to Dixmude, paralleling the trenches in either direction from the latter point. This light railway, the first of its kind used immediately behind the front line, on either the British or Belgian fronts, was a somewhat primitive affair, being operated in part by horse and in part by man power, but was at least an improvement over horse and hand transport, the only other possible system under the conditions.



Side view of Timber Ramp, from towpath, to dry bottom of Canal du Nord, to permit it being used as a highway for artillery and team transport. Built by Canadian Overseas Railway Construction Corps, Nov., 1917. The embankment was approximately 40 ft. high.

An extensive, power operated, 2 ft. gauge system, having 30 lb. rail, was strongly advocated by the C.O.R.C.C. at that time, but was not approved, such systems not being adopted until 1917, when all means of transport other than railways had failed. It was at this time that the extensive construction equipment of the C.O.R.C.C. first came into use in part, scrapers being used for preparing artillery positions in the sand dunes, concrete mixers for reinforced concrete work, and steam hoists for a transhipping plant from barges to the railway system, thus saving much labor.

In the latter part of Oct., 1915, the corps was recalled to England, under orders to proceed to Salonica for work on the Salonica-Uskub Railway. Just at that time, however, the break in the Serbian lines took place, the greater part of the railways in question were lost and the C.O.R.C.C. was returned to France via Southampton and Havre, reaching the latter point on Nov. 5. From Havre, one company proceeded to Audruicq, the central railway supply depot of the British armies, and undertook the extension of yards there. At that time this central railway depot consisted of some 40 miles of standard gauge tracks; at the signing of the armistice it had been extended to approximately 120 miles. The other company proceeded to billets at Wippenhoeck, just southwest of Ypres, where a few weeks later it was joined by the company from Audruicq, on the completion of its work at that point.

The C.O.R.C.C. was then attached to the second British Army and started on standard gauge work in that army's area. Advanced railways for the regular handling of supplies, ammunitions, R. E. stores, etc., were then practically unknown, being considered dangerous and unreliable. The average rail heads were from 15 to 25 miles from the front line.

The first work attempted by the corps in that area was the construction of a line from Wippenhoeck, on the main Hazebrouck-Voperingue line, to Dickebusch, a point south of Ypres, and about 1½ miles from the front line. The idea of the line at that time was that it would be used principally for railway mounted gun spurs, and possibly some small amount of stone traffic for repairs to roads. As the work advanced, and the corps became familiar with conditions, strong representations were made by it to the effect that the line should be made use of for advanced supply and ammunition rail heads and gradually this idea was adopted and authority given for the construction of advanced rail heads on this line. It was on this area that the first really advanced standard gauge rail heads were used behind the British front.

Railway Yard at Bapaume, France, looking east; Nov. 29, 1917.

By special request from the officer commanding the naval siege gun batteries on the coast, a small detachment was attached to that force, where it did much valuable work, remaining until practically the cessation of hostilities. Among the works of interest done by this detachment was the installation of the first 13 in. naval siege gun used behind the British front.

The corps remained in the vicinity of the Ypres salient until Aug., 1916, undertaking in addition to the works mentioned above, the construction of the Bergues-Vlamertingue line, later continued through to a connection with the old main line north of Ypres, various rail heads and branch lines in the Ypres salient and the construction of a meter gauge yard on the Belgian Railway at Ghyvelde.

Early in the spring of 1916, the Canadian Corps conceived the idea of establishing a power operated 2 ft. gauge railway in the Ypres salient, and a detachment was furnished by the C.O.R.C.C. to lay track and generally assist in this work. This railway was built, to a great extent, from salvaged materials, and in its beginning was somewhat primitive, for instance the first power consisted of two 10-ton locomotives abandoned in the German advance and salvaged by the C.O.R.C.C. from Dickebusch Lake, but it probably served as an example of what might be done with railway transportation and was the forerunner of the network of light railways that was finally installed.

In Mar., 1916, shipments of steel box cars began to arrive at Audriucq from Canada, and other points, and as neither men nor plant were available for their erection, the C.O.R.C.C. was called upon for assistance in the work. The erection of these cars was undertaken and the C.O.R.C.C. bridging plant, air compressors, etc., were set up and converted for the work. Some 1,300 cars were thus erected, by which time proper plant and other labor became available, and the work was turned over to the British army mechanical staff. During the period of this car construction, the detachment in charge of the work had the somewhat unpleasant experience of being present at the blowing up of some 15,000 tons of ammunition in the Audruicq dump, about a quarter of a mile from the car yard, a dump which was then one of the largest British dumps and which was set off by German bombs, the explosions throwing shells in some cases nearly a mile and continuing for three days.

Team Outfit, grading for railway, near Canal du Nord, Nov., 1917.

As railway work progressed in this area the need of steam shovels, track pile drivers and the usual standard gauge equipment became at once apparent, there being no modern railway construction equipment available in France. Ballast for railway construction was one of the most vexing problems, there being no good ballast available, the material used being principally the refuse from coal mines, which was both difficult to handle and unsuitable for track work, the supply being also very uncertain. After extensive representations made on this subject, permission was finally obtained for the acceptance of two 70 ton steam shovels and two standard gauge track pile drivers, and these were supplied by the Canadian Government through the C.P.R., and arrived in June, 1916. These shovels, which were worked incessantly from the summer of 1916, until the signing of the armistice, in many instances 24 hours a day, to a great extent saved the situation as far as ballast was concerned for the British railways, supplying the greater part of the material used for this work. This material consisted of sand and chalk. The track pile drivers were also incessantly employed, particularly in the German retreat, driving the great majority of new pile bridges from the Somme to the coast.

During the period referred to above, viz: from Nov., 1915 until Aug., 1916, the work of the corps may be briefly summarized as consisting of, 1st, the introduction of some, if insufficient, modern railway construction equipment in France; 2nd, the construction of the first advanced railways for both 2 ft. and standard gauge, showing to some extent the possibilities of such a means of transportation. The actual work consisted of the construction of some 60 miles of railway line, the erection of 1,300 steel box cars, the supply of ballast and construction of bridges for various lines, miscellaneous field engineering work, such as artillery positions, etc.

In Aug., 1916, the corps undertook the construction of a large railway yard at Zeneghem, some 12 miles from Audruicq, for an ammunition dump, etc., and shortly afterwards the construction of the ammunition yards at Dannes-Camier as well as various minor railway works, amounting in all to about 70 miles of railway. In this work they were for the first time assisted by considerable quantities of labor and the works were completed in Dec., 1916, at which time the corps moved to the Somme to take up advanced railway work in the Fifth Army area.

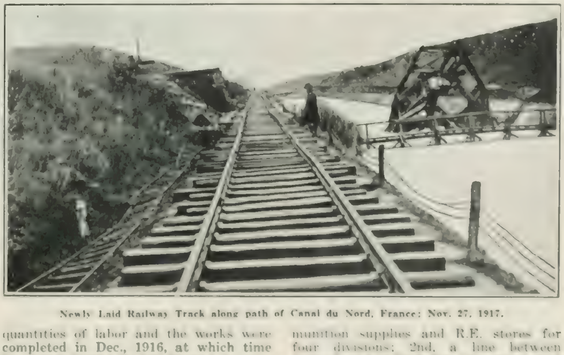
Colonel C. W. P. Ramsey, C.M.G.
Officer Commanding Canadian Overseas Railway Construction Corps.

During the late autumn attacks of 1916 by the British army in the Somme area, owing to the lack of proper railway facilities, practically all the roads had broken down under the heavy motor and team traffic, and in consequence the transportation of ammunition in sufficient quantities for further attacks was an impossibility. In view of this condition of affairs, and taking into consideration the contemplated 1917 spring attack, a very extensive railway programme was decided upon, and this work, in addition to the maintenance of such railways as already existed in that area and which in the majority of cases were in very bad shape, was taken over by the C.O.R.C.C. The contemplated extensions amounted to about 60 miles.

Considerable labor was supplied and work was pushed rapidly on these extensions until Feb., 1917, at which time the German retreat from Beaumont, Hamel and Serre started. In view of this retreat, which rapidly developed, work in the back areas was to a great extent abandoned, and all available forces were pushed on to the extension of the Candas-Acheux line, to a connection with the Nord Ry. main line from Albert to Arras at Achiet-le-Grand, the reconstruction of the Albert-Arras Ry. and also the reconstruction of the lines through Bapaume and easterly to Ytres and the Nord Canal, as well as the line from Boisleux-aux-Monts to Croisielles.

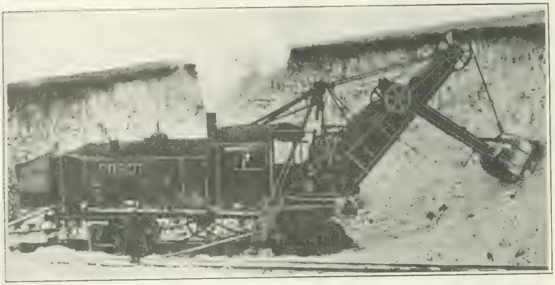
The reconstruction work was of the utmost urgency, and several units of the Canadian Railway Troops, then beginning to arrive in France in considerable numbers, as well as British and French troops, were for a short time employed upon it. All the bridge work, however, during the retreat in this area, was done by the C.O.R.C.C. forces, which also supplied the necessary ballast, and they eventually took over the completion, maintenance and further extensions of these lines, continuing with same until Nov., 1917.

Among the features of interest during this period, from Nov., 1916 to Nov., 1917, were the following: The maintenance and operation, without serious interruptions, of, 1st, a rail head at Aveluy, 4 miles from the front line, for ammunition supplies and R.E. stores for four divisions; 2nd, a line between Acheux and Albert for gun spurs and



Newly Laid Railway Track along path of Canal du Nord, France: Nov. 27, 1917.

hauling ammunition to batteries, running at some points within two miles of the front line, and fully exposed to direct observation; 3rd, an ammunition rail head at [illegible] Farm, 1½ miles from the front line, and 4th, an ammunition rail head at [illegible] camp, in front of [illegible] at 1,200 yards from the front line, probably the most advanced standard gauge rail head ever used in France.



Atlantic Type Steam Shovel, supplied by Dominion Government, through the C.P.R., to the Canadian Overseas Railway Construction Corps, at work in chalk pit near Puchevillers; Nov., 1917.

During the reconstruction period, it was found that, as the Germans retreated, they had in the majority of cases removed all rails, and the greater part of the ties, from their standard gauge lines. Where they had been pressed, rails had not been removed, but in such cases, they had been destroyed by explosives at practically every joint. All buildings and water supplies were destroyed. A feature which caused some annoyance was that of delayed mines, placed by the Germans in all large embankments. These mines where not discovered and removed, exploded at varying periods from 10 days to 4 weeks after the retreat. The arrangement of them was somewhat ingenious, the detonator being held by a wire in an acid bath, the acid gradually eating the wire away until a shock from a train passing on the embankment put the finishing touch, thus causing the explosion to take place at a most inopportune time. Work, even with track pile drivers, was in some cases carried on at points under direct observation, but without material loss. In this period about 50 miles of new line were constructed and about 80 miles reconstructed. Special detachments were also furnished during this period for work on advanced rail heads in the Ypres area, during the August and September battles.

In Nov., 1917, came the push for Cambrai, and all efforts were expended on the relaying of the line to Havrincourt, which point was reached some five days after the advance took place. This work necessitated some four miles of new construction, including the bridging of the Nord Canal, and about three miles of railway repairs. A roadway ramp was also built in two days, for the forwarding of artillery, from the embankment to the dry bottom of the Nord Canal, which had [illegible] as a [illegible] [illegible] after being [illegible]. The ramp from the embankment to the bottom of the canal was [illegible] [illegible]. This work was not strictly railway construction, but was done on an urgent call from the C.O.C., Fifth Corps for assistance. In the short period that the ground east of the Nord Canal was held, this railway line and roadway proved of the greatest value for the forwarding of supplies, men and ammunition, as well as for the evacuation of wounded, being practically the sole means of transportation.

From Dec., 1917, until Mar., 1918, the corps was employed in the construction of additional railways and rail heads for a defence line, in view of the anticipated hostile spring attacks. Some 40 miles of railway were put under construction and practically completed by the time the German attack took place, viz: Mar. 21, 1918. Shortly after this attack, it became apparent that the British were losing ground, railway construction was abandoned and until the end of Mar., the C.O.R.C.C. was broken up into maintenance and demolition parties. All railway mounted guns in its area were salvaged, as was practically all rolling stock, with the exception of a small quantity, so badly damaged by shell fire that it could not be moved. In addition to this, 100 miles of railway track were effectively demolished, much of this work being done when the Germans were actually in occupation of the ground.

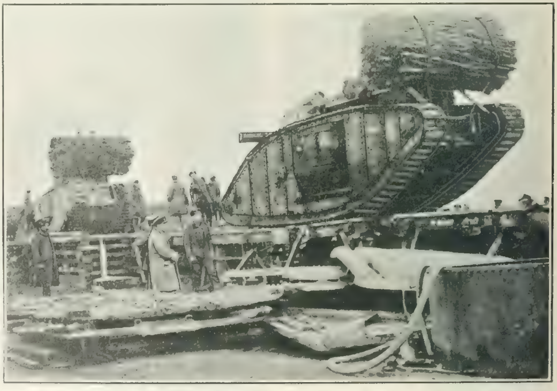
From Apr., 1918, until Aug., the beginning of the British final advance, railway work of the same type was carried on along the lines outlined previously behind the new front, some 50 miles in all being constructed. In the final advance, the corps undertook the reconstruction of the line through Valenciennes, and eventually finished its work by completing the railway line into Mons.

In Jan., 1919, the greater part of the unit was returned to England and at the moment of writing the majority of its members have reached Canada.

Some 500 miles of railway were constructed and reconstructed by this unit, which was probably 15% of the total standard gauge railway work done behind the British front. The skilled railway troops on the British front at the signing of the armistice probably totalled 30,000 men. In addition, many officers were furnished for executive positions and for other units, approximately 70 officers being commissioned from the ranks. The honors conferred on members of the corps were approximately as follows: C.M.G., 1; D.S.O., 9; M.C., 10; D.C.M., 6; M.M., 20; Belgian Croix de Guerre, 6.

Among the officers transferred or seconded, and who filled executive positions, are the following:

Lieut.-Col. (now Colonel) C. W. P. Ramsey, C.M.G., seconded as Railway Construction Engineer, 5th Army, Oct. 23, 1916, seconded to War Office, June 14, 1919. He was, prior to entering the army, Engineer of Construction, C. P. R., Montreal.



Method of Loading Tanks on Railway Cars. In Nov., 1917, during one night, 460 of these tanks were unloaded, between Etricourt and Velu, for the push on Cambrai.

Major (now Lieutenant-Colonel) J. G. Reid, D.S.O., transferred to command of unit, Oct. 23, 1916. He was formerly Assistant Engineer, C.P.R., Winnipeg.

Major (now Brigadier-General) C. L. Hervey, D.S.O., transferred to command of 4th Battalion, Canadian Railway Troops, Feb., 1917, seconded to War Office, May, 1918. He is an engineer and contractor, living at Lancaster, Ont., with office in Montreal.

Major (now Lieutenant-Colonel) F. Lefebvre, D.S.O., seconded as Railway Engineer, 5th area, Apr., 1918. He was Representative Engineer for Pearsons & Co. at Montreal.

Lieut. (now Lieutenant-Colonel) E. Turbett, O.B.E., D.S.O., seconded and placed in charge of mechanical shops northern area, Oct., 1916. He was Mechanical Superintendent, Quebec Ry. Light & Power Co., Quebec, Que.

Lieut. (now Lieutenant-Colonel) K. A. Ramsay, D.S.O., seconded as Assistant Director of light railways. He was Superintendent of Construction for Foley, Welch & Stewart, contractors.

Lieut. (now Major) C. Flint, D.S.O., Belgian Croix de Guerre, seconded to Marine Artillery, Mar., 1918. He was Resident Engineer, C.P.R., Edmonton, Alta.

Birthdays of Transportation Men in September.

Many happy returns of the day to:—

W. B. Bamford, District Freight Agent, C.P.R., Toronto, born at Belleville, Ont., Sept. 10, 1863.

G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., and G.T.P. R., Montreal, born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. J. Blais, Foreman Tinsmith, Canadian National Rys., Transcona, Man., born Sept. 26, 1876.

V. T. Boughton, Assistant Superintendent, Chapleau Division, Algoma District, C.P.R., Chapleau, Ont., born at Troy, N.Y., Sept. 9, 1888.

E. R. Bremmer, ex-Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

W. B. Bulling, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., now of Knowlton, Que., born at Montreal, Sept. 16, 1858.

W. E. Burke, Assistant Manager and Director, Canada Steamship Lines, Ltd., Toronto, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

A. S. Dawson, Chief Engineer, Department of Natural Resources, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

H. B. Dufief, Assistant to Solicitor, Grand Trunk Pacific Ry., Winnipeg, born at Washington, D.C., Sept. 16, 1883.

W. E. Duperow, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

R. S. Elworthy, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Chicago, Ill., born at London, Eng., Sept. 10, 1877.

H. G. Foreman, Assistant Treasurer, Canadian Northern Ry. System, Toronto, born there, Sept. 2, 1882.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

G. J. Fox, Superintendent, Calgary Division, Alberta District, C.P.R., Calgary, Alta., born at Montreal, Sept. 24, 1883.

W. H. Gordon, Trainmaster, C.P.R., Field, B.C., born at Montreal, Sept. 21, 1875.

R. S. Gosset, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.

E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept., 1865.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.

W. R. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

J. E. Hutcheson, General Manager, Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, Assistant to President, G.T.R., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., director, National Steel Car Co., Hamilton, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.

C. C. Labrie, Purchasing Agent, Canadian National Rys., Vancouver, B.C., born at Quebec, Que., Sept. 8, 1882.

R. E. Larmour, General Freight Agent, Eastern Lines, C.P.R., Montreal, born at Brantford, Ont., Sept. 26, 1868.

C. D. MacKintosh, Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, Alta., born at Auckland, New Zealand, Sept. 24, 1882.

W. A Mather, General Superintendent, Saskatchewan District, C.P.R., Moose Jaw, born at Oshawa, Ont., Sept., 1885.

M. B. Murphy, Manager, Winnipeg Joint Terminals,Winnipeg, born at Napa, Cal., Sept. 11, 1866.

J. Paul, District Freight Agent, Canadian National Rys., Winnipeg, born in Euphrasia Tp., Ont., Sept. 13, 1858.

W. J. Pickrell, Master Mechanic, New Brunswick District, C.P.R., St. John, born at London, Ont., Sept. 15, 1880.

H. T. Rawlings, Lake Forwarding Agent and Fuel Inspector, Canadian National Rys., Cleveland, Ohio, born at London Eng., Sept. 27, 1883.

W. D. Robb, Vice President, Transportation and Maintenance, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

H. T. Ruhl, Engineer, Maintenance of Way and Structures, Delaware & Hudson Rd., Albany, N.Y., born at Mifflinburg, Pa., Sept. 29, 1882.

A. Scott, Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

R. A. Sewell, Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, born at Brampton, Ont., Sept. 2, 1880.

J. M. Silliman, Engineer, Maintenance of Way, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., born at Easton, Pa., Sept. 8, 1885.

H. A. Young, formerly Ontario Storage & Cartage Co., Ltd., Toronto, now of Buffalo, N.Y., born at Brooklyn, N.Y., Sept. 1, 1864.

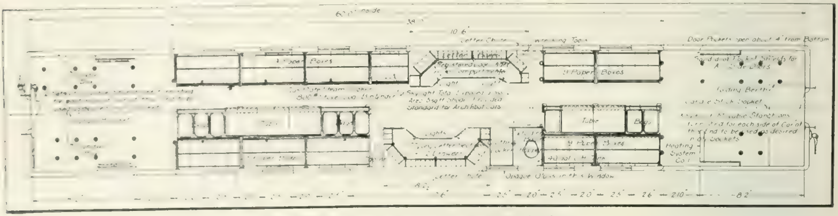
Imperial Service Medals Given Canadian Government Railways Employes.

A London cablegram says the Imperial Service Medal has been granted to the following: Albert J. Atkinson, time-keeper, Moncton; Placide Babineau, carpenter, Moncton; Alexander Bain, station agent, Riversdale; B. T. Boddington, locomotive fireman, Moncton; William Cantwell, tool room keeper, Charlottetown; John Corbett, section foreman, Moncton; J. S. Cameron, section foreman, Penniac; Harry Cummings, tester, Stellarton; Aime Dumas, conductor, Riviere du Loup; John A. Fraser, machinist, Moncton; M. Grant, section foreman, Riviere du Loup; Joseph Guay, brakeman, Levis; Alfred Lavel, conductor, Riviere du Loup; Jules G. Parent, locomotive man, Riviere du Loup; Aubrey C. Reid, carpenter, Moncton; F. W. Rioux, locomotive man, Riviere du Loup; Benjamin Steeves, section foreman, Campbellton; Matthew C. Webster, station agent, Pictou; Job Yeo, locomotive man, Charlottetown; Charles Mercier, locomotive man, Riviere du Loup; Robert W. Orchard, conductor, Mont Joli; Joseph Scott, locomotive man, Riviere du Loup.

Specifications for Steel Full Mail Cars for Canadian Railway Mail Service

As stated in Canadian Railway and Marine World at the time, the Board of Railway Commissioners passed general order 259 on Jan. 13, 1919, approving specifications for mail cars submitted by the Post Office Department's railway mail service branch, on May 22, 1918, as amended and corrected. These specifications cover the construction of all steel postal cars, wooden mail apartment cars, fixtures and interior equipment, including construction, sanitation and operation. A complete set of plans for the cars have been prepared by J. Ogilvie, Mechanical Expert, Board of Railway Commissioners. The following summary has been abstracted from the specifications for the all steel postal cars:

Any of the following types of construction may be used: 1. Heavy center sill construction, the center sill acting as the main carrying member. 2. Side carrying construction; the sides of the car acting as the main carrying members, having their support at the bolsters. 3. Underframe construction; in which the load is carried by all the longitudinal members of the lower frame, and having a steel superstructure framing. 4. Combination construction; in which the side frames carry part of the load in order to utilize uniform center sill construction, and embodying if desired, steel castings, as parts of the underframe.



Steel Full Mail Car for Canadian Railway Mail Service.

All fabricated steel must be open hearth, and must meet the requirements of the standard specifications of the American Society for Testing Materials.

The maximum end shock, due to buffing, shall be assumed as a static load of 400,000 lb., modified in the case of electric lines, where the train does not exceed 600,000 lb., to a static load of 200,000 lb., and for self propelled cars, with trailers, weighing not over 200,000 lb. to a static load of 100,000 lb. This end shock shall be assumed to be resisted by all the continuous longitudinal underframe members below the floor level.

Rivet centers shall be not less than 3 rivet diameters, nor more than 24 times the thinnest outside member thickness Below the floor, the framing connections may be rolled, pressed or cast steel, and above the floor, of malleable iron. Connections for I beams, chambers and tees, may also be made by coping the rolled members. All rivet holes must be reamed in place.

Center sills may be built up, or composed of rolled or pressed shapes, with or without cover plates, and cast steel end construction may be used. This applies also to the bolsters and cross bearers, floor beams and end sills.

In the side frame, the effective depth, when considered as a girder, may be taken as either the distance between the centers of gravity of the side plate and side sill, or belt rail and side sill. At side door openings, the bending movement caused by the vertical shear at the door posts shall be considered as resisted by the section above and below the door openings. A sufficient proportion of the door reinforcing members shall be extended beyond the door posts, so that their reaction may be taken care or by the side frame without exceeding allowable stresses.

The sum of the section moduli taken at any horizontal section between the floor line and the top line of the windows, of all posts and braces on each side of car located between end posts, shall not be less than 0.30 multiplied by the distance in feet between centers of end panels. The outside sheathing shall not be less than ⅛ in. iron or steel plate.

The roof may be either the clerestory or turtleback type. In the clerestory type, the deck plates shall be in the form of a continuous plate girder, or equivalent construction, extending from the upper deck eaves to the deck sill, and either built of rolled or pressed shapes, or pressed in one piece from steel plates. The carlines may be either pressed or rolled sections, extending in one length across the car, or supported from cantilever projections of the side posts. In the turtleback type, the carlines may be of similar arrangement. The roof sheets, if of iron or steel, must be at least 0.05 in. thick, and if of wood sheathing, not less than 13-16 in., covered with canvas, and laid in thick white lead and oil, or equal.

The sum of the section moduli of all the vertical end members at each end, shall not be less than 65, the main members to comprise at least 75% of this. For electrically operated trains, weighing not over 600,000 lb., the section moduli shall be at least 40, and for self-propelled cars and trailers, totalling less than 200,000 lb., the section moduli will be at least 20 for each end, the percentage of principal members remaining the same.

The horizontal reactions of all vertical end members at the top shall be calculated from an assumed external horizontal force, applied 18 in. above the floor line, to all vertical members in proportion to their respective section moduli, such force being of sufficient amount to cause bending of all the vertical members acting together and the top connections of the vertical end members will be designed for these reactions. The bottom connections of the vertical end members shall be sufficient to develop the full horizontal shearing value of all members. Except where the vertical end members shall bear directly against, or be attached directly to, the longitudinal members at either the top or the bottom, the assumed reactions will be considered as loads applied to whatever construction is used at the end sill or end plate, and both these last named members shall have section moduli, respectively, sufficient to prevent their failure horizontally before that of the vertical end members.

Using rolled steel having an ultimate tensile strength of from 50,000 to 65,000 lb., all parts of the car shall be so proportioned that the following unit stresses shall not be exceeded; Bolsters, 12,500 lb.; sills and framing 16,000 lb. The same stresses may be used for cast steel except in tension, when they must be reduced 20%. For members in compression, the formula, 16,000-70L-R is used, in which L is length in inches, and R, the least radius of gyration in inches. Rivets may be stressed to 10,000 and 12,000 lb. in shear in non-buffing and buffing, respectively, and to 20,000 and 24,000 lb., in bearing, non-buffing and buffing, respectively.

The floors shall be of iron or steel, flat or corrugated, the wearing surface of matched wooden flooring or composition, but with the latter, it must be surfaced in the wearing area, with wood, cork, or other suitable wearing material. The interior finish of the cars will be of flat or corrugated steel plate, composition board, or wood, properly secured to the car framing.

The cars shall be insulated throughout, with material of such a nature that it can be securely fastened so as to withstand the vibration incident to railway service, and the insulation must be such that it will not support combustion, nor absorb moisture beyond its own weight, and when wet, not become corrosive. It must be such that it will not transmit per square foot of surface, per Farhenheit degree, in 24 hours more than 8 b.t.u. for side walls, end walls and roof, and 7 b.t.u. for the floor.

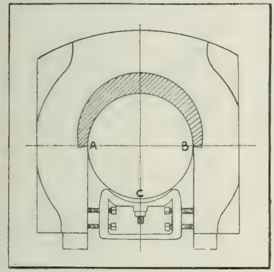
Details covering the illumination of the cars are also included in the specifications.

Railway Mechanical Methods and Devices.

Boring Locomotive Driving Box Journals on the T., H. & B. Ry.

In boring locomtive driving box journal brasses, the mechanic sometimes finds it difficult to get the brass bored to the exact size, especially when the journal is worn below the standard. The difficulty is due to the fact that the diameter of the brass is generally less than a full half circle, at the point A-B shown in the accompanying plan.

If it was over a half the circle there would be no difficulty in calipering it, and getting it exactly right, but it would not go over the journal. Therefore it is usually left a little less than the half circle and thereby it becomes difficult to caliper properly. To overcome this some mechanics measure the journal, take half of the size, and set the boring bar tool that distance from the center of the bar. This, however, necessitates considerable measuring, where two or three cuts have to be taken out of the brass, and is not altogether reliable.



Others cut tin or sheet iron templates the size of the journal and bore brass to suit. The accompanying plan, got up at the Toronto, Hamilton & Buffalo Ry. shops in Hamilton, makes it very easy to caliper the exact size accurately. It consists of a ½ x 1 in. wrought iron frame, made smaller than the cellar pit of the smaller box. Two half inch set screws on each side make it adjustable to the larger size boxes. A half inch cap screw, C, with a check nut inside the frame, completes the device.

When in use the frame is set inside the cellar pit and flush with the top side of the box, where it is held by the 4 set screws. The operator sets the head of the cap screw, so that the boring tool will just touch it, then by placing the point of the inside caliper on the mark left by the tool he can tell accurately the size he is boring the brass. We are indebted to M. J. Hayes, General Foreman, T., H. & B. shops, Hamilton, for the foregoing.

The Value of a Tool Room.

The province of the tool room is to make such tools as may be needed, to maintain them in such condition that when they are wanted, they are ready for service, and to have them on hand, so there will be no delay to the men who are to use them. I call to mind a hurry up job that was not done on time; on investigating the matter, the excuse was made: "We could not find our tools." On looking into the matter in detail, it was found that the excuse was correct. The practice had been for a man to pick up the particular tool that he needed, use it, and leave it where he got through with it. If somebody else wanted it, and remembered where it was last used, he might find it; and if he did not find it, then he kept on hunting until he finally located it. The result was an enormous waste of time chasing up tools. There was no tool room in that particular department, and there never had been. The men were consulted and were asked: "If you are given a tool room, a place to put your tools, will you put them there?" A tool room was built in the end of a shed for storing tools—it was not a manufacturing department and there were no machine tools in it whatever. It was simply a place to put the special articles that were needed at various times in a car repair yard. The majority of the men did as requested. When they took a tool out of the tool room, and used it, they put it back. A few, however, did not have time to put the tools back. The majority of the men, who were living up to the rule, made it so unpleasant for those who were careless, that they fell in line, and in a short time, every tool belonging in the tool room was put in its proper place when the men were through using it.—J. A. Carney, Superintendent of Shops, Chicago, Burlington and Quincy Rd.

Jack for Removing Expanded Tires.

The old-time prevalent idea that any old tool that had served its usefulness in the back shop would be received with a warm welcome in the locomotive house is now becoming more generally known as erroneous. The locomotive man, not having the back shop equipment close at hand, is thrown more or less on his own resources, and it is, therefore, false economy to have the locomotive house equipped with a scant or poor supply of tools. With good tools, reasonably cared for, higher efficiency is possible.

Jack for Removing Expanded Tires.

The accompanying illustration shows a tire removing device, a simple light air jack. After the tire is heated and expanded, the end of the jack is placed against the opposite tire or wheel center. The plunger, in pushing off the tire, is stopped from going out too far by a 3 x ¾ in. round collar, set fast on the shaft, which strikes the wheel center as the tire leaves it, using a lesser stroke, and economizing on the air.—F. D. West, Tool Foreman, Illinois Central Rd.

The Hamilton and Barton Incline Ry. is reported to have increased the price of red tickets on its line in Hamilton, Ont., from 50 for $1 to 50 for $1.25. The orange tickets remain at 10 for 25c.

Leaky Roof Testing Equipment, Winnipeg Shops, C.P.R.

After a freight car has passed through the C.P.R. Winnipeg freight car repair shops, it is subjected to a test for leaky roofs, with the apparatus shown in the accompanying illustration, which is said to subject the car to as severe conditions as the most violent rainstorm.

Near the ground level, there is a 6 in. header, parallel to the track, supplied with water from a 2 in. pipe, the control valve for which is located in the car shop. From this header, there are six ¾ in. galvanized iron upright pipes, rising to about 10 ft. above the top of the car, with the ends bent over into line with the track centers. These pipes are supported by a wooden frame structure. The sprinkler ends are the ordinary automatic fire sprinklers, with the fire seal removed.

Apparatus to Test Roofs for Leaks.

The sprinkler apparatus is placed over the outgoing track, and a string of repaired cars is drawn under the sprinkler at the rate of about 3 m.p.h., which is sufficient to show up any leaky spots. In addition to the control valve, there is also a drip cock inside the car shop for draining off the water in cold weather to prevent the apparatus from freezing.

Reid Newfoundland Co. Suit—A petition has been presented to a Quebec court by Miss H. D. Reid, asking for the appointment of a sequestrator in connection with the management of 54,768 shares of the Reid Newfoundland Co., now deposited with the Royal Trust Co., Montreal. The proceedings are directed against Sir William D. Reid, H. D. Reid, R. G. Reid Jr., Lord Shaughnessy, the Royal Trust Co., and the Reid Newfoundland Co. The petition alleges that by the will of her father, who was also the father of Sir William D. Reid and H. D. Reid, and the grandfather of R. G. Reid, his widow inherited property which was to revert to the children at her death. On the death of Lady Reid, Sr., it is claimed, Sir William D. Reid and H. D. Reid and others, as executors, continued the management of the Reid Newfoundland Co. and kept and operated the estate for their own account and benefit.

Steam Railway Statistics for Year Ended June 30, 1918.

This is the third of a series of tables containing statistics for the year ended June 30, 1918. The others were published in Canadian Railway and Marine World for July, pgs. 365 and 366, and for August, pg. 420.

Name of Railway	Passengers carried	Passengers carried one mile	Revenue per passenger per mile, cents	Mileage of revenue passenger trains	Mileage of revenue mixed trains	Mileage revenue freight	Tons of freight carried	Tons carried one mile.	Revenue per ton per mile, cents.	Mileage of non revenue trains.

In addition to the revenue train mileage, given in figure columns 4, 5 and 6, there was a total special revenue train mileage of 76,721, distributed over 24 railways.

Carbonization in Valve Chambers and Cylinders of Superheated Steam Locomotives; Its Cause, Effect on Lubrication and Maintenance, and Proper Measures to Overcome it.

By F. P. Roesch, Supervisor, Fuel Conservation Section, U.S. Railroad Administration, Northwestern Region.

The so-called carbonization or deposits of foreign matter in valve chambers, passages, etc., is usually called carbonized oil. This term is a misnomer, as shown by an analysis made by Dr. P. H. Conradson, Chief Chemist, Galena-Signal Oil Co., the composition of four samples being as follows:

FIRST SAMPLE.

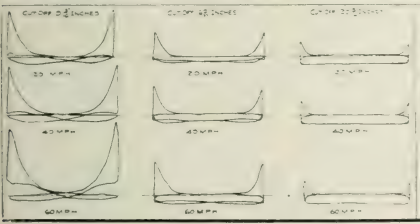
13.35% thick oil.
2.60% oily, gummy matter.
57.15% carbonaceous combustible matter (coal and coke matter).
26.90% red ash, principally iron oxides, silicious matter.

After removing the oil and oily matter, the deposit was non-magnetic, indicating practical freedom from metallic iron.

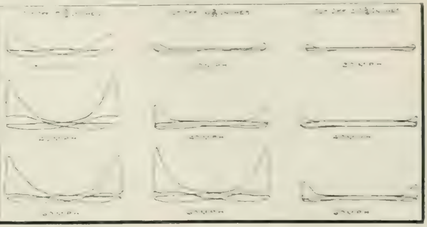
SECOND SAMPLE.

24.25% thick oil.
0.80% oily, gummy matter.
48.78% iron metal wearings.
8.18% iron oxides and silicious matter.
17.87% carbonaceous combustible matter.

After extracting the oil and oily matter, the deposit was very strongly magnetic, containing a large amount of metallic iron.



Cards from Locomotive having no by-pass or relief valve.



Cards from Locomotive having a by-pass and relief valve.

THIRD SAMPLE.

6.45% oil and oily matter.
35.70% coky, carbonaceous combustible matter.
57.28% metallic iron, iron oxides and silicious matter.

Mineral matter strongly magnetic from metallic iron wearings.

FOURTH SAMPLE.

4.2% oil and oily matter.
41.0% metal wearings, iron oxides, silicious matter.
54.0% coky, carbonaceous matter.

Mineral matter strongly magnetic.

From the above it will be seen that oil or oil products form but a small percentage of the whole, and the analysis also points directly to the cause, namely, smoke box gases drawn into the cylinders through the nozzle and there mixed with the oil adhering to the various ports, passages and surfaces not swept by either the valves or pistons in their movements, and this combination, through the high temperatures obtaining at the moment the throttle is closed, together with practically the entire absence of steam, bakes on the surfaces above referred to almost in the form of an enamel. Again quoting Dr. Conradson: "The above clearly illustrates the advisability of preventing smoke stack gases, with their inherent dirt, dust, grit, etc., to be drawn into the cylinders while the locomotives are drifting. As seen from the analyses, a comparatively small amount of oil binds together a large amount of mineral matter, forming a sticky deposit which bakes on the metal much harder with superheated steam, especially high superheat, than would be the case with ordinary wet or saturated steam."

Effect on Lubrication and Maintenance—Oil is introduced into valve chambers and cylinders in order to separate the rubbing surfaces with a film of lubricant. The oils now furnished will admirably perform this function, regardless of temperature, under proper conditions, but this film of oil is infinitesimal in thickness, therefore when the throttle is closed and the locomotive so manipulated as to allow the entrance of smoke box gases, with their constituent properties of coal, coke, soot and cinders, these small particles will work their way between the pistons and cylinder walls, separating them to a degree far beyond the thickness of the oil film, so that effective lubrication, even though the quantity of oil introduced be materially increased, is practically destroyed, as the film of oil cannot fill the grooves or ridges in rings and cylinders. Or again, this foreign matter may combine with the oil, forming an abrasive compound, causing wear of bushing, bull rings and packing rings, and thus accounting for the metallic iron, etc., found by Dr. Conradson. In fact, our investigation indicates that increasing the supply of oil beyond that required for effective lubrication simply aggravates instead of reducing the trouble.

R. Quayle, General Superintendent Motive Power, Chicago and North Western Rd., who is always given to reducing complex problems to the simplest channels for conclusions, told me some time ago how he, years previous, had demonstrated to some locomotive men what constituted sufficient lubrication. He said he put a few drops of oil on a face plate on his desk and smeared the oil over the entire surface of the plate, after which he scraped a straight-edge over the entire surface to remove all the surplus oil. He said he had nearly as much oil on the straight-edge and on the four edges of the face plate as he originally put on the face plate and the locomotive men had to admit that the face plate had enough oil left on it to lubricate the sliding surface of another face plate.

This beautifully homely illustration gave me the idea that giving the cylinder of a locomotive too much oil at one revolution and not any at the next revolution is like a window washer putting plenty of water on the pane of glass and then clearing the pane of the excess water by passing a rubber squeegee over it, leaving but a very thin film of water that quickly evaporates and leaves the pane clean and dry.

The piston in the locomotive's cylinder acts like the squeegee in the window washer's hands. It cleans the walls of the cylinder of all the excess oil, and drives out through the ports, exhaust passages, and the nozzle, what oil does not cling to the piston head and cylinder heads, to be carbonized at the first entrance of oxygen from the air; whereas the cylinder walls that need the lubrication for the next revolution do not have any unless the oil is injected into the steam the very next revolution.

As the lubrication is affected, so is the maintenance. Wear on valve rings and chambers, cylinder packing rings and cylinders is proportionately increased. Not only wear through abrasion, but, through lack of lubrication, cylinder packing rings become overheated, resulting in their collapse, or in other cases, breakage. Again, these so-called carbon deposits affect maintenance in other ways, as, for instance, cases have been observed where these deposits built up on piston and cylinder heads so as to take up practically all the clearance, in some cases knocking out cylinder heads, damaging cylinders, studs, etc., in others partially or wholly shearing rod bolts, etc.

Were the increased maintenance costs, the only direct loss, it might not be so serious, but, in addition to this, the deposits build up in the packing ring grooves, causing the ring to stick, producing valve and cylinder blows which materially impair the efficiency of the locomotive and result in proportionate increase in fuel and water consumption. Furthermore, cases have been observed where the exhaust passages were so constricted, due to the heavy deposits of this material, as to retard the exhaust sufficient to highly increase the back pressure.

A Possible Solution.—In checking over the various measures adopted by different railways to overcome the troubles mentioned above we find a marked lack of unanimity. This is not surprising, however, when the conditions under which each operates is taken under consideration, and it is only by comparing and analyzing the results obtained by the different methods that some plan can be formulated applicable to and meeting practically all conditions.

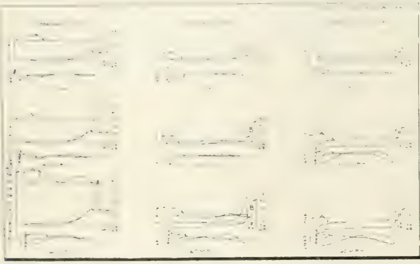
We find some roads block shut, or entirely remove, the steam chest relief valves, retaining the by-pass. Others block shut the by-pass and maintain the relief valve. Others again dispense with both by-pass and relief valves, while other roads maintain both. Some use a drifting throttle, some a so-called drifting valve, and others again use nothing. Some use special metal, some common grey iron, some use plain snap rings, some grooved and perforated snap rings, some segmental rings, etc. Some use a special oil, some the same as with saturated steam. Some advocate a reduction in the fatty constitutents in the oil, others an increase. Some advocate the use of the hydrostatic lubricator, others favor forced feed.

The Steam Chest Relief Valve is a heritage handed down from the saturated steam locomotive. It had its place at that time and as a safety feature with certain modifications can no doubt be fittingly used on modern power. Blocking it shut, or removing it entirely, will certainly prevent the admission of air to the valve chamber through this source, when the throttle is closed on a moving locomotive; but in this case the question arises, which is preferable in the cylinder, clean air from the outside, or smoke box gases? As a matter of fact, enquiry seems to indicate that these valves were removed from superheated steam locomotives, not so much to prevent carbonization, but to overcome cylinder failures which were attributed to the stresses set up by the cooling effect of air so introduced. Some years ago these valves were removed from [illegible] [illegible]motives using saturated steam, presumably to reduce maintenance costs, and in those cases the same deposits were in evidence on cylinder and piston heads.

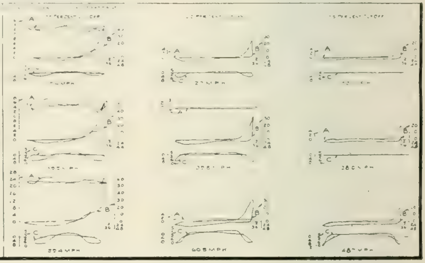
By-Pass Valves.—The function of this valve is to reduce the vacuum and compression created in the cylinder of the [illegible] locomotive employing piston [illegible] [illegible]motive is drifting, especially at high speeds. In this particular discussion we are not so much concerned with the compression, as the vacuum, as the only material effect due to compression, in so far as the so-called carbonization is concerned, is to increase the temperature of the air being compressed, which, while it undoubtedly adds to the adherence of the deposit, would not, however, be otherwise serious were it not for the presence of the smoke box gases in the cylinder, which are due solely to the vacuum created. A certain amount of compression is considered advisable in order to aid in cushioning the reciprocating parts. The elimination of the by-pass valve, either by blocking or removal, can have but one effect, namely, increasing the degree of vacuum, which vacuum must and will be filled from some source, either through the open relief valve, if in use, or in its absence through the nozzle, or through the admission of steam from the boiler. It has been shown conclusively that the major portion of the deposits found in cylinders, etc., is due directly to smoke box gases, and therefore the logical solution of the problem appears to be either to prevent their admission or to neutralize their evil effects.

The Drifting Throttle.—On roads where no drifting occurs to speak of, i.e., comparatively level roads, the use of the drifting throttle, so called, will undoubtedly prevent the admission of smoke box gases to the cylinders, regardless of the presence or absence of either or both steam chest relief and cylinder by-pass valves, provided the locomotive man does not forget. Here, however, is the danger—human fallibility. If the locomotive man fails to leave his throttle slightly cracked when coming to a stop, or when tipping the summit of a grade, the damage is done, even though the throttle be left closed for but a few revolutions. Each succeeding oversight adds its mite to the deposit, thus accounting for the deposits where the drifting throttle is presumably always used. As stated above, on comparatively level roads the drifting throttle can be used to advantage, if men will at all times comply with instructions, but where necessary to make long drifts, other means must be provided, as the drifting throttle is not always practicable, the gradient, tonnage, brakes, etc., governing.

The above explains why some roads find it to their advantage to block by-pass valves, while others maintain them presumably operative. In the absence of both by-pass and relief valves, much higher compression and greater vacuum will obtain than by their use, and in this case the vacuum can only be relieved through the nozzle. In order to make this clear, attention is directed to the the drifting cards shown herewith. Note the difference in the vacuum and compression at various speeds and cut-off. These cards also indicate another factor in the proposition, viz: if it were desired to entirely overcome cylinder vacuum under such conditions it would be necessary to proportion the by-pass valves to conform to cylinder volumes. As this is mechanically impractical, however, the problem must be considered with a view to finding relief under existing conditions.



Cards from Locomotive without a drift valve, with the relief valve blocked shut.



Cards from Locomotive without a drift valve, with the relief valve opened.

Drifting Valves.—Under this head can be classed all devices used to admit steam to the steam chest and cylinders, through pipes, etc., i.e., not through the main throttle as with a drifting throttle, and it is through failure to properly co-ordinate or take into consideration the relative movements of valve and piston that so many devices have been discarded as unsatisfactory. So many failures have been recorded that today the advocate of the drifting valve is received with a smile of compassion. A study of the causes of these failures would indicate the following:

1. The average locomotive man drifts his locomotive with the lever well hooked up, i.e., in a short cut-off. Following the movements of the valve and piston and beginning the cycle with the initial port opening as the piston is beginning its stroke, we have the piston moving back (assuming it starts from the front center), while the valve moves forward (inside admission) to complete the port opening. Continuing the cycle the valve now begins to travel back, closing the port when the piston has travelled a distance proportionate to the cut-off.

2. We will now assume that we are admitting steam to the valve chamber through a pipe of certain dimensions, and in order to avoid repetition we will assume the pipe to be 2 in. inside diameter. The flow of steam through a 2-in. pipe at 200 lb. absolute pressure is 9 lb. per second (Napier's formula

$$\frac{A.P.)}{70}$$

Its volume 40 lb. absolute pressure is 90.54 cu. ft.

Taking a locomotive with cylinders 25 x 30 in., drivers, 63 in. in diam., we find the piston displacement equal to 8.5 cu. ft. per cylinder. Now, assuming this locomotive to be drifting at the rate of 30 m.p.h., it would take 90.44 cu. ft. of steam per second to keep the cylinders filled at this speed; therefore, it would appear that a 2-in. pipe would more than meet our requirements under the above conditions, viz: keep both cylinders filled with steam above atmospheric pressure.

The above would be correct did the steam ports open directly to the boiler, so there would be no drop in pressure between the boiler and the cylinders, or if the intervals between port opening were so far apart as to allow the steam to bank up to boiler pressure. But as this is not the case and as the steam must follow natural laws (Boyle's) in so far as decrease in pressure as the increase in volume into which it expands, and as the cylinders are continually drawing on this supply, it follows, as shown by tests conducted on a certain railway that a 2 in. pipe extending from the cab to the steam chests will not maintain a pressure to exceed 20 lb. gauge or 35-lb. absolute in the valve chambers on a locomotive of the above dimensions drifting at 30 m.p.h.

As the initial pressure in the cylinders cannot rise above steam chest pressure, the pressure at cut-off will not exceed 35 lb. gauge; therefore, if the lever is carried at 30% stroke, the steam must again, expand to three times its original volume before the piston begins its return stroke, and therefore its final pressure would not exceed 11.6 lb., providing no steam at all escaped at the moment the port opened to exhaust. As the pressure under such circumstances was slightly above atmospheric at the point of exhaust port opening, however, the excess pressure passed out through the nozzle until the point of equalization was reached; on the further movement of the piston, the steam continues to expand with a corresponding drop in pressure to a point well below atmosphere. As no more steam is being admitted, equalization can only take place through the admission of air, and as the only opening to atmospheric pressure is by way of the nozzle, equalization will take place through this source, the inrushing air carrying with it the front end gases with all their fouling constituents. A glance at the indicator cards showing a sustained steam chest pressure of 25 lb. will clearly verify this statement.

Here, then, apparently is where and when the trouble starts. As the cylinder pressure is less than atmosphere, air will flow in through the nozzle and the open exhaust port, until the pressures equalizes the combined steam, air and smoke box gases being then expelled by the piston on its return stroke. However, as the valve, valve chamber and ports are at their highest temperature, and exposed to the first inrush of the incoming gases, it follows that all carbonaceous matter in these gases, coming into contact with any of the above surfaces, will adhere, or, in other words, be baked on. This theory appears to satisfactorily account for the greater deposits obtaining in the exhaust cavity of the valve as well as the exhaust ports and passages. If the reader will superimpose the drifting cards taken with and without by-pass and relief valves it may help to clarify the proposition.

The above hypothesis, if based on correct premises, would hold good in so far as the drifting throttle is concerned, except that through use of the drifting throttle a higher initial pressure may be obtained, resulting in a correspondingly higher terminal pressure. The only trouble is, as previously stated, in the fallibility of the human agent, and also the fact that the total opening of a circular valve (throttle) is very indefinite where gauged by the position of the throttle lever.

Starting from correct premises we should arrive at correct conclusions. Therefore, if the correctness of the above theories is established, the remedy appears obvious, namely, prevent by automatic means as far as possible the intake of smoke box gases or neutralize their evil affects by diluting with steam. To accomplish this it would appear that we should turn to such devices as we already have at hand, viz.: the steam chest relief and the by-pass valves. While the former is not exactly necessary, yet its use under proper conditions presents no great difficulty and as a safety feature it has a distinct place. The use of the by-pass, however, is practically essential in that it will go far toward preventing the formation of a vacuum in the cylinders if properly maintained, and under right treatment its maintenance cost is negligible.

The last and most important requirement is the neutralization of such gases as might be drawn in through the nozzle through improper handling of the locomotive. This can only be accomplished by admission of a jet of steam to both the receiving and exhaust end of the valve so that when the conditions obtain as mentioned previously, the steam jet so admitted will mingle with the front end gases before they have an opportunity to deposit their constituent matter, and so neutralize their effects, it being universally conceded that carbonization of oil, or even the deposits of the so-called carbon, will not take place in the presence of steam, as, again quoting Dr. Conradson: "I will show you by another interesting demonstration that you might admit a certain amount of air with the steam without carbonizing oil"; or, conversely, a certain amount of steam with the air and produce like effect.

The foregoing was contributed as an individual paper at the recent railway mechanical convention at Atlantic City, N.J.

Results of the Public Ownership of Railways.

By Andrew T. Drummond, LL.D.

The recently issued report of railway statistics of Canada for the year ended June 30, 1918, throws further light on the problem of government and municipal ownership of railways—a problem in regard to which the people, especially of Ontario, have allowed themselves to be misled by sections of the press and by a coterie of individuals engaged in exploiting the idea of public ownership, and who studiously suppress all facts which would militate against the idea. As the results of the operation of each railway line are given in the report in voluminous detail, and are compiled from sworn statements furnished by the different railway companies, we have reliable sources from which to draw conclusions. These conclusions only add emphasis to a long series, extending over years, illustrating the inability of both governments and municipalities in Canada to create those conditions in construction and operation which would place their railways on a business basis and lead to the avoidance of deficits. Briefly, these 1918 statistics establish certain facts.

1. Government ownership, just as it has year after year in the past, resulted in large deficits on every railway operated, whether under provincial or Dominion auspices. The Dominion Government systems show an adverse balance for the year of nearly $6,000,000 in their operating cost, without considering interest on the bonds issued to pay for the capital cost of the roads. On the other hand, the Ontario Government's railway fell short by towards $500,000 of paying its full bond interest, whilst the New Brunswick Government's road failed to meet any interest whatever on its cost. And it has to be remembered that all government roads are entirely exempt from government imposts and municipal taxes which privately owned companies are compelled to pay.

2. Just as in previous years, every municipally owned railway, if it had charged against it its proper share of taxes, as would be done with the private roads, and had it paid the interest on its cost, not to speak of sinking funds and funds for renewals and betterments, would have shown a large deficit. Even the much-heralded London and Port Stanley Ry., operated under the auspices of the Hydro Electric Power Commission of Ontario, which is a mere arm of the Ontario Government, would have had its nominal surplus of $22,493 turned into a considerable deficit had fair taxes been charged and interest paid on its original cost, which appears to be represented in the statistics by $1,746,854 in a municipal subscription and loan from the City of London.

3. The same government statistics indicate that, whilst the Hydro Electric Power Commission of Ontario is supposed to furnish the municipalities and railways with power at cost, for light, railway and manufacturing purposes, the charges made by it, while they may represent cost to the commission, appear, in actual operating experience, to be higher than those charged to consumers by privately owned power companies. Thus, in the case of the Lake Erie and Northern, and Galt, Preston and Hespeler and the London and Port Stanley Rys., which derive their power from the commission, the cost of this power is represented by 7.2c, 6.72c and 4.44c, respectively, for each mile run by the cars of these companies as against the much lower cost of power per car mile of, for instance, the following interurban electric railways, which derive their power from other sources:

Lake Erie and Northern	[illegible]
Galt, Preston and Hespeler	[illegible]
London and Port Stanley	[illegible]

[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	2.9c
[illegible]	[illegible]

The Windsor, Essex and Lake Shore [illegible] is operated electrically with [illegible] power, and in 1917 was re[illegible] power cost by 4.6c a car [illegible] in 1918 a power cost of [illegible]

We may well ask ourselves, Why do these results happen? The work of a government, as well as that of a municipality, is a business, and why cannot both be run on business principles? The Hydro Electric Power Commission of Ontario has always, in matters of expenditure, been given a free hand by the Ontario Government, of which it is an executive arm. The principle it has adopted of supplying power to the municipalities and railways at cost is fair, provided that cost is reasonable compared with the charges of other organizations. No details of its expenditure have been furnished, at least to the public, and no judgment can thus be formed as to the wisdom or economy exercised. The special report of the auditor presented to the legislature deals only in generalities, and expresses no opinion as to the propriety or large amount of any individual expenditure, whilst the public appears to be content with the mechanical outcome of the undertaking, without troubling itself as to the largeness of the outlay in construction, or as to whether the rates charged are, in consequence, higher than they could have been. The huge estimates of cost—towards $100,000 a mile—furnished by the commission to Toronto and other municipalities three and a half years ago, when seeking the passage by the people of the Toronto-to-London railway bylaws—estimates enormously in excess of what a private corporation, in deference to its shareholders, bondholders and the public, could have entered on—suggest that the expenditure already incurred by the commission in the purchase of power and in construction, as well as for maintenance, operating and renewals, have been so large that the present charges to the municipalities and railways have necessarily had to be correspondingly large, even if they exceeded what dividend-paying private companies are able to afford.

The recent reduction made by the commission in its rates for power to a considerable number of municipalities was, suggestively, not so much an act of grace as from a desire to help the municipalities to avoid their deficits, which were becoming noticeable, and to prevent the otherwise raising by the municipalities of their rates to consumers and driving them into the hands of private companies which could often afford to give cheaper rates.

The private company, when engaging in construction, has to limit its expenditure to the capital it can raise under the share and bond issues authorized by its charter. The Hydro Electric Power Commission has no such check on its expenditure, and if its works should cost a few million dollars more than anticipated it can always fall back on its relationship to the Ontario Government and that government's guarantee of its securities. This is the invariable trouble in all government construction, and the experience is the same in the annual operating of government undertakings. The ambition of the managing officials of private enterprises to make them a success is wanting, and there is no fear of a receiver if hey are not. Instead there is the fallacious opinion, held by so many politicians, that government works should be run, not on business principles, or with a view to bare profit, but for the convenience of the people, and that the ever consequent deficits should be met out of the general revenues of the country, forgetful of the facts that deficits anywhere are, on general principles, very objectionable, and that in meeting them out of general revenue the people pay them all the same. Our Canadian statistics are not alone in the disclosures they make. The disastrous results of the operating of railways under the auspices of the governments of both the United States and Great Britain have opened the eyes of especially the people of the former country to the fallacy of public ownership.

The results are largely similar in the case of municipal railway undertakings. The municipal councils have no capacity for railway management, nor can they attract the best railway experts, and in planning, in construction and in subsequently operating a system of railways they do not follow the strict business principles which would actuate a private company, but seek rather to satisfy the whims of the people whose votes have elected the individual members of the councils to office.—Monetary Times.

Reasons for Allowing the Temiscouata Railway to Advance its Passenger Fares to Four Cents a Mile.

Commissioner S. J. McLean, of the Board of Railway Commissioners, gave the following judgment, July 25: "Application is made by the Temiscouata Ry. for permission to increase its standard 1st class passenger fares from 3.45c to 4c a mile. Prior to the increase in the 15% case, the standard fare was 3.3c. When the increase in the 15% was made, the increase was limited to 3.45c, being 15% on a 3c standard base. This allowed an increase of 3% over the standard fare hitherto charged. Had the full 15% on the 3.3c rate been allowed, it would have given a rate of 3.82c.

"Complaint was also made of the railway having taken out its 2nd class fares on its main line. This was effective June 16, 1919. No application for suspension was received.

"The railway was instructed to serve a copy of its application on the various municipalities affected. The following municipalities were served: Fraserville, Cabano, St. Louis du Ha Ha, Notre Dame du Lac, St. Modeste, Ste. Rose du Degele, [illegible], St. Hilaire, St. Honore, Clair and Ledges. Prior to the hearing, [illegible] had been received as follows: [illegible] stated it had no objection. [illegible] of Cabano, Notre Dame du Lac, Clair and Ledges objected [illegible] fare. The municipal[illegible] Ste. Rose du Degele filed an objection [illegible] 2nd class fares. A telegraphic protest [illegible] the 2nd class [illegible] the eve of the hearing [illegible] municipality of Notre [illegible]

"At the hearing, various protests regarding the service rendered were made. As explained prior to the hearing, as well as in the course of the hearing, this is a matter distinct from the one of rates and had been the subject of a special report by an inspector of the board. At the same time, an opportunity was given those present to file these protests. While notice in regard to these complaints had not been served on the railway, the matters were discussed and explained at the hearing.

"Complaint was made as to the express service between Edmundston and St. Hilaire, it being stated that a parcel was taken beyond to Clair. It was explained that this was a matter falling within the operations of the Dominion Express Co. which operates over the Temiscouata Ry. Complaint was made of an extra charge for tickets purchased on the train. It was stated by the railway that if the agent was not at the station there was no additional charge.

"Complaint was made as to the limitations in connection with passenger travel on freight train cabooses. It was explained that the release which has to be signed is a standard form approved by the board's orders, and a satisfactory explanation was given as to the limitation in case of women desiring to travel, it being at the same time stated that in cases of sickness rendering it urgent to travel on a caboose the matter could be arranged.

"Various complaints of freight delays were made. An intimation was given by Mr. Stewart, for the railway, that if such matters were taken up with him they would be at once gone into. He pointed out that the instances of this nature, cited at the hearing, as well as complaints as to the nature of the service performed by the agents at various points, had been brought to his attention at the hearing for the first time.

"The complaint as to the station at Ste. Rose du Degele being closed too early, which was referred to by the mayor of that municipality was explained by Mr. Stewart to be due to the closing at 5 o'clock contingent upon the adoption of the 8 hour day.

"The question of the lack of connection at Riviere du Loup with the Canadian National Rys. for travel from St. John, N.B., via the C.P.R. and Temiscouata was raised by Mr. Michaud, M.P. In reply, it was stated that to hold the train so as to make the through connection would necessitate the following additional items of expense: Overtime, $1,500 a year; overtime for locomotive men, amounting to $15 a day, $4,700 a year. As against this additional expense of $6,200, it was testified that in April, which might be taken as a characteristic month, the C.P.R. issued to the Temiscouata Ry. 20 tickets, from which the railway received $2.80 in each case. On a yearly basis, this would mean a revenue of $672, against an increased cost of $6,200.

"The physical operating conditions of the Temiscouata Ry. were considered by the Board in Eastern Townships Lumber Company vs. Temiscouata Ry. Co., 16 Canadian Railway cases. In the present application, the following detail was given by the railway:

"Grades and curvature—The portion of the line in the Province of Quebec lies through a rolling and difficult country; commencing at Riviere du Loup, the line ascends for 24 miles to the summit between the waters of the St. John and St. Lawrence Rivers; in this 24 miles an ascent of 1003.7 ft. is made, being an average grade of 42 ft. per mile; leaving the summit at mileage 24 a descent of 775.7 ft. is made in the next 19 miles, which is an average of over 40 ft. to the mile. Out of 113 miles, there are accordingly 43 miles of heavy grades, 2% being encountered in many places, and on this section there are few tangents, a succession of curves from 4 to 7½ degrees being the ruling alignment. Under these conditions, the line may be compared to the mountain divisions of the lines west of Calgary, the grades of the Temiscouata Ry., in fact being actually heavier than one of the mountain divisions.'

"In some of the submissions made, the opinion was expressed that the nature of the business done and the profit obtained were such as to obviate any necessity of increase. If these allegations are correct, the application would of necessity fail. They must be tested by the actual returns. To take a prewar year as a starting point, it appears that between 1913 and 1919, while gross revenue increased 41%, expenses increased 77%. In terms of absolute figures, the increase in gross in the period in question was $108,801, while the increase in expenses was $142,728. This is mirrored in the net revenue. While in 1919 the gross operating revenue was 41% greater than in 1913, the net operating revenue was barely 50% of what it was in the earlier year. The following summary will illustrate the steady upward movement of expense:

Year ended June 30	Revenue	Expenses	Net revenue	% of expenses to revenue
1913	$251,662.39	$184,422.15	$67,240.24	73.28%
1914	272,079.17	206,688.64	65,390.53	75.96%
1915	221,109.98	181,872.18	39,237.80	82.25%
1916	222,872.15	180,450.49	42,421.66	80.96%
1917	226,817.76	202,240.72	24,577.04	89.17%
1918	300,961.11	252,117.38	48,843.73	83.77%
1919	360,463.92	327,150.38	33,313.54	90.75%

"There is not at present available for the year ended June 30, 1919, the same full details as are available for 1918 in the railways' sworn returns to the Railways Department. It must be remembered that in 1918 the sharp increase in wages, later referred to, had not been manifested.

"The figures for 1918 show the following capital liabilities worked out on a mileage basis: Stock, $8,620 a mile; consolidated mortgage bonds and prior lien bonds, $31,281 a mile; total, $39,901 a mile. No dividends have ever been earned or paid on share capital; so for purposes of measuring the earnings power of the line and charges against such earning power, the item of $8,620 per mile may be omitted. To understand the situation as it exists today, there must be considered all the debt outstanding whether the railway has met charges thereon or not. There are outstanding $2,856,333.88 of 5% consolidated mortgage income bonds and $243,333.33 of 5% prior lien bonds. The legislation of 1914, 4 Ed. VII, chap. 129, which makes provision for the prior lien bonds and the consolidated mortgage bonds may be referred to. The situation in respect of these securities is as follows: Dividends on consolidated mortgage income bonds have been paid as follows: For years ended June 30, 1909, 1910, 1911, and 1912, 1%; for years ended June 30, 1913 and 1914, 1¼%; for years ended June 30, 1915, 1%; since 1915 nothing has been paid on these bonds. Interest on 5% prior lien bonds, amounting to $12,166.66 a year has been paid since these bonds were issued in 1906 and $9,733.33 has been appropriated annually from net revenue for the redemption of these bonds.

"In the absence of a return as to the taxes for 1919, the figure for 1918 may be taken, viz: $4,530.94. Omitting the amount set aside for redemption of the prior lien bonds, the following summary situation regarding the charges against net operating revenue for the year ended June 30, 1919, is available:

Consolidated mortgage bonds, $2,856,333.88 @ 5%	$132,816.69
Prior lien bonds, $243,333.33 @ 5%	12,166.66
Taxes	4,530.94
	$149,514.29
Net operating revenue	33,313.54
Deficit	$116,200.75

"In 1918, the net operating revenue per mile was $421. This is exclusive of deductions for interest on funded debt (only a small portion paid), hire of equipment and other deductions. For 1919, the figure is $295.

"The decision of the board already referred to points out that the bulk of the freight tonnage carried is low grade. For 1918, produce of forests, etc., represented 72.5%; agriculture, 3.2%; stone, sand, etc., 13.7%. The latter was a special movement in connection with building construction. For 1919, the freight revenue per mile of line was $2,423, while the passenger revenue was $479. For 1917, the latest year for which full returns for all the railways of Canada are available, the freight earnings per mile of line of all Canadian railways was $5,575, while the passenger earnings were $1,069. Comparisons were made at the hearing by Mr. Paradis, who appeared for the municipality of St. Mathias de Cabano, between the Temiscouata and the Intercolonial (Canadian Government Rys.), contending that the former was in a better position from the standpoint of cost than the latter. The volume of business must be looked to. For 1917, the freight and passenger earnings per mile of line on the Intercolonial were respectively $7,460 and $3,312.

"As illustrative of the increases in cost, reference may be made to certain items. In 1915, coal on the locomotives cost $4.60 a ton, against $7.85 in 1919. This means increase in cost on the quantity used of $32,500 alone. The figures for coal consumption in passenger business are not given. If the average coal consumption in Canada for 1917 on straight passenger locomotive runs is taken, and also one-half of the mixed locomotive mileage consumption (the allocation is arbitrary), this would mean an increase in cost for coal in passenger business of $14,552. The average number of ties used is 18,000 a year. The price has increased from 25c in 1915 to 65c in 1919, a total increase of $7,200. The increase in wage costs for the year ended June 30, 1919, as compared with the previous year, was approximately $80,000.

"The company makes no provision for depreciation. When it has anything over, after paying interest on prior lien bonds and sinking fund, appropriations are made from the balance for ballasting and other work. Since 1912, the company has thus provided and expended $60,000 on the line. The expenditure on rails is light. The rails in place are Cammel steel. As they are getting old, they will have to be replaced in five or six years. No fund is set aside for their replacement. The company has $43,000 of capital money unspent at present; that is practically its working capital. On ballasting, the company has since 1912 spent some $74,000. Of this, $30,000 was from revenue and $44,000 from capital. The Manager expects an appropriation of $12,000 for ballasting on the eastern end of the line this year.

"Attention was directed to conditions on the branch from Edmundston to Connors. For a considerable portion of this line there is railway parelleling competing for light traffic. In May, 1919, there were 1,234 passengers carried on this branch, with an average haul of 12.7 miles and an average fare of 44c—a total passenger earning of $542.73. The earnings for June were $512.24. The freight revenue on this branch has recently been increased by a movement of pulpwood from Baker Brook, which movement it is expected will be over by August. The passenger service is mixed. The company computes average earnings as $2,500 a month from the branch, while its train service cost, as figured for May, 1919, at $2.85 per train mile, would amount to $4,942.08 per month.

"The reason for the cancellation of the 2nd class fares is explained by the company as follows: 'At present this company's express train consists of one baggage and mail car, one 2nd and one 1st class car. As a rule, there are very few passengers in the 2nd class car, while very often the 1st class is crowded; this 1st class car contains a smoking compartment. Passenger business is showing some increase and more 1st class space is needed on the train. We, therefore, intend to take the smoking compartment out of our 1st class car and fix up our 2nd class car as a smoking car and by doing this our present equipment will be sufficient to look after our passenger business for some time to come. Our passenger motive power is very light and over 25 years old, and the addition of another 1st class car to our train would seriously affect its running time as we ascend over 1,000 ft. in the first 24 miles after leaving Riviere du Loup. I claim that according to the Railway Act that we are within our within our rights in cancelling our 2nd class rates. Our freight and passenger rates are not any higher than the rates in effect on other Canadian railways and we give as good a service as any other railway of our size in Canada and much better than the majority of the small railways give. Our passenger equipment is kept in good repair and is thoroughly cleaned daily. Owing to the large increases in wages and material, we are obliged to practice the strictest economy in order to even meet operating expenses, and we are not able at present to spend the money necessary to provide another 1st class, especially when we are having a 2nd class car practically empty, which can be utilized for smokers and thereby provide 1st class space for non-smokers.'

"Detailed information as to the real need for a 2nd class fare was not furnished by the applicants at the hearing. Dr. Dube, who represented the Parish of Notre Dame du Lac, raised the question as to whether there was not a charter obligation on the part of the Temiscouata Ry. to have 2nd class fares. This was answered in the negative. There does not appear to be any statutory obligation in the special act. No provision is contained in the Railway Act as to [illegible] for [illegible] class fares. Even if the board has discretion to direct the installation of 2nd class fares—a point it is not necessary to pass upon here—the figures produced in regard to cost conditions and revenues do not warrant the exercise of this discretion by way of directing their re-installation on the Temiscouata Ry.

"The average haul per passenger is approximately 28 miles. For the period [illegible] it averaged 27.99 miles. As already pointed out, it cost over 90c on the dollar to operate during the year ended June 30, 1919. In April, 1919, it cost [illegible] to earn $1. For the 4 months ended April 30, 1919, it cost 96.5c to earn $1, as compared with 85c for the same period in 1918. The train mile costs which were $2.65 in Nov., 1918, were $2.[illegible] in May, 1919. In April, 1919, the passenger service train revenue per train mile was $1.15, while the operating expenses per train mile were $2.92.

"Exact data permitting the differentiation of passenger train mile costs from freight train mile costs are not available. If cost is arbitrarily allocated in the proportion that passenger train mileage bears to freight train mileage, this would give a passenger train mile cost of $2.70. If an arbitrary reduction of one-third is made from this, because of the smaller coal consumption of passenger locomotives, and the lower cost of upkeep of passenger cars as compared with freight cars, it would still leave a figure of $1.80. The passenger car miles for the year ended June 30, 1919, were $204,358. Allocating the revenues earned in passenger train service on a passenger car mile basis, the result is as follows:

		Passenger car-mile earnings
Passenger earnings	$54,165.99	26.54c
Mails	5,991.68	2.80
Express	3,552.39	1.70
	$63,710.06	31.04c

"The C.P.R., with a large and diversified volume of traffic, has an opportunity to effect economies in detail operating costs which are not available to a road so situated as is the Temiscouata. In the evidence submitted by the C.P.R. in the matter of railway mailpay, it was computed that the passenger mile cost for the 6 months ended Feb. 1, 1919, was 33.10c. Without a detailed analysis, which has not been made, of the comparative conditions of the two railways it cannot be said that the evidence as submitted by the C.P.R. is necessarily conclusive in the case of the Temiscouata.

"On consideration of all material factors concerned, a case for increasing the 1st class standard fare to 4c a mile has been made out. This increased rate may become effective on compliance with the provisions of the Railway Act as to standard passenger fare publication.

"As indicated, various matters affecting service were referred to at the hearing. The board has taken cognizance of these, and if they are not satisfactorily adjusted, further investigation, if need be, will be made by the board's operating department."

Orders by Board of Railway Commissioners for Canada.

[illegible] with June, 1904, Canadian Railway and Marine World has published in each issue [illegible] of orders passed by the Board of Railway Commissioners, so that subscribers who have [illegible] the paper have a continuous record of the Board['s] proceedings. No other paper has done [illegible].

General order 268. July 25. Ordering subject to terms of judgment of July 17, that tariffs issued under authority to and in conformity therewith be published and filed at least five days [illegible] date on which they are to become [illegible] that express freight collection [illegible] plan outlined be given effect to.

General order 269. Aug. 7.—Amending regulations regarding rules and specifications so that [illegible] pay of inspectors of crossings be increased [illegible] day from $3 as provided by general order [illegible].

General order 270. Aug. 7. Ordering that [illegible] shall be carried in lower sockets under [illegible] when passenger cars and cabooses [illegible] equipped with marker sockets in the [illegible] position.

[illegible] July 23.—Authorizing C.P.R. to build spur for Summit Sand and Gravel Co., Man[illegible].

[illegible] July 23.—Authorizing C.P.R. to remove [illegible] at Thorncliffe, Ont.

[illegible] July 24.—Authorizing C.P.R. [illegible] agents from Gunton, Komarno and Methven stations, Man.

[illegible] July [illegible].—Authorizing Grand Trunk [illegible] across highways on its Mel[illegible] in Yorkton and Assiniboia [illegible] Sask.

[illegible] July [illegible].—Approving specifications of [illegible] in G.T.R. bridge over Niagara River at Niagara Falls, Ont.

[illegible] July 24.—Authorizing Canadian National [illegible] highway between Sec. 14 and [illegible] meridian.

[illegible] July 21.—Suspending, until further [illegible] 17,014, re crossing by Canadian Northern [illegible] and 61, [illegible], Que.

[illegible] July [illegible].—Approving clearances [illegible] to be erected over Grand Trunk Pacific Ry. for Dinant Coal Co. and Spicer [illegible] Saskatoon, Sask.

[illegible] July 25.—Authorizing Canadian National Rys. to cross certain highways on [illegible]t-Humboldt Branch, Sask.

[illegible] July 24.—Approving Michigan Central [illegible] of Laidlaw drain in Malahide Tp., Ont.

[illegible] July 23.—Authorizing C.P.R. to build [illegible] Milling & Transfer Co., St. [illegible]

[illegible] July 17.—Ordering C.P.R. to [illegible] Frederick and Princess Sts., [illegible] watchmen.

[illegible] Authorizing Hydro Electric [illegible] of Ontario and Niagara, St. [illegible] Ry. to operate trains over crossing at Lots 77 and 90, Stamford Tp., [illegible]

[illegible] Dismissing Quebec, Montreal and Southern Ry.'s application to re[illegible] stations at St. Roch, Bac[illegible] Ste. Angele and [illegible] it to remove them from stations at Mount Johnson, St. Barnabe [illegible], St. Louis and St. Damasse, Que.

28,594. July 26.—Approving Midland Ry. of Manitoba (G.N.R.) standard freight tariff. C.R.C. 80.

28,595. July 25.—Authorizing City of Toronto to carry 16 in. water main under bridge on Dundas St., over Don River, C.P.R., G.T.R. and C.N.R.

28,596. July 25—Authorizing CP.R. to replace A-2 standard station building at Axford, Sask., with a portable building and box car body.

28,597. July 26.—Authorizing Canadian National Rys. to rebuild bridge over South Nation River, at mileage 78.26 from Montreal.

28,598. July 22.—Ordering C.P.R. to provide suitable accommodation for fruit shipments from Hamilton, Ont., to points in Maritime Prov-

28,599, 28,600. July 25.—Authorizing Canadian National Rys. to rebuild bridges over Chenail Ecart Creek, Hawkesbury, Ont., and over side road between Lots 15 and 16, Cons. 3 and 4, Whitchurch Tp., Ont.

28,601. July 28.—Ordering Kettle Valley Ry. to erect fences on south side of its track from mileage 56.3 to Osprey Lake, mileage 38.

28,602. July 28.—Authorizing Brantford Municipal Ry. Commission et al to cross with second tracks the Brantford St. Ry., in Brantford, Ont.

28,603. July 28.—Authorizing G.T.R. to rebuild bridge 61, across small creek on line of Bethune St., Peterborough, Ont.

28,604. July 28.—Authorizing Canadian National Rys. to rebuild its tracks across road allowance between Secs. 8 and 17, Tp. 17; Range, 8; west 1th meridian.

28,605. July 26.—Authorizing Canadian National Rys. to rebuild bridge over Mill Creek, Longueil Tp., at mileage 59.25 from Montreal.

28,606. July 26.—Authorizing Saskatchewan Highways Department to carry highway over Canadian National Rys. in s.w. ¼ Sec. 18, Tp. 15; Range 12, west 2nd meridian.

28,607. July 28.—Authorizing C.P.R. to build spur for Imperial Oil Ltd., Brandon, Man.

28,608. July 28.—Authorizing City of St. Boniface, Man., to alter switch and track for N. M. Patterson & Co.

28,609. July 29.—Relieving Canadian National Rys. from providing further protection at crossing, 3 miles west of Port Hope, Ont.

28,610. July 30.—Approving C.P.R. clearances at ice house at Trenton, Ont.

28,611. July 29.—Ordering Canadian National Rys. to build third class station and extension to passing track at Elie, Man.

28,612. July 26.—Approving C.P.R. clearance at ice house at Smiths Falls, Ont.

28,613. July 30.—Ordering Great Northern Ry. to build crib, from bridge 539 on west side of stream, north, approximately 400 ft. between Princeton and Brookmere, B.C.

28,614. July 30. Authorizing C.P.R. to build spur for Western Supply & Equipment Co., Lethbridge, Alta.

28,615. July 31.—Relieving Maine Central Rd. from providing further protection at crossing in Hereford Tp., Que.

28,616. July 31.—Authorizing C.P.R. to build crossing over its track at Caithness, B.C.

28,617. June 7. Ordering Canadian National Rys. to build freight house near main thoroughfare, Melfort, Sask., and to provide team track; stock pens to be removed from leg and placed farther east, Y to lead off St. Brieux Subdivision and to be removed altogether from elevator trackage; Imperial Oil Co.'s warehouse to be removed from elevator track and placed on same spur as Carrot River Valley Flour Mills' elevator.

28,618. Aug. 1.—Fixing basis for Joint Class Freight Tariffs to apply on Interline traffic between the G.T.R., C.P.R., and C.N.R., together with points of interchange.

28,619. July 31. Approving supplement 13 to Express Classification 3.

28,620. July 31.—Authorizing Temiscouata Ry. to file tariffs increasing first class passenger fare to 4c a mile.

28,621. Aug. 1.—Dismissing complaint of Kilgour Mfg. Co., Hamilton, Ont., against a belated demurrage bill on 101 cars of lumber.

28,622. Aug. 1.—Dismissing application of Dominion Millers' Association and others for revision of rule 9 or general order 201, Aug. 1, 1917, and restoration of demurrage tolls in effect prior to Aug. 20, 1917.

28,623. Aug. 1.—Ordering C.P.R. Telegraph and Great North Western Telegraph Co. to place lines and wires underground in part of Montreal, between Craig, Commissioners, St. Lawrence and McGill Sts., inclusive, and on Victoria Square.

28,624. Aug. 5.—Relieving C.P.R. from providing further protection at crossing of Cremazie Road, near Jacques Cartier station, Que.

28,625. Aug. 1.—Approving Special Tariff of Terminal and Switching Charges of Express Traffic Association of Canada, C.R.C., 3-T-13.

28,626. Aug. 6.—Extending to Oct. 6, time within which C.P.R. shall install electric bell at crossing of Anderson St., Grenfell, Sask.

28,627. Aug. 11.—Approving Express classification for Canada, no. 4.

28,628. Aug. 9.—Dismissing application of municipality of Waldeck, no. 166, Sask., for order directing C.P.R. to build overhead bridge across its tracks between Secs. 32 and 33; Tp. 16; Range 11; west 3rd meridian.

28,629. Aug. 6.—Extending to Aug. 31 time within which G.T.R. shall instal better trackage facilities for repair work in its Chatham yards as required by order 27,940, Dec. 16,1918.

28,630. Aug. 1.—Dismissing C.P.R. application for authority to continue in effect allowance made to Canadian Sugar Refining Co., of 1¼c a 100 lb. on account of cartage at Cote St., Paul, Montreal.

28,631. Aug. 1.—Ordering that cost of protection at crossing of G.T.R. Union Stock Yards branch and Toronto Suburban Ry. at Keele St., Toronto be paid three-fourths by G.T.R. and balance by City of Toronto.

28,632. Aug. 6.—Authorizing British Columbia Public Works Department to make highway crossing over Grand Trunk Pacific Ry. at mileage 1136.25.

28,633. Aug. 8.—Approving location and details of proposed G.T.R. station at Yonge Mills near Brockville, Ont.

28,634. Aug. 11.—Authorizing Canadian National Rys. to extend siding across Cameron St., Cumberland, Ont.

28,635. Aug. 1.—Dismissing complaint of Meradvance charge of 2c per 100 lb. on grain from chants Grain Co., Ltd., Fort William, Ont., against Fort William by reason of C.P.R. embargoes which prevented shipping prior to Mar. 15, when advanced rates took effect.

28,636. Aug. 8.—Ordering C.P.R. to stop no. 3 westbound, and no. 4 eastbound passenger trains daily at Herbert, Sask.

28,637. Aug. 9.—Amending order 28,602, July 28, re crossing of Brantford Municipal Ry. by Brantford & Hamilton Electric Ry.

Lining and Loading Cars of Potatoes for Protection from Cold.

An investigation, to determine the best method of lining and loading cars of potatoes, so as to protect them from the cold, has been conducted by the United States Department of Agriculture, and the recommendations made are embodied in the Department's Market Document no. 17, which covers the subject very fully, with numerous detail diagrams of the interior rearrangement of cars. The proper arrangement of ordinary box cars is the principal subject dealt with.

It is stated that approximately 75% of all cars prepared to protect potato shipments from cold during the winter, are either lined or loaded incorrectly. Protection from cold depends largely upon a constant current of warm air from the heater directly to the ceiling, spreading between the ceiling and top potatoes, thence through openings at the opposite end of the load down to the space beneath the false floor to the heater again. The basic principle of the form of protection outlined, lies in the fact that warm air is lighter than cold, and that unless there is a complete circulation channel around the load, the warm air will form a strata at the top of the car, and remain there, overheating at that point, and leaving the lower part of the car underheated.

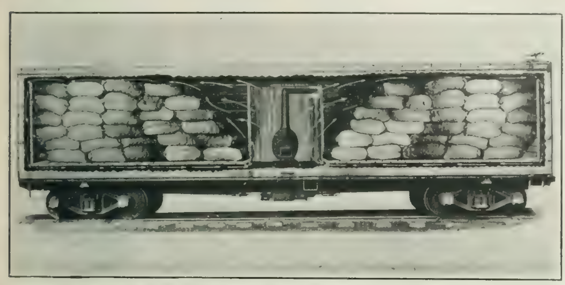


Fig. 1. Warm air circulation in correctly lined and loaded car of potatoes.

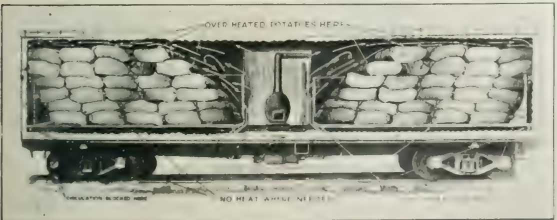

Fig. 2. Warm air circulation in an incorrectly lined and loaded car of potatoes. The warm air from the stove cannot reach space beneath the false floor, where it is needed.

For box cars, the estimated amount of material required for lining an 8 x 8½ x 36 ft. car, with 5 ft. doors, is as follows:

13 pieces, 2 x 4 in. x 14 ft. long.
8 pieces, 2 x 6 in. x 16 ft. long.
1,300 sq. ft. of 1 in. lumber, 16 ft. long.
2,250 sq. ft. of building paper.

In lining the car, the first thing is to cover all broken places with paper or board, and then line the whole inside of the car with paper, lapping the edges at least 4 in., and lathing all wall and ceiling seams, particular care being exercised to make the roof as heat proof as possible.

Three rows, each of three 2 x 4 x 6 in. blocks, are spiked to the end walls, on which are spiked vertically, three 2 x 4 in. x 7 ft. pieces, which form the end studding for the false end wall boards, providing a 6 in. end air space. The side walls are treated the same way, with 10 blocks on each side between the door and end wall, but the upper blocks have the 4 x 6 in. surface to the car wall, while the lower ones have the 2 x 6 in. surface to the wall. To these are spiked the studding, which has a slight batter, owing to the lower blocks protruding further.

On the floor, in each end, are laid longitudinally, four 2 x 6 in. x 15½ ft. stringers, which provide for a 6 in. space between the car and false floors. The inner ends of these stringers are blocked.

End wall boards are next nailed to the end studding, and cross floor boards the full length of the stringers. This is followed by longitudinal stripping on the studding for the side walls. The walls and floor are then papered, using continuous strips from the top of the false wall on one side, down and across the floor, and up the other side, securing the upper part of the wall papering by lathing the seams.

Longitudinal floor board, and wall board part way up the side, are next laid. These form a false wall and flooring through the full end interior of the car to the door edge. These inner ends are next boarded up, with a vertical studding, braced to the opposite studding by longitudinal pieces top and bottom, to form secure bulkheads for the potato load.

The false wall for one end of the car, prior to the application of the bulkhead, is shown in fig. 2, in which the way the various layers and parts are built up, may be noted. The stove is placed in the center between the bulkheads.

Produce, and other insulated cars, are recommended to be treated in much the same way. The floor, and walls to a height of 2 ft., should be papered, and an end wall, and single board flooring, applied in the manner already described, except that as the false side wall is omitted, the cross boards of the false flooring are cut short, so that heat circulation may be provided between the load of potatoes and the walls. Refrigerator cars can be treated in much the same way.

By this process of false flooring and false walls, and with the load of potatoes not built up within 8 in. from the ceiling, a continuous circulation of warm air from the stove will ascend, and move towards both ends under the roof, down the ends, and back to the center under the false flooring.

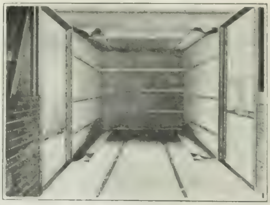

Fig. 3. Properly papered box car for potatoes. The ceiling, floor and walls of box cars should be papered before installing the false floor and walls.

Crown Colonies' Railways—Lieut.-Col. L. C. Amery, Under Secretary for the Colonies, is reported to have said in the British House of Commons recently, in the discussion of the colonial estimates, that railways in the crown colonies must be multiplied. In the overseas dominions there are 13 miles of railways per 1,000 square miles; in the crown colonies only 4.8 miles. Hence there is a prima facie case for a very great programme of railway construction. He is of the opinion that every sovereign spent in developing the colonies would brig manifold return in a very short time.

Passenger traffic on the Quebec and Saguenay Ry., between Quebec and Murray Bay, using the Quebec Ry., Light and Power Co.'s line to St. Jochim, is reported to have developed considerably since daily train service was put on in June. The trains are being operated for the Dominion Government by the contractors.

The Prince of Wales' Canadian Tour by Rail and Water.

The principal portion of the Canadian tour which the Prince of Wales is now making is over the Canadian Pacific Ry. and its British Columbia Coast and Lake and River Steamship Lines, but parts of it will be over the following railways: Algoma Central & Hudson Bay, Canadian National, Esquimalt & Nanaimo, Grand Trunk Grand Trunk Pacific, Kettle Valley, Timiskaming & Northern Ontario.

The Prince's first railway experience in Canada was at Quebec on Aug. 22, when, after motoring from the city to the north end of the Quebec Bridge, he was taken over it and back again on a special Canadian National Rys. train, to which were attached fitted up flat cars for observation purposes. Among those present were: Lieut.-Col. C. N. Monsarrat, Chairman of the Bridge Commission; Ralph Modjeska, one of the members of the commission; Phelps Johnson, President, G. H. Duggan, Chief Engineer, and G. F. Porter, of the St. Lawrence Bridge Co., representing the builders.

The special train, which will be used throughout the railway portion of the Prince's tour, has been provided by the C.P.R. In addition to the locomotive, which will be provided by the different lines over which the party travels, the all steel train consists of two baggage cars, tourist car Chinook, sleeping car Carnarvon, dining car Canada, sleeping car Chester, compartment car Empire, private car Cromarty, owned by J. K. L. Ross, one of the C.P.R. directors, and Lord Shaughnessy's car Killarney.

Several of the cars, notably the Chinook, the compartment, tourist and baggage cars, have been completed for the occasion, but are specially interesting as they are the first of new series that have been adopted for the entire C.P.R. system, and are equipped with everything that is modern in railway car building. After this journey they will be drafted into the regular service. The Prince of Wales will live in the train for about [illegible] months, making the Killarney his headquarters throughout the trip. The car is accordingly equipped with modern devices and conveniences, thus enabling the Prince and his suite to enjoy as nearly as possible the comforts of a stationary dwelling. Nothing has been omitted, from the thermostat set at the heater to regulate the temperature of the stateroom, which is a standard appliance in C.P.R. equipment, to the telephone that brings the Prince in touch with all parts of the train.

In order to distinguish it from all other cars on the line, the Killarney bears the Prince's feathers and motto. The car is entered from the rear by an observation platform large enough to accommodate several arm chairs. The first compartment is also devoted to observation, a compact little room fitted with a lounge, easy chairs, a table and electric fans. On rainy days or in cold weather the scenery may be viewed more pleasantly through the large windows on either side, than from the platform outside. A speed recorder adds interest to the journey and an air pressure gauge indicates the application of the brakes by the locomotive man.

Next to the observation compartment is a section devoted to the Prince's secretary, after which is the bedroom to be occupied by the Prince. A rich simplicity characterizes this compartment, which is finished in white mahogany inlaid with a fine line of ebony outlining the panels. Built into the walls across the end is the bedstead, finished with little ornamentation in the white mahogany of the room. Over the bed may be pulled a roller curtain to protect the occupant from the dust and draughts of the ventilators in the ceiling. The door is a full length mirror and an oval glass is set above the dressing table. The fittings of the dressing table and toilet are brass in harmony with the woodwork and a large receptacle is screwed into the wall to hold a thermos bottle. Next to the Prince's bedroom is a second stateroom with two berths similar to the grst assigned to the secretary. Then in a niche in the wall is a shower bath of white tiles and porcelain.

The central portion of the car is devoted to the dining room which is tastefully decorated in royal blue. Beneath the little extension table is a heavy blue pile carpet with six chairs upholstered in tapestry to match. The curtains and even the drawers of the sideboard carry out the color scheme, for the silver table service reposes between divisions of blue tapestry velvet. Between the sideboard and the window is a secretaire with pens and paper. Above it is a miniature bookcase. With steel walls finished in imitation mahogany, a kitchenette, pantry, icebox, service counter, charcoal heater and chef's bedroom, have been fitted into limited space beyond the dining room.

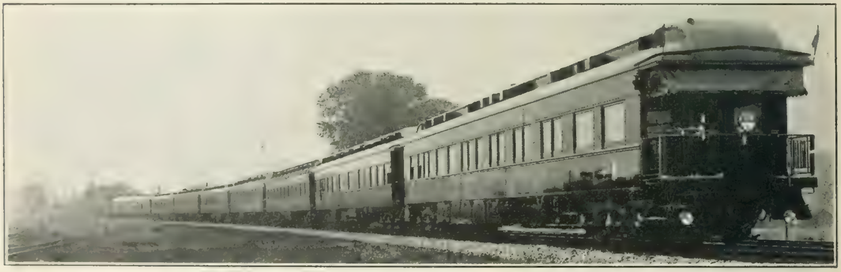
The compartment car Empire is reminiscent of an English coach, for the seats are partitioned off and joined only by the narrow corridor that runs down the length of the car. At each end is a commodious drawing doom, with a sofa, in addition to the upper and lower berths. The color scheme of this car is grey and green, the grey of the marbleized wall finish contrasting happily with the green of the heavy friezette plush upholstery. In each room is to be found an individual heating control.

The members of the Prince's immediate suite occupy the Killarney and dine with him in the dining room laid for six. Six more are accommodated in the Cromarty. The dining car is a pleasant place where tables for four and for two are placed at the windows down each side of the car. The rich brown tones of the Cuban mahogany walls and ceilings combined with the green hangings and accentuated with inlaid lines of satinwood harmonize beautifully. This car will accommodate 30 persons at a sitting.

The sleeping cars present only one feature of exceptional interest to the traveling public well acquainted with the details of the C.P.R. sleeping cars. Tucked away in a corner is a dispensary as shipshape as the doctor's office on a ship. A special chair has been arranged for the patient if such there be, and the showpiece of the little office is a patent light fixture with which the physician can examine the throat.

In one of the baggage cars the darkcloset and workroom of the official photographer have been arranged. There are shower baths and sleeping compartments in the baggage cars too, and cold storage cupboards were the chef keeps his supplies. An auxiliary generator is also installed here, to provide electric light throughout the train if it is stationary for any length of time.

The locomotive in addition to the regular signal flags has two staffs each bearing the royal standard, with the Prince's insignia. From the royal standards in front of the locomotive, to the electric searchlight at the rear end of the car Killarney, the train is 780 ft. long, and its total weight without passengers is figured at about 1,000,000 lb. The locomotive and 9 cars, with interior decor-



Canadian Pacific Railway Train conveying the Prince of Wales through Canada.

In addition to the locomotive, the train consists of two steel baggage cars, tourist car Chinook, two sleeping cars, Carnarvon and Chester; dining car Canada, compartment car Empire, private car Cromarty, owned by J. K. L. Ross, one of the C.P.R. directors; and Lord Shaughnessy's official car, Killarney, at the rear.

ations and furnishings, are said to have cost over $750,000.

E. W. Beatty, President, C.P.R., is represented throughout the trip by A. B. Calder, Assistant General Passenger Agent, Montreal. The Canadian National Railways is to be represented, during the portion of the trip over its lines, by A. J. Hills, Assistant to the President, and the Grand Trunk Ry. is to be similarly represented by H. R. Charlton, General Advertising Agent. R. G. Chamberlin, Chief of Investigation Department, C.P.R., Montreal, has been appointed by the Dominion Government as Commissioner of Police of Canada, and as such is in charge of police arrangements during the Prince's entire Canadian tour.

Dining Room, Private Car Killarney.

The schedule provided for the C.P.R. royal train to leave Quebec, Aug. 24 at 2 p.m., arrive at St. Martins Jct. at 6.30 p.m., leave there at 8 p.m., and reach the Government House private siding at North Toronto, Aug. 25 at 9 a.m. But the Prince decided to motor from Quebec to Three Rivers, with some of his staff, arrived there at 6.25 p.m. and boarded the train which was waiting there for him, reaching Toronto, Aug. 25, at 10.10 a.m. After spending three days in Toronto the Prince left again from the private siding, North Toronto, Aug. 27 at 11.30 p.m., arriving at Ottawa Central Station on the morning of Aug. 28.

The itinerary for the balance of the trip is as follows, subject to alteration:—

Canadian Pacific Ry.—Sept. 1. Leave Ottawa Central Station 11.30 p.m. Sept. 2, arrive North Bay, 9.55 a.m.

Timiskaming & Northern Ontario Ry. Sept. 2 . Leave North Bay 10.30 a.m., arrive Cobalt 2.30 p.m., leave 5.30 p.m.; ardrive Timmins, 10 p.m. Sept. 3. Leave Timmins 1.45 p.m., arrive North Bay 10.20 p.m.

Canadian Pacific Ry.—Sept. 3. Leave North Bay 11.30 p.m. Sept. 4. Arrive Sault Ste. Marie, 10 a.m.

Algoma Central & Hudson Bay Ry.—Sept. 4. Leave Sault Ste. Marie 1.30 p.m., arrive Oba, 10 p.m.

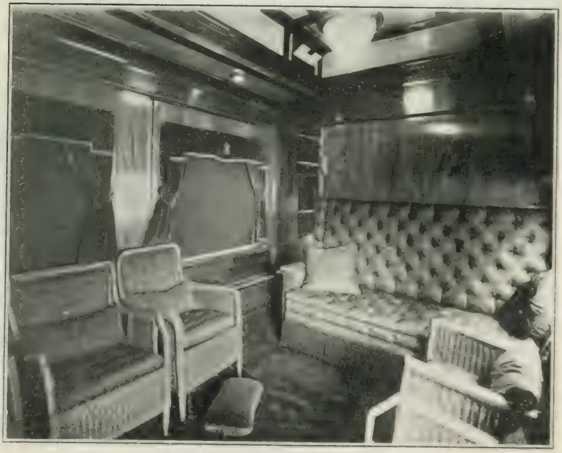
Canadian National Rys.—Sept. 4. Leave Oba, 10.30 p.m. Sept. 5. Arrive Orient Bay, 7 a.m. There the Prince and party will leave the train to spend three days fishing the Nipigon River, and under canvas. The arrangements for this are being made by the Canadian National Rys., co-operating with McKirdy & Sons, outfitters, etc. The train will be sent on from Orient Bay to Nipigon, and will leave there with the Prince and party Sept. 8 at 11.50 a.m., reaching Port Arthur 3.15 p.m.

Canadian Pacific Ry.—Sept. 8. Leave Port Arthur 4 p.m., arrive Fort William 4.15 p.m., eastern time, leave 7 p.m., central time. Sept. 9. Arrive Winnipeg 11 a.m. Sept. 10. Leave Winnipeg 7 p.m. Sept. 11. Arrive Saskatoon, 11 noon, leave 6 p.m. Sept. 12. Arrive Edmonton 10 a.m. Sept. 13. Leave Edmonton, 12.30 a.m. Sept. 13. Arrive Calgary, 8.30 a.m. Sept. 15. Leave Calgary 3.45 p.m., arrive High River 5 p.m. Sept. 16. Leave High River 7.50 p.m., arrive Calgary 9 p.m. Sept. 17. Leave Calgary 6.15 a.m. or earlier. Arrive Banff 10 a.m., leave 6 p.m., arrive Lake Louise, 7.20 p.m. The party will spend the night at Chateau Lake Louise, 3½ miles from the station. Sept. 18. Leave Lake Louise 12 noon, arrive Field 1.50 p.m. The Prince will go independently to Field, and will visit Yoho Valley, Takakaw Falls and Emerald Lake. Sept. 20. Leave Field 8 a.m., arrive Revelstoke 1.50 p.m., leave 5.30 p.m., arrive Sicamous 8 p.m. Sept. 21. Leave Sicamous 2 p.m., arrive Kamloops 5.10 p.m., leave 6.10 p.m. Sept. 22. Arrive Vancouver, 10 a.m. Sept. 23. Leave Vancouver by C.P.R. s.s. Princess Alice, 1.30 p.m., arrive Victoria 6.15 p.m.

Esquimalt & Nanaimo Ry. — Leave Victoria and arrive Qualicum at times to be arranged. Short stops will be made at Duncans, Ladysmith and Nanaimo. The Prince will leave for an island trip, independent of the train, returning to Victoria, Sept. 28.

Canadian Pacific Ry.—Sept. 28. Leave Victoria by C.P.R. s.s. Princess Alice 12 midnight. Sept. 29. Arrive Vancouver, 7.30 a.m. The Prince will proceed to New Westminster by motor and open the exhibition. The train will be sent to New Westminster to meet him.

C.P.R. and Kettle Valley Ry.—Sept. 29. Leave New Westminster 1.30 p.m. Sept. 30. Arrive Penticton 1 a.m. The route from Hope to Penticton is via the Kettle Valley Ry., through the Hope Mountains. From Penticton a steamboat and motor trip will be made, visiting Kelowna and Vernon. The C.P.R. s.s. Sicamous will be used on Okanagan Lake. Sept. 30. Leave Penticton [illegible] p.m. Oct. 1. Arrive Nelson, 10 a.m. The train will be sent by car ferry and rail from Nelson to Kootenay Landing and



Sitting and Observation Room, Private Car Killarney.

the party will leave Nelson by C.P.R. [illegible] kin for Kootenay Landing, calling at Balfour en route and arriving at Kootenay Landing at 8.30 a.m.

Canadian Pacific Ry.—Oct. 1. Leave Kootenay Landing 9 p.m. Oct. 2. Arrive [illegible] 10 a.m., leave 10.30 a.m.; arrive Lethbridge 1 p.m., leave 5 p.m. Oct. [illegible] Arrive Medicine Hat 9 a.m., leave 10.30 [illegible] Arrive Maple Creek 1.30 p.m., leave 2 p.m.; arrive Swift Current 5 p.m., leave 5.30 p.m. Oct 4. Arrive Moose Jaw, 10 a.m., leave 12.30 noon; arrive Regina 2.30 p.m. Train to be placed on Grand Trunk Pacific Ry. siding near Government House.

Bedroom, Private Car Killarney.

Grand Trunk Pacific Ry—Oct. 6. Leave Regina 3 p.m., arrive Edenwald 4.30 p.m., where there will be a three days' duck shooting expedition. Oct. 9. Leave Edenwald at time to be arranged, arrive Qu'Appelle 11.50 p.m.

Canadian Pacific Ry.—Oct. 10. Leave Qu'Appelle 1 a.m., arrive Brandon 10 a.m., leave 12 noon; arrive Portage La Prairie 2 p.m., leave 2.30 p.m.; arrive Winnipeg 4.30 p.m. Oct. 11. Leave Winnipeg 2 am., arrive Fort William, 2.30 p.m., central time, leave 3.50 p.m., eastern time. Oct. 12. Arrive Biscotasing 10 a.m. A stop of 4 days will be made at Biscotasing to visit Northern Ontario woods, lakes and rivers. Oct. 17. Leave Biscotasing 9 p.m. Oct. 18. Arrive West Toronto 8.25 a.m., arrive Hamilton 10 a.m.

Grand Trunk Ry.—Oct. 18. Leave Hamilton 9.30 p.m., arrive Niagara Falls, 10.30 p.m. Oct. 20. Leave Niagara Falls 12 noon, arrive Brantford 2.30 p.m., leave 6 p.m. Oct. 21. Arrive Guelph 10 a.m., leave 3 p.m., arrive Stratford 5 p.m., leave 6 p.m. Oct. 22. Arrive Woodstock 11 a.m., leave 12 noon; arrive Chatham 2 p.m., leave 3 p.m.; ar- [illegible] p.m., arrive Windsor 6.30 p.m. rive London 4.30 p.m. Oct. 23. Leave

Canadian Pacific Ry.—Oct. 24. Leave Windsor 12 noon, arrive London, 3.20 p.m.; arrive North Toronto, 8.20 p.m.

Grand Trunk Ry.—Oct. 25. Leave Toronto at time to be arranged, arrive Kingston at 10 a.m. Oct. 27. Leave Kingston, arrive and leave Brockville, and arrive Vaudreuil, at times to be arranged.

Canadian Pacific Ry.—Oct. 27. Leave Vaudreuil at time to be arranged, arrive at Windsor St. Station, Montreal, 12.30 p.m. Oct. 31. Leave Windsor St. Station, Montreal, 1.30 p.m., arrive and leave St. Annes, and arrive Ottawa, at times to be arranged.

Private Car used by the Prince of Wales, afterwards King Edward VII, during his Canadian Tour in 1860.

A Winnipeg press report states that it is expected that the destruction of the trans-shipping elevator at Port Colborne, Ont., will have a serious effect on freight rates, and will add to the cost of transporting the western grain crop to the east.

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1919, compared with those of 1918:

	Gross	Expenses	Net	Increases or decreases
Jan.	$13,028,328	$11,474,816	$1,553,512	$ 385,519
Feb.	11,064,167	10,083,051	981,116	390,218

June	6009,585	6,868,864
	$40,009,585	$35,444,230

Approximate earnings for July, $7,657,402, and for 2 weeks ended Aug. 14, $3,702,367, against $5,733,299 and $3,219,358, respectively for same periods, 1918.

Canadian National Railways Construction, Betterments, Etc.

Ties for Eastern Lines. Tenders were received to Aug. 25, for 1,400,000 ties to be made and delivered by Oct. 1, 1920, as follows: on National Transcontinental Ry., district 5, south of St. Lawrence River; and 1,000,000 on the Halifax Division Intercolonial Ry. Tenders were also received to Aug. 25 for 1,375,000 ties, to be made and delivered by Oct. 1, 1920, as follows: 1,000,000 on lines between Port Arthur and Pembroke, Ont.; 50,000 on lines in Central Ontario; 25,000 on lines between Ottawa and Quebec; 200,000 on lines between O'Brien and Quebec; and 100,000 on Lake St. John District lines.

Stores Building, Sydney. Tenders are under consideration for the erection of a store building at Sydney, N. S.

Halifax Ocean Terminals. Tenders were received to Aug. 23 for the construction of transit sheds 21 and 22, at Halifax, N. S., and to Aug. 27, for the construction of docks, marginal and other paved and macadamized roads and streets at Halifax Ocean Terminals.

Truro-Belmont Second Track—Work is reported to have been started by the Bate, McMahon Co., on their contract for building a second track between Truro and Belmont, N.S., 7.57 miles. A press report stated recently that the grading would be started at Onslow and be gone on with in either direction. The work includes the erection of a new bridge over the Salmon River, some smaller bridges and a subway near the Graham and Mackenzie mill.

Fredericton Station—A press report states that negotiations are in progress for the purchase of a site on Regent St., Fredericton, N.B., on which to erect a union station, and that plans for the building will be prepared at an early date.

Moncton Express Building—Tenders were received to Aug. 25 for the erection of a frame building, 110 ft. long at Moncton, N.B., for express business.

Moncton Freight Shed, Etc. We are officially advised that the freight sheds to be built at Moncton, N. B., will be a one story building 400 x 40 ft., brick walls, steel beams, flat roof, and provided with continuous doors along the track side. A two-story and basement brick office building 41 x 41 ft. will be built adjoining. The contract for these buildings has been let to Engineers and Contractors, Ltd., St. John, N. B. The buildings are to be gone on with at once, and it is expected they will be completed by Nov. 1.

Edmundston Car Shop. Tenders are under consideration for the erection of a car shop at Edmundston, N. B.

St. Malo Shops—The fire protection plant at the Transcontinental Ry. shops at St. Malo, Quebec, is reported to have been completed and to have been approved by Quebec fire department officers.

The machinery for the shops continues to arrive, and it was reported recently that it was expected to have everything in place for the full operation of the plant by the end of the year.

Grenville Subdivision Tenders are under consideration for the construction of concrete culvert, abutments and piers between L'Orignal and Ottawa, on the Grenville subdivision, covering about 50 miles of line.

Ties for Western Lines. Tenders were received to Aug. 25 for the supply of 3,525,000 ties to be made and delivered Oct. 1, 1920, as follows: 600,000 on the line between Port Arthur and Rainy River, Ont.; 50,000 on Duluth, Winnipeg and Pacific Ry. in Minnesota; 25,000 on Canadian National Ry. lines in Minnesota; 50,000 on C. N. R. lines in Manitoba; 1,500,000 on C.N.R. lines between Winnipeg, Man., and O'Brien, Que.; 300,000 on C. N. Ry. lines in Alberta, and 1,000,000 on C.N.R. lines in British Columbia.

Port Arthur Elevator Construction—Work is reported to have been started on the addition to the Canadian Northern Ry. elevator at Port Arthur, Ont., by the contractors, the Barnett McQueen Co. The work is expected to be completed for the handling of the 1920 crop.

Fort William, Ont.—A press report states that the company proposes to widen its right of way between Empire Ave., and Frederick St., Fort William, Ont.

Western Lines Betterments—Tenders were received to Aug. 25 for the supply of all material and labor for the following works: Freight office and extension to freight shed at Saskatoon, Sask.; turntable foundations at Dauphin, Man., and Kamsack, Sask.; track scale foundations at North Battleford, Big Valley and Swan River, Sask.

A. E. Warren, General Manager Western Lines, on returning to Winnipeg, Aug. 18, from a trip over the lines to Vancouver, is reported to have stated that improvements estimated to cost $1,000,000 are being made, or are being arranged for on the line from Calgary to Drumheller, Alta. The line in the vincinity of Drumheller is being double tracked, additional yard accommodation is being provided, and many of the bridges are being replaced by concrete structures, while at one point a tunnel is being built which will result in the elimination of three bridges.

Gravelbourg-Swift Current Extension—A press report states that Gibbs Bros., who have the contract for grading 27 miles have been authorized to extend their grading operations from Neidpath, the end of the present contract, on to Swift Current, Sask., as a relief measure.

Thunder Hill Branch. We are officially advised that the contract for grading and building culverts on this branch, mileage 101.5 to 115.5, has been let to D. R. McDonald, Netherhill, Sask.

Prince Albert to Paddock Wood—A press report states that construction will be started immediately on a branch line from Prince Albert to Paddock Wood, Sask.

Vancouver Island Lines—Tenders are under consideration for the supply of 2,000 telegraph poles, 90 per cent. to be 25 ft. and 10 per cent. to be 30 ft. long, for the company's lines from Victoria, towards Alberni. Delivery to be made within one month after receipt of order.

Tourist travel on the Pacific coast steamships operated by the C. P. R., and by the Grand Trunk Pacific Ry., is reported to be the heaviest since 1914.

Railway Finance, Meetings, Etc.

Algoma Central and Hudson Bay Ry.—Algoma Eastern Ry.—The shareholders of these two railway companies are called to meet at Sault Ste. Marie, Ont., on Sept. 17, the first mentioned at 10 a.m., and the second at 11 a.m., to receive directors' reports and statements of accounts for the year ended June 30; for the purpose of ratifying the acts of the directors since the last meeting of shareholders, and for the transaction of other business. R. Home Smith, Toronto, is President and Alex. Taylor is Secretary of both companies.

Canadian Northern Ry. A press report states that the $10,000,000 two and a half year to five year 6 per cent. collateral trust Canadian Northern Ry. notes, placed on the market recently by Wm. A. Read & Co., New York, are secured by the deposit of $14,286,000 of C. N. Ry. 4 per cent. bonds, due 1914, guaranteed as to principal and interest by the Dominion Government.

Canadian Northern Ry.—There has been deposited with the Secretary of State at Ottawa a duplicate original of trust agreement, dated June 1, made between the Canadian Northern Ry. and the National Trust Co., securing certain 5½% secured notes of the Canadian Northern Ry.

Canadian Pacific Ry. The directors on Aug. 11 declared the following dividends, payable Oct. 1, to shareholders of record at 3 p.m., Sept. 2, for the quarter ended June 30: Common stock, 2½ per cent., being at the rate of 7 per cent. a year from revenue and 3 per cent. from special income account. A dividend of 2 per cent. for the half year ended June 30, on the preference stock, payable on the same date was also declared.

Edmonton, Dunvegan and British Columbia Ry.—The Board of Railway Commissioners, is being asked to recommend the Dominion Government to sanction an agreement entered into between the Edmonton, Dunvegan and British Columbia Ry. and the Alberta and Great Waterways Ry., on May 3, 1918.

Timiskaming & Northern Ontario Ry.:

	May, 1919	May, 1918
Passenger earnings	$ 77,249.49	$ 54,992.67
Freight earnings	148,569.02	182,645.02
Total earnings	225,818.51	237,637.69

Railway Employes Statistics.

The Railways Department report gives the following figures for the years ended June 30, 1917 and 1918, respectively:

	1917-1918.	1916-1917.
Number	143,493	146,175
Salaries and wages	$152,274,953	$129,626,187
Ratio to gross earnings	46.11%	58.34%
Ratio to operating expenses	55.59%	58.34%

The Canadian Ticket Agents' Association will hold its annual meeting on Sept. 23 at 2 p.m. at Prince George Hotel, Toronto. Following is the subsequent programme: Sept. 23, theatre party at Shea's Theatre in the evening. Sept. 24, leave Toronto 10 a.m. by G.T.R. for Muskoka Wharf, where a Muskoka Navigation Co.'s steamboat will be waiting, spent afternoon on Lakes Muskoka and Rosseau, arriving at Monteith House about 6 p.m., where the night will be spent. Sept. 25, sailing, etc., on Lakes Rosseau and Joseph, staying at some hotel for the night. Sept. 26, return by steamboat to Muskoka Wharf, thence by G.T.R. train, arriving at Toronto at 4.45 p.m.

Mainly About Railway People Throughout Canada.

F. F. Busteed, [illegible] E., of Vancouver, formerly [illegible] of Grade Revision, C.P.R., [illegible], has been spending the summer at [illegible] Lodge, Seton Lake, Lillooet, B.C.

Andrew Carnegie, who died at Lenox, Mass., Aug. 11, was in his early days in Pennsylvania Rd. service for about 12 years. He later entered the steel rail trade and was mainly instrumental in its development. He was born at Dunfermline, Scotland, Nov. 25, 1835 and came to North America at the age of 13.

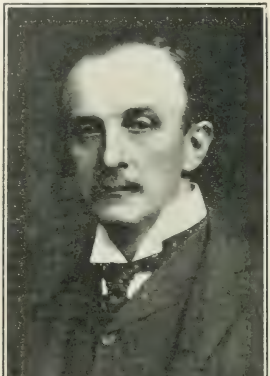
Hon. Frank Broadstreet Carvell, K.C., who has been appointed Chief Commissioner, Board of Railway Commissioners for Canada, was born at Bloomfield, Carleton County, N.B., Aug. 14, 1862, and educated at the public schools and Boston University, graduating with the degree LL.B., in 1890. He commenced practice at Dorchester, N.B., as an attorney, in 1890, and was made a K.C. in 1907. He represented Carleton, N.B., in the Liberal interest in the New Brunswick Legislature from 1899 to 1900, and from 1904 represented the same constituency in the House of Commons. He joined the union government which was formed during the war, as Minister of Public Works, resigning on his present appointment.

R. G. Chamberlin, Chief of Investigation Department, C.P.R., Montreal, has been appointed by the Dominion Government as Commissioner of Police of Canada, and as such is in charge of police arrangements during the Prince of Wales' entire Canadian tour.

D. C. Coleman, Vice President, Western Lines, C.P.R., returned to Winnipeg, Aug. 4, after a trip over the company's lines in the prairie provinces and British Columbia. He went to Calgary later on and was one of the speakers at the industrial conference which opened there Aug. [illegible].

Sydney E. Dewey, General Eastern Freight Agent, G.T.R., New York, who died suddenly at Buffalo, N.Y., Aug. 8, was born at Beckenham, Kent, Eng., July 4, 1879, and entered G.T.R. service Jan. 1, 1896, since when he had been, to May 10, 1893, clerk, Division Freight Agent's office, Toronto; May 10, 1903 to Mar. 1, 1904, Soliciting Freight Agent, Hamilton, Ont.; Mar. 1, 1904 to Apr. 16, 1906, Travelling Freight Agent, Hamilton, Ont.; Apr. 16, 1906 to Jan. 14, 1907, Contracting Freight Agent, New York; Jan. 14, 1907 to Oct. 23, 1911, Travelling Freight Agent, New York; Oct. 23, 1911 to Feb. 16, 1914, Commercial Agent, Pittsburg, Pa.; Feb. 16, 1914 to Feb., 1916, Commercial Agent, New York, and from Feb., 1916, General Eastern Freight Agent, New York.

Sir Henry Lumley Drayton, K.C., who has resigned the position of Chief Commissioner, Board of Railway Commissioners for Canada, to enter the Dominion Government as Minister of Finance and Receiver General, was born at Kingston, Eng., Apr. 27, 1869, and educated in England and Canada, commencing his [illegible] in [illegible] as a law student at Toronto. He was called to the Ontario bar in [illegible] and commenced practice in Toronto, being appointed Assistant City Solicitor in [illegible], remaining to Sept., 1900 [illegible] private practice. On [illegible], he was appointed Crown Attorney for the County of York, Ont., [illegible] Nov., [illegible], to resume private practice. He was appointed a K.C., Jan. 20, 1908, and on Apr. 25, 1910, was appointed counsel for the City of Toronto, and subsequently was one of Toronto's representatives on the Ontario Hydro Electric Power Commission. In July, 1912, he was appointed Chief Commissioner, Board of Railway Commissioners, following the death of J. P. Mabee. On the outbreak of war he was in London, Eng., and under the acting High Commissioner rendered good service in connection with the aiding of Canadians who were stranded at various points on the continent on account of the war, and was created a knight bachelor in June, 1915. He was sworn in as Minister of Finance and Receiver General, and as a member of the Privy Council for Canada, Aug. 2.



Sir Alfred W. Smithers, M.P.,
Chairman of the Board, Grand Trunk Railway Co.

E. C. Gill, of the C.P.R. Publicity Department in Europe, sailed from Liverpool, Eng., early in August for a tour through Canada, to obtain information with regard to prospects for British settlers and manufacturers in the Dominion.

Grant Hall Vice President, C.P.R., returned to Montreal, Aug. 7, after a five weeks trip through Western Canada, during which he visited the various points on the company's system where new construction has been started recently. He was accompanied by W. B. Lanigan, General Traffic Manager, Montreal, and from Winnipeg by D. C. Coleman, Vice President, Western Lines. They were guests at a breakfast given by Moose Jaw citizens Aug. 2.

D. B. Hanna, President, Canadian National Rys., has been re-elected a director of the British Empire Trust Co., London, Eng.

William D. Hannah, Chief Fuel Inspector, G.T.R., Montreal, has retired after nearly 40 years of continuous service with the company. He was born at Newton Stewart, Scotland, Sept. 1, 1844, and entered G.T.R. service in 1880. He has occupied positions as assistant agent, night yardman at Toronto, and general inspector, station agent, fuel inspector, and Chief Fuel Inspector at Montreal. On his retirement he was presented by the staffs of the Stores and Purchasing Departments with a purse of money.

Robert Wetmore Hannington, who has been appointed Solicitor for British Columbia, Canadian National Rys., Vancouver, B.C., was born at Dorchester, N.B., graduated from Dalhousie University in law and was called to the bar in 1892. He went to Nelson, B.C., in 1897 and commenced practice there, and in 1908 moved to Vancouver, where he continued practice. He was appointed City Solicitor, Victoria, B.C., in 1915, and held that position to the date of his present appointment. He is a son of the late Hon. D. L. H. Hannington, a former Premier of New Brunswick, and at the time of his death senior judge of the New Brunswick Supreme Court.

Lieut.-Col. F. C. Hawkes, O.B.E., of the Indian State Railways, who served in Mesopotamia from 1915 to 1919, latterly as Assistant Director of Railways, was married in England recently to Miss C. M. Bovey, second daughter of the late Dr. H. T. Bovey, formerly Dean, Applied Science Faculty, McGill University, Montreal, and afterwards Rector of the Imperial College of Science and Technology.

Alfred J. Heath, of the Refund Department, C.P.R., Montreal, died there suddenly July 25. He was born at St. John's, Nfld., in 1857, and entered C.P.R. service at St. John, N.B., in 1889, and prior to his transfer to Montreal in 1901 was District Passenger and Ticket Agent there.

Brig.-General C. L. Hervey, D.S.O., engineer and contractor, Montreal and Lancaster, Ont., was a lieutenant in the Corps of Guides when war broke out and was later promoted to captain. When the Imperial authorities called for the formation of a Canadian Overseas Railway Construction Corps, the work of which is fully described in this issue of Canadian Railway and Marine World, he was appointed Major in command of no. 1 company. In September, 1916, he was transferred to the Canadian Railway Troops and promoted to Lieutenant-Colonel and Officer Commanding the 4th Battalion, C.R.T. In July, 1918, he was seconded to the Imperial Army and promoted to Brig.-General, and since returning to Canada has been placed on the reserve of officers with that rank.

T. E. Hillman, who died at Whitestone, N.Y., recently, was born at Worthington, Eng., Oct. 24, 1848. From 1889 to 1891 he was Engineer in Charge of the St. Clair Tunnel (G.T.R.) with supervision of trial borings, location, construction on tunnel, approaches and connecting railway lines. He was later engaged as chief engineer in locating and building several electric railways and hydraulic plants in Ontario, including that of the Dominion Power and Transmission Co. at Decew Falls. In 1910 he supervised test borings, on Bow River, Alta., for the foundation of the C.P.R. irrigation dam.

H. J. Humphrey, who has been appointed Superintendent, Trenton Division, Ontario District, C.P.R., Toronto, was born at Berry's Mills, N.B., Jan. 26, 1879, and entered railway service in June, 1896, since when he has been, to Aug., 1897, telegraph operator at various points, Intercolonial Ry.; Aug., 1897, to Aug., 1901, telegraph operator, Boston & Maine Rd.; Aug., 1901, to April, 1902, telegraph operator, Intercolonial Ry.; May 9, 1902, to Sept. 6, 1903, telegraph operator, C.P.R., Calgary, Alta.; Sept. 6, 1903, to June 1, 1907, dispatcher, C.P.R., Calgary, Alta.; June 1, 1907, to Nov. 1, 1909, dispatcher, C.P.R., Medicine Hat, Alta.; Nov. 1, 1909, to April 10, 1911, dispatcher, C.P.R., Calgary, Alta.; April 10, 1911, to July 1, 1912, Chief Dispatcher, C.P.R., Macleod, Alta.; July 1, 1912, to Jan. 8, 1915, Car Service and Fuel Agent, Saskatchewan Division, C.P.R., Moose Jaw; Jan. 8, 1915, to Jan. 1, 1916, Superintendent of Car Service, Western Lines, C.P.R., Winnipeg; Jan. 1, to Nov. 6, 1916, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal; Nov. 6, 1916, to Feb., 1917, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham; Feb. to Apr. 2, 1917, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal; Apr. 2, 1917 to Aug. 1, 1919, Superintendent Browneville Division, New Brunswick District, C.P.R., Browneville Jct., Me.

S. J. Hungerford, Assistant Vice President, Canadian National Rys., E. W. Oliver, General Superintendent, Niagara, St. Catharines and Toronto Ry., and W. R. Robertson, Superintendent, N. St. C. & T.R., were in a head on collision between the special car in which they were travelling on the N. St. C. & T.R., between Welland and Forthill, Aug. 15, and a regular car, due to the motorman disobeying a crossing signal. Both cars were damaged considerably, but no one was hurt further than being somewhat badly shaken.

George E. Hyde, who died at Cluny, Alta., Aug. 1, was, from 1911 to 1914, an engineer in Natural Resources Department, C.P.R., Calgary, Alta., and prior to that, was Chief Engineer, St. Marys and Western Ontario Ry., a C.P.R. subsidiary.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, made a trip to the Pacific Coast in July and August.

Lorne Macdonald, formerly Division Freight Agent, G.T.R., Toronto, and promoted recently to Assistant General Freight Agent, Montreal, was entertained to dinner by the Toronto staff, July 29, and presented with a gold repeater watch, and a gold mounted umbrella for Mrs. Macdonald.

Mrs. A. D. MacTier, wife of the Vice President, Eastern Lines, C.P.R., Miss MacTier and Captain Stewart MacTier, of Montreal, made a trip to the Pacific coast recently.

Simon James McLean, who has been appointed Assistant Chief Railway Commissioner for Canada, was born in Quebec, June 14, 1871, and was educated at private and public schools there, and at Cumberland, Ont., and later, at the Ottawa Collegiate Institute, and from 1890 to 1894 was a student in the University of Toronto, Political Science Department. Among the academic positions held by him at various times, are 1894-5, Mackenzie Fellow, University of Toronto; 1895-6, University Fellow in Economics, Columbia University, New York; 1896-7, University Fellow in Economics, Chicago University, 1897-1902, Professor of Economics, and Sociology, University of Arkansas; 1902-06, Associate Professor of Economics Leland Stanford Jr. University, California; 1906-08, Associate Professor of Political Economy, University of Toronto. He is a B.A. and LL.B. of Toronto University; M.A. of Columbia University, Ph.D. of Chicago University, and a member of the Ontario bar. He has made a special study of transportation problems in various parts of the world, and has an intimate knowledge of transportation matters, both legislative and administrative, and has had a wide experience in direct contact with business men, railway and labor representatives, both in Canada and the U.S. As a tribute to his insight into such matters he was elected to the chairmanship of the transportation section of the Commonwealth Club of San Francisco. He has been a prolific writer on transportation subjects, having contributed largely to technical periodicals, reviews, etc. From 1898 to 1901 he acted in an advisory capacity to the Railways and Canals Department, and prepared a special report which was subsequently published by that Department. In 1901 he was appointed special commissioner on Railway Rate Grievances for Canada, and conducted investigations in leading towns throughout the Dominion. The findings of this investigation were embodied in a report which recommended that a railway commission be organized for Canada, with power over rates and classification, and that it should have transferred to it the functions hitherto exercised by the railway committee of the Privy Council. These recommendations were adopted by the government, and embodied in the Railway Act of 1903. From 1904 to 1905 he was expert agent of the U.S. Census Bureau, and of the Interstate Commerce Commission, and conducted investigations to determine the valution of railway property in the Western States, and in 1908 he acted as chairman of conciliation boards to investigate disputes in two many cases. He was appointed to the Board of Railway Commissioners in Sept., 1908 for 10 years, and was reappointed in 1918 for a second term.

S. J. McLean,
Assistant Chief Railway Commissioner

J. A. McKenzie, town ticket agent, G.T.R., Woodstock, Ont., fell from the roof of the verandah at his house, while doing some work on it, Aug. 11, and fractured his hip.

Sir William Mackenzie, ex-President Canadian Northern Ry., and Miss Mackenzie, returned to Toronto, Aug. 8, from England.

M. H. MacLeod, Vice President, operation, etc., Canadian National Rys., returned to Toronto, Aug. 18, after an extended trip over the various lines west of Toronto. He was accompanied for the greater part of the trip by A. E. Warren, General Manager Western Lines; J. R. Cameron, Assistant General Manager, Western Lines; H. A. Dixon, Chief Engineer, Western Lines; R. G. Reid, General Master Mechanic, and T. Turnbull, Engineer Maintenance of Way.

M. M. Mahoney, heretofore Superintendent of Transportation, Canadian War Mission, Washington, D.C., has been appointed Secretary of the mission, succeeding J. Watson Bain, resigned.

A. Palmer, foreman of a G.T.R. bridge gang, St. Thomas, Ont., died in the General Hospital, Chatham, Ont., Aug. 11, as the result of a wound in the throat, believed to have been self inflicted.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners, Ottawa, has been appointed chairman of a commission which has been empowered by the Dominion Government to investigate the possibilities of the Canadian northland, as a permanent meat and wool producing area, particularly in regard to the establishment of herds of musk-ox and reindeer, and he has also been appointed as a royal commissioner to enquire into the conditions pertaining to race meetings in Canada, and betting in connection therewith.

Robert Arnett Sewell, who has been appointed Superintendent of Car Service, Eastern lines, C.P.R., Montreal, was born at Brampton, Ont., Sept. 2, 1880. He entered transportation service with the Canadian Express Co., as clerk at Brampton, Ont., in Jan., 1895, and remained in that service until May, 1898, when he entered C.P.R. service, since when he has been, to Dec., 1898, assistant agent, Cheltenham, Ont.; Dec., 1898, to Apr., 1899, operator at various points on the Eastern Division; Apr., 1899, to Aug., 1903, operator, relieving agent and dispatcher at various points on the Ontario Division; Aug., 1903, to Jan., 1912, agent and dispatcher at various points on the Western Lines; July, 1914, to Dec., 1916, agent, Oshawa, Ont.; Dec., 1916, to Nov., 1917, Chief Dispatcher, Toronto; Nov., 1917, to Oct., 1918, Inspector of Transportation, Eastern Lines, and for a short time, acting Superintendent, Trenton Division, Ontario District; Oct., 1918 to Aug. 1, 1919, Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal.

John S. Shaughnessy, who died at Chicago, Ill., Aug. 10, was a nephew of Lord Shaughnessy, Chairman, and former President, C.P.R. He was for a time, several years ago, in Minneapolis, St. Paul and Sault Ste. Marie Ry. service.

Sir Alfred Waldron Smithers, M.P., Chairman of the Board, Grand Trunk Ry. Co., London, Eng., who was knighted recently, was born in 1850 and has been a member of the London Stock Exchange for nearly 40 years. He was elected a director of the G.T.R. in 1896 and Chairman of the Board in 1909. He is also Chairman of the English Association of American Share and Bondholders and

M.P. for the [illegible] Division of K[illegible] arrived in Canada Aug. 10, [illegible] with the Dominion Government in regard to the G.T.R.'s future, and to [illegible] the company's lines.

Guy Tombs, whose resignation of the position of Assistant Freight Traffic Manager, Canadian National Rys., Montreal, to become Traffic Manager for the Canadian Export Paper Co., was announced in our last issue, was presented recently with a gold watch and chain by the staffs of the Ontario and Quebec lines, with an address and a cut glass punch set with tray by the Montreal male office staff and with a gold signet ring by the female staff.

M. Frank Tompkins, who has been appointed General Freight Agent, lines Matapedia, Que., and Edmundston, N.B., to Port Arthur and Armstrong, Ont., Canadian National Rys., Moncton, N.B., was born at Margaree, N.S., Dec. 6, 1878, and entered Canadian Government Rys. service Nov. 23, 1896, since when he has been, to Feb. 1, 1900, telegraph operator at various points; Feb. 1 to May 1, 1900, freight clerk, Truro, N.S.; May 1, 1900, to Sept. 1, 1902, freight clerk, Sydney, N.S.; Sept. 1, 1902, to July 1, 1903, accountant in Superintendent's office New Glasgow, N.S.; July 1, 1903, to July 1, 1904, telegraph operator, New Glasgow, N.S.; July 1, 1904, to Jan. 1, 1911, relieving agent at various points; Jan. 1, 1911, to Nov. 30, 1914, chief clerk, Division Freight Agent's office, Halifax, N.S.; Nov. 30, 1914, to June 1, 1917, Division Freight Agent, Halifax, N.S.; June 1, 1917 to Jan. 1, 1919, Assistant General Freight Agent, Canadian Government Rys., Moncton, N.B.; Jan. 1, to Aug. 1, 1919, Assistant General Freight Agent, lines Matapedia, Que., and Edmundston, N.B., to Port Arthur and Armstrong, Ont., Canadian National Rys., Moncton, N.B.

A. T. Weldon, who has been appointed Assistant Freight Traffic Manager, all lines east of but not including Port Arthur, and Armstrong, Ont., Canadian National Rys., Montreal, was born at Dorchester, N.B., Mar. 6, 1876, and entered transportation service in 1890, since when he has been, to Apr., 1900, in different capacities in the Freight Department, Intercolonial Ry.; Dec., 1901, to Aug., 1904, in Division Freight Agent's office, I.R.C., Halifav, N.S.; Aug., 1904, to May 1, 1907, Secretary, Halifax Board of Trade; May 1 to Nov. 18, 1907, General Sales Agent, Port Hood-Richmond Ry. Coal Co., Halifax, N.S.; Nov. 18, 1907, to 1909, Division Freight Agent, I.R.C., Halifax, N.S.; 1909 to Oct. 1, 1914, General Freight and Passenger Agent, Black Diamond Steamship Co., Montreal; Oct. 1, 1914, to June 9, 1917, Assistant General Freight Agent, Canadian Government Rys., Moncton, N.B.; June 9, 1917, to Dec. 31, 1918, General Freight Agent, Canadian Government Rys., Moncton, N.B.; Jan. 1, to Aug. 1, 1919, Assistant Freight Traffic Manager, lines east of Matapedia, Que., and Edmundston, N.B., Canadian National Rys.

Inverness Coal and Ry. Co.—As stated [illegible], the [illegible] Trust Co. is act[illegible] this company. An [illegible] to a Nova [illegible] to lease the [illegible] port states that [illegible] probability that the rail[illegible]er by the Dominion Government, and merged in the Cana[illegible]ational Rys.

The Liberal Party's Attack on the Dominion Government's Railway Policy.

At the convention in Ottawa, early in August, of delegates representing the Liberal party throughout Canada, the following resolution, moved by Hon. G. P. Graham, ex-Minister of Railways and seconded by Hon. R. Lemieux, M.P., ex-Postmaster General, was adopted without discussion:—

"Whereas the construction of the National Transcontinental Ry. wholly upon Canadian soil, including terminal facilities, and in the completion of the projected steamship connection with Europe and the far east, thus affording the best possible transportation between the Orient and the mother country, and opening up a large portion of Canada not before developed, and providing for lowering of the freight rates was undertaken by the Liberal government and Parliament of Canada; and,

"Whereas, the accomplishment of the purpose for which this transportation system was designed has been thwarted by the studied hostility of the Borden administration, this convention expresses its opinion that only by the defeat of the present government can the beneficial results which should accrue from the construction of this great national transcontinental route be secured; and,

"Whereas, the government by its policy in dealing with the Canadian Northern Ry. System, which in addition to granting of subsidies and guaranteeing of bonds also made large loans of public money and thus involved the Dominion of Canada in financial obligations which resulted in the government assuming the ownership of the said system; and,

"Whereas, in addition to assuming the enormous liabilities incurred by the purchase of the Canadian Northern Ry. System the Borden government forced through parliament, in contravention of legislation already on the statute books, an act, under which $10,000,000 was paid to C.N.R. interests, the identity of whom has never been disclosed, this convention condemns, with all possible vigor this entire unbusinesslike transaction and demands full investigation into the conditions surrounding the purchase of the C.N.R. and the destination of the moneys paid.

"The government now owns and operates some 16,000 miles of railway. We believe that the present system of management by a board, the majority of the members of which devote but a small portion of their time to this work, is unwieldy, inefficient and extravagant, and that under it and the present administration public ownership and operation will not receive a fair trial.

"Adequate facilities and tonnage for ocean traffic are a vital concern to the commerce of Canada, and the utter lack of foresight on the part of the government in neglecting to see that such facilities and tonnage were provided for the immediate after-the-war period is not only humiliating to the Canadian people but is materially impairing our export trade.

"At this time, when the country should be in a position to take full advantage of opportunities to secure its proper share of the export business on which the financial, industrial and agricultural future of Canada depends, we are confronted with the lamentable situation that no adequate provision has been made for the transportation of the products of the farm, the factory and the forest to the markets of the world.

"With the knowledge of enormous destruction of tonnage by the havoc of war in its possession, the failure of the government to protect the trade of Canada against the condition that now confronts it shows an absence of business ability which merits the severest condemnation of the people of Canada.

"This convention declares its fullest confidence in the future of Canada, believing that a wise and economical development of our natural resources and a judicious and vigorous immigration and colonization policy coupled with strict economy and efficient management in every department of government will solve the transportation and other difficult problems now confronting the country."

Sir George Cartier's Great Work for Railways.

In referring to the monument to the late Sir George Etienne Cartier, which has been erected at Quebec, the Toronto Globe says:—"As an advocate of railways he rendered distinct service. In 1852 he rendered two bills to the legislature, one to authorize the Grand Trunk Ry. Co. to build between Toronto and Montreal, and the other to incorporate a company to construct a railway from opposite Quebec to Trois Pistoles, and for the extension of that railway to the eastern boundary of the province. During the construction of the Grand Trunk the company's credit on several occasions became dangerously low, and Cartier led in the agitation for aid. Similar emergencies arose a generation later in the construction of the Canadian Pacific. Indeed, Sir George Cartier himself had considerable to do with the inception of the C.P.R. Late in the sixties he had taken a leading part with William McDougall in the negotiations in England, which resulted in the purchase of the great prairie regions of the west from the Hudson's Bay Co. In 1872 he introduced the legislation connected with the C.P.R. scheme, providing for grants of 50,000,000 acres of land and $30,000,000 in cash.

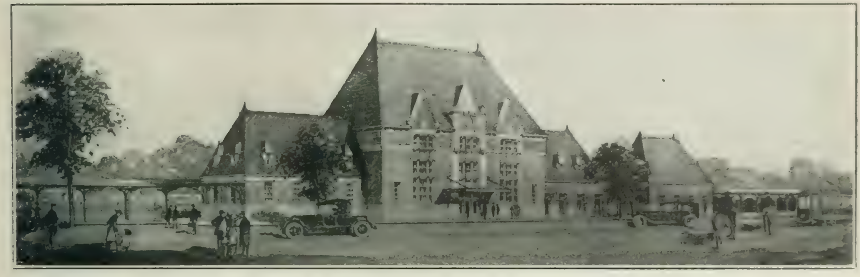
Grand Trunk Ry. Notice is given that there has been filed with the Secretary of State at Ottawa a certificate that the shareholders of the company had, at a special meeting held in London, Eng., on July 30, passed a resolution assenting to and accepting the Grand Trunk Act, 1919, which authorized the creation of perpetual 4 per cent. consolidated debenture stock to a total amount of £2,500,000.

Montreal Incline Ry.—The Montreal Administrative Commission is reported to have decided Aug. 8, not to operate the Incline Ry. The commission had an inspection of the property made with the result that it was found it would cost from $5,000 to $10,000 to put it in a thorough state of repair, and that the work would take about two months to complete.

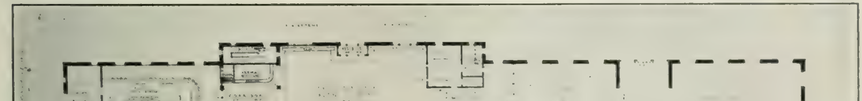
Vehicle Traffic on Quebec Bridge—The Levis County Council, passed a resolution recently asking the Dominion Government to open a road for vehicle and general traffic on the Quebec bridge. Copies of the resolution have been sent to other public bodies interested, with the request that they petition the government similarly.

Canadian Pacific Railway Construction, Betterments, Etc.

Three Rivers' New Station—The company has had plans prepared for a new station at Three Rivers, Que. The design is of the French chateau style, and the building will have a large general working room with ladies waiting room, ticket offices, etc., surrounding it in the center; while at the ends will be the baggage and express offices. The building will have a concrete foundation, brick walls, reinforced concrete floors and roof, steel frame, main walls of Citadel, Quebec, brick, trimmed with Deschambault limestone, copper roof. The main waiting room walls will be marble wainscot and Caen stone or marble above tile floor. The lunch room and lavatories will be finished with marble dadoes and tile floors. The wood trimming generally will be red oak.



The Canadian Pacific Railway's New Passenger Station at Three Rivers, Que.



Ground plans of Canadian Pacific Railway Stations at Three Rivers, Que. The upper plan is that of the new station, the lower plan that of the old station.

Kingston Freight Terminals—With respect to a press report as to the laying out of a new freight terminal at Kingston, we are advised that the only work contemplated is the building of a new freight shed on a new location with the necessary tracks to serve it. The work has been under consideration for some time.

Linwood to Waterloo Extension—A press report from Kitchener, Ont., states that the local board of trade has asked C.P.R. representatives to be present at its next meeting in order to discuss a proposal to build a line from Linwood on the Guelph and Goderich line to Waterloo. It is reported that the company has made surveys for such a line and has obtained estimates as to probable traffic, etc.

Bridge in Victoria—The agreement proposed to be made between the City of Victoria and the C.P.R., as owners of the Esquimalt and Nanaimo Ry. for the erection of a new bridge at Johnson St., Victoria, has been under discussion at several city council meetings recently. The questions involved have to do with building of the highway approaches, and the traffic over the bridge. It is expected that the agreement will be finally settled at an early date. (Aug., pg. 432).

Canadian Exports of Railway Track Material. Figures compiled by the U.S. Bureau of Statistics show that during June, Canada exported the following railway track material, the figures given representing the weight and the value: Spikes, 53,028 lb., $61,683; steel rails, 717 tons, $41,928; also switches, frogs, splice bars, etc., $26,806 and car wheels and axles, $10,550.

Freight and Passenger Traffic Notes.

Traffic on the Edmonton, Dunvegan and British Columbia Ry., into the Peace River country is reported to be increasing. During the week ended Aug. 9, it was reported that 28 carloads of cattle, 20 carloads of horses, 6 cars of settlers' effects, and 64 cars of general freight were dispatched from Edmonton, and that 509 passengers bought tickets at Edmonton station.

Vancouver, B.C., merchants are carrying on a campaign to attract Alberta wheat to that city for export. They are directing their attention to the question of freight rates from the point of production to Vancouver, and shipping rates to China and Japan, and also the question of the provision of elevators and wharves, at Vancouver, and of the necessary vessels.

The Fredericton, N. B., Board of Trade, Aug. 12, is reported to have taken up with C. A. Hayes, Vice President Traffic, Canadian National Rys., questions in connection with the projected service on the extended St. John and Quebec Ry. The service proposed to be given is a tri-weekly one, and Mr. Hayes is reported to have advised the Board of Trade that if the results of the tri-weekly service indicate that prospects are such as to justify the expense, a daily service will be provided.

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received [illegible] electric type locomotives, Loc. 5,100 to [illegible] class 14 A, [illegible] from Montreal Locomotive Works.

Canadian National Rys. have ordered [illegible] steel mail cars; 20 all steel first class passenger cars and 13 compartment observation cars from Canadian Car and Foundry Co., Montreal.

The C.P.R., between July 15 and Aug. [illegible] received 2 tourist cars and 1 Pacific type locomotive from its Angus shops and 2 vans from its Winnipeg shops.

The American Cyanamid Co. has ordered 6 transfer cars from Canadian Car & Foundry Co. for delivery by Sept. 20.

The Hydro Electric Power Commission of Ontario has received another electric locomotive from Canadian Car & Foundry Co.

The G.T.R. has ordered 9 steel mail cars, 44 box cars, 2 stock cars and repairs for a number of hopper and box cars from Canadian Car & Foundry Co. The mail cars are to be delivered between Sept. 22 and Oct. 31, the box cars between Oct. 1 and 17.

The Canadian National Rys., 20 all steel mail cars, ordered from Canadian Car & Foundry Co., will be built according to the specifications prepared by the Post Office Department's Railway Mail Service branch, as approved by the Board of Railways Commissioners and which are summarized on pg. 472 of this issue. The general dimensions will be as follows:—

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.
Length over buffers, about	77 ft. 6 in.
Width over side sills	9 ft. 9⅝ in.
Width over all at eaves	10 ft. 1⅞ in.
Width to clear story	5 ft. 11¼ in.
Height from rail to roof at center	14 ft. 2 in.
Height over lamp jacks, about	14 ft. 5 in.
Height from rail to eave mouldings	11 ft. 2½ in.
Height from rail to sill at end	3 ft. 7⅝ in.
Height from rail to sill at center	3 ft. 9 in.

The Canadian Car & Foundry Co., between June 13 and Aug. 21, delivered 30 baggage cars, and 250 ballast cars to Canadian National Rys.; 30 steel frames for tourist cars, to C.P.R.; 1 electric locomotive to Hydro Electric Power Commission of Ontario, and repaired 200 refrigerator cars for the G.T.R. The company repaired 177 wood box cars for the Grand Trunk Pacific Ry. at its Fort William plant, and delivered 13 stock cars to Canadian National Rys., from, and built 150 refrigerator cars for the G.T.R., at its Amherst plant.

The Canadian National Rys'. 9 dining cars which are being built by Canadian Car & Foundry Co., will have the interior finished in quarter oak. Special arrangements are made to provide ample refrigerator and locker space, and refrigerator being equipped with the [illegible] system, with separate compartments for poultry, meat, milk and vegetable lockers. The kitchen will be equipped with removable carving tables, hot tables for cooked meats and poultry, and special arrangements for heating [illegible] dishes. The cars will also be equipped with humidor for cigars and with mineral water lockers, and special [illegible] water filter to provide the best [illegible] water for drinking purposes. They will be electrically lighted throughout, with fans in body of car and exhaust [illegible] kitchen. The cars will be equipped with the latest type of clasp brake [illegible] al arrangements are made in [illegible] with steel rein[illegible] prevent telescoping in case [illegible]on. The chief dimensions are:

Length over buffers	81 ft. 10 in.
Length over end sills	73 ft. 6 in.
Width over side sills	9 ft. 9⅝ in.

The Canadian National Rys'. 18 steel sleeping cars which the Canadian National Rys. ordered from Canadian Car & Foundry Co., will be of the C.N.R. standard type with 6-wheel trucks with 5 in. x 9 in. axles, McCord journal boxes, rolled steel wheels, latest type of clasp air brakes, Westinghouse L.N. equipment with 18 in. brake cylinder, hot water heating with the largest size of Pullman standard type of hot water heater, with 2½ in. duplicate coils, under feed water tanks with water raised by compressed air and C.N.R. standard piping arrangements; the interior finished in mahogany with latest design of friezette, short nap plush. The cars will have 12 sections, one drawing room and one smoking room. The lower berths will be fitted with 2 coat hangers each and upper berths with one each; C.N.R. standard curled hair mattresses and C.N.R. standard type and weight of blankets and linen. The cars will be electrically lighted throughout, with lights in both upper and lower berths and with electric fans in the corridor, semi-incandescent lamps, and fire extinguishers to meet the Board of Railway Commissioners' requirements. Delivery is to be made between Oct. 1 and Nov. 27. The dimensions are:—

Length over end sills	73 ft. 6 in.
Length of berth accommodation	37 ft. 6 in.
Length of smoking room end	17 ft. ¼ in.
Length of drawing room end	18 ft. 11¾ in.
Width over side sills	9 ft. 9⅝ in.

Orders by the Board of Railway Commissioners.

(Continued From Page 480).

28,638. Aug. 6.—Authorizing Canadian National Rys. to rebuild bridge over Mud Creek, Ont., at mileage 125.40 from Todmorden, Ont.

28,639. Aug. 6. Extending to Dec. 1 time within which G.T.R. shall complete spur for M. M. Cummings, Westboro, Ont.

28,640. Aug. 9.—Ordering G.T.R to install a 30 in. concrete pipe culvert 24 ft. long between Lots 54 and 53, St. Malachie d'Ormstown Parish, Que., and to regrade ditch on north side of track between Lots 52 and 53.

28,641. Aug. 6.—Authorizing Canadian National Rys. to rebuild bridge over Donovan Creek, Ont., at mileage 127.50 from Todmorden, Ont.

28,642. Aug. 6.—Authorizing Grand Trunk Pacific Ry. to build car feery slip on portion of water front, Block C, at Prince Rupert, B.C.

28,643. Aug. 6. Authorizing Grand Trunk Pacific Ry. to build road diversion in lieu of road allowance on north and east boundaries of n.e. ¼, Sec. 22, Tp. 27, Range 6, west 2nd meridian, Sask.

28,644. Aug. 11. Amending order 18,870, Feb. 18, 1913, re Great Northern Ry. train service between Vancouver, B.C., and Blaine Wash., on Vancouver, Victoria and Eastern Ry.

28,645. Aug. 12. Dismissing application of A. Cooper & Co., Fort William, Ont., for order requiring that C.P.R. Neebing siding be put into operation again and placed on tariff list.

28,646. Aug. 6. Authorizing Canadian National Rys. to build new crossing over arm of Sydenham Lake, Ont., at mileage 166.10 from Todmorden, Ont.

28,647. Aug. [illegible] Extending to Aug. 31, time within which Canadian National Rys. shall make alteration to station at Baldur, Man., required by order [illegible] June [illegible]

28,648. Aug. [illegible] Ordering G.T.R. to build culvert at point east of White Station, Godmanchester Tp., Que.

28,649. Aug. 11. Ordering G.T.R. to build subway for vehicular and pedestrian traffic under its tracks at St. Paul Ave., Brantford, Ont.

28,650. Aug. 1[illegible]. Relieving Grand Trunk Pacific Ry. and C.P.R. from maintaining towerman to operate crossing near Forrest, Man., between [illegible] p.m. and [illegible] a.m.

28,651, 28,652. Aug. 12. Authorizing Canadian National Rys. to cross two highways in Chatham Tp., Que.

28,653. Aug. 12.—Authorizing C.P.R. to build connecting track between its Queen's Wharf Branch and the Toronto Harbor Commissioners' tracks and to cross Bathurst and Housey Sts. at grade in Toronto.

28,654. Aug. 9. Authorizing Canadian National Rys. and Montreal Terminal Ry. to operate over interlocking plant at crossing of Imperial Oil Co. spur, Pointe aux Trembles Parish, Que., without first stopping.

28,655. Aug. 13. Ordering Grand Trunk Pacific Ry. to appoint station agent at Darmody, Sask., by Sept. 15.

28,656. Aug. 11. Amending order 28,540, July 12, re speed limitation by C.P.R. at crossing of highway, 2½ miles east of Oshawa, Ont.

28,657. Aug. 11.—Approving agreement July 21, 1919, between Bell Telephone Co. and Norland Independent Telephone Co., Victoria County, Ont.

28,658. Aug. 11.—Authorizing Canadian National Rys. to extend siding across John St., Longueuil, Que.

28,659. Aug. 11.—Authorizing Canadian National Rys. to build siding extension at Evanturel station, Que.

28,660. Aug. 11. Ordering G.T.R. to build 5 ft. highway on east side of bridge carrying public road near Danville station, Que., over its tracks.

28,661. Aug. 13. Dismissing J. L. Atkinson's application re/road crossing on Vancouver, Victoria & Eastern Ry. at Kilgard, B.C.

28,662. Aug. 14.—Approving Temiscouata Ry. on Standard Passenger Taric C.R.C. 72, on basis of 4c a mile.

28,663. Aug. 8. Authorizing C.P.R. to cross at grade 27 highways on its Archive-Wyemark Branch, Sask.

28,664. Aug. 14.—Authorizing C.P.R. to build siding across road allowance between Secs. 23 and 24, Tp. 20, Range 10, west 2nd meridian, Sask.

28,665. Aug. 14.—Approving C.P.R. plan of half interlocking plant at crossing of C.P.R. and St. John Ry on Main St, Fairville, N.B.

28,666. Aug. 14.—Relieving G.T.R. from providing further protection at crossing near Waterville, Que.

The Esquimalt and Nanaimo Railway and Foreshore Coal Rights.

The Imperial Privy Council gave judgment, Aug. 2, on the Esquimalt and Nanaimo Ry.'s appear against the decision of British Columbia courts in the action brought by H. W. Treat to establish his rights to minerals under the foreshore of lands granted to the company in connection with the construction of the railway from Esquimalt to Nanaimo, B.C. Treat was granted a license by the B.C. Government to prospect for coal under the Vancouver Island foreshore. The Esquimalt and Nanaimo Ry. received certain grants of land from the government in aid of the construction of its railway, which lands ran down to the wateredge. The company claimed that Treat was a trespasser when he began prospecting along the foreshore of the lands conveyed, and entered action. The main question involved in the action was what was meant by the words "coast line" in a statutory conveyance. The B.C. courts held unanimously that the expression indicated the boundary at high water. The Judicial Committee upheld this view, and dismissed the appeal with costs.

Steel Rails Making at Sydney—In view of the reported closing down of the Dominion Iron and Steel Co.'s rail mill at Sydney, N.S., the Sydney Board of Trade and the town council held a joint meeting Aug. 8. A letter was read from General Superintendent Rice of the Dominion Iron and Steel Co., saying that all rail contracts for the Dominion Government had been completed July 31, and that the other rail contracts would be finished up in a week. He outlined what other work it was proposed to do before the plants were close down. The meeting decided to bring the matter to the Dominion Government's attention, and to urge that orders be given to the company in order that the various plants may be continued in operation. A press dispatch of Aug. 18 stated that the plants would be closed odwn on Aug. 23 for an indefinite period.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Canadian Western Ry.—The Dominion Parliament has conditionally extended for five years the time within which the company may build its projected railway, from the International Boundary, through Pincher Creek and Cowley, and along the Old Man River to Livingstone Mountain, and thence to Calgary, Alta., with a branch to Michel, B.C. (May, pg. 235).

Esquimalt and Nanaimo Ry.—A press report states that this company, which is a C.P.R. subsidiary, will ask tenders shortly for the construction of 12 miles of line, from near the present terminus at Port Alberni, towards the Great Central Lake, Vancouver Island, B.C. (July, pg. 381).

Essex Terminal Ry.—The Dominion Parliament has granted a conditional extension of five years within which the company may build its authorized branch line from Ojibway to Pelton, Ont., 7 miles, and to connect the same with the Michigan Central Rd., the Pere Marquette Rd., and the Windsor, Essex and Lake Shore Rapid Ry. (June, pg. 313).

Grand Trunk Ry.—A press report of Aug. 12 stated that work has been started on the extension of the company's yards at East London, Ont. The yards will, it is said, be extended from Rectory St. to Hale St., Pottersburg, involving the laying of about eight miles of new tracks, and a considerable amount of granding.

Grand Trunk Pacific Ry.—The Regina city commissioners are reported to be considering taking steps to compel the company to fulfil its agreement to build a railway station and hotel in the city, for which concessions were granted to the company's subsidiary, the G.T.P. Branch Lines Co. in 1911-12. The city granted a site exempt from taxation, on the company agreeing to build a $250,000 station and a $1,000,000 hotel.

A Prince Rupert, B.C., press report of Aug. 13, stated that the construction of the car ferry slip at that place was well under way, and that it is expected to be completed in October. The estimated cost is $50,000. Details of construction were given in our last issue. (Aug. pg. 431).

High River, Saskatchewan and Hudson River Ry.—The Dominion Parliament has granted a conditional extension of time for five years, within which the company may build its projected railway, from any point in Tps. 25 to 28, Range 1, West 4th Meridian, Alta., to Saskatoon, Sask., to the Saskatchewan-Manitoba boundary between Tps. 52 to 56, and thence to a junction with the Hudson Bay Ry. at Pas, Man., under construction by the Dominion Government. (Mar., pg. 135).

Hudson Bay Ry.—A press report states that the construction of 10 miles of line will take the track to a point on the Nelson River, whence there is navigable water to Port Nelson on Hudson Bay, Man.

Kettle Valley Ry.—A press report states that work has been restarted on the construction of the branch line from Princeton to the Copper Mountain district, B.C. The contractors' men stopped work in April, and it is reported that very little work has been done since then. Tierney Bros., the contractors, is expected to have had the line completed in June. (July, pg. 381).

Pacific Great Eastern Ry.—The question of the diversion of the Pacific Great Eastern Ry. in the Quesnel district, British Columbia, is being discussed by public bodies throughout the district. Vanderhoof people are particularly anxious that the line be diverted to pass through that place, and a deputation visited Prince George recently to place their case before delegates of the Victoria, Vancouver and New Westminster Boards of Trade, who were on a trip over the line.

The British Columbia Premier is reported to have announced that a survey party will be sent out shortly to go over the location between Clinton and Ashcroft for the sole purpose of seeing that the best location has been obtained for the line.

Track is expected to be laid to Williams Lake by the end of October. (Aug., pg. 434).

Quebec and Saguenay Ry.—A suggestion has been made that after this line to Murray Bay has been completed and taken over by the Canadian National Rys. should be extended to Chicoutimi, Que. (Aug., pg. 434).

St. John and Quebec Ry.—The final inspection of the extension from Gagetown to a connection with the C.P.R. at Westfield, N.B., was made, Aug. 23, and the line was opened for through traffic to St. John, N.B., Aug. 25. (Aug., pg. 434).

Timiskaming and Northern Ontario Ry.—Recent press reports state that the engineering party sent out from North Bay, Ont., to make a survey of the country between Cochrane, the present terminus of the T. and N.O.R. and James Bay, is making satisfactory progress. The party was reported to have more than half completed the trip to James Bay, at the end of July. The report states that the party has had several accidents, and encountered a good many difficulties. The country through which they have passed is stated to contain considerable muskeg, and other ground in which construction would be difficult. It is expected that the party will return to headquarters in the autumn. (June, pg. 314).

The Toronto, Hamilton and Buffalo Ry. is reported to have served notice of appeal against the Board of Railway Commissioners' suspended order with respect to the building of a bridge over its tracks on Main St. West, Hamilton, Ont., towards which it was ordered to pay 70% of the cost.

The question of the removal of the company's coaling dock at Hamilton, and replacing it by a modern coaling plant on a new site, is again being considered by the Hamilton City Council's special committee. One of the members of the committee asserted at a meeting, Aug. 16, that the company could make money by scrapping the present plant and building a concrete coaling plant at the Aberdeen yards. The present dock blocks the extension of Homewood and Stanley Aves. and Herkimer St.

"A grinding application of the brakes does a car no good."

"In other words, you've got to handle a car as you would bad news."

"Eh?"

"Brake it gently." Kansas City Journal.

Pay of Inspectors of Highway Crossings, Etc.

The Board of Railway Commissioners passed general order 269, Aug. 7, as follows: Re regulations regarding plans and specifications required to be filed with the board, dated Jan., 1919, being standard rules for the construction of highway, farm, wire, and pipe crossings, and general requirements for interlocking appliances at rail level crossings, junctions, and drawbridges: Upon its being represented to the board by the G.T.R. that the pay of inspectors for inspecting all crossings should be increased to $11 a day, instead of $3, as provided in the case of wire crossings by general order 267, amending the standard conditions and specifications for wire crossings, the Canadian National Rys. and the C.P.R. concurring in the above representations, it is ordered that the said regulations be amended by striking out the words "three dollars" after the word "exceed," in the sixth line of paragraph 7, page 14, and before the word "per," and substituting therefor the words "eleven dollars"; and by adding after the word "applicant," in the sixth line of the said paragraph 7, the words, "such payment to cover both wages and expenses."

Steel Rail Deliveries to Railways.

We are officially advised that up to Aug. 2 the Dominion Iron and Steel Co. had delivered 103,673 gross tons of steel rails, completing orders placed by the Dominion Government in Nov., 1918. The rails have been distributed to the following railways:—

	Gross tons
Canadian Government Rys.	44,718
Canadian Government Rys. (stocked)	132
Canadian Northern Ry.	2,378
Canadian Northern Ry. (stocked)	977
Canadian Pacific Ry.	21,288
Grand Trunk Ry.	33,821
Timiskaming & Northern Ontario Ry	161
Total	103,673

Edward Fitzgerald's Appointment—Sir R. M. Kindersley, Governor, Hudson's Bay Co., in presiding at a general court of the company in London, Eng., recently, said among other things: "In view of the ever-increasing duties which devolved upon Sir Augustus Nanton and other members of the advisory committee in Canada, the board secured the services of Edward Fitzgerald recently. For many years he was Assistant General Purchasing Agent for the C.P.R. He will occupy the post of Deputy Chairman of the advisory committee in Canada, devoting his whole time to the company's interests."

Calgary Industrial Congress—Among the principal speakers at the industrial congress at Calgary, Alta., in August, were D. C. Coleman, Vice President, Western Lines, C.P.R.; A. E. Warren, General Manager, Western Lines, Canadian National Rys.; J. S. Dennis, Chief Commissioner of Colonization and Development, C.P.R., and Robt. Dollar, President Robt. Dollar Steamship Co.

Hudson Bay Ry.—We are officially advised in connection with a recent press report that the Canadian National Rys. had absorbed the Hudson Bay Ry., that this is not the case. The line from Pas, Man., towards Nelson, is being handled by the Canadian National Rys. staff for the present for the Dominion Government.

Aerial Transportation Notes.

The British Minister of Munitions is reported in a London cablegram to have contracted for the sale of 700 aircraft engines and a great number of airplanes for Canada and the United States.

Vickers Limited, according to a press cable, is about to start a combined passenger and mail service between London, Eng., and Flushing, Holland, by aircraft, as the first of similar services to France, and Central Europe.

The Canadian Air Board's Vice Chairman is reported to have stated recently that it is hoped to start surveying operations by hydroplanes before long, and that other lines of operations to be established will be the carrying of mails, forest patrol work and public inspection.

The Northern Canada Trades Ltd., of which E. L. Janney is President, is reported to have bought three aeroplanes of the J.N.4 type, and to be converting them into hydroplanes. They will, it is said be used for explorations in Ungava Territory, and for supplying the company's trading and other parties.

Major-General Seely is reported to have stated in the British House of Commons, Aug. 16, that the Imperial Government intended to offer prizes aggregating £64,000 for plans for the best types of commercial seaplanes, and large and small aeroplanes. The paramount essential element which will govern decisions will be safety.

A direction finder invented by Dr. Bellini and Capt. Tosti, and perfected by the Marconi Wireless Telegraph Co., is reported as capable of enabling an aviator to steer a true course either at night or through fog. The finder is said to have been tested by the British Admiralty in connection with marine work, and to have proved satisfactory.

Capt. R. E. Long, formerly in charge of the Canadian Air Force's technical section is reported to have been appointed Secretary of the Canadian Air Board, established recently by the Dominion Government. Other appointments to be made will include a superintendent of flying operations, a superintendent of the certificates branch and a medical officer.

A London, Eng., press cable of Aug. 4, stated that it was expected that the first passenger airship would leave Barrow-in-Furness during the month, travelling via Lisbon and Sierra Leone to Rio de Janeiro, South American and return. The airship is reported to be 535 ft. long, with a capacity of 1,250,000 cubic ft., and a full power speed of 60 miles an hour.

The Aero Club of Manitoba has been formed by former air service men. Membership is open to any one who has served in any capacity with the air forces of any of the allied countries. The objects are to promote good fellowship among those interested in flying, to promote flying, to safeguard flyers and render charitable and financial aid to flying men in case of need.

The Aerial Service Co. Ltd., has been organized at Regina, Sask., to carry on business in commercial flying. R. J. Groome, is President of the company which has a hangar four blocks west of Albert St. The minimum charge for a flight is $15, and a schedule of rates for single and return trips to Moose Jaw and other points in the province is reported to have been drawn up.

A recent press report stated that arrangements were being made for a flight from Halifax, N.S., to Vancouver, B.C., that it was hoped to start the trip on Sept. 30, with short stops at Montreal, Toronto, Port Arthur, Winnipeg, Calgary and Vernon, B.C., and to make Vancouver in 40 hours from the time of starting. D. K. Trim is mentioned as the pilot and W. H. Walsh as the navigating officer. Both were former officers of the Royal Air Force.

The American Express Co. was reported, Aug. 15, to have practically completed arrangements for the establishment of a daily passenger and baggage service between London, Eng., and Paris, France. It is stated that the service will be inaugurated in October. The company is also reported to be arranging for an aeroplane service in connection with the arrival and departure of trans-Atlantic steamships at Liverpool and Southampton.

The Canadian Aero Co. Ltd., has been incorporated under the Dominion Companies Act with authorized capital of $50,000 and office at Brantford, Ont., to establish, equip, maintain and operate services of aircraft of all kinds for the carriage of passengers, mails, express and freight between such points within or without Canada as may from time to time be determined upon. The provisional directors include W. S. Brewster and G. D. Heyd, Brantford.

Capt. E. C. Hay, of the Dominion Flying Corps, left Vancouver, Aug. 7, at 4.13 a.m., with the object of flying to Calgary, Alta., within 18 hours. The route taken was to Vernon, 225 miles; thence to Grand Forks, 125 miles, to Cranbrook, 175 miles, to Lethbridge, 225 miles, and to Calgary, 120 miles, a total of 870 miles. He arrived in Calgary at 8.50 p.m., thus making the trip in 16 hr. 37 min., the actual flying time being 13 hours. This is the first flight made over the Rocky Mountains.

Handly-Page, Ltd., has been incorporated under the Dominion Companies Act with a capital of $2,500,000 and offices at Morrisburg, Ont., to manufacture, buy, sell and have aeroplanes of all kinds; to build cars, shops, boats, piers, wharves, aerodromes and other structures, and to carry on a variety of other operations connected therewith. The provisional directors are: W. H. Workman, Rear-Admiral Mark Kerr, C.B., London, Eng.; H. C. Clark, Montreal; F. R. Chalmers, W. H. McGannon, Morrisburg, Ont.

The Dominion Parliament at its last session passed an act authorizing the Canadian Pacific Ry. to establish, maintain and operate services by air craft between such points and places within Canada as may be found desirable, and to exercise and employ such powers as may be necessary for such purposes. These powers are to be exercised subject to all regulations put in force by the government; a clause to this effect having been inserted in the act at the instance of the government which also secured the elimination of the power asked for the carry on business without, as well as within, Canada.

The Dominion Government has passed an order in council approving of regulations recommended by the Air Board as follows:—No aircraft shall fly over any city or town except at such altitude as will enable it to land outside the city or town should the means of propulsion fail through mechanical breakdown or other cause; provided that this prohibition shall not apply to any flight undertaken for a special purpose approved by the Air Board, or any area comprised within a circle with a radius of one mile from the center of an aerodrome approved by or under the control of the Air Board. No person in any aircraft shall carry out any trick flying, or exhibition flying, over any city or town area or populous district; or carry out any trick flying or exhibition flying over any regatta, race meeting, or meeting for public games or sports, except where specially arranged for in writing by the promoters of such regatta or meeting; or carry out any flying which, by reason of low altitude or proximity to persons or dwellings, is dangerous to public safety; or drop or cause to permit to be dropped from the aircraft any article capable of causing injury or damage. Where any aircraft flies in contravention of any provision of these regulations, the owner and the pilot or commander shall be deemed to have contravened them, provided that it shall be a good defence if the contravention is proved to have been due to stress of weather or other unavoidable cause, or to have been approved by the Air Board. Any person contravening any of the regulations shall be liable to imprisonment for not exceeding 6 months or to a fine not exceeding $1,000, or to both such imprisonment and fine.

Arrangements Between Dominion and Provincial Governments to Relieve the Drought Situation in the Prairie Provinces.

In view of the serious situation with respect to feed for live stock that has arisen in certain parts of the western provinces owing to drought, it has been found necessary for the Dominion Government to give some assistance to farmers and stockmen in the dry area in order to carry their cattle over winter. The dry area may be defined as all that part of the provinces of Alberta, Saskatchewan and Manitoba lying roughly south and west of a line drawn from Wetaskiwin to Camrose, north to Chipman, east to Lloydminster, south to Chauvin, then to Elbow, Moose Jaw, Weyburn, Virden, Souris and south to the International Boundary.

Conferences have been held between representatives of the railways, provincial governments and the Dominion Government, and a scheme of assistance practically agreed upon.

Hay taken into the dry area over the C.P.R., the C.N.R. or the G.T.P.R., will be carried at no cost to the purchaser, as this will be met by the railways, the provincial government, and the Dominion Government paying equal shares. The same arrangement applies to the transportation of hay-making machinery from points in the dry area to northern districts where hay can be cut, and back to the point of origin.

Assistance will be given to owners of less than 100 cattle or 300 sheep, and assisted shipments will be limited to two carloads for each owner. The exact amount of assistance has not yet been decided upon, but if the railways and the provincial governments are prepared to do likewise, the Dominion Government will pay one-third of the cost of transportation of cattle and sheep to some feeding ground, and back to the dry area next summer. In the event of this not being agreed to, it is proposed that the railways should pay one-half of the return transportation only, leaving one-quarter of the return freight to be paid by the provincial government and the remaining one-quarter by the Dominion Government. This latter arrangement will mean that the owner must ship the cattle and sheep out at his own expense, and if they are returned before Aug. 1, 1920, and the other conditions are fulfilled, they will be returned to him without charge.

The above arrangements only apply to shipments over the C.P.R., the C.N.R. and the G.T.P.R. As the railways in Northern Alberta, the Edmonton, Dunvegan and British Columbia and the Alberta and Great Waterways are unwilling to make any freight concessions, the provincial and Dominion Governments will each pay one-half of the cost of transportation on hay, hay making machinery and live stock moved over these two lines, under the same conditions.

The order in council authorizing the Dominion Government's share in the above arrangement has been passed, and it is hoped that it will be possible to put the scheme into operation at an early date, so that the serious feed situation in the prairie provinces may be somewhat relieved.

The Conservation of Track Material

The following committee report was presented at the Roadmasters' and Maintenance of Way Association of America's last annual meeting:

All members of the committee realize the importance of the subject to be considered and the saving which can be effected by close supervision of track material, both in and out of track.

Rails—One of the largest expenditures which the railway companies make is for new steel rails. A large number of rails are permanently damaged in track on account of the maintenance forces being unable to properly take care of the rails, resulting in battered and chipped ends. On a number of roads these rails are taken out of track, a sufficient amount sawed off each end, rail re-drilled and used again on branch lines. The average cost per ton for this work, including labor, sawing, drilling, oil and saw blades, is approximately 40c a ton. The committee recommends this as good practice.

Angle Bars—Cracked angle bars can be welded by the acetylene gas process and made use of again. The cost of this work is from $1.50 to $2.00 a pair, and we believe that it would be better economy to scrap the defective angle bars rather than weld them. Worn and bent joints can be straightened and built up for 20c a joint and made use of again. The bar is heated in an oil furnace, placed in die and swedged under a drop hammer. In this manner bar is swelled to its original section by means of pieces of steel 1⅞ x ⅛ in. thick placed in the center of bar.

Track Bolts—A large number of good usable track bolts can be recovered wherever rail is being renewed, if bolts are oiled before renewals are made, at a cost as follows: per mile for oiling: 4 hours labor, 30c an hour, $1.20; 1 gal. kerosene oil at 10c a gal. and 1 gal, black oil at 13c a gal., cost of labor recovering bolts 4½c a bolt. Bolts which are recovered to be used in sidings and industrial tracks have an approximate life of 8 years.

Track Spikes—Old spikes can be straightened and used again in sidings and industrial tracks at a cost of not to exceed 70c a 200 lb. keg. There are a number of different ways of straightening old spikes, but the most approved way and the one recommended by your committee is with a press, where from 2 to 4 spikes may be straightened at a time. This is a decided advantage over other methods, on account of bringing the head back to its original position, where with the hand method or trip hammer it is impossible to straighten the heads up.

Worn Switch Points can be made use of in several different ways: First, by cutting off a sufficient amount of worn point and replaning same. The cost of labor for this method is not less than $10 a point. Second, the worn point can be built up by the acetylene gas process at an approximate cost of $2.25 a point, but a point so built up should only be used in sidings.

Frogs—Worn and broken frogs can be repaired at a large saving over the cost of new frogs. To repair these frogs in the shops cost considerably more than by the acetylene gas process. To repair 90 lb. spring rail frog in shop, bolts, rivets, new wing rail, including labor and price of rail costs, $70. A new frog of this kind costs $160. A no. 9, 100 lb. spring rail frog, new short point, bolts and rivets, including labor costs, $45 to repair. Cost of new frog, $152. Rigid frogs can best be repaired with the gas process at approximately the following cost: New point and both wing rails built up and bolted, including the gas and labor charge, from $12 to $14 a frog, and by shop process $25, saving by gas process $13 a frog, with the additional advantage that the frogs can be built up under traffic, if necessary, at a slight additional cost.

Tie Plates—No tie plates should be discarded as scrap, unless they are entirely unfit for further use, but should be made use of on storage tracks and industrial sidings. Plates of heavier section can be re-punched and used on lighter section of rail to prevent rails cutting into ties. This conserves ties.

Track Ties—To conserve ties in track they should be inspected in accordance with the association's recommended practice. Ties removed from track should be carefully sorted and those fit for sidings or temporary track piled separately. Ties fit for fuel should either be disposed of to company employes, or to outside parties, to be used for that purpose, or they can be unloaded and used for engine fuel. Good use of old track and switch ties can be made for cribbing and docking. No old ties should be burned except those which are absolutely worthless for any other purpose.

Fences—To conserve lumber supply, the committee recommends a more extensive use of wire fencing and concrete posts.

Crossing Plank—To further conserve the supply of crossing plank which is a very large item, the committee recommends the following for consideration: Concrete slabs for highway crossings, macadam crossings and the paving block crossings. Either of these methods for crossings would successfully take the place of our plank crossings, if properly installed, requiring less attention and the cost would not exceed plank crossings, and in some cases would cost less.

Track Tools—In order to conserve tools, careful inspection should be made at frequent intervals, and defective tools should be sent to shop for repairs.

Coal—We are told that there will be a great shortage of coal this winter; therefore we should conserve it at every point. Coal is used by the track forces in the tool houses, labor camps, blacksmith shops, derrick cars, ditching machines and riding cars. If only a few shovelfuls are saved each day it will help to cut down the shortage. Coal can be saved in a number of different ways: Where it is used for camps, instead of unloading on the ground, a platform should be provided for it to be unloaded on and only a small amount unloaded at a time, as coal deteriorates when left out in the air any length of time and camp help will only use the lump coal. When spilled along the track it should be loaded up promptly or disposed of to outside parties and not thrown over the bank out of sight. In camps and toolhouses, fires should only be kept burning when necessary.

Other Supplies, such as wicks, chimneys, oil cups, lanterns, torpedoes and fusees should be furnished gangs in such quantities that all will be used, and not left lying around the camps and tool houses until useless.

Oils and Gasoline—Now that on a number of roads tie-tamping machines and motor cars are used, there is a great saving to be made in oils and gasoline if operators of such machines are carefully instructed in regard to their duties. We should all remember to look after the little things; the large ones will be taken care of also.

Scrap—Now that material is hard to get, a close watch should be kept on the scrap piles. Your committee recommends that all scrap be picked up by section forces weekly and placed for loading at designated points and that all scrap be loaded up on the divisions once a month, at this time the roadmaster or some competent foreman should accompany the train and all material that can be made use of again, should be sorted out and held for future use. Only material that is scrap should be disposed of. Other material scattered along the track, such as marker lamps, grease plugs, air brake hose, etc., should be shipped direct to the motive power department to be used over again.

Attempt to Defraud the C.P.R.—John Casserley, a laborer, was sentenced to three months imprisonment at Calgary, Alta., Aug. 12, for attempting to defraud the C.P.R. He checked a trunk from Edmonton to Pincher Creek, and claimed that it had been opened in transit, and that $500, in addition to wearing apparel, had been taken. An action was brought to recover $565, but the company, after investigation, secured an admission that there had not been any loss. The company then prosecuted Casserley for attempting to obtain money by false pretences.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners—Hon. F. B. CARVELL, K.C., ex-Minister of Public Works, has been appointed Chief Commissioner, vice Sir Henry L. Drayton, K.C., who has entered the Dominion Government as Minister of Finance and Receiver General.

S. J. McLEAN, Commissioner, has been appointed Assistant Chief Commissioner.

Canadian National Rys.—F. BRADLEY, heretofore sleeping and dining car inspector, has been appointed equipment inspector, sleeping, dining and parlor car, hotel and news department, Winnipeg, vice J. A. McAllan, transferred.

J. D. CAMERON, latterly in military service overseas has been appointed City Freight Agent, Victoria, B.C.

R. W. HANNINGTON, heretofore City Solicitor, Victoria, B.C., has been appointed Solicitor for British Columbia, C.N.R. Officer, Vancouver, B.C.

W. M. HOLLISTER, has been appointed sleeping and dining car inspector, Winnipeg, vice E. L. Clarke, resigned.

J. A. McALLAN, heretofore equipment inspector, sleeping, dining and parolr car, hotel and news department, Winnipeg, has been appointed sleeping and dining car inspector, Winnipeg, vice F. Bradley, transferred.

S. MORRISON has been appointed acting District Engineer, Pacific District. Office, Vancouver, B.C.

M. F. TOMPKINS, heretofore Assistant General Freight Agent, Moncton, N.B., has been appointed General Freight Agent, with jurisdiction over lines Matapedia, Que., Edmundston, N.B., and east. Office, Moncton, N.B.

A. T. WELDON, heretofore Assistant Freight Traffic Manager, Moncton, N.B., with jurisdiction in the Maritime Provinces, has been appointed Assistant Freight Traffic Manager, with jurisdiction extended to inclde all lines east of, but not including Port Arthur and Armstrong, Ont., Guy Tombs, Assistant Freight Traffic Manager, lines west of Matapedia, Que., and Edmundston, N.B., to, but not including Port Arthur and Armstrong, Ont., having resigned to enter commercial business. Office, Montreal.

J. A. WINTER, has been appointed sleeping and dining car inspector, Winnipeg, vice P. Cotton, appointed dining car steward.

The Pacific District has been divided as follows:—Division 1, Edson, Alta., to Boston Bar, B.C., including Boston Bar; Superintendent, J. E. NELSON, Kamloops Jct., B.C.

Division 2, Boston Bar to Vancouver, including Port Mann, and Vancouver terminals and Vancouver Island lines; Assistant Superintendent, L. E. MUNCEY, Vancouver, B.C.

The jurisdiction of the dispatching office at Kamloops Jct., will include the entire district.

Canadian Pacific Ocean Services Ltd.—T. R. PERCY, heretofore chief clerk, Passenger Department, C.P.R., Montreal, has been appointed General Agent, Passenger Department, C.P.O.S., Yohohama, Japan.

Canadian Pacific Ry.—H. J. HUMPHREY, heretofore Superintendent, Browneville Division, New Brunswick District, Browneville Jct., Me., has been appointed Superintendent, Trenton Division, Ontario District, vice R. W. Scott, transferred. Office, Toronto.

G. S. LYTLE, heretofore Car Service Agent, Manitoba District, Winnipeg, has been appointed Car Service Agent, Saskatchewan District, vice J. A. Berry. Office, Moose Jaw.

F. S. ROSSETER, heretofore Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Assistant Superintendent, Toronto Terminals Division, Ontario District, vice W. J. Stinson, transferred. Office, West Toronto.

A. T. Weldon
Assistant Freight Traffic Manager, Eastern Lines, Canadian National Railways.

R. W. SCOTT, heretofore Superintendent, Trenton Division, Ontario District, Toronto, has been appointed Superintendent, Toronto Terminals Division, Ontario District, vice T. Collins transferred. Office, Toronto.

R. A. SEWELL, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal, has been appointed Superintendent of Car service, Eastern lines, vice O. M. Lavoie, promoted. Office, Montreal.

W. J. STINSON, heretofore Assistant Superintendent, Trenton Division, Ontario District, Trenton, has been appointed Assistant Superintendent, Trenton Division, Ontario District, Havelock, vice R. de B. Girouard, transferred.

W. J. SUTCLIFFE, heretofore chief clerk to Auditor of Freight and Telegraph Receipts has been appointed Assistant Auditor of Freight and Telegraph Receipts, vice J. Bonner, superannuated. Office, Montreal.

E. G. WHITE has been appointed Superintendent of Department of Colonization and Development. Office, Montreal.

Central Vermont Rd. (U.S.R.A.)—I. AUSTIN has been appointed acting Track Supervisor, Montpelier, Vt., vice W. Z. Penell.

W. Z. PENELL, heretofore Track Supervisor, Montpelier, Vt., has been appointed Track Supervisor, St. Albans, Vt., vice W. Bibby, resigned to enter G.T.R. service.

Edmonton, Dunvegan & British Columbia Ry.—C. DOWLING, Traffic Manager, Edmonton, Alta., is reported to have resigned to enter other service in Eastern Canada.

Grand Trunk Ry.—W. GILLESPIE, heretofore Mechanical Superintendent Central Vermont Ry., St. Albans, Vt., has been appoflinted General Foreman, Scrap and Reclamation yard, G.T.R., Montreal.

A. D. McCARTHY has been appointed Assistant Superintendent, Montreal Terminals, vice F. J. Miller, resigned.

C. S. OGILVIE, heretofore Assistant Engineer, Ottawa, Ont., has been appointed Assistant Engineer, Montreal Division, vice C. Murgatroyd, resigned. Office, Montreal.

Grand Trunk Pacific Ry.—R. H. MERRITT, heretofore City Ticket Passenger and Ticket Agent, Calgary, Alta., has been appointed City Passenger and Ticket Agent, Seattle, Wash.

United States Railroad Administration—F. E. DEWEY has been appointed appointed General Assistant, New England District, Eastern Region. Office, Boston, Mass.

Windsor-Detroit Bridge or Tunnel Project.

In connection with the proposal to construct a bridge or tunnel underneath the Detroit River to provide for highway traffic between Detroit, Mich., and Windsor, Ont., it is reported that the general opinion is more favorable to a bridge than to a tunnel. Plans for such a bridge are reported to have been prepared by J. A. L. Waddell, of Kansas City. A preliminary survey of the water front on both sides of the river is reported to have been made, and a site selected tentatively. It is suggested that the bridge entrances shall be close to the water's edge on both sides of the river, instead of by long inclines, which would bring them too far back, particularly on the Canadian side. Foot passengers could be carried to and from street level to the bridge level by elevators, and vehicle traffic would move along spiral roadways. The spiral on each side of the river, would have a diameter of 340 ft., and would make three turns to reach the bridge level of 130 ft. The cost of such a bridge and spirals is estimated as about the same as for a twin tunnel under the river, with the added advantage of eliminating the possible danger from automobile exhausts. The Dominion Prime Minister has informed the Mayor of Windsor that owing to the retrenchment made necessary by the war, no government aid can be given towards the construction of a bridge or tunnel between Windsor and Detroit for many years to come.

Railway Cartage Rates Increased—Railway companies in Canada have issued supplement 52 to C.R.C. no. E3280, effective Sept. 4, providing increases in cartage rates applicable in cities and large towns on their eastern lines.

The C.P.R. Management asks its Conductors' Co-operation.

The following letter from Alfred Price, General Manager, Eastern Lines, C.P.R., reproduced in facsimile of his handwriting, was sent recently to all passenger train conductors under his jurisdiction:

"This letter is being addressed to all passenger conductors on Eastern Lines, but it is nevertheless intended as a very personal message to you. Ever since the early eighties, when its passenger train service was first inaugurated, the courtesy of C.P.R. conductors and other train and station employes, has been proverbial. Even from the beginning, practically all employes who had to deal directly with the public, took a pride in the new enterprise and the reputation for courtesy established by the pioneers in the service has been perpetuated by the newer and younger men.

"The responsibilities you have to assume, and the many duties you have to perform, are fully appreciated. It is well understood that in addition to conforming to numerous exacting train rules, you have jurisdiction over employes and the care of every passenger on your train, and that there are many things to worry, perplex and annoy you. It is common knowledge that occasionally there are unreasonable, disagreeable and even quarrelsome people to deal with, and under such circumstances it is extremely hard to maintain one's equanimity. It is, however, in just such a situation that you have an opportunity of showing your real worth to the company by preserving a courteous, calm and dignified demeanor. Remember that you are carrying passengers from day to day who are not accustomed to railway travel, and who find everything in connection with their first trip exceedingly strange. Such passengers need special consideration. Some women are accompanied by irritable and obstreperous children, who are most trying upon their nerves. A little kindly attention from you will help them to stand the strain. You may be handling American, European and Asiatic travellers, who are making their first trip on a C.P.R. train. They have heard of C.P.R. efficiency and courtesy, and are on the lookout for a demonstration of both. If you are true to the traditions of the service, you will not disappoint them. Every day you are collecting tickets from people who control the routing of large volumes of freight. They are judging the C.P.R. by you, and if they are impressed by your efficiency, courtesy and patience, their further patronage will probably be assured.

"It is recognized that the C.P.R.'s present unexampled position is due in large measure to the quality of the work of its employes, and to their unswerving loyalty and devotion to the company's interests. We have no monopoly of most of the traffic we are handling, and competition is growing keener every day. If therefore the C.P.R. and its employes are to continue to prosper, the company must retain the admiration, the confidence and the good will of its old friends, and it must also win new friends in ever increasing numbers. As there are such vast multitudes of people who travel on C.P.R. trains—over 15,000,000 a year—it would not be even remotely possible for the company's officials to meet any large proportion of them, so as to foster and develop amongst them the proper sentiment; while you and the other employes through whom the public transacts its business with the company come into personal contact with all these people. This gives you and the other passenger conductors of the system the unparalleled opportunity of making friends for the company of over 40,000 persons every day of the year. Feeling assured of your pride in being a vital part of our great transportation organization, and of your attachment to and interest in all that pertains to its welfare, you can without doubt be depended upon to do your part in binding more closely to it the old friends, and winning to it the new friends, who are so necessary to its continued prosperity."

Lifting of Canadian Northern and Grand Trunk Pacific Rails for War Purposes.

During 1917 and 1918, Canadian Railway and Marine World published considerable information about the removal of rails from the Canadian Northern and Grand Trunk Pacific Railways for use on the British western front. Following is the official report on the work, by Alex. Ferguson, engineer in charge, as issued recently by the Railways Department:—

"On May 21, 1917, instructions were given to proceed with the work of lifting track from the Grand Trunk Pacific and Canadian Northern roadbeds between Imrie and Resplendent, Alta., to provide steel rails for the use of the British armies in France, as authorized by order in council. An organization was immediately created, and the work of lifting track and of transforming the two lines into one was commenced.

"The G.T.P.R. track between Imrie and Leaman Jct., 13.6 miles; between Obed and Pocahontas, 42.25 miles; and between Geikie and Resplendent, 34.8 miles, was lifted, and the rails and angle bars shipped to Three Rivers, Que.

"The Canadian Northern track between Leaman Jct. and Obed, 79.9 miles, and between Snaring Jct. and Geikie, 22.05 miles was lifted, and the rails relaid on the G.T.P.R. between Leaman Jct. and Obed, and between Snarring Jct. and Geikie.

"The G.T.P.R. rails between Pocahontas and Snaring Jct. were lifted and relaid partly with 60 lb. steel and partly with 80 lb. Canadian Northern rails in order to release the G.T.P.R. rails for shipment to France, and at the same time preserve rail connection with the coal mines at Pocahontas. This portion of the G.T.P.R. line is being operated as a spur and is, as yet, considered merely temporary.

"The first shipment of steel rails for Three Rivers left Edmonton on June 17, 1917, and the last on Oct. 26, 1917. The total shipments amounted to 23,408 gross tons of rails and 1,110 gross tons of anglebars.

"During Oct., Nov. and Dec., 1917, a considerable amount of work was done on the construction of highways between Otley and Carrot Creek and between Peers and Fulstow, in order to give the settlers access to the G.T.P.R. line. Befor the close of the fiscal year arrangements were made for the completion of these roads and for the construction of a roadway from Rosevear on the G.T.P.R. to Horner."

Traffic Orders by Board of Railway Commissioners.

Midland Railway Standard Freight Tariff

28,594, July 26. Re application of Midland Ry. of Manitoba, under sec. 330 of the Railway Act, 1919, for approval of its Standard Freight Tariff C.R.C. 80. Upon reading what is filed in support of the application, and the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff, to take effect on Aug. 24, 1919, to apply locally in Manitoba between points on the company's railway north of Midland Jct., cancelling the company's Standard Freight Tariff C.R.C. 5, be approved; the said tariff, together with a reference to this order to be printed in at least two consecutive weekly issues of the Canada Gazette.

Joint Class Freight Tariffs

28,618, Aug. 1. Re joint class freight tariffs, to apply on interline traffic between Grand Trunk, Canadian Pacific, and Canadian National Railways. Upon reading the submissions filed on behalf of the said railway companies, the Canadian Manufacturers' Association, the Boards of Trade of Toronto and Montreal, Dominion Canners, Ltd., and others; and upon the report and recommendation of the board's Chief Traffic Officer it is ordered

1. That within the territory covered by order 3258, July 6, 1907, as amended, in what is known as the International Rates Case, and in conformity with the relevant provisions thereof, also with the station groupings of the respective companies as shown in their tariffs between points west of Toronto on the one hand, and points east of Toronto on the other, joint tariffs of class rates be compiled to apply between stations on the Canadian Pacific and Grand Trunk Rys., the Canadian Pacific and Canadian National Rys., respectively, on the basis of the so-called schedule A scale, with the addition of the following figures to be incorporated in the rates themselves.

1	2	3	4	5	6	7	8	9	10 classes
8	7	6	4	2½	2½	2½	2½	2½	2½

cents per 100 lb.

the rates so compiled to include the service of transfer from the one company to the other; subject, however, to a minimum joint charge of 100 lb. at the 1st class rate, but not less than 75c.

2. That the joint class freight tariffs carrying out the requirements of this order be published and filed so as to become effective not later than Oct. 1, 1919.

3. That the following be made the points of interchange of interline freight traffic between the said companies under the terms of this order. Lennoxville, Montreal, Ottawa, Brockville, Peterborough, Toronto, London, Mount Forest, Orillia, North Bay, Actonville, Ste. Rosalie, Renfrew, Kingston, Milton, Guelph, Woodstock, Tillsonburg, Inglewood, and Essa (Utopia).

Following is the report of the board's Chief Traffic Officer, which was concurred in by the board and adopted as its judgment:

"Since everything likely to be of value appears to have been submitted, I think this old question should be disposed of. It is perhaps unnecessary to review the various stages prior to the filing of G. T. R. (C. R. C. no. E. 3842) and C. P. R. (C. R. C. no. E. 3439) Tariff to Joint Mileage Class Rates to apply on interline traffic between themselves, to become effective May 1, 1918. This tariff having been objected to, it was suspended by order 27160, Apl. 26, 1918, following a hearing at Ottawa on April 16. The last hearing was held at Ottawa on May 7, 1918. On Sept. 25, 1918, the tariff was withdrawn and cancelled, order-in-council P. C. 1863 having issued in the meantime, and none has been substituted.

'The G.T.R. had, and still has, a joint tariff to and from points on the Central Ontario Ry., (now part of the Canadian National) via Trenton, but the rates are claimed by Dominion Canners, Ltd., to be excessive and restrictive of trade. It appears, generally speaking, to be a little higher than the tariff first referred to, the basis of which may be explained as follows: Taking the old standard tariff in effect before the 15 per cent. case, representing, of course, single line movements, the general rates for the same mileage blocks were made by adding 4c per 100 lb. to the 1st class rates up to 110 miles; for the blocks over 110 to 220 miles 2c were added to the 1st class rates; and for all distances beyond 220 miles the single line standard rates were adopted as the joint rates for like mileages. To the 1st class joint rates so arrived at 15 per cent. was added so as to bring the schedule in line with the judgment in the 15 per cent. case. Then the rates for classes 2 to 10 were graduated from those 1st class rates in conformity with the scaling of the standard tariff. Of course, had this tariff been permitted to go into force, or if it were now resubmitted on the same plan, it would now include the further 25 per cent. increase.

"These were the rates for haulage only; an additional charge of 4c per 100 lb., to cover cost of transfer of l. c. l. freight from one line to the other, being provided for.

"The greatest objection to this tariff was that it had as its general basis the maximum or standard eastern scale, which, in practice, is applied to only a small proportion of the traffic moving under the classification ratings. The great bulk of such traffic is directed from or to the manufacturing and jobbing centers, and is subject in the east to the lower scale of what is known as Schedule A. It is to this schedule that the joint tariffs should be related, in my opinion, if they are to be of any practical service. Two points have, however, to be kept in view. Both the standard tariff and Schedule A are one company's scales, and the board has had frequent occasion to rule that they cannot be applied as of right to joint hauls. The other point is that while physical connection exists at the point of transfer of the suggested tariff, thus enabling the interchange of carload traffic without handling, on the other hand, at several of them l. c. l. shipments have to be transshipped and teamed. Cartage cost varies, even in the case of the big cartage corporations with which the railway companies have contracts. The present rates, regardless of classification, of those cartage companies, are 6c per 100 lb. at Montreal; 5c at Toronto; 4½c at Windsor and Walkerville, and 4c at the other cartage points. Some of the interchange points shown in the tariff referred to are such cartage points; at the others the companies must rely on the best terms they can make with the local carters.

"Careful consideration has decided me to recommend that within the territory covered by order 3258, July 6, 1907, as amended, in what is know as the International Rates Case, and in conformity with the relevant provisions thereof, also with the station groupings of the respective companies as shown in their tariffs between points west of Toronto on the one hand, and points east of Toronto on the other, joint tariffs of class rates be compiled to apply between stations on the C. P. R. and G. T. R., the C. P. R. and C. N. R., and the G. T. R. and C. N. R., respectively, on the basis of the so-called Schedule A scale, with the addition of the following figures to be incorporated in the rates themselves.

1	2	3	4	5	6	7	8	9	10 classes
8	7	6	4	2½	2½	2½	2½	2½	2½

cents per 100 lb.

the rates so compiled to include the service of transfer from the one company to the other; subject, however, to a minimum joint charge of 100 lb. at the 1st class rate, but not less than 75c. It is not my purpose that these additional figures should be understood to represent merely an approximation to the average cost of transferring the freight; they are intended to include that, and as well, some addition to Schedule A, because of its application to a joint service. The unfairness of applying the tapering rate of the extending mileage of a single carrier to the same aggregated mileage, but shorter individual hauls, of two carriers will not be overlooked. In the sum total the railways may come out ahead of the transfer costs; but on the other hand, the board will not be committed to the principle of single line rates for a two line service.

"The companies' proposition provided 10 transferpoints,asfollows: Lennoxville, Montreal, Ottawa, Brockville, Peterborough, Toronto, London, Mount Forest, Orillia and North Bay. These do not sufficiently cover the field, and my proposal to add the following 10 more, making two facing pages, instead of a single page, of the tariff, is satisfactory to the companies, the additions being Actonville, Ste. Rosalie, Renfrew, Kingston, Milton, Guelph, Woodstock, Tillsonburg, Inglewood, Essa (Utopia).

"As the work of compilation will take some time during the vacation season, I think Oct. 1, might reasonably be named as the effective date, if these recommendations are approved.

"I give below a comparison up to 500 miles of the 1st, 5th, 6th, and 10th class rates, as proposed in the joint mileage tariff first referred to, as increased by 25 per cent., and including in the 1st class the 4c for transfer, with the rates, including transfer, herein recommended. It will be understood that the mileages are selected, there being intervening groups taking lower rates than shown for the farther distaces.

	Proposed.				Recommended.			
Miles.	1st	5th	6th	10th	1st	5th	6th	10th
50	44	20	19	13	40	18	17	12½
75	53	24½	22	15½	48	22½	21½	15½
100	58½	27½	24½	19	51	24½	22½	17
125	61½	29	25½	20	57	27	24½	18
150	64½	30	27½	22	60	28	25½	20
200	73	34½	32	23	62½	30	27	21½

450	113½	54½	52	36½	88½	42½	40	30
500	119	57½	54½	39	91	44½	41½	31½

Temiscouata Railway Passenger Fares

28,620, July 31. Re application of Temiscouata Ry., for permission to increase its standard passenger fare to 4c a mile, and re complaint of Municipality of Ste. Rose du Degele, Que., against the cancellation of second class fares by the company. Upon hearing the matter at Riviere du Loup, July 10, the applicant company, the Municipalities of Edmundston, Cabano, Riviere du Loup, and Temiscouata, the County of Madawaska, and the Towns of Notre Dame du Lac and Ste. Rose du Degele being represented, and what was alleged at the hearing; and upon reading the further submissions filed. It is ordered that the company be authorized to publish and file tariffs increasing its 1st class standard passenger fare to 4c a mile; and that this increased rate shall not become effective until the company has complied with the requirements of secs. 330 and 334 of the Railway Act, 1919. That the complaint of the Municipality of Ste. Rose du Degele be, dismissed.

28,662, Aug. 14. Re application of Temiscouata Ry., under sec. 334 of the Railway Act, 1919, for approval of its standard passenger tariff(C.R.C. no. 72, on the basis of 4c a mile: Upon the recommendation of the board's chief traffic officer, the said tariff having been filed on the basis permitted by the board in its order 28,620, July 31, it is ordered that the said tariff dated to become effective Aug. 25, be approved, the said tariff, with reference to this order, to be printed in at least two consecutive weekly issues of the Canada Gazette.

Belated Demurrage on Lumber Cars.

28,621, Aug. 1. Re complaint of Kilgour Manufacturing Co., Hamilton, Ont., against a belated bill of demurrage amounting to $1,200, subsequently reduced to $515, on 101 cars of lumber received at Hamilton from various points during Jan. to July, inclusive, 1917: Upon hearing the complaint at Toronto, June 24, 1918, the complainant, the Canadian Manufacturers' Association, the C. P. R. and the Canadian Car Service Bureau being represented at the hearing, it is ordered that the complaint be dismissed.

Demurrage Tolls Confirmed

28,622, Aug. 1. Re application of Dominion Millers' Association, Canadian Millers' Committee, Canadian Manufacturers' Association, Ontario Retail Lumber Dealers' Association, Toronto Board of Trade, Peterborough Board of Trade, and the Premier Potato Co., for revision of rule 9 of general order 201, Aug. 1, 1917, and the restoration of the demurrage toll in effect prior to Aug. 20, 1917. Upon hearing the application at Ottawa, July 8, 1919, the Canadian Manufacturers' Association, the Boards of Trade of Montreal and Toronto, the Canadian Lumbermen's Association, Canadian Car Demurrage Bureau, Michigan Central Rd. and the Grand Trunk, Canadian Pacific, and Canadian National Rys. being represented, it is ordered that the application be dismissed.

The Chief Commissioner, Sir Henry Drayton, gave the following judgment: "This complaint is made by shippers and consignees who desire that the present demurrage tolls should be decreased. No complaint is made as to the basis of the present tariff. On the other hand, shippers think it more equitable than the tariff in force in the United States. The whole question is the amount. The application is opposed by the railways, which are desirous of getting as many cars as possible on hand for the grain movement and of keeping terminals as free as possible, so as to prevent congestion and blocking the movement.

"Mr. Marshall, for the Toronto Board of Trade, and who supported the application, introduced figures which showed, for the period under review, under the increased demurrage tolls, affording as they do a direct incentive to shippers to load and to consignees to unload with all diligence, a saving of 90,820 car days.

"The shippers are not unanimous on the application. The Ford Motor Car Co. state: 'We have not felt any serious effect resulting from the higher demurrage charges, and if these higher charges have resulted in the more prompt release of equipment and the reduction of congestion, we cannot see that it would be wise to reduce to the old basis, as we feel that it would only be inviting a return of old conditions of car shortage and congestion when the volume of traffic is again restored.'

"Mr. Tilston, who appeared for the Montreal Board of Trade, said: 'This matter has been considered very carefully by my committee, and from what we know of the car shortage, if we are going to succeed in moving the crop in the autumn, it will be very undesirable for the board to make any reduction in the present demurrage rates. The present rates of $1, $2, $3, $4, and $5 are more equitable to the honest dealer who is doing his best to unload his cars within the free time limit. The board should not make any reduction in these penalties.'

"The present situation is not normal. Usually some 62 per cent. of the country's grain moves via Buffalo. Owing to the requirements of the United States movement, Buffalo is this year closed to our grain. If anyhing like a proper movement of grain overseas is to be made, full facilities must be given the traffic. The car supply must be sufficient, and terminal congestion so often arising out of delayed cars avoided as much as possible. The car days saved under the higher tolls, and amounting to 90,820, would, allowing 6 days for the short movement from the Bay ports to Montreal, and with a loading of 1,600 bush. to a car, afford transportation for no less than 25,212,800 bushels to our chief sea port. In the public interest no reduction can be made under the present circumstances, and the application ought to be dismissed."

Cartage Allowance to Canada Sugar Refining Co.

28,630. Aug. 8. Re C.P.R. Co.'s application for authority to continue in effect the allowance made to the Canada Sugar Refining Co. of 1¼c per 100 lb. on account of cartage at Cote St. Paul, Montreal, as published in Tariff C.R.C. E3369: Upon hearing the application at Ottawa, Mar. 18, the Canadian Pacific, Grand Trunk and Canadian National Railways, and the Canadian Manufacturers' Association being represented, it is ordered that the application be refused and that C.P.R. Tariff C.R.C. no. E3369, in so far as it provides for a cartage allowance of 1¼c per 100 lb. to the Canada Sugar Refining Co. at Cote St. Paul, be disallowed; general order 252 to remain in effect.

Advanced Rate Charged on Grain.

28,635. Aug. 1. Re complaint of Merchants' Grain Co., Fort William, Ont., that it was charged an advance of 2c per 100 lb. on grain from Fort William, by reason of embargoes placed by the C.P.R., which prevented the complainant shipping prior to Mar. 15, on which date the advanced rates took effect: Upon hearing the complaint at Fort William, Mar. 5, the complainant and the C.P.R. being represented at the hearing, and upon reading the further submissions filed, it is ordered that the complaint be, and it is hereby, dismissed.

Location of Marker Sockets on Railway Cars.

The Board of Railway Commissioners passed general order 270, Aug. 7, as follows: Re order 10453, May 3, 1910, dealing with location of markers on G.T.R. passenger trains and general order 127, July 6, 1914, directing that all railway cabooses be equipped with marker sockets as provided by the order. Upon its appearing that railway companies have marker sockets at the corners of the roof on some of their passenger cars, in addition to the lower positions; upon the report of the board's Chief Operating Officer, that, in his opinion, and with a view to standardization in equipment and practice, the requirements as to passenger cars and cabooses should be the same, it is ordered as follows:

1. When passenger cars and cabooses are equipped with marker sockets in the lower position (the said lower position to be at such elevation as will permit of lamps and flags being placed therein from the platform or floor of the car without the use of steps), markers shall be carried in such lower sockets.
2. All passenger cars and cabooses hereafter constructed shall be equipped with marker sockets in the lower position.
3. All passenger cars and cabooses now in use, not equipped with marker sockets in the lower position, shall be so equipped on or before May 1, 1920.
4. Order 10453, May 3, 1910, and general order 127, July 6, 1914, are rescinded.

The St. John and Quebec Ry. has, it is reported, completed arrangements for running rights over the C.P.R. from Westfield to St. John, N.B., so as to give a through service over the recently completed extension from Gagetown to Westfield.

Department of Railways and Canals, Canada.

WELLAND CANAL.

NOTICE TO CONTRACTORS.

Placing Stone Protection on Summit Level Between Thorold and Port Colborne.

SEALED TENDERS addressed to the undersigned and marked "Tender for the placing of Stone Protection on the Summit Level of the Welland Canal between Thorold and Port Colborne," will be received at this office until 12 o'clock, noon, on Monday, September 8, 1919

Specification and form of contract to be entered into can be seen at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Superintending Engineer, St Catharines, Ont.

An accepted bank cheque for the sum of $1,500 made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted

The cheques thus sent in, will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

By order, J. W. PUGSLEY,
Secretary

Department of Railways and Canals.
Ottawa, August 25, 1919

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—J. L. Retallack, Public Utilities Commissioner for British Columbia, gave a ruling, Aug. 6, as to the scope of evidence admissible under the Public Utilities Act in the 6c fare case. The matter came before him July 10, under the provisions of the act passed at the Legislature's last session, which authorized the B. C. Electric Ry. to charge a 6c fare on certain of its lines until such time as the Commissioner shall fix a rate. At the hearing July 10, W. G. Murrin, Assistant General Manager B. C. E. Ry., argued for the fullest scope, viz., the inclusion of evidence as to the whole of the company's investments and operations in the province, while E. G. McCrossen for the city argued for the limitation of the investigation to such of the company's investments as are necessary to its street railway service within Vancouver City, and of its operations and receipts therein.

The commissioner in his ruling stated that he had to deal with the subject matter of the mandatory enquiry under Sec. 11 (4) of the act, which was to determine the just and reasonable rate to be charged by the B. C. E. Ry. on any line of railway which enters or traverses any portion of the city; and with the application of the City of Vancouver for the determination of the just and reasonable car fare to be charged within the limits of the city, with consideration of the B. C. E. Ry. Co's receipts within such limits, but without consideration of any capital investment, operating or other costs of the company outside such limits, except such as directly affect the cost of street railway operations within such limits.

After reviewing the arguments submitted the commissioner ruled that evidence as to the company's investments, operating and administrative costs, fixed charges and receipts in the Victoria area, be excluded from the enquiry under the act. He also ruled that evidence as to the company's gas system in Vancouver be also excluded, and "for the reason of insufficient correlation that evidence of the company's investments in land or other property in the Vancouver area, for speculative or any other purposes, except directly for the purposes of its power, light and railway systems shall be excluded from the enquiry. The scope of the enquiry is further limited by the statute itself; and by the fact that certain lines are being operated under some new charters, and consequently beyond his jurisdiction. These are: The Burnaby Lake line east of Commercial Drive. The Kitsilano line from the north end of Granville St. bridge and from the Granville St. station. The siding south of False Creek from Granville St. to Main St. bridge. The Vancouver and Lulu Island.

Following a review of the remainder of the arguments, the commissioner said: "I therefore rule that in the enquiry under this act, evidence shall be accepted as to the B. C. E. Ry. Co's investments of capital, in the area contiguous to and inclusive of the delta of the Fraser River, the cities of Vancouver and New Westminster, the municipalities of Point Grey, South Vancouver and Burnaby, the city and district of North Vancouver and the districts served by the New Westminster and Chilliwack line, and including its investments, present property values administrative costs, fixed charges and receipts, whether directly or through its subsidiary companies in its power and electric lighting systems in said district.

Upon the city's statement the commissioner pointed out that if its application were acted upon a decision would be necessary as to whether it would be just to secure such net return on the company's investment, either by continuing the present system of rates being more or less different rate for each governmental division of the district of Vancouver by establishing a basic rate, modified in relation to mileage, for the whole of said district, or by establishing the zone system throughout the district, viz., a fare figured in proportion to the density of population and mileage.

The commissioner concluded as follows: "I have not yet sufficient evidence, either, that the present system of rates is unfair and prejudicial to Vancouver, or as to the fairness and practicability of any other system, to justify me in giving a ruling now as to proportionate rates. Moreover, the other cities and municipalities which make up the district of Vancouver, are also interested in this issue. Therefore in order to obtain further evidence and to afford all parties likely to be affected an opportunity of being heard, I propose to give notice of and to hold a hearing to consider this particular issue, such hearing will not delay the general hearing under the act."

The commissioner then directed that for the convenience of all parties, the city's application and the enquiry under the act be consolidated.

The remainder of the sitting was occupied in fixing details of the procedure to be followed in carrying out the decision, and the commission adjourned to Aug. 19.

The following represented the different interests: British Columbia Electric Ry., W. G. Murrin and V. Laursen; City of Vancouver, E. G. McCrossen, E. F. Jones and Alderman McKae; Point Grey, G. G. McGeer; New Westminster, Burnaby and Surrey, W. G. McQuarrie, M. P.

Hamilton Radial Electric Ry.—A new schedule of fares was put in operation between Hamilton and Oakville, Ont., Aug. 18. The new rates from Hamilton are: To Burlington Beach, 30c single, 35c return; to Burlington, 25c single, 45c return; to Bronte, 35c single, 65c return; Oakville, 45c single, 85c return. The scale for individual workmen's tickets and for family tickets limited to six weeks is:

	Workmen's ticket 12 trips	Family ticket 26 trips
Kenilworth	$ .90	$2.60
Ghent's	.90	2.60
Canal	1.20	3.90
Burlington	1.50	4.55
Burlington	1.20	......
Pine Cove	1.80	5.20
Bronte	2.10	7.80
Oakville	3.60	9.10

Under the former schedule, a single trip to Burlington Beach, or Burlington cost 15c and a return ticket 25c, these being the figures fixed in the Burlington Village and Saltfleet Tp. franchise bylaws. In 1918 the Board of Railway Commissioners authorized the company to charge a return fare of 64c to Burlington, subject to the village's consent. This consent was refused and the company stopped operating the line. Subsequently an arrangement was made to reopen the line, and at a later date an amendment was made in the Dominion Railway Act giving the Board of Railway Commissioners power to revise rates notwithstanding any contract between a company and a municipality. An officer of the Dominion Power and Transmission Co., which owns the H.R.R., is reported to have said, Aug. 13, that the company did not wish to increase the rate to the extent authorized by the board at present, but if the line continues to lose money there will have to be a further increase.

Lethbridge Municipal Ry.—Fares on this railway were advanced on July 1 to 10c cash, or 4 tickets for 25c. For children the fare is 5c cash, or 6 tickets for 25c. Workmen's tickets were abolished. Following is a comparison of the old and new fares.

	New	Old
Cash fare	10	5c
Adults' tickets	4 for 25c	5 for 25c
Children's cash fare	5c	....
Children's tickets	6 for 25c	10 for 25c
Workmen's tickets (limited)	....	6 for 25c

We are advised that the change is merely an experiment, and that if it is found ineffective in producing a reasonable increase in revenue other changes may be made.

Moncton Tramways, Electricity and Gas Co.—The New Brunswick Board of Commissioners of Public Utilities, has issued its final order on the Moncton Tramways, Electricity and Gas Co.'s application, dated Aug. 28, 1918, for an increase of fares on its electric railway, and increased rate for natural gas and electric current. At the hearing in Nov., 1918, an interim order was granted, to run for four months, abolishing special rates and allowing the company to charge a straight 5c fare on its electric railway. At the final hearing the commissioners decided that as the rate of 8 tickets for 25c for workmen and school children was specified in the company's act of incorporation, it was not within their jurisdiction to alter it.

The final order directs "that the company be authorized to discontinue selling any tickets for street railway fares at the rate of 6 for 25c, and in lieu thereof be authorized to charge 5c for each and every street railway fare or ticket. This variation of the tariff to be in force and effect from July 1. This order is not to interfere in any way with the tariff now in force under which the company sells 8 tickets for 25c to workmen and school children, and which is to remain in force until otherwise ordered."

Montreal Tramways Co.—The Montreal Tramways Commission is reported to be giving consideration to the question of a revision of fares to be charged by the Montreal Tramways Co. during the current year. The fares for the past year are said to have averaged 4.8c a passenger, while the average cost per passenger was 4.64c. For this year the commission will have to provide $1,000,000 additional for wages. The accounts are being audited, and as soon as this work is completed the commission will be able to fix the fare to be charged.

Guelph Refuses to Lease Guelph Radial Railway to the Grand River Ry. Co.

Guelph, Ont., ratepayers on Aug. 11, by a vote of 1,285 to 437, refused to sanction the bylaw to lease the Guelph Radial Ry. to the Grand River Ry. Co. on the terms, detailed in Canadian Railway and Marine World for Aug., pg. 442.

The vote was the end of a short but exciting campaign. When the city council first approved of the agreement on July 15, its action was apparently generally approved by the citizens. The agreement contained a clause to the effect that it was not to become operative until approved by the Hydro Electric Power Commission of Ontario, with which the city has an agreement for the construction of an electric railway line from Toronto to London, etc. It was principally in connection with this point that the campaign was carried on. Sir Adam Beck, chairman of the commission, spoke at two meetings in opposition to the bylaw, and a great deal of work was done in the same direction by representatives of the municipalities of the district which are members of the Hydro Electric Railway Association of Ontario.

A press report of Aug. 15 stated that, as a result of the Guelph vote, a proposal to have a meeting of representatives of municipalities in Wellington County at Arthur at the end of the month had been called off. The meeting was to have been held to confer with C.P.R. officers as to the building of an electric railway from Guelph through Elora, Fergus, Drayton, Palmerston, Arthur and Mount Forest.

Change in Ontario Law Respecting Assessment of Electric Railway Structures, Etc.

An act to amend the Assessment Act, and other acts in connection therewith, passed at the Ontario Legislature's last session, contains the following sections:

"12. Section 44 of The Assessment Act is amended by adding the following as subsection 4:—

"(4) Notwithstanding anything contained in this section or any other section of this act the structures, substructures, superstructures, rails, ties, poles and wires of such an electric railway, shall be liable to assessment and taxation in the same manner and to the same extent as those of a steam railway are under the provisions of section 47 and not otherwise.

"13. Section 45a of The Assessment Act, as enacted by 8 Geo. V., cap. 20, sec, 39. is amended by adding at the beginning of subsection (2) the words "Subject to the provisions of subsection (3)" and by adding the following as subsection (3):

"(3) Notwithstanding anything contained in this section or in paragraph 7 of section 5, any restaurants, merry-go-rounds and switch-back railways carried on in connection with an electric railway owned, leased or operated by or for a municipal corporation or vested in or controlled by a commission on behalf of a municipal corporation, shall be assessable."

The Assessment Act, R.S.O. 1914, chap. 195, provides as follows in sec. 47.

"(2) The assessor shall assess the land and property aforesaid as follows:

"(a) The roadway or right of way at the actual value thereof according to the average value of land in the locality; but not including the structures, substructures and superstructures, rails, ties, poles, and other property thereon:

"(b) The said vacant land, at its value as other vacant lands are assessed under this act:

"(c) The structures, substructures, superstructures, rails, ties, poles and other property belonging to or used by the company (not including rolling stock and not including tunnels or bridges in, over, under, or forming part of any highway) upon, in, over, under or affixed to any highway, street or road (not being a highway, street or road merely crossed by the line of railway) at their actual cash value as the same would be appraised upon a sale to another company possessing similar powers, rights and franchises, regard being had to all circumstances adversely affecting the value including the non-user of such property, and

"(d) The real property not designated in clauses (a), (b) and (c) of this subsection in actual use and occupation by the company, at its actual cash value as the same would be appraised upon a sale to another company possessing similar powers, rights and franchises. 4 Edw. VII, c. 23, s. 44 (2):

"(3) Notwithstanding anything in this tures, superstructures, rails, ties, poles, act contained, the structures, substruc- wires and other property on railway lands and used exclusively for railway purposes or incidental thereto (except stations, freight sheds, offices, warehouses, elevator, hotels, roundhouses and machine, repair and other shops) shall not be assessed.

"(5) A railway company assessed under this section shall be exempt from assessment in any other manner for municipal purposes except for local improvements."

Heretofore, while steam railways in Ontario were exempt from assessment and taxation on structures, substructures, superstructures, rails, ties, poles and wires on railway lands, electric railways were not exempt. The amendment given above exempts electric railways also and puts them in exactly the same position as steam railways.

The Ontario West Shore Railway's Funds.

In connection with the winding up of the Ontario West Shore Ry's affairs, T. Strothers, the trustee appointed by chap. 135 of the Ontario statutes of 1915, has on deposit with certain branch corporations $139,360.92 derived from the sale of rails and other material of this unfortunate uncompleted electric railway. Under the terms of an act passed by the Ontario Legislature at its recent session, the trustee is entitled to purchase $20,000 of the company's unsecured bonds, outstanding, and in the event of being unable to do so to pay interest thereon, until the fund is distributed. The fund is to be invested, subject to the Ontario Railway and Municipal Board's approval, and the interest arising from the securities purchased is to be paid over half yearly, in pro-rata proportion to the municipalities of Goderich, Ashfield, Huron and Kincardine, and the holders of the $20,000 of unsecured bonds if unpurchased, until maturity, when the fund will be distributed between them. The municipalities named guaranteed bonds for $400,000 in aid of the construction of the railway.

Application was made to the Ontario Railway and Municipal Board, Aug. 12, by the Mayor of Goderich as representing the municipalities interested to have the fund invested for the next five years in the projected issue of Dominion war bonds. Counsel for the trustee asked that the investment of the fund be left in the Toronto General Trusts Corporation's hands provided that there would be no brokerage expenses in connection with the handling of the fund. The corporation promised interest at the rate of 5½ per cent. under the arrangement. Decision was adjourned pending further consideration by the municipalities.

The Montreal Tramways Co.'s Commissioners Street Line.

The Montreal Tramways Co.'s tracks on Commissioners St., Montreal, are about to be removed, and a press report states that they will not be replaced. Some years ago certain property rights on the street were taken to the courts, and the Supreme Court decided that the Montreal Harbor Commission's contention was correct. The chairman of the Montreal Tramways Commission is reported to have stated Aug. 19, that the court decision, having been given against the Montreal Tramways Co., there is nothing to be done but to remove the tracks, now that the Harbor Commission wants to deal with the property and the work of removing the tracks will be undertaken very shortly.

The Commissioners St. car line was closed to traffic, Aug. 25. It has never been a busy one, the busiest time being during the navigation season. The lines affected by the closing of Commissioners St. are the Ontremont and Delorimer routes. The first lines swings off McGill St. to Commissioners St. for only a very short distance so as to make the turn, and the effect of the removal of the tracks will not serviously affect this service. The Delorimier line, however, runs right along the harbor front from Berri St. to McGill St., and gives the navigation service. The public will now have to use the Notre Dame St. line, and make their way to the water front.

It was reported recently that the Montreal Tramways Co. had been asked to remove its lines to the opposite side of Commissioners St., but the report of Aug. 24, states the company will not relay the tracks, as to do so would cost at least $90,000.

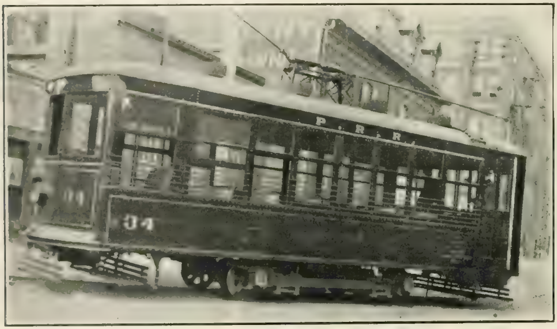
The Harbor Commission proposes to lay some additional freight tracks on Commissioners St.

Poles on Quebec Streets—The question of poles carring electric wires on the streets has again been brought forward in Quebec. W. J. Lynch, General Manager, Q.R.L. & P. Co., is reported to have said the company is willing and anxious to do everything in its power to avert accidents. All the companies interested, he said, should get together and discuss the matter with the city authorities.

One-Man, Safety Cars, on Peterborough Radial Railway.

The Peterborough Radial Ry., which is owned by the Ontario Government, and is operated by the Hydro Electric Power Commission of Ontario, placed in service recently two one-man, safety cars, which have the following general dimensions, etc.:

Length over all	27 ft. 9½ in.
Width over all	7 ft. 8 in.
Height overall	9 ft. 9⅝ in.
Height of rail to floor	2 ft. 3 15-16 in.
Wheel base	9 ft. 0 in.
Wheel size	24 in.
Seating capacity	34



One-man, Safety Car, Peterborough Radial Railway.

The one-man safety car is, as its name implies, operated by one man, which has led people to believe that this form of operation is dangerous to the public safety. This impression, needless to say, is entirely erroneous, and it is claimed that these cars are safer in operation that the average city car operated by both motorman and conductor. It is called the one-man safety car for this reason. The operator has complete control over the car, and does not depend for his starting and stopping signals on a conductor. The passengers entering, leaving, and awaiting to enter, or to leave, are in his full view at all times. He operates the opening and closing of the one and only door from which entrance and exit is obtained. It is impossible for him to start the car while the door is still open, since on the particular position of the brake valve which operates the air cylinder controlling the opening of the door, the brakes are also fully applied. Similarly, it is impossible for him to open the door until the car has come to a complete stop, as when he throws his handle to the door opening position of the valve, the brakes are automatically fully applied. This feature eliminates any possibility of any person getting either on, or off, the car while it is in motion. Even if the operator was willing to let them, he could not do it. The step, of course, folds up when the door is closed, and there are no outside grab handles to permit anyone to ride outside who might insist on trying to get on while the car is in motion.

The air brakes are of extra capacity, permitting a very quick stop with full service application, a stop which is nevertheless free from jar when properly applied. The car body is of the very latest design and is extremely light and easy riding, with no strength sacrificed in its almost entire construction of steel.

The controller is fitted with an improvement of the old form of dead man release. It is absolutely necessary for the operator at all times to keep his hand on the controller handle, and be wide awake to his job, unless the brakes are fully applied. When the brakes are fully applied, then, and then only, can he remove his hand from the controller handle. If he should happen to take his hand off the handle at any position of the controller, a plunger operated by air automatically throws out the circuit brake. The brakes are automatically applied in full service position, the doors unlatched (not opened) and the car automatically comes to a complete stop. This feature does not allow any accident to occur, due to the operator taking a fainting spell, or becoming suddenly incapacitated. It also is important in this respect. Suppose that the operator is unnerved, through something unexpected happening, such as a child suddenly running out in front of the car, or an automobile crossing suddenly at a bad traffic intersection. He does not know what to do to stop the car, in other words he loses his nerve, all he has to do is to let go of everything and watch what happens. The breaker goes out, throwing off the power, the brakes go on, sand is applied to the rail, the car stops itself.

Again, supposing several people have boarded the car, and some person in the lead requires change. The operator wishes to start the car, and after he ras the car in motion, wishes to have both hands free in order to properly make change. There is a foot valve, which he places his foot on, and which performs the same function as the dead man release in the controllers. When he places his foot on this valve he can take his hand off the controller without throwing the breaker and applying the brakes. But should he remove his foot from this valve, the same thing happens as if he removed his hand from the controller handle.

The simplicity of the automatic features of this equipment is very important. All operations of the sand service brakes, emergency brakes, door opening and door closing mechanism are on different positions of the handle on the compact brake valve. The acceleration rate and the breaking rate are much faster than in the average car, enabling the operator to make better schedules.

The equipment is for double end operation, with two trolley bases and poles, and is also supplied with trolley catchers. A bungalow type motor driven compressor assures an ample supply of air at all times. H. B. life guards are provided. The car body is of steel side plate construction, and semi-steel body structure throughout, making a very light strong car. The electrical equipment consists of two G.E. 258C motors and K63B controllers.

The cars were built by the National Supply Car & Equipment Co., St. Louis, Mo.

"Ottawa Electric Railway News."

The Ottawa Electric Railway has commenced the publication of the "O.E.R. News," a four page, 7 x 4½ in. folder, to be distributed in the cars. An article in the first issue, addressed "To our Patrons," says:

"The purpose of this little publication, which we propose to issue each week, is to foster the spirit of co-operation that is so essential in the development of an industry which, as in the case of a street railway, takes on the proportions of a public institution. Any industry that has for its patrons thousands of people in every walk of life, whom it must serve every day from January to December, must depend upon the co-operation of these people to successfully carry out much that is planned for the betterment of the service.

"It is our purpose to keep in close touch with our patrons in all matters that have to do with street railway operation. We want to establish a community interest in local street railway transportation for it is one of the most important industries in any city and the development and progress of a municipality may generally be measured in proportion to the character and extent of its street railway service. We shall keep you posted on any news concerning the service and shall tell you of our plans for its improvement and extension as the occasion arises. We invite correspondence on subjects pertaining to the service, and we want you to feel that this is your publication as well as ours. Get a copy of the O.E.R. News every weekend and keep in touch with the progress of events in street railway affairs."

Niagara, St. Catharines and Toronto Railway Strike—All the company's employes, conductors, motormen, power house men and trackmen, went on strike on Aug. 21 at 4 a.m., owing to the dismissal of certain conductors who were charged with dishonesty. The employes organization demanded that the evidence against the men be submitted to them. The management refused to comply, on the ground that in the case of a breach of criminal law, the evidence is crown property. When the employes realized this, they voted to return to work on Aug. 25 at 4 a.m.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry. A press report states that the company has prepared plans for the construction of a transformer station at Barnett, B. C.

A press report states that work has been started on the reconstruction of 5 miles of track in district 2, south of Tucks, on the Lulu Island line, at an estimated cost of $25,000. This line is owned by the C.P.R., but is leased to the B.C.E.R.

Grand River Ry.—We are officially advised that in addition to the 2 miles revision between Hespeler and Preston, now under construction, which has already been described, the company contemplates making a revision of the freight line between Kitchener and Waterloo, 2 miles, and a change of route in the City of Galt, so as to transfer its line to a private right of way. F. H. Midgeley, Galt, Ont., is Resident Engineer. (May, pg. 267).

Hamilton St. Ry.—A press report, states that the company is about to undertake the repair of its tracks on Herkimer St., Hamilton, Ont. (June, pg. 324).

Lake Erie and Northern Ry. has, according to a press report, made surveys for a spur line into the Holmdale district, Brantford, Ont., and we have been officially advised that the company is contemplating the building of a spur line into Paris, Ont.

Montreal Tramways Co.—It was reported Aug. 14, that the city council was about to proceed with the expropriation of Kelley St., in Ahuntsic, Bordeaux Ward, so as to enable the company to build the extension of its line authorized in the contract with the city. It is not considered likely that construction will be done this year.

The Montreal Tramways Commission was reported, Aug. 14, to have arrived at a decision to remove the present tracks on Bridge St., and to operate an autobus service thereon between Wellington St. and Mill St. The commission has authority to do this under sec. 89 of the contract, which provides that "If in the opinion of the commission the requirements of the population and of the traffic justify it, and the financial conditions permit, the company shall establish and operate within or without the limits of the city an autobus system on the streets which the commission shall designate, and under the conditions which it shall determine, provided that the establishment and the operation of such system shall not be a charge upon the company's revenues in the sense that the earnings of the autobus system shall be sufficient not to unjustly affect the company's passenger or freight rates."

Nova Scotia Tramways and Power Co. We are officially advised that the proposed extensions and improvements include the following: Track department—rehabilitation of present lay out, and the construction of about half a mile of new single track, in order to afford quicker access to the business district of the city. Power house—installation of new boilers; addition of two benches of retorts in the gas plant, and the extension of the gas main distribution. Electrical distribution department—a complete rehabilitation of the present aerial lines, and the tion of the present aerial lines, and the usual amount of short extensions to supply the normal growth of business. (Aug. pg. 449).

Ottawa Electric Ry.—The Ottawa, Ont., City Council has, according to a press report, authorized the construction of a loop for the St. Patrick cars on Cobourg, Murray and Charlotte Sts.

Sherbrooke Ry. and Power Co. A press report states that the company is preparing plans for an extension of its lines. The company operates 9 miles of line in Sherbrooke, Que., and vicinity.

Woodstock, Thames Valley and Ingersoll Ry.—A press report states that the route of the projected provincial highway through Western Ontario, in passing from Woodstock to Ingersoll, will follow the route of the Woodstock, Thames Valley and Ingersoll Ry. for some distance, and that some arrangement will have to be made between the company and the government in regard to the matter.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	June, 1919	June, 1918	12 mons. to June 30, 1919	12 mons. to June, 30 1918
Gross	$411,605	$488,873	$7,062,550	$5,986,437

Calgary Municipal Ry.—A press report states that it was reported to the city commissioners of Calgary, Alta., recently that the municipal railway had earned a profit of $5,898.28 for July, against a profit of just over $100 for July, 1918, and that the deficit on the operations for the seven months ended July 31, was about $1,900. The following figures for July are given:—

	1919.	1918
Passengers carried	1,465,044	1,134,180
Car mileage	277,046	288,257

Cape Breton Electric Co:—

	May, 1919	May, 1918	5 mons. to May 31, 1919	5 mons. to May, 31, 1918
Gross	$46,350.66	$28,916.96	$230,884.91	$193,106.22
Expenses	38,449.70	27,740.74	175,182.00	148,106.22
Net	7,900.96	11,176.22	55,702,91	45,724.30

Edmonton Radial Railway:—

	1919.	1918
Receipts for June	$53,274.94	$41,084.01
Operating expenses and fixed charges	58,461.15	52,297.57
Deficit	$5,186.21	$11,213.56
Passengers carried	867,933	770,538

The City Comptroller has issued a report on the city finances for the 6 months ended June 30, which shows the recepits, operating expenses, etc., of the E.R.R. as follows:—

	1919.	1918.
Receipts	$311,408.25	$265,067.38
Operating expenses	228,690.10	193,699.57
Net receipts	$82,718.15	$71,367.81

This report does not show the fixed charges on the railways separately from the other civic utilities, but gives a total figure of $381,534.83 for capital charges and depreciation. In another report it is stated that the deficit for the 6 months on the railway was $44,434.29 against $56,127.93, and that 5,625,864 passengers were carried against 5,383,584 for the corresponding period of 1918.

Hamilton St. Ry.:—

	1919.	1918
Receipts for 3 months, ended June 30	$219,238.71	$212,256.33
City's percentage	17,539.09	15,460.50

London and Port Stanley Ry. The City Treasurer of London, Ont., was reported to have received on Aug. 13, $48,391.60 covering rent and interest charges of the L. and P. S. Ry. for the half year ended June 30.

Sandwich, Windsor and Amherstburg Ry.—A press report states that the Windsor, Ont., City Counmil has served notice on the Sandwich, Windsor and Amberstburg Ry., of its intention to purchase the lines in the city upon the expiration of the franchise in 1922.

Toronto Civic Ry.:—

	Earnings	Passengers
July, 1919	$35,610.47	2,113,046
" 1918	28,285.97	1,691,403

Toronto Suburban Ry.—A press report states that switches will be built into several industrial plants on the line between Toronto and Weston, Ont.

An unconfirmed press report states that the Canadian National Railways is planning to expend the T.S.R.'s Lambton-Guelph line to Kitchener, Stratford and London, and on to Windsor or Sarnia. (Mar., pg. 143).

Waterloo-Wellington Ry. Negotiations for the sale of this line, formerly the Berlin and Northern Ry., are in progress between W. H. Breithaupt, President, and the Kitchener, Ont., City Council. V. S. McIntyre, Superintendent of the city's electric railway, is reported to have completed an investigation of the Waterloo-Wellington Ry., and to be preparing a report for the Kitchener Light Commissioners. It is reported that the price asked by the company is about $75,000.

The company's line is 3.15 miles long; it has outstanding $17,800 of common stock, and $2,400 of bonds, a total of 20,200. The total revenue from all sources for the year ended June 30, 1918, was $8,159.93; the operating expenses were $7,909.04; taxes $244.25; interest on funded debt $130 and interest in floating debt $2,746.95. The net loss on the year's operations therefore was $2,870.13.

Winnipeg Electric Ry. and allied companies:—

	June, 1919	June, 1918	6 mons. to June 30, 1919	6 mons. to June, 30 1918
Gross	$112,615	$293,140	$1,874,640	$1,811,338

Net	*35,190	74,858	416,153	426,045

*Deficit.

The net deficit after allowing fixed charges for June was $95,307.61.

Proposed Sale of London Street Railway.

A press report of Aug. 18 stated that the mayor of London, Ont., had received a letter from the London St. Ry. Co., offering to sell the company's lines to the city, and giving an indication of the price which would be accepted. The par value of the company's shares is $40, and the report states that the price asked approximates $55 a share. The latter was expected to be given consideration by the city council's committee on Aug. 27, though it was stated later that the matter might be postponed.

Some days previous to the receipt of the letter, it was stated that while negotiations were going on, there was a difference between the city and the company representatives as to the method to be adopted for arriving at the value of the property. The city favoring the fixing of the purchase price by an agreement while the company wanted the appointment of arbitrators to make a valuation.

Electric Railways Employes' Wages, Working Conditions, Etc.

The British Columbia Electric Ry.'s street railway employes on Aug. 8 submitted a proposed new wages schedule together with notice of the re-opening of the present agreement, which will, therefore, automatically expire thirty days from that date. The new scale for city motormen and conductors asked by the men is 55c to 65c an hour, to be [illegible] in 12 months, in place of 40c to interurban men the proposed scale is 65c [illegible] an hour, reached in 18 months. For [illegible], reached in 12 months, instead of [illegible], reached in 18 months.

A totally new provision is for the payment of 70c an hour to city motormen and conductors on night runs, which the men propose shall be those after 6.30 p.m., except when completed before 8.30 p.m.

The proposed agreement provides for a guarantee of an 8 hour day for week days, and 6 hours for Sundays, instead of a minimum of 6 hours on week days, as under the old contract. The spread is proposed to be reduced from 11 hours to 10 hours.

Under the terms of the present agreement, either party can reopen it on giving one month notice, and it will be, therefore, necessary to come to some conclusion before Sept. 8. The matter will in all likelihood go before a conciliation board.

Guelph Radial Ry.—The Guelph, Ont., City Council has under consideration an application from Guelph Radial Ry. employes for an increase of wages. The men are reported to be asking for an 8-hour day, for 44c an hour for the first three months, and 47c thereafter, with time and a half for overtime.

Hamilton St. Ry.—The branch of the union to which the Hamilton St. Ry. employes belong, is reported to have been discussing the wage question. The present agreement between the men and the company will not expire until Mar., 1920, and the younger members are reported to be in favor of repudiating the agreement and demanding the same rates of pay as were granted recently to the employes of the Dominion Power and Transmission Co.'s suburban lines. It was reported Aug. 8, that the company had offered to pay 4c an hour additional by way of bonus, on condition that the agreement be extended for a year. The Minister of Labor was asked, Aug. 12, to send a representative to Hamilton to discuss the situation.

Moose Jaw Electric Ry.—A settlement was reported to have been effected, Aug. 15, between this company and its employes, and the car service was resumed Aug. 16. The wage schedule is said to have been adjusted temporarily, but the question which delayed the settlement was that of the recognition of the union. The terms of the settlement had not been made public at the time of writing. During the strike, the company made several efforts to carry on the service, but is said to have been able to operate only a limited service during the week preceeding the settlement.

The Ottawa Electric Ry. had, prior to [illegible], had a signed agreement as to wages and working conditions with Division 279 of the Amalgamated Association of Street and Electric Railway Employes of America, which contained about 65 clauses, and was the result of boards of conciliation appointed in past years, each year adding more and more to the agreement and binding the company to various concessions. All of the employes who worked on an hourly basis, with the exception of about 10, were members of Division 279. This agreement expired on June 30. On June 1, the company was presented with a draft agreement, to take effect on July 1, asking for an increase in the wage rate to 60c an hour, and many other concessions, such as double time for Sundays and legal holidays, two weeks holidays with pay for all employes, etc., which would amounted in all to an increase of over $600,000 a year. It was pointed out to the committee from the union that such an agreement was impossible, as the total profits from the business during the past fiscal year were less than $300,000. Negotiations were carried on during June, but without reaching any agreement, as the men stated that they could not be satisfied with anything less than 60c an hour, although they agreed to drop many other concessions asked.

The men refused to apply for a board of conciliation and stated that on July 1 they would go on strike. The Superintendent urged them to apply for a board of conciliation and to comply with the law, but they did not agree to this. The company thereupon applied for a board which was appointed by the Labor Department. The men refused to appoint a member of the board to represent them, and the Labor Department appointed one for them. At a meeting of the board on June 30, the men notified the chairman that the board must bring in an award as to wages for their mass meeting at midnight or they would go on strike the next day. The chairman stated this was impossible and strongly urged them to wait until the board could make its award as in any case if the rates could be adjusted satisfactorily to both parties, they would be dated from July 1.

However, the men went on strike on July 1. The company stated publicly that it would not do anything to operate a service until the board had finished its work. The Minister of Labor, who was out of town, returned a few days later and notified the board to suspend its sittings until the men had returned to work and restored the conditions which prevailed before the strike. A mass meeting was held and the union refused to allow its members to return. Although the President of the international organization had wired, stating the strike was illegal and urging to men to return to work, also that they would receive no strike pay.

The company then announced in the press that it would not employ strike breakers, but asked for applications from men who wished to be trained for the positions of conductors and motormen, and who would be given a guarantee of 9 hours a day as permanent employes. A class of 100 was formed at once and several hundred applications were received and kept on a waiting list until this first class had become trained. On July 9 the company started operating 22 cars and commenced another class for training. The service was gradually increased until on July 18 the company had 56 cars running, out of a normal service of 100. It could undoubtedly have done much better than this but purposely held back in order to give the old hands a chance to return. On July 18 the union committee asked for a proposition from the company and were told that 150 employes who had been given a promise of permanent work would have to be retained in the service, at nine hours work a day; those who were employed as conductors and motormen to be booked at the bottom of the relief runs. This would mean that 150 of the men who were on strike could not return to work, but would be placed on a waiting list and called upon as vacancies occurred. After a very stormy meeting the men voted to return under these conditions and at the old maximum rate of 39c, at which rate the new employes had been engaged.

The Brotherhood of Railway Trainmen offered to act as mediators between the company and the striking employes, but their efforts were devoted in trying to induce the company to break faith with the new employes and restore the rest of the strikers who were left without employment. These negotiations failed. On July 25 a meeting was arranged between representatives of the company, the men's union and two members of the board of conciliation, and agreement was reached with regard to rates and also the status of the striking employes who were on the waiting list. This was reduced to writing and signed by the various parties, the company refusing to sign an agreement such as the man had asked for prior to the strike. The net result was that the men received increases ranging from 3c to 6c an hour, and that as far as the strike was concerned, the company won an unqualified victory. It was clearly established that the work of a car man in city service is not skilled labor, and that men can be trained in a few days. The company had the sympathy of the general public and the newspapers all through the strike. An attempt to cause a sympathetic strike through the Trades and Labor Council failed. The principal provisions of the agreement are as follows:

Wages to be paid conductors and motormen from Aug. 1, as follows, per hour: First year, 39c; second year, 41c! third year, 43c; fourth year and thereafter, 45c. On Sundays, New Year's Day, Victoria Day, Dominion Day, Civic Holiday, Labor Day, Thanksgiving Day and Christmas Day, 10c an hour extra over regular rates will be paid. The rate for overtime shall be time and one half on all days at the regular rate. This will not include Sundays and legal holidays mentioned above. An allowance of one hour will be made to spare men who show up at 6 a.m., noon relief, and 6 p.m., who do not get work. An allowance of 10 minutes will be made for crews taking out or putting in cars in barns.

The overtime rate, and Sunday and legal holiday rate mentioned above will apply to all departments and to all employes working on an hourly basis. The following rates will be paid per hour:

Air brake and fare box repairer, machinist, carpenter and armature winder	50c
Painter, pitmen, car changers	45c
Glazier, armature winders' assistant, electrical trouble and bench workers, pit helpers, oilers and greasers	42c
Car cleaners	35c
Car inspectors	40c
Apprentices, at rates arranged for on employment with 5c an hour increase every six months.	
Linemen	45c
Ground men	39c
Chauffeurs	40c
Trackmen	40c

Laborers	37c
Switchmen	35c
Dynamo tenders, 1st class, main power plant, 8 hr. day	50c
Dynamo tenders, 2nd class, substations, 9 hr. day	44c

The new men, i.e., those taken into the service between July 1 and July 18, will be booked at the bottom of the list of conductors and motormen who are guaranteed 9 hours a day, and will remain so until such time as all the men who are at present working spare or are on the waiting list have been absorbed into the positions senior to those occupied by the new men today. The company, through its Superintendent, will do everything possible to adjust matters in the future so as to place the old employes into the positions they occupied prior to July 1. The committee representing the employes who are members of the employes union, agree that their members will do nothing, when either on or off duty, to force the men who are known as new employes to leave the service. All parties accept these new men as permanent employes and with full rights as such, with the one exception mentioned above, that until the old employes have been placed in their old positions, they will remain stationary at the bottom of the list of those men booked on 9 hours. Those men who have been unable to return to the other departments than the car service are considered as on a waiting list, and will be given the first available chance to return to their former positions as vacancies occur. The company guarantees that no discrimination will be used against any man in its employ because of his belonging to an association or union of employes.

Winnipeg Electric Ry.—A board of conciliation is the question of wages to be paid the company's trainmen and shopmen. The board consists of Chief Justice Mathers, chairman; J. T. Haig, K.C., representing the company, and R. S. Ward, representing the men.

Toronto Civic Railway Operating Results.

The Toronto Bureau of Municipal Research has issued the following statement of the results of operating the Toronto Civic Ry. from 1915 to 1919:

Year	Expenditures, including debt charges.	Income	LOSS Amount	LOSS % of Income
1915	$ 332,074.25	$ 199,980.49	$132,093.76	49.3
1916	343,975.17	225,031.38	118,943.79	66.1
1917	432,136.83	275,972.78	156,164.05	52.8
1918	460,082.87	331,724.00	128,358.87	38.7
Estimated, 1919 ..	629,677.93	340,000.00	289,677.93	85.2
Total..	$2,198,247.05	$1,372,708.65	$825,538.40	60.1

In reviewing the city estimates for this year, the Commissioner of Finance, Thos. Bradshaw, said: "The recommendation to increase the fares of the civic car lines to an extent that would eliminate the annual deficit, though often repeated, and strongly urged, has met with no result. Nothing can more discredit the policy of public ownership in the eyes of the man on the street than this uneconomic policy in regard to a service which, from its present limited nature, is of advantage to a special section of the ratepayers only. Moreover, many others, who are not Toronto citizens at all by virtue of residence beyond the city limits, receive transportation at a nominal rate and do not even contribute to the yearly deficits as general taxpayers.

"The deficit for 1919 is estimated to reach about one-half of a mill on the assessment, and the suggestion has been made that all deficits should be capitalized and made a part of the funded debt, which will be established when the Toronto Ry. is acquired, but it is felt that such a proposal could not have received due consideration. It is estimated that these accumulated deficits would amount to the large sum of approximately $1,750,000 by Sept., 1921, and if this amount were added to the price to be paid for the tangible assets of the Toronto Ry., the total capital liability of the enterprise would be so greatly increased that the successful operation of the system under municipal ownership would be very seriously handicapped from the beginning. This augmentation without value savors too much of certain corporation methods, and their accompaniment of inflated and watered capial, with its well known disastrous and burdensome effects.

"It must, of course, be recognized that the heavier the capitalization of an enterprise, the greater must be the earnings in order to maintain it, and the logical result of over capitalization of the street railway of Toronto by the city, would be an inevitable increase in the citizens' transportation charges."

Ottawa Electric Railway Insurance and Sick Benefit Society.

F. D. Burpee, Superintendent, Ottawa Electric Ry., has issued the following bulletin to all employes:—"It has been suggested that an insurance and sick benefit society would be welcomed by a large number of the employes. The company's directors have authorized me to say that if this is the case, they will agree to pay into such a scheme, an equal amount to that paid in by the employes who wish to participate, and all expenses connected with the society.

"The scheme I have in mind covers a life insurance policy of $1,000, payable at death from any cause, which could be converted at about the age of 65, into the same amount of cash, or continued as a paid-up insurance policy for a greater amount; a sick benefit amounting to $10 weekly, for any 10 weeks in one year, after the first week's absence, from any illness, or from accident occurring while off duty; and the services of a doctor, free of charge, to members of the society. Accidents while on duty are not being considered, as they are taken care of by the Workmen's Compensation Act of Ontario.

"It would also be arranged that if a man left the service for any reason whatever before reaching the age of 65, he could continue his policy by assuming the full payment of the premium, or give up the policy and take its cash surrender value. This could be done at any time after three year's premiums had been paid, and after five years the cash surrender value should amount to greater than the premium paid by the holder of the policy. This clause practically means that the policy becomes a savings bank account, and in the event of the man leaving the service for any cause, after 5 years, would bring him back in cash more than he had paid in, as well as providing protection during his employment.

"In order to put the society on a permanent basis the life insurance would be underwritten by a responsible life insurance company, the payments of the premiums being guaranteed by the railway company.

"We have a number of employes who have passed the age that would be accepted by any insurance company, except by the payment of a premium that would be too heavy for the society to stand. The directors are willing that the railway company should take care of the interests of these employes separately, so that they would not become a burden on the society, but they would receive the same benefits as the younger employes. The scheme is entirely optional, and is open to the employes of all departments, including those occupying supervisory positions. The sick benefit will not be open to those who are employed on a monthly salary. It is expected that the monthly charge for each man will not exceed $2, and will probably be considerably less. The exact amount cannot be ascertained until the applications have been received, and the ages of those applying are definitely known.

"The scheme will be guaranteed by this company and, as far as the life insurance is concerned, will be covered by a responsible insurance company. It will enable any employe to obtain the benefits referred to above at half or less than half of the amount they would cost in any other way.

"All those who wish to become members of this society are requested to give their names, ages, and dates of birth as soon as possible to the officials mentioned below: Conductors and motormen, Mr. Tobin; car shops and barn, Mr. Baldwin; line department, Mr. Ouelette; track department, Mr. Monette; power department, Mr. Bradley.

"An application will not obligate you to anything until the exact monthly rate to carry this scheme on can be obtained. This rate will depend on the average age of those who wish to join. If you wish to avail yourself of these benefits put your name in at once, and as soon as the rate is given it will be announced by bulletin, when any who wish to withdraw their names can do so."

Mainly About Electric Railway People.

Captain A. C. Eddy, Engineer of Maintenance of Way, British Columbia Electric Ry., Vancouver, is back in the company's service after being attached to the U.S. Engineers for nearly two years, and being engaged in construction service in France for the U.S. army.

Chas. Elliott, heretofore Claims Agent, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., has been appointed Assistant Superintendent at Niagara Falls, Ont., with jurisdiction over the Niagara Falls, Wesley Park and Clifton Tramway Co.'s line and Niagara Falls terminal, D. Toomey, heretofore Inspector at Niagara Falls, having resigned.

George Kidd, General Manager, B.C. Electric Ry., returned to Vancouver recently after spending three months in England, conferring with directors there. He had no changes in policy or staff to announce, the trip being for routine purposes only. One of the directors is expected to visit British Columbia shortly.

Mrs. A. W. McLimont, who died at Ottawa at the end of July, was mother of A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.

Mrs. G. A. Seixas, who died at West Field, N.J., was mother of E. F. Seixas, formerly Manager of the Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., and now General Manager and Official Representative, Monterey Ry., Light and Power Co., Monterey.

Electric Railway Notes.

The Winnipeg Electric Ry. has received 2 semi-steel cars from Ottawa Car Manufacturing Co.

The Three Rivers Traction Co. has received 2 one-man wooden cars from Ottawa Car Manufacturing Co.

Toronto and York Radial Ry. employes, about 200 in all, have decided to join the Toronto Railway Employes' Union, instead of forming a separate branch.

The British Columbia Electric Ry. was fined $30 by the Victoria police magistrate, recently, for permitting one of its cars to proceed at a greater rate of speed than 10 miles an hour.

The British Columbia Electric Ry. entertained the members of the Engineering Institute of Canada's Vancouver branch, at its Lake Buntzen hydro electric power development plant recently.

The Regina Municipal Ry. employes' union voted recently to withdraw from membership in the Regina, Sask., Trades and Labor Council, owing to that body having endorsed the constitution of the one big union.

The Cape Breton Electric Co. began recently a safety first campaign through advertisements in the local papers. The first talk was introductory, and subsequent talks were addressed to passengers, parents, boy scouts, auto drivers, etc.

The Vancouver, B.C., City Council gave the first reading recently to a bylaw repealing the bylaw authorizing the operation of a jitney service in the city, passed during the recent strike in which British Columbia Electric Ry. employes joined.

The Nova Scotia Tramways and Power Co. contemplates the purchase for its lines in Halifax, N.S., of 20 single truck Birney safety cars, as soon as the Nova Scotia Board of Commissioners of Public Utilities grants the necessary permission to do so.

The British Columbia Public Utilities Commissioner has under consideration an application of residents of South Vancouver for an increased service. The people ask for a 15 minute through service instead of the present shuttle car service on Main St. from 52nd St.

In Vancouver every Friday, one of the B.C. Electric Ry.'s observation cars is handed over to one of the military hospitals for the use of convalescent soldiers. Seventy tickets are given out each week to the blue band men and they enjoy the cars' regular trip through the city.

The Edmonton, Alta., City Commissioners propose to continue granting passes for disabled soldiers on the Edmonton Radial Ry., and to make an application to the military authorities at Ottawa for payment. The same decision was made with regard to 12 passes issued to the military police.

The Montreal Tramways Commission is said to have under consideration the operation of one man cars on certain city stub lines. It was reported Aug. 12 that arrangements would be made to hold a meeting at the end of August at which the question could be discussed by all parties interested.

The London and Port Stanley Ry. is quoting a round trip fare from London to Cleveland, Ohio, on Wednesdays and Saturdays, returning on the following day. The trip from Port Stanley to Cleveland and return is made by the steamboat Theodore Roosevelt, which runs daily between those ports.

Saskatoon, Sask., ratepayers, by a vote of 174 to 123, taken recently, defeated the proposal favoring the operation of one-man cars on the Saskatoon Municipal Ry. They also defeated the proposal to provide the funds necessary for the alteration of the present cars to permit of their operation as one-man cars.

The Oshawa Ry. has ordered a 50 ton electric locomotive from Ottawa Car Manufacturing Co. It is to be all steel construction, 32 ft. long over bumpers, cab 16 ft. long by 10 ft. wide. top of rail to top of roof 12 ft. It will be equipped with four 100 h.p. Westinghouse motors with Westinghouse H.L. double end control, Westinghouse EL 14 air brake and locomotive brake.

The Grand River Ry. inaugurated a Sunday car service on its lines between Galt, Preston, Hespeler, and Kitchener, Ont., Aug. 3. The service is an hourly one, and the cars arrive at and leave Galt, in connection with the cars on the Lake Erie and Northern Ry., which is operated under the same management. It is now therefore possible to make a Sunday trip from Kitchener to Port Dover on Lake Erie, and return on the same day.

The Elgin, Ont., county judge has reserved judgment on the appeal of the London and Port Stanley Ry. against an assessment of $61,000 on its property in Port Stanley, Ont., property. The company claims that the line, being municipally owned, is exempt from taxation even under the act passed at the Ontario Legislature's last session. This act, counsel for Port Stanley, contended, was passed for the purpose of making the property assessable.

A London, Ont., City Council's committee had before it recently a report on the service given by the London St. Ry., which claimed that the company was not maintaining the service called for in the bylaw, reference being specially made to the continued maintenance of a stub line on Rectory St., between Dundas St. and Hamilton Road. The report was adopted, but the matter was referred back to the committee in order that a further report might be received from the City Engineer.

The Winnipeg Electric Ry. announced recently that it was employing 517 returned soldiers. Of these 259 are previous employes, who went back to their positions enjoying their seniority and all benefits which accrued during their absence overseas. Following are other particulars: Employes in company's service having joined army, 607; returned soldiers previously employed re-entered service, 259; returned soldiers not previously employed now in service, 258; returned soldiers employed, but since resigned, 357.

The Regina, Sask., City Council on Aug. 9, approved of a report of the commissioners on the question of the feasibility of having the Regina Municipal Ry. cars meet all trains at the union station. The commissioners reported against the proposal. Superintendent Houston pointed out that the most feasible way of providing such a service would be to extend the College line round the South Railway St. loop, and give a 10-minute service. In order to pay operating charges and overhead expenses it would be necessary to carry 1000 passengers a day from the station. Commissioner Thornton is reported to have said that there was absolutely no chance of getting sufficient patronage to justify the operation.

John Mackay & Co.'s appeal against the judgments of the Canadian court in his action against the City of Toronto for $42,000 for services rendered in connection with the proposed purchase of the Toronto railway by the city some few years ago, came before the Imperial Privy Council recently, judgment being delivered Aug. 7, dismissing the appeal, with costs. When the case was before the Canadian courts judgments were rendered against appelant each time, one judgment stating that if he was entitled to recover the amount he should receive would be approximately $7,000. The point on which the appeal failed was that there was no agreement between the parties and that the then mayor had no authority through the city council to commit the city to the matter.

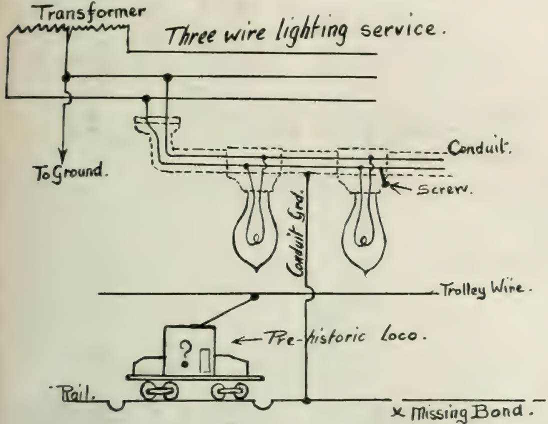
Toronto Preparing to Take Over the Toronto Ry.—The mayor of Toronto made the following statement recently: "The city council's traffic commission will meet weekly, as soon as the exhibition is over. During the past six months a sub-committee of R. C. Harris, E. L. Cousins and Mr. Bradshaw, have been working on the financial, legal and engineering features of the taking over of the Toronto Ry. and everything is being done that can be done. A report will be presented to the city council shortly dealing with the whole question. The commission will report the extension of civic car lines, the opening of a car factory to manufacture cars, and on the submission of a bylaw for $5,000,000 for equipment, track allowances and other matters, as well as on many matters referred to it during the past six months by the city council. As soon as we take over the railway, a commission of three or more will be appointed, similar to the harbor board, to take complete control of the system, and operate it."

Fort William Municipal Ry. and Port Arthur Civic Ry.—A Port Arthur, Ont., press dispatch of Aug. 20 says that Sir Adam Beck, chairman, Hydro Electric Power Commission of Ontario, has offered to take over the municipally owned railways in Fort William and Port Arthur, to put them under one management, and to make them pay. These lines are operated by commissions representing the city councils of Port Arthur and Fort William, respectively and have been losing money for some years past. There are several lines in each city and an interurban line connecting the two cities.

Electrification of Belgian Railways—A Brussels cablegram states that the electrification of the principal railways in Belgium is to be proceeded with at once. The first line to be electrified will be that between Brussels and Antwerp, the estimated cost of the work being 15,000,000 francs. The electrification of the line from Brussels to Ghent, Louvain and Namar will be gone on with at a later date. The cablegram adds that contracts for the work had not been let up to Aug. 9.

A Peculiar Trouble at Vancouver.

The accompanying diagram illustrates a rather remarkable case of trouble which occurred some years ago in a machine shop on the south side of False Creek, Vancouver. Whenever a train passed the building all the lights on one side of the shop would flare up and burst. After some Sherlock Holmes-ing, the following clues were picked up:



The central or neutral wire of the lighting service was permanently connected to ground at the transformer.

The conduit system in the building was connected to the B.C.E.R. track to "ground" it.

One of the light wires had become "grounded" on to the conduit, as a result of a screw, securing a light receptacle, having punctured the insulation.

Some enterprising individual, in a hurry to become wealthy, had removed some of the copper bonds from the track by means of a hammer and cold chisel.

The result was that when an electric locomotive passed over the place where the bonds should have been, the 500-volt direct current flowed from the trolley wire through the motors to the rail, along the rail to conduit ground wire, thence through lamps to a real ground at the transformer. The lamps, being designed for 110 volts, went on strike when forced to carry 550 volts. J. H. Northrop, Horne-Payne substation, in British Columbia. Electric Railway Employes Magazine.

The London and Lake Erie Ry. and Transportation Co. has, we are officially advised, sold the whole of the copper wire from its dismantled line from London to Port Stanley, Ont., to Frankel Bros., Toronto.

St. Thomas Municipal Ry. Operation—The City of St. Thomas, Ont., is considering making changes in regard to the operation of its electric railway, which for some time past has been losing losing about $1,000 monthly. The substitution of one-man cars, for the two-man cars now operating, is one of the things suggested.

Answers to Questions on Electric Railway Topics.

Answers to questions were sent by Canadian electric railway officials recently to the American Electric Railway Association's question box:—

Zone Systems.—What would be the determining factors in establishing zone limits on a city property, when it is intended to have on central city zone and one outside suburban zone?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C.—The factors determining zone limits are the geographical and topographical layout of the system, density of traffic and length of average haul. For example, in our east outlet from the business district is controlled in one direction by the bridges available, so that to reach a district less than two miles away requires the same mileage as another over three miles out.

Continuous Use of Power.—Is it good practice on roads of less than 75 miles, to allow cars on the line continually, the city lines included being less than 10 miles?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—It depends upon headway of traffic and consequent liability to delays and collisions. All work except emergency jobs would have to be done at nights, or when traffic is at a minimum, and proper flagging rules should be enforced.

Draftsmen's Association Formed in Toronto.

Following a series of meetings in Toronto by a number of draftsmen of all branches, the Draftsmen's Association has been formed with the following objects: To promote more professional etiquette of the various branches of arts and science similar to that of the physician, lawyer, etc. To ensure that all work be carried out by men of specific qualifications. That the branches of arts and science shall know each other closer in relation to their work, and eliminate professional jealousy. That by means of lectures and classes to be given by advanced members of the association, a broader knowledge be imparted to the younger element of all branches. To act habitually through the associations of architects, engineers and draftsmen and their chapters; in other words, to act as a compact, professional body, and not as individuals. To convince the employers of the different branches that the maintenance of ethical standards is the only right road to business success. To make the employers believe in us because we believe in ourselves. To promote such interest and participation in public and quasi-public affairs that will show the draftsmen to be men of general ability and civic pride, and not merely self-interested individuals. To create a more equable relation between employers and employes. That the employers who purchase the brains of the different services financially realize the value thereof. Last, and not least, that by inspiration and thoroughness in the training of the junior draftsmen the association aspires to do what the societies of architects and engineers have failed to do, viz: a more sound training in every branch of the arts and science and ensure better recognition of the draftsman as a co-ordinate to the architect or engineer.

Disaster at Port Colborne Elevator.

The Dominion Government terminal grain elevator at Port Colborne, Ont., was wrecked Aug. 9, by an explosion, which is thought to have been caused by the ignition of dust. There was about 400,000 bush. of wheat in the elevator at the time, and it is expected that a considerable portion of this will be salved. The building itself was practically wrecked and the top was blown some distance, and fell on the Montreal Transportation Company's steel barge Quebec, which was loading at a nearby slip. The upper works and deck of this vessel were battered in and the vessel was eventually beached to save her from sinking. The number of deaths in the elevator and on the barge Quebec was 10, and several were severely injured. The Dominion Government has appointed a board of engineers to determine the cause of the disaster, to make recommendations with a view to preventing any similar occurrence in future, and also to decide as to the repairs and reconstruction of the elevator buildings and the salvaging of the grain left in the bins. The board consists of C. N. Monsarrat, Consulting Engineer, Dominion Government; A. St. Laurent, Assistant Deputy Minister, Public Works Department; D. W. McLachlan, Engineer in Charge, Port Nelson Terminals, Hudson Bay Ry.; and John Murphy, Electrical Engineer, Railways and Canals Department.

The Board of Conciliation appointed to deal with the wages question of the Toronto Ry. and Toronto Electric Light Co.'s employes, consists of Judge Gunn of Ottawa, Chairman; W. H. Moore, General Manager, Toronto and York Radial Ry., representing the companies, and F. Bancroft, Toronto, on behalf of the men. It has since been announced that Judge Gunn has declined the appointment.

Railway Lands Patented—Letters patent were issued during July for Dominion railway lands in Western Canada to the Canadian Nothern Ry. covering 9,493.70 acres.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Opertion, Etc.

Orders for Steamships—Since Canadian Railway and Marine World for August was published, the Marine Department has been negotiating with the Dominion Shipbuilding Co., Toronto and the Midland Shipbuilding Co., Midland, Ont., for additional steel cargo steamships for Canadian Government Merchant Marine Ltd. It is said that the Dominion Shipbuilding Co. has been awarded an order for 2 ships, approximately [illegible],550 tons d.w. each, single deck type, improved Canard to Lloyd's classification, speed 11 knots, approximate delivery dates May and June, 1920.

Names of Steamships. It was stated in Canadian Railway and Marine World for August that some of the names chosen for vessels of the Canadian Government Merchant Marine Ltd., fleet might be changed, and that names ending in "er" might be substituted for them. We have since been advised of the following changes:

Canadian Cadet, approximately 3,400 tons d. w., being built by Port Arthur Shipbuilding Co., Port Arthur, Ont., changed to Canadian Sower.

Canadian Scout, approximately 5,100 tons d. w., being built by Wallace Shipyards Ltd., North Vancouver, B.C., changed to Canadian Raider.

Keels Laid—Since Canadian Railway and Marine World for August was published, we have been advised of the laying of the following keel:

S.S. Canadian Inventor, Marine Department contract 36; builder's yard no. 13, approximately 8,100 tons. d.w., J. Coughlan & Sons, Vancouver, B.C., July 24.

At the dates of our last advices keels were expected to be laid as follows, but up to Aug. 26 we had no information that they had been.

Marine Department Contract 30; builder's yard no. 2; approximately 8,100 tons d.w., Harbour Marine Co., Victoria, B.C., expected to be laid about Aug. 21.

Marine Department contract 32; builder's yard no. 43; approximately 4,300 tons d.w., Port Arthur Shipbuilding Co., Port Arthur, Ont., expected to be laid Aug. 21.

Marine Department contract 33; builder's yard no. 44; approximately 4,300 tons, Port Arthur Shipbuilding Co., Port Arthur, Ont., expected to be laid Aug. 22.

Delivery of Steamships—The steel cargo steamships which are being built for the Marine Department, and which have been completed so far, were delivered to Canadian Government Merchant Marine Ltd., for operation, as follows:

Feb. 22, s.s. Canadian Voyageur, 4,575 tons, d.w.; Canadian Vickers, Ltd., Montreal.

April 26, s.s. Canadian Warrior, 3,995 tons, d.w.; Collingwood Shipbuilding Co., Collingwood, Ont.

May 9, s.s. Canadian Pioneer, 8,408 tons, d.w.; Canadian Vickers Ltd., Montreal.

May 23, s.s. Canadian Ranger, 8,382 tons, d.w.; Canadian Vickers Ltd., Montreal.

June 7, s.s. Canadian Recruit, 3,964 tons d.w.; Collingwood Shipbuilding Co., Collingwood, Ont.

June 19, s.s. Canadian Volunteer, 4,530 tons, d.w.; Wallace Shipyards Ltd., North Vancouver, B. C.

July 18, s.s. Canadian Trader, 3,341 tons, d.w.; Port Arthur Shipbuilding Co., Port Arthur, Ont.

Aug. 7, s.s. Canadian Sailor, 3,357 tons, d.w., Port Arthur Shipbuilding Co., Port Arthur, Ont.

Aug. 7, s.s. Canadian Trooper, approximately 4,300 tons, d.w., Wallace Shipyards, Ltd., North Vancouver, B. C.

Aug. 14, s.s. Canadian Seigneur, approximately 8,100 tons, d.w., Canadian Vickers, Ltd., Montreal.

Deadweights of Steamships. The following table shows the approximate tons d.w. provided for in the contracts for 8 of the steel cargo steamships ordered by the Marine Department for Canadian Government Merchant Marine, Ltd., and the finally determined weights at which the builders are paid at the price per long ton stated in the contract.

Steel cargo steamship Canadian Trader, 3,341 tons d.w., built for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., Port Arthur, Ont.

	Approximate	Determined
Canadian Pioneer	8,100	8,408
Canadian Ranger	8,100	8,382
Canadian Recruit	3,750	3,964
Canadian Sailor	3,400	3,357
Canadian Volunteer	4,300	4,530
Canadian Trader	3,400	3,341
Canadian Voyageur	4,300	4,575
Canadian Warrior	3,750	3,995

Officers of Steamships—Following is a list of captains and chief engineers of steamships so far appointed by Canadian Government Merchant Marine Ltd., the first column containing the name of the vessel, the second that of the captain and the third that of the chief engineer:

Canadian Miller	Lt. Commander J. G. Randell	J. M. Roche
Canadian Pioneer	T. R. Coffin	P. C. Bennett
Canadian Ranger	A. S. M. Nicholls	R. J. Webster
Canadian Recruit	J. D. MacKenzie	R. N. Simpson
Canadian Signaller	J. E. Faulkner	Robt. Blair
Canadian Sailor	W. E. Baker	J. W. Abolit
Canadian Seigneur	F. Ferguson	J. Gladstone
Canadian Trader	D. Campbell	Chas. Thompson
Canadian Volunteer	A. O. Cooper	John Young
Canadian Voyageur	A. L. Starrett	J. T. Meredith
Canadian Warrior	E. C. Sears	L. Marshall

The s.s. Canadian Trader, approximately 3,400 tons d.w., was delivered by the Port Arthur Shipbuilding Co. to the Marine Department, July 18, transferred to Canadian Government Merchant Marine Ltd., and proceeded light to Erie, Pa., clearing from there on July 23, with a cargo of no. 8¾ coal consigned to Canadian National Rys. at Montreal.

Canadian Vickers Ltd., Montreal, delivered the s.s. Canadian Seigneur, Marine Department contract 25; builder's yard no. 69, approximately 8,100 tons d.w., to the Marine Department, Aug. 14, and she was transferred immediately to Canadian Government Merchant Marine Ltd. A full description of this type of ship was published in Canadian Railway and Marine World for April.

The company launched the s.s. Canadian Miller, Marine Department contract 26; builder's yard no. 70, approximately 8,100 tons d.w., on Aug. 16, when she was christened by Mrs. J. W. Norcross, wife of the President, Canada Steamship Lines. The vessel has the following dimensions, length overall, 413 ft. 1 in.; length, b.p., 400 ft.; breadth moulded, 52 ft.; depth moulded, 31 ft.; draft loaded 25 ft. 1 in. She is of the two deck, poop, bridge and forecastle type, and equipped with triple expansion engines with cylinders, 27.44 and 73 in. diar. by 48 in. stroke, 3,000 i.h.p., for a speed of 11 knots an hour, and supplied with steam by 3 single ended boilers at 180 lb. working pressure. Immediately after launching, she was towed to the fitting out wall, and it is expected she will be ready for service early in September. The Canadian Miller is the fifth ship built by this company for the Canadian Government Merchant Marine, making an approximate total of 40,000 tons, and 3 more ships are under construction.

We are advised that the company expects to launch the s.s. Canadian Navigator, Marine Department contract 23; builder's yard no. 73, approximately 4,300 tons d.w. about Sept. 13.

Collingwood Shipbuilding Co., Kingston, Ont., which has a contract for one steel cargo steamship, Canadian Beaver, approximately 3,750 tons d.w., from the Marine Department, for Canadian Government Merchant Marine Ltd., advised us Aug. 5 that the ship will probably be launched late in September or early in October, but that this will depend largely on deliveries of material.

J. Coughlan & Sons, Vancouver, B.C., laid the keel of the s.s. Canadian Inventor, approximately 8,100 tons d.w., for Canadian Government Merchant Marine Ltd., Marine Department contract 36; builder's yard no. 13, on July 24. The keels for the s.s. Canadian Importer and the s.s. Canadian Exporter, each also approximately 8,100 tons d.w., were laid Apr. 26 and May 3, respectively, as stated previously in Canadian Railway and Marine World.

Davie Shipbuilding & Repairing Co., Lauzon, Que., which has contracts from the Marine Department for 2 steel cargo steamships, Canadian Trapper and Canadian Hunter, each approximately 5,100 tons d.w., advised us Aug. 5 that it expected to launch them by the latter end of September.

Steel Cargo Steamship, Canadian Ranger, 8,382 tons d.w., built for Canadian Government Merchant Marine Ltd., by Canadian Vickers Ltd., Montreal, on her maiden trip down the St. Lawrance, en route to Liverpool, Eng.

Dominion Shipbuilding Co., Toronto, is reported to have been assured by the Marine Department of an order for 2 steel cargo steamships for Canadian Government Merchant Marine Ltd., of approximately 3,550 tons d.w., each, single deck type, improved Cunard to Lloyd's classification, speed, 11 knots, approximate delivery dates May and June, 1920.

Harbour Marine Co. Ltd., Victoria, B.C.—The Marine Department's contracts 29 and 30, for 2 steel cargo steamships of approximately 8,100 tons d.w. each, were let to Victoria Machinery Depot Co., Victoria, B.C., which name has appeared in our full page table, "Orders for steel cargo steamships for Canadian Government Merchant Marine Ltd." for several months past. As a subsidiary company, Harbour Marine Co. Ltd., has been formed to build the ships, its name has been substituted in our table for Victoria Machinery Depot Co. As stated in our last issue, the keel for Marine Department's contract 29, builder's yard no. 1, was laid July 14, and we have since been advised that the keel for Marine Department contract 30; builder's yard no. 2, was laid Aug.

Port Arthur Shipbuilding Co., Port Arthur, Ont., delivered the steel cargo steamship Canadian Sailor, Marine Department contract 20; builder's yard no. 40; 3,357 tons d.w., to the Marine Department, Aug. 6. She was transferred immediately to Canadian Government Merchant Marine, Ltd., and left Aug. 7, at noon, for Montreal, with grain.

The company expects to launch two other vessels as follows: s.s. Canadian Adventurer, Marine Department contract 19a; builder's yard no. 41, approximately 3,400 tons d.w., about Sept. 1, and s.s. Canadian Sower, Marine Department contract 20a; builder's yard no. 42, approximately 3,400 tons d.w., about Sept. 15. Keels for 2 steel cargo steamships, Marine Department contracts 32 and 33; builder's yard numbers 43 and 44, each approximately 4,300 tons d.w., were to be laid Aug. 21 and 22. It was the intention to deliver these two ships this year, but the programme has been changed.

Prince Rupert Dry Dock and Engineering Co., Prince Rupert, B.C.—A Vancouver press report of Aug. 7, stated that keels for the 2 steel cargo steamships of approximately 8,100 tons d.w. each for Canadian Government Merchant Marine Ltd., would be laid about the end of August, and that it was expected that both vessels would be completed and ready to hand over to the government by Feb. 1, 1920, construction on both vessels proceeding simultaneously. The report also stated that the price to be paid to the company, is the same as to other western concerns, viz: $188 a ton. Reference to the detailed table of government shipbuilding on another page of this issue, will show that the price paid for this type of vessel, to this and other Pacific coast firms, is $198 a ton d.w.

C.P.R. Scholarships at McGill University.—Only one candidate qualified at the recent McGill matriculation examinations for the five scholarships in the applied science faculty offered by the C.P.R., viz: Jacob Bloomfield, Montreal.

The Railways of Canals Department received tenders during August for the purchase of the motor schooner, Neophyte, as she lies at Port Nelson, Hudson Bay. She was built at Amsterdam, Holland, in 1903, and is of steel with the following dimensions, length 107 ft.; breadth, 10.7 ft.; depth, 6.2 ft.; tonnage, 150 gross; 97 net; 188 tons d.w. capacity on 7 ft. draft. She is rigged for sailing as a fore and aft schooner, and the auxiliary equipment includes a 4 h.p. motor, driving screw.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the six different types of steamship being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton.
Length, overall	280 ft.	260 ft.	260½ ft.	333 ft. 7 ins.	344 ft.	413 ft. 1 in.	[illegible] ft
Length, bet. perpendiculars	270 ft	251 ft.	251 ft.	320 ft.	331 ft.	400 ft.	430 ft
Breadth, moulded	38 ft.	43½ ft.	43½ ft.	44 ft.	46½ ft.	52 ft.	56 ft.
Depth, moulded	20½ ft.	23 ft.	26 ft.	25 ft.	25½ ft.	31 ft.	38 ft
Draft, loaded	17¼ ft	20 ft	22 ft. 2 in.	21 ft. 2 ins.	21 ft. 8 ins	25 ft. 1 in.	29 ft
Type	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	Lake, s.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	2d., p.b. & f'c's'le	3d., p. & f'c's'le
Engines—Type	Tri-compound	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion
Cylinders, diar.	17½ x 23¾ x 47 ins.	20½ x 34 x 56 ins	18 x 30 x 50 ins	25 x 41 x 67 ins	25 x 41 x 68 ins	27 x 44 x 73 ins.	29½ x 50 x 80 ins
Stroke	33 ins	40 ins.	36 ins.	45 ins.	45 ins	48 ins	54 ins
Ind. h.p.	[illegible]	1,300	1,200	1,800	2,500	3,000	4,000

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contractions are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Contract	Contract date	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name
1	Mar. 4, 1918	Canadian Vickers Ltd., Montreal	66	*4,575	$207.	$ 947,025	S.d., p., b. and f'c's'le	Lloyd's	11	Dec. 31, 1918	June 11, 1918	Nov. 23, 1918	Canadian Voyageur
2	May 22, 1918	" "	67	*8,408	180.	1,513,410	2.d., p., b. and f'c's'le	"	11	Jan. 31, 1919	July 17, 1918	Dec. 3, 1918	Canadian Pioneer

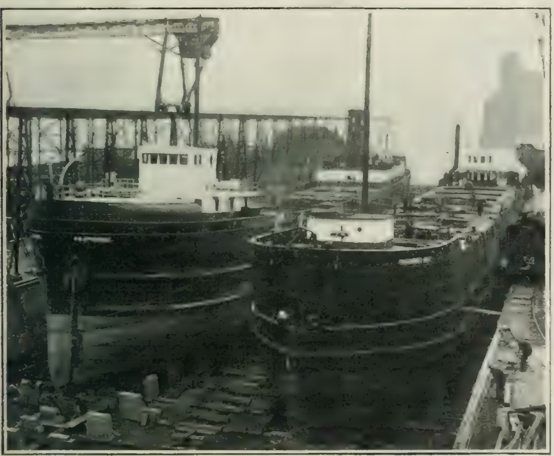
The Passage of Large Vessels Through the Welland Canal.

For many years past it has been the practice, in the case of large vessels, which it is desired to take from the Great Lakes to the ocean, or vice versa, to cut them in two, to enable them to pass through the Welland Canal locks. Owing to the demands of the war, and the shortage of vessels, due to submarine warfare, a large number of vessels have been taken from the Great Lakes and placed in coasting and ocean service. Many of these were small enough to pass the locks without cutting in two, but a considerable number had to be divided. On account of the large number of such vessels, which the U.S. sent to the coast, it was decided to send a complete staff with outfit, to the St. Lawrence, so that the work of repairing them might proceed without interrupting the very urgent work then being carried on at Canadian shipyards there.

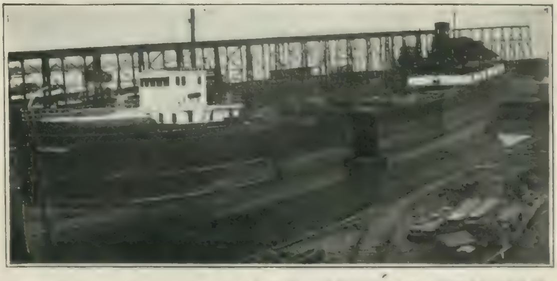


Steamship Paipoonge and Barge Thunder Bay, in Collingwood Shipbuilding Co.'s Drydock No. 2, preparatory to being cut in two to pass through the Welland and St. Lawrence Canals to the Ocean.

When the Welland Ship Canal is completed, work of this nature will be obviated, as the locks to be built will be of sufficient depth, width and height, to take the largest vessels likely to be operated on the lakes for some time.

The illustrations given on this page and the next, show the s.s. Paipoonge, owned formerly by the Canadian North West Steamship Co., Port Arthur, Ont., and the U.S. barge Thunder Bay, after being divided. These vessels were sold during 1918, for operation between South American ports, and the work of cutting them in two was completed, but the purchased defaulted in payment, and the vessels were re-sold, the purchaser in each case being H. B. Smith, President, Collingwood Shipbuilding Co., Collingwood, Ont., for the company.

The vessels are being re-joined by the Collingwood Shipbuilding Co., and will be refitted and made suitable for lake service.



Steamship Paipoonge, after being cut in two by Collingwood Shipbuilding Co., showing fore and aft sections afloat.

Inventions of Devices for Securing Greater Safety at Sea.

The war was carried on at such enormous cost to the world that it is some mitigation to learn that many of the instruments developed in warfare will be of great advantage to trade and navigation in times of peace. Interesting examples of this counterpoise were given by Dr. J. C. McLennan, Professor of Physics, University of Toronto, in an address to the Northeast Coast Institution of Engineers and Shipbuilders recently. As Scientific Adviser of the British Admiralty during the war he had a large share in the invention and development of these devices, and though naturally he could not enter into great detail regarding some of them, still he indicated sufficient to show how useful they may become to the merchant marine.

When the armistice was announced, the menace of the submarine had been completely overcome, and as far as it was then developed and used by the enemy it was helpless in face of the devices used against it. Among these was the hydrophone for sound ranging, and Prof. McLennan states that within operable ranges a ship can be given its position by sound ranging more accurately than by directional wireless or by any other known method. Explosions of mines or torpedoes at any point in the North Sea can easily be located by stations situated in Great Britain. In the war during the bombardment of the Belgian coast, it was a common thing for a monitor to proceed in a fog to a position some miles from the coast and by dropping depth charges have its position accurately determined from stations on the English coast. So accurately was this done that it was found, when the monitor's guns were trained in selected directions, objectives several miles inland could be hit with regularity, and with a minimum expenditure of ammunition. By means of sound ranging it is possible to fix the position of light vessels, buoys which indicate channels, and obstructions such as sunken vessels. Ships approaching in fog the shores of Nova Scotia, Newfoundland, or Labrador can be given their positions with accuracy for ranges up to 500 miles.

One of the simplest and most feasible methods of improving navigation appears to be by the use of the Leader gear, which consists of a cable laid on the bottom of the sea, along the course of a narrow, tortuous channel leading into a harbor or through a mine field. If an alternating electric current is passed through such a cable it is possible, by means of delicate devices installed on a ship, to obtain either aural or visual indications of the presence of such a cable, and by these indications a ship can be guided in safety in fog or darkness at speeds as high as 20 knots an hour, almost with as much precision as a tramcar by a trolley wire over a railway. Experiment has shown that it is a simple matter to apply this method in water of suitable depth for distances as great as 50 miles or longer. By a Leader gear laid in such areas as the River St. Lawrence or the entrance to Halifax harbor, Prof. McLennan says that in and out lanes of traffic can be organized which can be maintained with ease in fogs.

In case sound ranging might prove ineffective by the hydrophone, another system, the echo method, was invented. It was found that by means of beam sound waves, analagous to the working of a submarine it was possible to sweep the seas, and when an object such as a submarine came within the beam the sound waves were reflected and echo effects were produced. Prof. McLennan says that the same method can be used for [illegible] sounding as well as for locating icebergs, surface vessels, and rockbound coasts in a fog. The directional wireless can also be used to give the position of ships in the North Atlantic, when they are prevented from getting it by fogs or bad weather. The Admiralty, in consequence of these developments and of what they promise, proposes to establish a research and experiment department to increase the efficiency of the navy, and also to provide aids to navigation for the mercantile marine. The expense will be heavy, but Prof. McLennan says that if it prevents two or three wrecks per year, or lowers the time of the voyage between Great Britain and Canada on the average by one day per voyage per ship through the fog-covered areas in the neighborhood of Newfoundland sufficient will be saved in a year or two to cover the whole cost.—Toronto Globe.

Trent Valley Canal Construction.

The route of the Trent Valley Canal as now in operation and under construction lies between Trenton, on the Bay of Quinte, where direct connection is made with Lake Ontario, and Honey Harbor, on Georgian Bay, from which port the waters of the upper great lakes are at once accessible. The portion of the canal now under construction lies between Lake Couchiching and Georgian Bay.

The Railways and Canals Department report for the year ended Mar. 31, 1918, contains the following in regard to the work: The portion of the canal which lies between Trenton and Rice Lake is practically completed; the extent of the canal in operation or ready for operation may therefore be stated as about 200 miles, or between Trenton and Washago. In addition to this, other channels maintained would approximate 90 miles.

The Ontario-Rice Lake Division includes the canal which lies between Trenton and the easterly end of Rice Lake, a total distance of 56½ miles. This section is now practically completed, and will be opened for traffic early next season. (Note. This has been done.) The entire work when fully completed will have cost slightly over $5,000,000.

The Severn Division includes the portion between Lake Couchiching and Port Severn, on Georgian Bay, a total distance of 43 miles. In this distance there will be included 4 miles of canal, 5¼ miles of subaqueous channel, and 33¾ miles of deep river and lake navigation. The rise of about 139 ft. between the level of Lake Huron and that of Lake Couchiching will be overcome by 5 locks. For the regulation of the river levels, 15 dams will be required. The route of the canal will be crossed by 8 steel bridges, 5 for highway and 3 for railway traffic. Five of these bridges will be fixed spans, and the remainder swing spans. For construction purposes this division has been subdivided into 4 sections or contracts known as sections 1, 2, and 3, and the Port Severn section. Section 1 is not yet under contract, and it is not likely that tenders on it will be called for until after the close of the war. The work to be undertaken will include the reconstruction of 3 locks and 2 regulating dams, and will extend from deep water in Georgian Bay, near Island No. 181, 17 miles easterly, to a little above the Big Chute near the mouth of the Severn River. Section 2, now under contract, extends from the Big Chute to above McDonald's Rapids, 11½ miles. The work included in the contract comprises principally the construction of a dam at Pretty Channel, a dam, lock, and power-house at Swift Rapids, and the reconstruction of the Canadian Northern Ry. bridge at Ragged Rapids. The dam at Pretty Channel was completed towards the close of 1915. The dam at Swift Rapids was completed near the close of navigation in 1917. Since the completion of this dam, the elevation of the water in the river between Swift Rapids and Ragged Rapids has been raised 47½ ft. The power house at this point has been completed and all machinery installed, and it is expected that the plant will be in operation within a few days. Work on the lock has been proceeding satisfactorily. The excavation for the lock pits is about completed. The concrete work of the lock and the entrance piers is now about two-thirds completed. The upper entrance piers, breast wall and gate recess walls have been finished, and work on the side walls is well advanced. The swing span of the bridge at Washago for the crossing of the Canadian Northern Ry., was completed during the year. The girder approach at the west end has not yet been erected, and the completion of the railway diversion on either side of the bridge has been delayed for want of rails. No further work was done on the substructure of the Ragged Rapids bridge. Section 3, about 15¼ miles in length, extends from the easterly end of section 2 to deep water in Lake Couchiching. The contract for the work to be undertaken includes the construction of a lock just north of Lake Couchiching, 2 highway swing bridges, 1 railway swing bridge, and several small dams near Washago, as well as a large amount of rock and earth excavation. Owing to the conditions resulting from the war, a surrender of the contract was effected. Of the total amount of work to be performed under the contract, a little more than half has been completed. Of the work thus far carried out, the following items are among the more important: The excavation for the Couchiching lock is practically completed, and the concrete work on the upper entrance piers, breast, and recess gate walls is well advanced. The dredging of the channel in Lake Couchiching is nearly completed. The canal cut across country, from the Muskoka Road bridge to the river, is well advanced. The highway bridge at Muskoka Road is completed and now in use. The construction of the pivot pier only at the Hamlet Highway crossing of the canal has thus far been carried out. The swing bridge for the crossing of the Canadian Northern Ry. is complete, except for the fixed spans at the west.

Fore section of steamship Paipoonge afloat.

Dominion Canal Statistics for the 1918 Navigation Season.

Following are extracts from the report issued by the Railways and Canals Department.

The total traffic through the canals during the 1918 navigation season was 18,883,619 tons, a decrease of 3,371,285 from 1917. The volume of traffic through the various canals was as follows:

	Tons	Increase	Decrease
Sault Ste. Marie	12,913,711	....	2,533,381
Welland	2,174,298	....	316,244
St. Lawrence	3,0301,134	....	360,010
Chambly	369,186	....	65,632
St. Peter's	59,716	....	2,538
Murray	44,735	....	12,868
Ottawa	167,170	....	47,665
Rideau	54,136	....	30,413
Trent	64,898	15,969	....
St. Andrews	4,640	....	2,534
Total	18,883,619	15,969	3,371,285

Gross Traffic Since 1905.

	Tons		Tons
1905	9,871,744	1912	47,587,245
1906	10,523,185	1913	52,053,913
1907	20,543,639	1914	37,023,237
1908	17,502,820	1915	15,198,803
1909	33,720,748	1916	23,583,491
1910	42,990,608	1917	22,238,935
1911	38,030,353	1918	18,883,619

Following is an analysis of the various commodities passing through the canals:

Canals. 1918.	Products of farm. Tons.	Manufacturers. Tons.	Products of forest. Tons.	Products of mines. Tons.	Total. Tons.
Sault Ste. Marie	1,513,446	259,983	41,808	11,098,474	12,913,711
Welland	287,986	229,829	123,979	1,532,504	2,174,298
St. Lawrence	337,862	235,014	397,678	2,060,580	3,031,134
Chambly	21,124	30,271	219,387	98,404	369,186
St. Peter's	9,790	6,793	1,940	41,193	59,716
Murray	....	7,796	....	36,939	44,735
Ottawa	6,450	19,048	84,540	57,132	167,170
Rideau	3,311	9,408	7,378	34,039	54,136
Trent	2,155	2,274	59,367	1,097	64,893
St. Andrews	7	54	4,579	....	4,640
Total	2,182,131	800,470	940,656	14,960,362	18,883,619

The percentages of the different commodities for 1917 and 1918 were as follows:

	1918 Per cent.	1917 Per cent.
Products of farm	11.56	17.27
Manufactures	4.25	3.65
Products of forest	4.94	5.26
Products of mine	79.25	73.82

The number of vessel passages and tons of freight in Canadian and U.S. vessels, and the total of Canadian and U.S. freight for 1917 and 1918, were as follows:

	Canadian Vessels. No.	Canadian Vessels. Tonnage.	U.S. Vessels. No.	U.S. Vessels. Tonnage
1917	21,588	9,831,694	6,594	10,259,772
1918	18,909	7,800,972	6,791	9,616,200

Freight Tonnage.

	Canada	United States	Total
1917	5,964,369	16,274,566	22,238,935
1918	3,369,477	15,514,142	18,883,619

During the past 10 years the wheat carried through the Sault Ste. Marie Canadian Canal each year was, as follows, in bushels:

1909	48,047,83	1914	77,467,838
1910	51,774,83	1915	48,727,911
1911	68,641,00	1916	82,807,342
1912	83,743,08	1917	60,551,243
1913	101,066,133	1918	19,987,255

In 1918 a large volume of Canadian wheat passed through the Sault Ste. Marie U.S. canal, which is also true, in a lesser degree, of previous years, the following table showing the bushels for the past 4 years:

	1915. Bushels.	1916. Bushels.	1917. Bushels.	1917. Bushels.
Through Canadian Canal	48,272,911	82,807,342	60,551,243	19,987,255
Through U.S. Canal	121,389,950	102,196,325	98,023,019	42,312,016
Total	170,117,861	185,003,667	158,574,262	62,299,271

Canadian wheat in the form of flour, had a total of 7,061,913 bush. There were 1,569,314 barrels of flour, which were calculated into wheat on the basis of 4½ bush. to the barrel. The total bushels of waterborne wheat in 1917 and 1918 would thus be:

	1917	1918
Through Canadian canal	60,551,243	19,987,255
Through U.S. canal	98,023,019	42,312,016
In the form of flour	13,230,850	7,061,913
Total	171,805,112	69,361,184

The distribution of Canadian wheat, moved through the Canadian and U.S. canals at Sault Ste. Marie from Port Arthur and Fort William, was as follows:

	1915. Bushels.	1916. Bushels.	1917. Bushels.	1917. Bushels.
To Montreal	3,512,410	1,233,982	1.280.170	728,500
To Georgian Bay ports	25,065,000	46,406,749	52,173,042	38,774,391
To other Canadian ports	33,067,613	28,029,847	31,369,487	20,638,204
To Buffalo, N.Y.	106,784,542	106,349,913	72,872,692	2,158,176
Total	167,430,564	182,020,521	157,975,391	62,299,271

There was also a large volume of wheat moved during 1918 from Port Colborne to Montreal, which might be added to the foregoing total for Fort William and Port Arthur to Montreal, Port Colborne being used as a port of transfer. It might be assumed that nearly all the wheat shown in the foregoing table as being moved from the head of the lakes to other Canadian ports, means to Port Colborne for transfer to Montreal.

Water carriers obtained exceptionally high rates on wheat during 1918, the rates for the different routes for the past 4 years being as follows:

	1915.	1916.	1917.	1918.
Port Arthur—Fort William to Montreal—				
Per ton, per mile	0.132c	0.205c	0.265c	0.309c
Per bushel	4.99c	7.55c	9.78c	11.39c
Per ton	$1.66	$2.52	$3.26	$3.80
Port Arthur—Fort William to Georgian Bay—				
Per ton per mile	0.282c	0.264c	0.270c	0.277c
Per bushel	3.54c	4.10c	4.25c	4.32c
Per ton	$1.18	$1.37	$1.42	$1.44
Port Arthur—Fort William to other Canadian ports—				
Per ton per mile	0.124c	0.169c	0.185c	0.205c
Per bushel	2.84c	3.68c	4.18c	4.48c
Per ton	94.80	$1.22	$1.39	$1.49
Port Arthur—Fort William to Buffalo—				
Per ton per mile	0.159c	0.159c	0.196c	0.158c
Per bushel	3.97c	4.27c	5.00c	4.11c
Per ton	$1.32	$1.42	$1.67	$1.37

The rates from Duluth, Minn., were substantially the same as from Fort William and Port Arthur. In order that the bearing of these rates may be properly understood in their lations to gross earnings, allowance should be made for the following charges paid by vessel owners on all cargoes of wheat moved between Fort William and Montreal:

Clearing house at Fort William	.01 to .03 a bush.
Trimmers at Fort William	.06 " "
Elevation at Montreal	.30 " "
Shovelling at Montreal	.20 " "
Total	.59 a bush.

To Port Colborne the average deductions would amout to 0.44c and to Buffalo 0.41c, and to Georgian Bay ports 00.38c.

In addition to the wheat passing through the Sault Ste. Marie canals, other grains were moved in 1917 and 1918 as follows:

	Bushels 1917	Bushels 1918
Oats	37,014,644	10,120,625
Barley	5,149,725	3,470,358
Flax seed	5,073,760	1,588,052
Total	47,238,129	15,179,035

Details of all traffic passing through the Sault Ste. Marie canals are published monthly in Canadian Railway and Marine World, the complete summary for the 1918 season being given in our Jan., 1919 issue.

Collection of Water Transportation Statistics.

The Dominion Statistician at Ottawa is making an enquiry, through the Dominion Bureau of Statistics, into water transportation matters, to secure the following information:—

A return for every vessel registered by the Dominion Government, showing construction, size, value, rig, route, freight and passengers carried, etc.

A return of the business operations of every Canadian ship company or owner, covering vessels operated, assets and liabilities, revenues, operating costs, profit and loss accounts, accidents, etc. This enquiry to be supplementary or complementary to the preceding and to be compiled in close co-ordination.

A report from each port, listing by name each craft entering, or clearing, and showing rig, country of registry and tonnage. These returns to be checked against the preceding, and to show definitely the vessels, not only of Canadian, but also of foreign registry, engaged in Canadian traffic. At times of urgency to be collected monthly. A card catalogue to enable instant information to be given as to vessels engaged in Canadian traffic and the class of service in which each is engaged.

The total vessels, tonnages, etc., touching at Canadian ports to be reported to the bureau annually by the Customs Department under the Statistics Act, sec. 22. These statistics, published heretofore as part of the Customs Department's trade statistics, to be merged in the general report on water carriers and navigation.

Canal statistics to be enlarged, placed on the same basis as other sections, and worked into the general treatment.

Monthly traffic returns from leading water carriers to be collected as part of the scheme of railway statistics.

Air Tool Devices for Shipbuilding.

The three convenient air tool devices illustrated herewith were developed by W. A. Mason, foreman air tool repair shop, Wyandotte plant, American Shipbuilding Co., Detroit, Mich.

Repairing Vise for Air Drills.—Figs. 1, 2 and 3 show a special vise or holder for air drills while repairs are being made. It consists mainly of a round vertical standard or shaft, with attached base plate for bolting to the work bench, and a double clamping block or head mounted on the standard and carrying a horizontal bearing sleeve. A shouldered mandrel is held in the sleeve and provided with a threaded split collar on the end opposite the shoulder, to prevent end play and to give any desired rotary tension. The opposite end of the mandrel is fitted with a threaded stud which is to be screwed into the dead handle side of the air drill. The universal features of the vise, with clamping aramgements for all adjustments, makes it easy to hold the air drill in any position desired and to make changes from one position to another with the least possible loss of time.

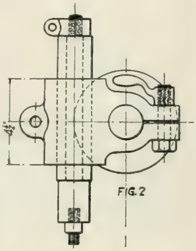

FIG. 2

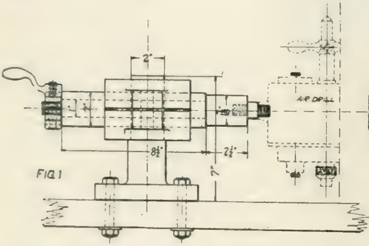

FIG. 1

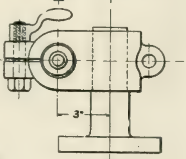

FIG. 3

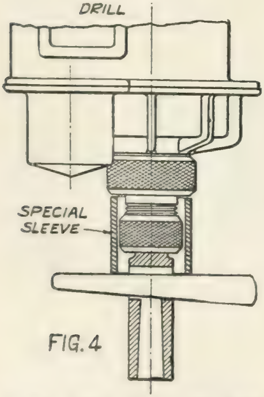

FIG. 4

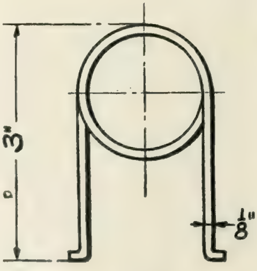

FIG. 5

Air Drill Socket Extractor.—Fig. 4 illustrates a very simple method of removing a taper shank drill socket from certain classes of air drills which are not provided with a more convenient extracting arrangement. A hardened tool steel sleeve constitutes the special device used for this purpose, and is made large enough to slip loosely over the protection nut of the drill spindle so that it can rest on shoulder against the face of the packing nut. The length of the sleeve is such as to partially overlap the drift key slot in the drill socket. A key driven into the slot and bearing against the sleeve will force the socket out of the drill spindle.

Air Drill Valve Extractor.—Fig. 5 shows a device for extracting valves from air drills, it being made of no. 11 B. & S. gauge spring steel wire. When used the bent points or hooks are inserted into the main parts of the valve and a piston or drift plug is inserted from the opposite end until it rests against the heels of the hooks, which act as driving lugs for the removal of the piston by tapping lightly on the plug. This obviates damage to valve and block resulting from the usual practice of using cold chisel against the valve for its removal.

The First Steamboat on the Red River of the North.

The Red River of the North was first opened to navigation in 1858. The discovery of gold in British Columbia in that year made the people of St. Paul, Minn., then only a village of a few thousand, wild with excitement. Suffering as they were from the financial depression of 1857 they strained every nerve to find some way across the great plains to the gold-laden waters of the Fraser River in B.C.

Many routes were discussed at meetings called by the St. Paul Chamber of Commerce, but a way down the Red River to Fort Garry and thence, westward by the Assiniboine seemed the most promising. Even this route offered almost insurmountable difficulties. Fort Abercrombie and Pembina were the only two settlements of note on the Red River south of Fort Garry, the Hudson's Bay Co.'s post on the Assiniboine River. A stage line was in operation as far as St. Cloud, but a road would have to be constructed from there to some point on the Red River from which a steamboat could be operated to Fort Garry.

As no one knew whether the Red River was navigable, Alex. Ramsey and John Irvine were sent to make an investigation. Making their way up the Minnesota River and over the Kittson trail they arrived at Fort Abercrombie, a structure of "log cabins on the bottomland of the river." From there they travelled on horseback down the east side of the river to a claim which Mr. Irvine had staked out opposite the mouth of the Sheyenne. As far up as that point, they decided, the river ought to be navigable for three or four months of the year.

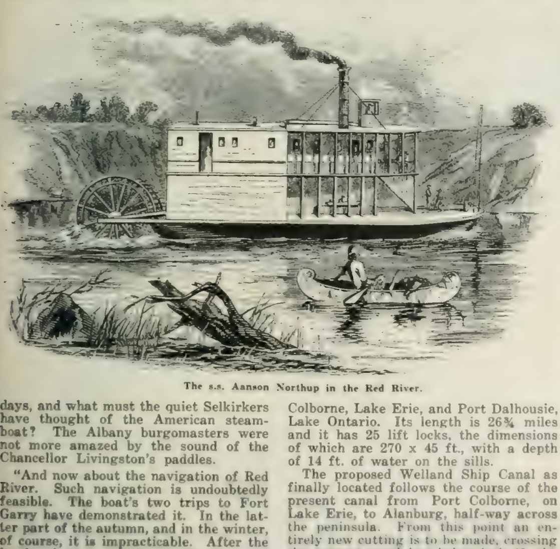
As a result of Mr. Ramsey's report, the St. Paul Chamber of Commerce made a contract with Anson Northrup to build the first steamboat on the Red River for $2,000. The timbers for his craft were hewn at Crow Wing on the Mississippi. The second hand machinery which had been brought from Maine several years before, with the timbers, lumber, cabins and furniture, was loaded upon 34 wagons at Crow Wing. In the bitter winter of 1858 a party of 60 resolute men and 34 teams trudged 150 miles through the snows of an unknown country, unusually hilly and heavily timbered and without the semblance of a road, to Irvine's claim on the Red River.

There the Anson Northrup was built. The impression that it was not exactly a boating palace may be gained from a description given by Mr. Ramsey concerning the appearance of the boat the next year: "The hull was new, but it was made of pine; the machinery was eight years old; the furniture was very limited; the boiler was of the locomotive kind, and the head was cracked clear across and leaked so badly that it was not possible to get up a sufficient head of steam to be called seaworthy or bear inspection."

The Anson Northrup made its maiden trip in the summer of 1859. Many passengers were taken from Fort Abercrombie to Fort Garry, where they were received with great enthusiasm. It was afterward sold to Norman Kittson, and, in his hands, saw many years of service on the Red River..

The foregoing particulars, gathered from the Minnesota Historical Society's records, by W. W. Wemet, were published recently in the Courier-News, Fargo, N.D. A somewhat different account appeared in Harper's Magazine for Aug., 1860, in an article "To Red River and Beyond," as follows:—

"Late in the winter of 1858-59, Anson Northup, having run his boat up the Crow Wing River, a tributary of the Mississippi, the previous autumn, took it to pieces, packed the cabin, machinery, and timber for building the hull, on sleighs, which, with great difficulty, were drawn by horses and oxen across to Otter Tail Lake, and thence westward to the mouth of the Cheyenne, on the Red River. Assisted by the St. Paul Chamber of Commerce, but mainly depending on his own private resources, and by hard work and perseverance, the boat was rebuilt on the banks of the Red River, and launched successfully on May 19, and, as the breaking bottle drenched the planks, was christened the Anson Northup. In the high water of early spring she made her trial-trip down to Fort Garry and back. She had to lie by every night, of course, and must have been greatly delayed by the necessity of stopping to cut timber for firing. In spite of these delays, she made the return trip in eight days, and what must the quiet Selkirkers have thought of the American steamboat? The Albany burgomasters were not more amazed by the sound of the Chancellor Livingston's paddles.



The s.s. Aanson Northup in the Red River.

"And now about the navigation of Red River. Such navigation is undoubtedly feasible. The boat's two trips to Fort Garry have demonstrated it. In the latter part of the autumn, and in the winter, of course, it is impracticable. After the ice breaks up, which usually happens about May 1, the water is very high, and the river is navigable to as large steamboats as can make all the turns in the winding river, from Fort Abercrombie to the mouth at Lake Winnipeg, nearly 500 miles. After Aug. 1, the water has fallen sufficiently to reveal serious obstructions in the channel from Fort Abercrombie to the mouth of the Cheyenne River, its largest tributary but one, entering Red River 50 or 60 miles below the fort. But from this point to its mouth, it is easily navigable in the lowest stages of water, until the ice forms in early November. The success of the boat works a revolution in the Hudson's Bay Co.'s business. Hereafter the annual outfit and returns will pass through the United States, instead of by the difficult and circuitous passage of Hudson Bay to York and Moose Factories."

It will be noticed that in the article reproduced from the Fargo-Courier-News, the name of the builder of the first Red River steamboat is given as Anson Northrup, while the Harper's Magazine article has it as Anson Northup.

The accompanying illustration of the steamboat Anson Northup is reproduced from Harper's Magazine for Aug., 1860, which is in Canadian Railway and Marine World editor's private library.

Welland Ship Canal Construction.

The Railways and Canals Department report for the year ended March 31, 1918, issued recently, contains the following: This important work has for its object greater and better accommodation for a larger class of vessels than those that can be used on the present Welland Canal.

The present canal lies between Port Colborne, Lake Erie, and Port Dalhousie, Lake Ontario. Its length is 26¾ miles and it has 25 lift locks, the dimensions of which are 270 x 45 ft., with a depth of 14 ft. of water on the sills.

The proposed Welland Ship Canal as finally located follows the course of the present canal from Port Colborne, on Lake Erie, to Alanburg, half-way across the peninsula. From this point an entirely new cutting is to be made, crossing the present canal just below lock 25, the water level of the two canals at this point being the same, viz., 568 ft. above sea level. The new canal again crosses the present one below lock 11, the water of both canals at this point being at an elevation of 382 ft. above sea level.

The proposed canal enters Lake Ontario at the mouth of the Ten Mile Creek about three miles east of Port Dalhousie. The total length of canal from lake to lake is 25 miles; and the difference in level between the two lakes, 325½ ft., is to be overcome by 7 lift locks, each having a lift of 46½ ft. The locks are to be 800 ft. long by 80 ft. wide in the clear and with 30 ft. of water over the miter sills at extreme low stages in the lakes. The width of the canal at the bottom will be 200 ft. and, for the present, the canal reaches will be excavated to a depth of 25 ft. only, but all structures will be sunk to the 30-ft. depth, so that the canal can be deepened at any future date by dredging out the reaches.

A new western breakwater will be built at Port Colborne to ensure quiet water in the harbor during storms.

The outer entrance piers in Lake Ontario will be placed about 1½ miles from shore, where the depth of water is 30 ft.; a wide channel will be dredged out from these piers and an embankment formed on either side of it about 500 ft. wide. The lock walls will be 82 ft. high above the top of the gate sills.

The work is divided into 9 sections, of which section 1, approximately 3 miles, at the Lake Ontario end of the canal, was placed under contract on Aug. 1, 1913; section 2, approximately 4 1-3 miles, was placed under contract Dec. 31, 1913; section 3, approximately 2 miles, was placed under contract on Oct. 4, 1913; section 5 was placed under contract on Dec. 22, 1913.

During the fiscal year 1917-18, $1,235,046.59 was expended, making the total expenditure to March 31, 1918, $14,928,969.58.

[**Editor's Note**—Owing to the war, work on the various contracts was suspended in Jan., 1917, and was resumed early this year by the same contractors working on a cost plus percentage basis.]

Accidents in the St. Lawrence River and Gulf.

A Quebec press dispatch reports the following accidents:

The steam barge Captain Dan, E. Gamache, master, struck a wharf while entering Quebec harbor, Aug. 22, and sank before she could be beached. The cook was drowned, but the rest of the crew were rescued from a capsized boat.

The steamship Admiral Hastings, which left Montreal Aug. 16 for England with cargo, went aground on Bagot Bluff, south point on Anticosti Island, early on Aug. 23. The salvage tug Lord Strathcona left Quebec the same day with a schooner to raise the vessel. The latter reports she is hard aground and cannot get out by her own power.

The steamship Verdulia, which left Quebec Aug. 20 for England with cargo, struck an iceberg off Belle Isle on Aug. 23. She immediately sounded her S.O.S., but later reported she was apparently slightly damaged and could proceed on her eastward voyage. She passed Belle Isle's wireless station at 2 p.m., Aug. 23.

The steamship Glen Allen of the Kirkwood Line of Montreal, scraped her bottom on the rocks outside the channel, a few miles west of the Quebec bridge, on Aug. 22 and was being examined at Quebec to decide whether she need go into dry dock.

Dominion Government Highway Board — In connection with the projected highway improvement scheme, which is being undertaken by the Railways and Canals Department and for which parliament has voted $20,000,000, it is announced that an honorary advisory board is to be appointed, those suggested being: C. A. Magrath, Chairman, Canadian Section, International Joint Waterways Commission; R. Home Smith, President, Algoma Central and Hudson Bay Ry., and J. P. Mullarkey, railway contractor, Montreal.

General Shipbuilding Matters Throughout Canada.

B.C. Marine Railway Co., Victoria, B.C., is building a wooden steamship hull for the Union Steamship Co. of British Columbia. The dimensions are, length, 145 ft.; beam, 27 ft.; draft, 7½ ft. The machinery from the s.s. Washington, which was purchased recently is to be installed in the new hull, which, when completed next spring, is intended for excursion service on the Selma Park and Buccaneer Bay run.

Canadian Vickers Ltd., Montreal, advised us recently that it expected to launch a steamship of approximately 8,300 tons d.w., its builder's yard no. 76, for French interests, about Aug. 25.

Wooden Steamships for French Government, at Foundation Co.'s fitting out yard, Victoria, B.C.
For full description see Canadian Railway and Marine World, Dec., 1918, pg. 570.

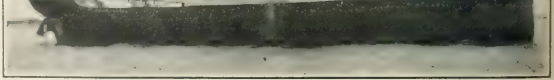
Cholberg Ship Co., Victoria, B.C.—The auxiliary powered schooner Washington, the second of this type to be built for the Porsgrund Damp and Seil Co., Porsgrund, Norway, which, was expected to be launched at the end of July, was not launched until Aug. 7. The company is reported to have received an order from the Universal Shipping and Trading Co., Seattle, Wash., for the conversion of 3 wooden steamship hulls, purchased from the U.S. Shipping Board, into barquentines.

The Dominion Shipbuilding Co., Toronto, launched the steel cargo steamship Skolma, Aug. 7. This ship is similar in all particulars to the s.s. Hessa, the launching of which was announced in our last issue. She is of the single deck type, with poop, bridge and forecastle, steel texas on bridge, with wing deck house, chart room and pilot house, and is built on the transverse system with hull divided into compartments by 4 watertight bulkheads and 1 screen bulkhead. She has cargo capacity for 151,466 cu. ft. of grain, with carrying capacity of approximately 3,550 tons. She has a double bottom, fore and aft, for 779 tons of water ballast, and the water tank capacity is 5,053 imp. gals. There are 4 hatches each 22 x 18 ft. and she is classed 100 A1 at Lloyd's for ocean service. The propelling machinery consists of inverted triple expansion engines, with cylinders 20, 33 and 54 in. diar. by 40 in. stroke, 165 n.h.p., 1,200 i.h.p., at 87.5 r.p.m., and supplied with steam by 2 Scotch marine boilers, each 11 x 14½ ft. with 2,730 sq. ft. heating surface to each boiler, and working pressure of 180 lb. a sq. in. The average speed will be 10.2 knots on a fuel consumption of 201 tons in 24 hours. Her dimensions are, length overall, 261 ft.; length, b.p., 251 ft.; breadth moulded, 43½ ft.; depth moulded, 24 ft 2½ in., approximate tonnage, 2,300 gross, 1,400 net.

J. Duffy & Co., Southville, N.S.—The first vessel to be built by this company was launched at the end of July, and named J. Duffy. She is a schooner, built of native lumber, and with accommodation for a crew of 24. Her dimensions are, length overall, 150 ft., beam, 27¾ ft.; depth, 11¼ ft.; 115 tons register.

Foundation Co., Victoria, B.C.—Trial trips took place during July of 5 of the wooden steamships built by this company for the French Government. These were the Metz, Strasbourg, Trois Rivieres, Frontenac and Victoria. Up to the end of July, 11 of these ships had been launched out of an order for 20. They are of approximately 3,000 tons d.w. capacity and are equipped with vertical, triple expansion, twin screw engines of 550 h.p., and supplied with steam by 2 Scotch boilers, having 3,500 sq. ft. heating surface. Their dimensions are, length over all, 293 ft.; breadth moulded, 46½ ft.; depth moulded, 23½ ft.; draft, 21¾ ft.

Wm. Lyall Shipbuilding Co., Vancouver, B.C.—It was announced early in August, by W. S. D. Cook, General Manager, that the yards would have to be closed down about the end of September, unless more contracts were secured, and at that time, he stated, there were no more contracts in sight. This company is one of several, which were formed during the war, to build wooden vessels, to meet an emergency, and which built 6 standard wooden steamship hulls for the Imperial Munitions Board, on behalf of the British Government. The company is just about completing the construction of 8 wooden steamships of 1,500 tons d.w. capacity each, for the French Government.



Steel cargo steamship Canadian Sailor, 3,357 tons d.w., built for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., Port Arthur, Ont.

New Westminster Construction & Engineering Co., New Westminster, B.C.—The award in the arbitration between this company and the Imperial Munitions Board regarding the use, by the board, of the company's yard at Poplar Island, was announced Aug. 3. The judgment found that the board was indebted to the company to the extent of about $1,400, and that the company did not agree to buy the shipbuilding plant for $97,000. It was also found that the board was entitled to $20,000 for the use of machinery and $1,700 insurance, the company being allowed $23,000 due for arrears in certain payments and taxes.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The new wage agreement with the employes, which effective as from Aug. 1, provides that the wage for a 50 hour week, including the 5% increase, granted Apr. 1, is granted for a 48 hour week, and that if, for the present, the 50 hour week be continued, overtime is to be paid for the additional 2 hours.

G. Wagstaff, Port Greville, N.S., launched the tern schooner Jennie V. Merriam, 454 tons register, July 29. She is classed in Bureau Veritas for 13 years, and is equipped with electric light and stockless anchors. She is owned by Capt. C. S. Merriam, and loaded a cargo of lumber for England at Parrsboro, N.S. A duplicate of this ship is on the stocks and is expected to be launched shortly.

Yarrows Ltd., Victoria, B.C., is reported to have been requested to tender for the construction of steel freight steamships suitable for the fruit trade between the West Indies and New York, for the Di Giorgio Co. of New York, which purchased the C. P. R. s.s. Princess May recently for such purpose. The company has also received a contract for the alterations to the s.s. Princess May, which it is reported will cost approximately $75,000. She will be entirely refitted and remodelled to make her suitable for the fruit trade. The existing oil burning equipment will be removed and a more up to date one installed.

The World's Shipping Statistics.

The first uncensored Lloyd's return of the world's shipping since they were suspended by the war gives the following comparisons, according to countries, for the years 1914 and 1919:

	1914	1919
United Kingdom	18,892,000	16,345,000
British Dominions	1,632,000	1,863,000
	20,524,000	18,208,000
United States (seagoing)	2,027,000	9,773,000
United States (lakes)	2,260,000	2,160,000
	4,287,000	11,933,000
France	1,922,000	1,962,000
Holland	1,472,000	1,574,000
Italy	1,430,000	1,238,000
Grand total	29,635,000	34,935,000

The above figures are incomplete, as they do not take into account the distribution among the allied countries of 1,768 German steamships not otherwise dealt with at the signing of the armistice.

Mail Subsidies and Steamship Subventions for 1918-1919 and 1919-1920.

In addition to the estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 279, the supplementary estimates for the year ended Mar. 31, 1919, submitted to the House of Commons during the recent session, included the following items:—

Ocean and mail service between Canada and Great Britain, further amount required	$100,000.00
Steam service between St. Catherines Bay and Tadoussac	886.67

The supplementary estimates for the year ended Mar. 31, 1920, contained the following items:—

Between Baddeck and Iona, further amount required	$ 1,000
Between Froude's Point and Lockeport, N.S., further amount required	400
Between Grand Manan and the mainland, further amount required	2,500
Between Mulgrave and Canso, further amount required	3,000
Between Mulgrave and Guysborough, calling at intermediate ports, further amount required	2,000
Between Pictou and Montague, calling at Murray Harbour and Georgetown, further amount required	1,000
During the season 1919, between Sydney and Whycocomagh, further amount required	1,000
Between Montreal, Quebec, Prince Edward Island and Newfoundland	17,500
Between Halifax, La Have and La Have River ports, in lieu of vote [illegible] in main estimates, for steam service between Halifax, Mahone, Tancook Island and La Have River ports	4,000
Between Pictou, New Glasgow, Antigonish County ports, and Mulgrave, further amount required	500
Between Newcastle, Neguac, and Escuminac, calling at all intermediate points on Miramichi River and Miramichi Bay, further amount required	500
Ferry service between Campment d'Ours Island and the mainland on Georgian Bay	2,000
	$ 35,400

Buoy and Lighthouse Steamship—The estimates for the year ending Mar. 31, 1920, passed by the House of Commons recently, contained an item of $150,000, for a steamship for buoy and lighthouse service in the maritime provinces. We are advised that it is not intended to use this appropriation.

The Great Lakes Dredging Co. Ltd. and the Thunder Bay Contracting Co. Ltd., have been amalgamated under the Ontario Companies Act, as The Great Lakes Dredging and Contracting Co. Ltd., with $2,000,000 authorized capital, and office at Ottawa, to carry on the business of a drydock, dredging, towing, freighting, wrecking and salvaging company, and to own and operate the necessary plant, steam and other vessels for such purposes. The provisional directors are: Senator M. J. O'Brien, L. J. Martin, J. J. Murray, Renfrew; J. A. O'Brien and W. O. Matthews, Ottawa.

Vessels Registered in Canada During June, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

Cargo Steamship Building in Canada for British Government.

Steamships Launched and Under Construction.—Since the information given in our last issue respecting launchings of steamships under construction in Canada for the British Government, was published, the s.s. War Halton has been launched by Polson Iron Works, Ltd., Toronto. There now remain 2 steel steamships to be launched to complete the orders for 43 steel vessels placed by the Imperial Munitions Board, at an approximate cost of $40,000,000. There were also 46 wooden steamships ordered at an approximate cost of $24,500,000, all of which have been delivered. The approximate d.w. tons of the steel steamships is 211,300 and of the wooden steamships 128,000, total approximate d.w. tonnage 339,300. Of the 2 steel steamships remaining to be launched, the War Chariot, approximately 8,800 tons d.w., is being built by J. Coughlan & Sons, Vancouver, B.C., and the War Fury, approximately 3,400 tons d.w., by the Midland Shipbuilding Co., Midland, Ont.

Sale of Surplus Supplies, Etc.—The Imperial Munitions Board offered for sale by tender recently a quantity of surplus shipbuilding supplies and equipment lying at Quebec and Montreal.

Vessel Register Transfers from Canada to Great Britain—A number of the steamships built in Canada for the British Government, and registered at different ports in the Dominion, have been transferred to the British register. These are War Atlin, 2,338 tons; War Casco, 2,319 tons; War Charger, 5,703 tons; War Tanoo, 2,326 tons, registered at Vancouver, B.C.; War Camchin, 2,339 tons; War Masset, 2,340 tons; War Nanoose, 2,285 tons; War Skeena, 2,342 tons; War Stikine, 2,335 tons, registered at Victoria, B.C.; War Ewen, 2.344 tons; War Kitimat, 2,336 tons; War Sumas, 2,305 tons; War Tyee, 2,302 tons, registered at New Westminster, B.C.; all gross tons, a total of 15 vessels and tonnage of 38,279 tons.

Vessel Sales—Since the conclusion of the war, several of the steamships built in Canada under orders from the Imperial Munitions Board for the British Government, have been sold to allied governments. The s.s. War Camp, built by J. Coughlan & Son, Vancouver, B.C., is reported to have been sold to South American interests and is stated to be now running out of Buenos Aires under the name of Sierra Quemaada. The s.s. War Skeena, built by Cameron-Genoa Shipbuilders, Victoria, B.C., is reported to have been taken over by the French Government under the name of Roumanier.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—The s.s. War Vixen, the launching of which was announced in our last issue, was the second of the two vessels being built by this company for the British Government under order of the Imperial Munitions Board. The christening was performed by Mrs. Walter Nicholls, daughter in law of the company's President, Senator Nicholls. The first ship, the s.s. War Magic, is being held at the yard until the completion of the War Vixen so that the two may proceed to sea together. These vessels have an approximate d.w. tonnage of 3,500 and are classified 100 A1 at Lloyd's. They have the following dimensions, length overall 261 ft.; breadth moulded [illegible] depth moulded 23 ft. They are equipped with triple expansion engines of 1,400 h.p., are supplied with steam by 2 Scotch boilers, 12 x 14 ft., at 180 lb.

Polson Iron Works, Ltd., Toronto—The last of the steel cargo steamships to be built by this company for the British Government under orders of the Imperial Munitions Board, was launched Aug. 16 and named War Halton. She has the following dimensions, length overall, 261 ft.; length, b.p., 251 ft.; beam, 43½ ft.; depth moulded, 22½ ft. She is equipped with triple expansion, surface condensing engine of approximately 1,256 h.p. The other five vessels were launched as follows: War Taurus, Sept. 19, 1918; War Hydra, Oct. 15, 1918; War Hamilton, Dec. 22, 1918; War Timiskaming, Feb. 8, 1919, and War Algoma, July 23, 1919.

Atlantic and Pacific Ocean.

The Dominion Government has presented pieces of silver plate to several officers and men of the s.s. Lord Erne, of Belfast, Ireland in acknowledgement of the rescue of the shipwrecked crew of the s.s. Percesien, of Quebec, which was lost in the Atlantic Ocean, Feb. 9, 1918, during extremely rough weather.

Canadian Pacific Ocean Services Ltd., has commenced a direct steamship service between Canada and Singapore and the Federated Malay States, calling at intermediate ports in Japan, China and the Phillipine Islands. The s.s. Methven, a recently built steamship of about 10,000 tons carrying capacity, is being used on the route.

The Nippon Yusen Kaishi, is, it is announced, placing orders for additional passenger steamships of 25,000 tons each for service between China, Japan and North America. The first of these vessels is said to be under construction in Great Britain, costing about $400 a ton, and she is expected to be ready for service within a year. They will have a speed of approximately 20 knots an hour, and it is expected will make the run between Yokohoma and Victoria in 9 days.

Furness Withy & Co. are reported to have acquired the shipping interests of Wm. Thomson and Co., St. John, N.B., formerly owners of the Battle Line. Wm. Thomson & Co. have conducted a large brokerage business in Canada for many years, and at one time were said to have under charter half the vessel tonnage loading at St. John. The business was established at St. John in 1841, and the company owned a number of sailing vessels and steamships, the latter being named after battles of ancient Greece. The sailing vessels were disposed of several years ago, and the company's interest in the Battle Line was sold during the war.

The Canadian Pacific Ocean Services' s.s. Empress of France, formerly s.s. Alsatian, is scheduled to sail from Liverpool, Eng., Sept. 26, for Quebec. She was released recently from Admiralty requisition and has been refitted and overhauled ready for her Atlantic service. She was built at Glasgow, Scotland, in 1913 for the Allan Line Steamship Co. and is a sister ship of the s.s. Calgarian, which was torpedoed and lost during the war. Her dimensions are, length, 571.4 dt.; breadth, 72.4 ft.; depth 26 ft.; tonnage, 18,481 gross, 10,747 net. She is screw driven by engines of 20,000 h.p. She has accommodation for 200 first class, 500 second class and 1,000 third class passengers.

Maritime Provinces and Newfoundland.

The schooner Josephine Swanton, which was wrecked on Tryon shoal, in Northumberland Strait, P.E.I., recently, has drifted off into deep water and now lies in 7 fathoms with a least depth of 27 ft. over the wreck.

The Sydney Foundry and Machine Co. has applied to the Dominion Government for the grant of a water lot at Anderson's Point, Sydney, N.S., for the construction of a dry dock, for which, it is stated, the Dominion Government has granted a subsidy.

The St. John Steamship Co. has placed the s.s. Glenholme in service on the St. John River. She was built at Yarmouth, N.S., early this year. Her dimensions are, length, 102.5 ft.; breadth, 30.5 ft.; depth, 9.7 ft.8; tonnage, 233 gross; 126 net. She is screw driven by engine of 24 n.h.p. Capt. Moore is master, with J. S. McCulloch as chief engineer.

In connection with the harbor improvement work at Courtenay Bay, St. John, N.B., what is said to be the largest cofferdam in Canada was commenced Aug. 7, by the Bedford Construction Co., for the removal of 150,000 yds, of rock at the entrance to the drydock. It is reported that it will be 1,500 ft. long, and will contain about 400,000 ft. b.m. of lumber.

The s.s. Rosalind which arrived at St. John's, Nfld., July 24, to take up her service for the Red Cross Line, was formerly known as Lady Gwendolen, and was built at Glasgow, Scotland, in 1911, for the British and Irish Steam Packet Co. Ltd., Dublin, Ireland. In the early stages of the war she was used for carrying food supplies to Russia and when the revolution broke out she was at Archangel, where she was badly damaged. When the British took position of that port the ship was handed over to the

Dundee and Perth Shipping Co. and was engaged as a cargo vessel and operated between Dundee and London. She has accommodation for 350 passengers, and is fitted with all modern equipment. Her dimensions are, length, 300.2 ft.; breadth, 39.7 ft.; depth, 17.5 ft.; tonnage, 2,163 gross; 1,336 net. She is screw driven by engine of 362 h.p.

Province of Quebec Marine.

The Princess May Steamship Co. Ltd., has been incorporated under the Dominion Joint Stock Companies Act, as a private company, with office at Quebec, and its business to be carried on with $125,000 capital.

A green spar buoy has been established to mark the wreck of the schooner Enterprise, which sank May 14, about 2 miles south of Entry Island, off Magdalen Islands, in the Gulf of St. Lawrence. As soon as the masts of the wreck have been removed the buoy will be discontinued.

La Cie. Generale du Port de Chicoutimi has deposited plans with the Minister of Public Works, for a wharf to be built at the Baie du Ha Ha, Saguenay River. The site is numbered 97M, 98R, and 98S on the official cadastre of St. Alexis de la Grande-Baie, and measures 830 ft. wide, 1,400 ft. long on the north side and 1,950 ft. on the south side.

Ontario and the Great Lakes.

The Toronto Ferry Co. is contemplating building a ferry steamboat, which it expects to have ready for service early in 1920.

The wreck of the steam tug Jim and Tom, which was sunk on the western side of the east pier at Port Dover, Nov. 28, 1918, has been removed.

The dredging operations on the north side of St. Thomas channel in the River St. Lawrence were completed Aug. 7, and the plant and machinery moved to the south half of the channel.

The Marine Department has arranged to overhaul the Colchester lighthouse, Lake Erie, and in addition, will build several cribs there. The work will, it is said, cost about $20,000.

The Minister of Public Works is reported to have announced Aug. 3, that $50,000 will be included in the supplementary estimates for improvements in Port Dover harbor.

Canada Steamship Lines' s.s. T. P. Phelan, ran aground on Fraser Shoal, east of Cardinal, in the St. Lawrence River, at the end of July, while eastbound with 70,000 bush. of wheat for the British Government.

It is suggested that the question of granting a franchise for a ferry service across the Detroit River, from Windsor, to the Detroit and Windsor Ferry Co., be submitted to a vote of the ratepayers at an early date.

The U.S. s.s. Aztec, of Buffalo, when being locked through lock 17 of the Cornwall canal, Aug. 15, backed into the gates of the rear lock, partially opening it, and causing a rush of water from the upper lever to carry out both sets of gates. A boy of 7 years, who was playing on the bank was washed away and drowned.

The harbor headline on the north and south sides of the McKellar River at Fort William, beyond which no wharves or other structures shall be built, has been amended, after careful checking of the measurements during last winter.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for July as follows:—Superior, 602.58; Michigan and Huron, 581.34; St. Clair, 576.24; Erie, 573.45; Ontario, 247.75. Compared with the average July levels for the past 10 years, Superior was 0.18 ft. above; Michigan and Huron 0.45 ft. above; Erie 0.67 ft. above, and Ontario 0.96 ft. above.

The steam tug D. S. Pratt, owned by Canadian Dredging Co., Midland, Ont., the steam tug Lasalle, and the scow D79, owned by the Great Lakes Transportation Co., Midland, Ont., have had their names changed to Strathmore, Strathbell and Strathbuoy, respectively. They are being operated by the Dominion Towing and Wrecking Co., Fort William, Ont., which is owned by the same interests as the other companies mentioned.

The attempts to raise the s.s. Keystorm, formerly owned by the Keystone Transportation Co., Montreal, and which sank in the St. Lawrence River, below Alexandria Bay, several years ago, were continued during the summer, but were abandoned early in August, for the year, owing to the failure of the wooden pontoons used on the work. It is stated that special steel pontoons are to be built, and that the work will not be resumed until these are ready.

The Northern Navigation Co.'s s.s. Huronic, grounded on Angus Island, about 40 miles from Port Arthur, Aug. 15, whilst en route from Port Arthur to Duluth. She was not considered in any danger, but all passengers were transferred to the company's s.s. Hamonic and returned to Port Arthur. The Huronic was released the same day with the aid of the tugs Bowman and Sarnia, and was accompanied to the Port Arthur Shipbuilding Co.'s plant, where she was drydocked for examination and repairs. An outside examination showed that several plates in the bow were buckled, and that the bottom was ripped to no. 2 hatch.

Vessel masters are requested to check the speed of their vessels in passing through the St. Clair Flats Canal, Lake St. Clair, reducing to about 8 miles an hour when weather is suitable for such speed. It is not suggested that vessels should be checked in storm, or when conditions to any extent render control uncertain, but only when through the variety of conditions encountered, speed be reduced in reasonable accord therewith, and solely for the purpose of preventing as far as possible further deterioration of the revetment, and of the channel side of the east dike of the canal. This revetment has deteriorated markedly in the last two years and several sections have collapsed, the timber work swinging into the channel. This condition exposes anchorages adjacent to the collapsed portions to undue strain and the backfilling to the effects of the wash created by passing vessels at high speed.

The Webster Steamship Co.'s s.s. Muriel W., struck one of the sunken cribs off Putnam's pier at Port Weller, at the entrance to the new Welland Ship Canal, Aug. 4, during a heavy fog, and sank in 30 ft. of water. She is believed to be a total loss. She was built at Milwaukee, Wis., in 1886 and practically rebuilt in 1912, her original name being Veronica, and her owners the Standard Navigation Co., Buffalo, N.Y. The hull was of oak and she was built with diagonal strapping on the frames, steel arches, bow sheathed for ice, steel boiler house. Her dimensions were, length b.p., 202 ft.; breadth moulded, 34½ ft.; depth moulded, 19 ft.; tonnage, 1,093 gross; 880 net. She was equipped with fore and aft compound engine, with cylinders 22 and 40 in. diar. by 40 in. stroke, 625 i.h.p. at 75 r.p.m., and supplied with steam by a single firebox boiler, 9 ft. 2 in. by 16 ft. at 100 lbs. working pressure.

British Columbia and Pacific Coast.

The Pacific Salvage Co., which bought the Dominion Government's sloop Algerine recently, is having it remodelled and refitted as a salvage vessel by Yarrows, Ltd., Victoria, B.C.

The U.S. s.s. Admiral Knight of Seattle, Wash., a wooden steamship of 600 tons, was destroyed by fire on the B.C. coast, July 27, while bound for Alaska. All the crew were saved.

The C.P.R. s.s. Princess Ena, while northbound through the Seymour Narrows, Aug. 6, struck Ripple Rock, a submerged reef in the center of the narrows. She proceeded to Plumpers Bay, where

[illegible] to await assistance and was [illegible] taken to Victoria for examination and repairs.

The Canadian Robert Dollar Co. is reported to have purchased the s.s. War Melody, 1,800 tons d.w., which was built by Harland & Wolff, Ltd., Belfast, Ireland, for the British Government. The vessel is intended for the Pacific service out of Vancouver.

The lighthouse maintained on the outer edge of the sandheads, at the entrance to the Fraser River in the Strait of Georgia, will be removed from its station about Sept. 15 for repairs. During its absence the station will be marked by a gas and whistling buoy painted red and showing an occulting red light.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., is reported to have stated that the company is considering the building of additional car barges, and steamships for the passenger trade, as, owing to the loss of the s.s. Princess Sophia, and the sale of the s.s. Princess May, there is an insufficiency of ships for the business offering.

The Grand Trunk Pacific Coast Steamship Co., placed its autumn and winter schedule in effect Aug. 27, the s.s. Prince Albert being placed on the Prince Rupert-Masset Inlet route and the s.s. Prince John on the Stewart-Masset and South Queen Charlotte Islands route, the former on a fortnightly schedule, and the latter making trips to Stewart and fortnightly for the ports mentioned.

The Union Steamship Co. of British Columbia, is having a steamship built by by B.C. Marine Railway Co., to the following dimensions, length, 145 ft.; beam, 27 ft.; draft, 7½ ft. The engines of the s.s. Washington, purchased recently by the Union Steamship Co. will be installed in the new hull, and it is expected that she will be complete and ready for operation about April, 1920, when she will be placed on the run to Buccaneer Bay.

The C.P.R. s.s. Princess Margaret had considerable experience during the war. It was stated in the British House of Commons, Aug. 15, that she was chartered in the early days of the war, and was refitted for mine laying work. She was purchased subsequently by the British Government for £495,500. She was utilized chiefly in the neighborhood of the Baltic Sea, and latterly was used for transporting Russian counter-revolutionary troops.

The C.P.R. s.s. Princess May, is reported to have been sold to the Di Giorgio Co., for the fruit trade between New York and Havana. A contract is stated to have been awarded to Yarrows Ltd., Victoria, B.C., for general overhauling and remodelling, before she leaves for the Atlantic early in September. She was built at Newcastle-upon-Tyne, Eng., in 1888, for the Chinese service, and was then named Hating, and was acquired subsequently by the C.P.R. for its British Columbia coast service. Her dimensions are, length, 249 ft.; breadth, [illegible] ft.; depth, 17.7 ft.; tonnage, 1,717 [illegible] 92 net. She is screw driven by engine of 450 h.p. Capt. F. C. Stratford is reported to have been appointed to command her.

The litigation between Grant Smith & Co. and Macdonnell, contractors, Victoria, B.C., and the Seattle Construction and Drydock Co., in connection with the sinking of a floating drydock, leased from the latter company by the contractors [illegible] vernment piers at [illegible] Point, was concluded recently by the dismissal of the appeal and cross appeal against the judgment of the British Columbia courts, by the Imperial Privy Council. The contractors leased the drydock from the company for the building of reinforced concrete caissons, and the dock collapsed and sank under the weight of two of these caissons. The owners sued the contractors for damages in 1915, and there was a counterclaim on the ground that the dock was defective. Judgment was given in favor of the owners for $80,000, and on an appeal this amount was reduced to $35,000.

Mainly About Marine People.

Capt. C. W. Baird, Windsor, N.S., has been appointed harbor master there.

Hon. C. C. Ballantyne, Minister of Marine, who, after recovering from an operation at the Royal Victoria Hospital, Montreal, returned to Ottawa, at the beginning of July, for a few days, and left there July 12, for St. Andrews, N.B., to thoroughly recuperate, left St. Andrews Aug. 5, and had to re-enter the hospital in Montreal, Aug. 7, having torn some muscles in his back. It was his intention to visit the Pacific coast, on official business, early in September, but his trip has had to be postponed for some weeks.

J. P. Carey, formerly chief clerk, Furness Withy and Co., Halifax, N.S., has been appointed local manager for that company at St. John's, Nfld. On leaving Halifax he was presented with a travelling bag by the local outside staff, and with a silver tea service and silver cigarette case by the local office staff.

Thomas Hoar, harbor master, Bowmanville, Ont., was struck by lightning and killed Aug. 17, while lighting the lamps at the lighthouse.

Capt. R. McDonald, harbor master, North Sydney, N.S., died suddenly there, Aug. 8, aged 74. He entered marine service in early boyhood, and was a sailing master from 1877. He retired from active sea life about 10 years ago.

T. R. Percy, who has been appointed General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Yokohama, Japan, was presented with a travelling bag and suit case, Aug. 1, by his associates in the C.P.R. Passenger Department, Montreal, on his leaving to take up his new duties.

Chas. E. Stephens, of C. Stephens Co. Ltd., wholesale grocers, Collingwood, Ont., who died there Aug. 18, aged 73, was one of the incorporators of the North Shore Navigation Co., which operated steamships on the Upper Lakes until its absorption by the Northern Navigation Co., of which he was a director, and also Secretary, for several years.

Contracts Let for Marine Public Works.

The Dominion Public Works Department has let the following contracts recently:

Kincardine, Ont.—Dredging: Contractors: C. S. Boone Dredging and Construction Co., Toronto. Approximate amount, $9,576.

St. Michel de Bellechasse, Que.—Wharf repairs. Contractors: J. B. Gallibois, St. Pierre, Montmany County, Que., at $32,422.56 (unit prices).

Port Hope, Ont.—Repairs to pier. Contractor: R. Brewder, Cobourg, Ont., at $11,565.46 (unit prices).

Midland, Ont.—Renewals to Governments wharves 1 and 2. Contractor: W. H. McArdle, of Midland, at $3,291.30 (unit prices).

Quebec, Que., King's wharf—Repairs to Marine storage building. Contractor, L. H. Peters, Ltd., Quebec, at $9,060.

Thessalon, Ont.—Reconstruction of wharf. Contractor, A. G. Tweedie, Sault Ste. Marie, Ont., at $9,428.75.

Comox, B. C.—Repairs to wharf. Contractors, Fraser River Pile Driving Co., New Westminster, B. C., at $17,358.04.

Souris, P. E. I.—Delivery and placing of stone on portions of seaward side of breakwater. Contractors, Phillips & Mutch, Charlottetown, P. E. I., at $53,750.

Half-Moon Bay, Comox-Atlin, B.C.—Construction of wharf. Contractor: Fraser River Pile Driving Co., New Westminster, B.C., at $5,775.

Ste. Anne de Beaupre, Que.—Wharf repairs and reconstruction. Contractor: Onesime Poliquin, Portneuf, Que., at $26,201.50 (unit prices).

Toronto Harbor, Ont.—Eastern entrance—Reconstruction of portion of east pier superstructure. Contractors: C. S. Boone Dredging and Construction Co., Toronto, at $31,095.70 (unit prices).

Berthier en Bas, Que.—Repairs to wharf. Contractor: Nazaire Letourneau, Montmagny, Que., at $17,556.80 (unit prices).

Three Rivers, Que.—Dredging in St. Maurice River. Contractors: Simpson Bros. Co., Montreal, approximate amount, $30,480.

Sidney, Roberts Bay and Saanichton, B.C.—Repairs to wharves. Contractors: McDonald, Watson & Wither, Victoria, B.C., at $10,948.82 (Sidney $6,393.50, Roberts Bay $3,377.24 and Saanichton $1,178.08).

North Arm of Fraser River, B.C.—Dredging. Contractors: Pacific Construction Co., Vancouver, approximate amount $152,000.

Canadian Cargo Space Requisitioned, London, Eng., cablegram, Aug. 20 to Montreal Gazette:—The amount of Canadian cargo space at present controlled by the Ministry of Shipping, 70%, will be reduced to 60% in September. This will be a disappointment to the Canadian shipper, who had been hoping for a reduction to 50%. Heavy buying by the British Food Control in Canada is the chief reason for the commandeering of so much space. The Food Control sent a large purchasing staff to Canada some weeks ago, and they are already at work buying supplies in the Dominion.

The Anderson Co. of Canada has sold drifters 45 and 47, owner formerly by the British Government to George Latil, Percheries Modernes, of Cette, France. These vessels were sold at New York and were two of a number which were returning to Halifax, N.S., from Bermuda. They cleared from New York for France, July 31, and arrived safely at their destination.

Morison, Pollexfen and Blair of Canada, Ltd. has been incorporated, with $50,000 authorized capital, and office at Montreal, to carry on a general brokerage business, and to own and operate steam and other vessels and manage regular steamship services. Morison Pollexfen and Blair have been established in this line of business in Liverpool, Eng., for a great many years.

Demountable Wooden Ships to Be Built in British Columbia

Some particulars of this project were given in Canadian Railway and Marine World for July and August. The following is reproduced from the Victoria B. C. Times: In many respects the demountable ship, designed by John Arbuthnot of Victoria, to deliver lumber to off-shore markets at the minimum cost, resembles the galleon of the fifteenth century. A model of this unique design of lumber carrier has been built here by the promoters and is attracting a great deal of interest. The promoters are going ahead with the construction of several demountable ships and before very long the first craft of this type will be clearing the shores of British Columbia with, or composed of, 5,000,000 ft. of lumber for the United Kingdom. According to the plans of the syndicate each ship will contain anywhere up to 5,000,000 ft. of lumber. The great raft will probably draw about 18 ft. of water, which will give it a freeboard of about 8 ft. on deck. The lumber will be bolted together with iron bolts, hollow space will be left aft for fuel and supplies and for the placing of the crew's quarters.

The engine to supply the power to propel the craft will be bolted down to the deck instead of being in an engine room. Instead of being a direct drive, as in ordinary marine reciprocating engines, the engine will be an indirect drive, the power being transmitted to the propeller by means of geared shafts. A rudder will be mounted, and it is estimated by naval experts that ample power and steerage way is provided for. Lloyd's Registry has given the new craft a rating and a very favorable one. The Lloyd's rate is said to be 15 per cent., which is only slightly greater than the rate charged by Lloyd's for the inload on steamships and A1 sailing craft.

On arrival in the United Kingdom the demountable ship will have its engine removed and shipped back to British Columbia as freight. Everything else on board, including the sails, masts and rigging, and also the collection of iron rods which held the craft together, will find a market at the point of destination or will be sent back for the fitting of other ships.

The demountable ship can be built quickly and dismantled even more quickly. This unique vessel, by reducing transportation costs and automatically solving the tonnage problem, is expected to revolutionize the overseas lumber trade.

Wreck Commissioner's Enquiries and Judgments.

S.S. Chebucto's Damages to Pier.

Held at Halifax, N.S., July 30, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. N. Hall and Jos. Blois as nautical assessors into the causes which led to the Dartmouth Ferry Commission's s.s. Chebucto damaging a pier at Halifax, N.S., June 8, to avoid a collision with a motor boat. The court found that the damage caused to the pier could not have been avoided under the circumstances, being caused directly through the presence of the motor boat in close proximity to the Chebucto, and the entrance to her landing place, and it therefore exonerated the master, Capt. M. Murphy of the Chebucto from all blame. The master of the motor boat, J. A. Crouse, through his lack of watchfulness, caused the s.s. Chebucto to deviate from her course to avoid a collision, and he was severely reprimanded and cautioned to be more careful in future, and to avoid being a menace to navigation through indifferent lookout.

Grounding of the s.s. Lake Frolona.

Held at Quebec Aug. 19, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and Commander C. J. Stuart, R.N.R., as nautical assessors, into the causes of the grounding of the s.s. Lake Frolona, Aug. 5, near buoy 71Q in the River St. Lawrence, where she suffered serious damage. The court found that the pilot of the s.s. Frolono, N. Arcand, in a momentary delusion as to buoy 71Q, being out of position, was responsible for the casualty, and çonsequently for the extensive damages done to the vessel. Owing to his long and successful career as a pilot, 39 years, and this being his first accident, and to 26 years of steady service with the Dominion Coal Co. without any untoward incident, and also owing to his straightforward evidence, the court exercised leniency and suspended his license for one month only, from Aug. 19 to Sept. 18, inclusive. The court exonerated the master and officer of the Lake Frolòna from all blame for the casualty, both being at their posts at the time.

The United States Shipping Board is reported to have sold 100 steamships built on the Great Lakes during the war, to the Anderson Overseas Corporation, New York, for approximately $80,000,000. It is stated that the vessels are intended for French and Italian ownership. It was reported recently that authority has been given for the sale, in London, Eng., of 20 wooden steamships at $300,000 each to a British buyer, who, it is said, has obtained an option for an additional 100 steamships of the same type.

British Government Shipbuilding Orders Cancelled—According to a statement made in the British House of Commons recently, orders have been cancelled for 326 vessels, resulting in a net saving of £42,000,000. When the armistice was signed, 302 warships and 806 auxiliary vessels were on order, and at present 84 warships and 110 auxiliary vessels are being completed, mainly to replace others.

The U.S. Shipping Board, up to Aug. 14, has sold 185 of its steamships, 712,727 d.w. tons, built during the war, for $127,187,740. The number of steel vessels sold was 122, which realized $99,645,060, and 63 wooden vessels which brought $27,546,680.

Commercial Wireless Service Between Canada and Bermuda.

The Naval Service Department established on Aug. 10, a commercial wireless service between the Canadian medium power radiotelegraph station at Barrington Passage, N.S., and the British Government station at Bermuda. These stations were erected during the war for naval purposes, but with the cessation of hostilities are now available for commercial work. The establishment of this service is particularly welcomed by commercial interests as the Halifax Bermuda cable has been interrupted since June 21.

The total rates charged via the radio circuit are the same as those charged by the cable company, viz: from Nova Scotia, New Brunswick, Quebec and Ontario, 36c a word; from Manitoba, Saskatchewan, Alberta and British Columbia, 42c a word.

Communication between the Barrington Passage radiotelegraph station and Halifax is maintained by a private line. Messages for transmission via the radio circuit should be routed via Halifax.

Barrington and Bermuda are only two of a number of radio stations which were built throughout the empire during the war for naval purposes, and which might, with the cessation of hostilities, become available for commercial purposes, and it may be that the inauguration of this service with Bermuda is the forerunner of the establishment of a number of similar services throughout the empire.

Telegraph, Telephone and Cable Matters.

The Commercial Cable Co.'s Manila-Shanghai cable has been repaired, and communication with China and Siberia by that route has been re-established.

W. Clark, cashier, Great North Western Telegraph Co., Calgary, Alta., was arrested there, Aug. 11, on a charge of theft, a shortage of about $3,000 being alleged.

Wireless telegraph operators engaged on the Great Lakes are reported to have asked for the appointment of a conciliation board to deal with alleged grievances as to discrimination against employes in the matter of seniority.

The Marconi Wireless Telegraph Co. of Canada, Ltd. is applying to the Dominion Parliament for authority to reduce its capital stock from $5,000,000 to $3,750,000, by reducing the par value of the outstanding shares from $5 to $2.50 each, and by issuing an additional 500,000 shares at $2.50 each.

W. M. Archibald, who died at Nanaimo, B.C., at the end of July, aged 81, was until about six years ago, agent, C.P.R. Telegraphs there. He is said to have handled the first cable message sent across the Atlantic, which was from Queen Victoria to the then President of the United States.

The Naval Service Department is reported to have a number of vacancies for trained civilian wireless operators. They are wanted mostly for service on the Pacific coast, but there are also vacancies in the wireless stations and direction-finding stations on Nova Scotia coast. A number of returned soldiers who have served in the wireless sections of the army during the war have been accepted for these positions.

The telegraph companies operating in Canada are applying to the Board of Railway Commissioners for authority to increase their tolls. The application points out that the tolls now in force were established Mar. 30, 1916, under general order 163, and suggests that an increase of 25% be granted. It is claimed that the revenue is, at present, totally inadequate to maintain an efficient service, in view of the abnormal increases in the cost of labor and materials, which have increased by about 60% and 85% respectively, in addition to heavy increases in taxes and rentals. Telegraph employes had an application before the Canadian Railway War Board's Board of Adjustment No. 1, for an increase of wages recently, which was partially granted.

For Sale and Classified Advertising

Under this heading Canadian Railway and Marine World will place advertisements for Positions Wanted, positions Vacant, Equipment for Sale, Tenders Wanted, Dividend, Annual Meeting, Legal Notices, etc.

Dividend Notice.

At a meeting of the Board of Directors held today, the following dividends were declared:

On the Preference Stock, two per cent. for the half-year ended 30th June last;

On the Common Stock, two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account.

Both dividends are payable 1st October next, to Shareholders of record at 3 p.m on 2nd September next.

By order of the Board.

ERNEST ALEXANDER.
Secretary.

Montreal, 11th August, 1919.

A Port Arthur, Ont., press dispatch says that the Great Lakes Wireless Association, has been formed among the operators on land and ship stations operated by the Marconi Wireless Telegraph Co. of Canada, under the Naval Service Department. The operators, the majority of whom are being paid $45 and $50 a month on ships, and the same with a living allowance of $25 on land stations, have forwarded a request to the company for $75 a month, with a $10 increase yearly, $30 a month living allowance and $15 a month living allowance for officers in charge of land stations. Station officers usually obtain house, fuel and light.

In dealing with the City of Montreal's application for an order directing the C.P.R. Telegraphs, and the Great North Western Telegraph Co. to place their wires underground along certain streets, the Chief Railway Commissioner, Board of Railway Commissioners, said on Aug. 13: "I am of the opinion that in all cases where city development has reached such a stage as the streets in question, to render it reasonable and advisable that the improvement should be made and all city wires placed underground, the board should make an order requiring the underground construction to be made and that the cost of this underground construction should be placed upon the company, in cases where it does the necessary work, or, in cases when it is done by the municipality and ducts rented from the municipality, on such terms or rental as may be agreed upon between the parties."

Among the Express Companies.

The Canadian Northern Express Co. [illegible]ed an office at Prairie River, [illegible]

Mrs. Richard Helme, wife of the Superintendent, Western Division, Dominion Ex. Co., Vancouver, B.C., died there Aug. 13.

The Board of Railway Commissioners passed order [illegible], Aug. 11, approving express classification for Canada No. 4, C.R.C., no. E.T. 14, applicable to all express companies subject to the board's jurisdiction.

The Board of Railway Commissioners issued order 28,619, July 31, approving supplement 13, as finally revised and submitted by the Express Association of Canada, for express companies operating in Canada.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Davis-Bournonville Co., Jersey City, N.J., has issued a bulletin describing the Pyrograph, a boiler shop cutting machine, for trimming and beveling boiler sheets to the correct flange height and calking angle in one operation, with the oxy-acetylene torch.

Independent Pneumatic Tool Co., 60 West Jackson Blvd., Chicago, and 334 St. James St., Montreal, has issued bulletin 99, describing and illustrating hose couplings.

Transportation Conventions in 1919

September.—Master Car and Locomotive Painters' Association of the United States and Canada, Chicago, Ill.

Sept. 16-19.—Traveling Engineers' Association Chicago, Ill.

Sept. 16-18.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

October, 1919

Delayed Action Mines as Affecting the Railways on the British Western Front.

By Lieut.-Col. Blair Ripley, C.B.E., D.S.O., M.E.I.C., Formerly Officer Commanding First Battalion Canadian Railway Troops.

Our first introduction to delayed action mines was at Peronne in the spring of 1917, but it was not till the summer of 1918 that the really "classy" article was met with. No delayed action mines were encountered previous to 1917, for the reason that there was no call for them. However, at this time, the Boche had retired at several points to his Hindenburg line, and carefully planned and set his mines before retiring. What were called "booby traps," were left behind in billets and "dug outs." Souvenirs of various kinds were placed in positions, with connections concealed, and so that when lifted, a trigger would be pulled, or a trap sprung, exploding charges of various kinds and sizes, intended to cause casualties among our men. After our first losses from this cause, warnings were sent out to everybody and consequently from that time on everyone was on the look out. Sometimes the opening of a door in a billet or dug out produced a terrific explosion, in a similar way, by pulling a cord, which released a spring or other trap, causing the exploding of the charge carefully set for the occasion. Usually when retreating the most attractive billets or dug outs were mined and often those just vacated by the German staff proved the least desirable for habitation by our own troops. They were generally looked upon with suspicion, and not reoccupied without most careful investigations by experts to take care of any "booby traps" that might be found.

The worst booby trap that was brought to the writer's notice could have been conceived by none other than the mind of the miserable Boche, with whom the British played the game as far as methods of warfare were concerned. The body of a dead German was left on a stretcher, beside the doorway, on a narrow street quite near the west end of the railway bridge we were building across the Somme Canal at Peronne during September, 1918. When a party of Australian soldiers attempted to remove the body for burial, the explosion of the charge to which it was attached caused several casualties. The writer did not see the explosion take place, but was satisfied with the authenticity of reports concerning the affair, it being his business to pass the spot for several days in succession and coming in contact with those working on the spot. He did see the corpse on the stretcher and several times over expressed the hope that it would be soon removed. There were many diabolic inventions, but what seemed so to us at first were quite commonplace towards the end of the war.

In his retirement in the spring of 1917 the Boche was not content with blowing up the bridges on the railways in the ordinary way, but trickery had to be resorted to in this also. At first when a bridge was partly "blown" we used what was left of the bridge, when possible, in the construction of the new. It was soon found that this was risky, and parties of tunnellers or miners experienced in the laying of charges were sent ahead to examine all structures and to remove mines when encountered. Even then we had "blow ups" after we had finished our work. At this time, however, the Boche did not appear to have any refined device for exploding the mines or charges such as he developed afterwards, but it was the shock or weight of the passing train or other such cause that set off the charge.

When possible he carried off much track material as he retired, rails, ties and everything in some cases, especially just out of Peronne, but where this was not possible every rail would be blown, by using charges at every second rail joint, and frogs and switches were his specialty. He never passed them over.

The really "classy mines" as mentioned at the outset were not developed until the summer and autumn of 1918, but when they came it was with a vengeance. The speed with which the enemy retreated from Villers Brettoneaux, which is a few miles east of Amiens, will be judged by the fact that we did not meet with a single delayed mine till Roisel was reached. This mine however did not "go up" till we had actually completed our line into Caudry, and the line had been under operation for some time into Cambrai. Caudry is about 12 miles east from Cambrai, on the line to Le Cateau, and the mine in question had apparently been "set" or timed for about 30 to 35 days. It was located at the main road crossing in Roisel and had escaped detection. A very large crater resulted, and there were many casualties. Indeed so great was the damage done that the trains were held up for over two days.

In this mine, as in all others which were afterwards encountered, a very ingenious device in the way of a time fuse was used. This consisted of a percussion cap of large calibre, encased in a brass holder which also contained a plunger firing pin, operated by a stiff brass spring. The plunger was tied back against the spring in the position for striking, by a small wire encased in a tube with a stopper. A specially prepared acid was admitted to the tube, and when the acid had eaten the wire tieing back the plunger, of course the spring was released, the plunger struck, and off went the charge. We found several packages of these ingenious time fuses and each contained a selection of vials of acid of varying strengths, and specially marked, so that the right one could be used to produce the explosion after the proper lapse of days and to suit the situation. These fuses were afterwards specially made, so that they would screw into the nose of a shell, and also so as to resemble the regular nose fuse of the shell. When the Boche found it necessary to abandon a portion, or all, of one of his ammunition dumps, it was quite a simple operation to remove a regular shell fuse from one of the shells and to insert one of the ingeniously timed delay action fuses and all who would happen to be about the dump when the fuse was "ripe" would, or would not, live to tell the tale, as the case might be.

Later on, old ammunition, shells, and bombs were used in "mining" instead of the regular lines of explosive. It was a very easy way of getting rid of shells he could not take along with him in his retreat. A shell or two, of course of large calibre, buried into a culvert would destroy it, and in the railway embankments it was quite easy to dig the necessary number of wells or pits and to roll into them the proper number of shells or bombs of the proper size, one of which, in each case, fitted with the delayed action fuse, properly timed, would gain his ends in delaying our advance, as the advance could not be kept up without the railways. During the last month of the war all the mines we encountered were of this type. The bombs used were called "pigs," being much the shape of a long pig, about 3 or 4 ft. long and 18 or 20 in. in diameter. We have seen as many as eight of these taken from one charge. A charge of this size would blow a hole in an embankment, that would require from 1,200 to 1,500 yards of material to refill, and there were in the high embankments just east of Le Cateau about 20 of such mines in a distance of three miles, no road crossings being overlooked of course. The blowing of the road crossing meant the tieing up of both the roadway and the railway—one stone killed two birds for the Hun.

Probably the two most outstanding cases of delayed mining we had to contend with were at Wombaix and Caudry. The former was in a deep cutting, and we had not detected it. Trains had been passing over the spot every day for about two weeks and the mine had been placed about two weeks before we built the line. It went up while one of our construction trains of track material was passing over the spot and some cars of rails which happened to be over the charge when it went up, went up also, cars and rails being pretty much scattered about the place. The front and rear ends of the train were untouched.

Caudry's main street passed under the track by a subway of steel and brick superstructure and brick abutments. It had been examined for mines and pronounced safe. It seemed quite untouched and our suspicions were aroused, so that it was examined carefully a second time. No traces of mining or disturbances of any kind being found, it was decided to operate our trains across the street, concluding that for once the Boche had overlooked something. Two weeks later, one morning at 9 o'clock it "went up." The superstructure was carried up the track a short distance and deposited down one side of the embankment. There was not sufficient left of the two abutments to tell that there had ever been any. Several civilians were killed. What had happened in this case was that the Boche had tunnelled out from the cellar of a near by building, placed his charges and concealed his work by boarding up the cellar walls. The civilians remarked afterwards that for a long time the Boche would permit no one to go in sight of the building. This of course was when the tunnelling was going on and the exacavated material was being got rid of. The delay to train operation was 30 hours, which amply justified the expense and painstaking in setting the mine.

In a large material yard at Sassignies, which contained several thousand tons of track material, which it was necessary to leave behind in his great retreat, the "pigs" were again used to great advantage in the destruction of the material. A few "pigs" placed under a pile of rails, a pile of frogs and switches, or a pile of ties, generally twisted the material out of shape, or otherwise destroyed it, as well as scattered it all over the neighborhood. Fortunately no "pigs" remained "alive" when we got there. They had all "gone up."

The enemy were certainly masters of the art as far as destruction goes and we have doubtless learned many a lesson from the many devices they used. In blowing up rails in the track, latterly they used a very simple but effective device for fuse lighting, and one which rendered possible the blowing up of miles of track in a single day. The explosive was placed at every second rail joint, as before stated. Ordinary caps and rubber covered fuse, similar to that in Cánada were used, but instead of using matches or a torch for lighting the fuse, they employed a little copper cap that clipped over the end of the fuse. The copper cap, of course, had a mechanical lighting device inside it, and all that was necessary was to pull the string to start the fuse burning. In this way, once the charges were set, a man walking along the track could easily light and blow up at least 6 or 8 miles of track a day.

During the last days of the war, desperate days for the enemy, he attained even greater refinement in his work of destruction. Not being content with the blowing up of bridges as he had done it in the past, he very carefully conceived a most effective means of delaying us in the reconstruction of them. The most striking example of this was at Maubeuge. Before blowing up a very impôrtant bridge over the river there, they placed a train of cars on the bridge. The ruined cars, bridge, car wheels, axles, etc., literally filled the stream, and prevented us driving piles, which would have been the more speedy method of rebuilding the bridge.

During the two months preceding the signing of the armistice a great many mines were taken out before they had gone their time and thus before they had done their damage. The enemy were very careful to conceal all traces of their mining, but some heavy rains told the tale, and surface settlements in the roadbed showed disturbances that indicated where they had sunk shafts or driven tunnels for the placing of the charges. Tunnelling companies and miners were set to work to remove them. This was a [illegible] hazardous occupation and one that could not exactly be relished, but still in was done.

After the signing of the armistice, the Germans indicated the positions of some mines to us and as these had gone too close to their time to permit us to dig them out with any possible degree of safety, they were "sprung" by surface charges exploded immediately over them, this process in itself being sufficiently hazardous for those engaged in the operation. The "springing" proved successful, the acid having eaten so far into the wire holding back the plunger in the fuses that the shock of the surface charges finished it.

There were other minor devices in the way of mechanical devices, infernal machines, etc., used by the enemy in connection with their mines and delayed action mines, but with the exception of the "surfaces" or "road mine" the principle features are covered above. The "road mine" was made up of an explosive encased in a metallic container, about the size of an ordinary bake pan, and which was set into the surface of the road or highway, to be exploded by being struck with a horse's hoof, wagon or automobile, or anything passing along the road. They made a nasty little crater in the road, rendering traffic more difficult and caused some destruction, and loss of life, to the first traffic on the road after they were set, but we did not see a great deal of damage done by them.

Enough has no doubt been said to show that the Boches were past masters when it came to the art of destruction. We will take off our hats to him, when it comes to the doing of such work. He, however, has taken his hat off to us, the allies, as the winners of the war, many times since the signing of the armistice.

Birthdays of Transportation Men in October

Many happy returns of the day to:

A. Aitken, Assistant Superintendent, Toronto Terminals, C.P.R., Toronto, born at Decewsville, Ont., Oct. 12, 1872.

E. W. Beatty, K.C., President, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Oct. 13, 1874.

L. S. Brown, General Superintendent, Maritime District, Canadian National Rys., Moncton, N.B., born at Nelson, N. B., Oct. 19, 1864.

John Burns, Works Manager, Angus shops, C.P.R., Montreal, born there, Oct. 14, 1877.

F. F. Busteed, formerly Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, Sales Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct, 22. 1875.

C. E. Cartwright, ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Oct. 13, 1864.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

H. A. Dixon, Chief Engineer, Western Lines, Canadian National Rys., Winnipeg, born at Sand Hill, Ont., Oct. 7, 1878.

J. W. Doyle, General Manager, Cape Breton Ry., St. Peters, N.S., born at Summerside, P.E.I., Oct. 12, 1872.

L. V. Druce, Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at London, Eng., Oct. 20, 1873.

R. G. Edwards, Assistant Superintendent, Windsor Division, Ontario District, C.P.R., London, Ont., born at Maitland, Ont., Oct. 10, 1883.

A. C. Egan, Assistant to Comptroller, Canadian National Rys., Toronto, born at Winnipeg, Oct. 6, 1883.

C. E. Friend, Comptroller, Canadian National Rys., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

C. N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant to Vice President, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born there, Oct. 8, 1872.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, born at Three Rivers, Que., Oct. 12, 1861.

O. M. Lavoie, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Cyril de Wendover, Que., Oct. 16, 1884.

A. E. McMaster, Treasurer, Whalen Pulp & Paper Mills Ltd., Vancouver, B.C., born at Perth, Ont., Oct. 22, 1885.

Sir William Mackenzie, President, Toronto Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta District, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. T. Marlow, General Freight Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., born in Montgomeryshire, Wales, Oct. 9, 1850.

C. R. Moore, Assistant to Vice President in charge of operation, G.T.R., Montreal, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, Chief Engineer, Hudson Bay Ry., Pas, Man., born at Aberdeen, Scotland, Oct. 15, 1877.

T. F. Rahilly, ex-Superintendent, Algoma Eastern Ry., now of Marquette, Mich,. born at Diorite, Mich., Oct. 6, 1892.

H. G. Reid, General Master Mechanic, Western Lines, Canadian National Rys., Winnipeg, born at Pembroke, Ont., Oct. 27, 1863.

W. S. Rollo, agent, G.T.R., St. Johns, Que., born at Dundee, Scotland, Oct. 8, 1852.

O. J. Rowe, Local Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at Binghamton, N.Y., Oct. 11, 1879.

J. K. Savage, Assistant General Superintendent, Ontario District, C.P.R., Toronto, born at Forreston, Ill., Oct. 5, 1876.

Lord Shaughnessy, K.C.V.O., Chairman, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand

Trunk Pacific Ry., Winnipeg, born at Barking, Essex, Eng., Oct. 2, 1868.

K. Stewart, Assistant Superintendent, New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., born at Little River, N.S., Oct. 21, 1868.

C. E. Stockdill, Assistant to Vice President, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

D. A. Story, ex-Freight Traffic Manager, Canadian Government Railways, Moncton, N.B., born at Halifax, N.S., Oct. 26, 1853.

E. N. Todd, General Foreign Freight Agent, Eastern Lines, C.P.R., Montreal, born at Huntingdon, Que., Oct. 17, 1879.

J. H. Valleau, Secretary-Treasurer, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

J. A. Vallerand, Superintendent and General Freight and Passenger Agent, Roberval - Saguenay Ry., Chicoutimi, Que., born at Quebec, Que., Oct. 21, 1878.

R. Walton, Division Master Mechanic, Farnham Division, Quebec District, C.P. R., Farnham, Que., born at Peterborough, Ont., Oct. 16, 1880.

D. C. Coleman's Address at Calgary Industrial Congress.

D. C. Coleman, Vice President, Western Lines, C.P.R., gave the following address at the Industrial Congress held at Calgary, Alta., recently: "The balance of the world has just narrowly escaped subjugation by one nation of only seventy million people. The frightful struggle necessary to thwart the designs of this comparatively small minority was not due to any inherent mental or moral superiority in the German race as compared with others or to its martial qualities or its admittedly fine military organization, but to the development of industry on scientific lines and to the close association of the best brains of the country in the regions of finance and commerce. If the German had kept his too ready sword in its scabbard and had turned his head away from alluring visions of political power, it is altogether probable that within a few years he would have attained a dominating position in the trade and commerce of the world. When we remember how ruthless and cruel he has proved himself to be, it is fortunate for us that he chose to risk his all on an attempted rush through a bloody short cut to power and threw away the advantages which he had legitimately won by his ant-like industry, his genius for stealing the best ideas of other people and applying them to practical purposes, and his primary in the field of scientific research. In the United States and Canada we complacently thought that having no ruling caste, our best talents were devoted to business, and we flattered ourselves that we had a genius for organization; but we were too self-centered, our vision never bridged the seas, and in industry as in politics, we trusted to happy bursts of inspiration rather than to hard thinking or to wearying and consuming research. With the German, business was a study and an obsession, with us it was a game—a game which we played with the utmost spirit and with ambition and necessity holding our coats on the sidelines—but still a game.

"Having wrecked the German's dream of world-empire, it would be well for us, while the bully is still nursing his bruised and broken head, to reflect on the factors and elements in his national life which made him so formidable, and which indeed carried him to the very threshold of victory. Having found and studied these, we should, without subscribing to or adopting his abhorrent principle of an infallible and omnipotent state, endeavor to work into the fabric and spirit of our own political and industrial organization some of the passion for successful achievement which made the Germans a nation of workers, united in the resolve that in all branches of activity they should lead the world. This very necessary examination and other similar investigation and the application of the lessons drawn therefrom serve as a justification for this congress, and the consideration of the best way in which to develop our own resources should be influenced very greatly by the experience of other countries, where such development has been attended by conspicuous success.

"That the period of reconstruction through which we are passing is a difficult and trying one, we are all prepared to admit. The experience of the past does not help us in every particular. It has always been hard for mankind to settle down to a rational way of doing things after the convulsions brought about by a great war. At such times the quack with a panacea for all social and economic ills invariably has an innings, for the excited and the overwrought are easily persuaded to try fantastic remedies. And who among us is not just now suffering from the effects of overstrain Our special danger is when fitful and irregular gusts of passion and prejudice are reflected in legislation and executive action. In former times, when governments were less immediately responsive to public clamor, there was time for deliberation and a proper weighing of issues before a decision was taken. This fact is not advanced as an argument against our present more democratic system of government, which marks a great advance on any other system or process which man has devised, but it does indicate a real danger. The voice of the people may be the voice of God, but if so it is the voice of all the people, not that of a strident and clamorous faction, and that voice must express the considered view of the people. The wild ravings of a man in a delirium of pain should not and are not accepted as conveying his settled and normal aspirations and opinions, and in the same way the desires and aspirations of a people cannot always be deduced from the cries of a faction, temporarily unsettled by the acute pains caused by a sudden change from war to peace, and worked on and exploited by charlatans and adventurers. Under a democratic system of government, such as we have, those in authority are required to keep in step with public opinion, but they should not be forced to compromise with their principles in order that they may conform to every passing current of passion and prejudice, and they should be given time and opportunity to master problems as they arise, and thus be in a position to suggest to us a permanent and consistent policy.

D'Alton C. Coleman.
Vice President, Western Lines, Canadian Pacific Railway.

"The cry in this country and in other democratic countries seems to be for a government which is continually doing something, and that something must be striking and novel and preferably in the direction of restriction and paternalism. There is a pathetic belief that a profusion of legislation and government interference with normal processes in business and social life and with personal liberty in some way or other leads us along the road to freedom and happiness. Such intervention, if the truth be known, takes us in an altogether different direction. The opinion may be ventured that many of the difficulties we are now encountering are the direct result of fussy and unnecessary interference by governments with commercial enterprises and with the normal action of the law of supply and demand. A certain amount of interference was probably necessary during a state of war, and was brought about by the war, but some of it can be attributed to a panicky weakening in the face of clamor for drastic action to remedy some evil which seemed to call for correction. What is needed is free and open competition with proper protection of the public against combinations which are designed to stifle that competition. A government monopoly is not usually the best remedy. We may judge what government monopoly means, by the results of government control and operation of railways in the United States. These results have been a greatly increased cost of the transportation which is sold to the public, accompanied by an inconsiderate discourteous and much inferior service.

"We know that every man who speaks up against farther experiments in the direction of government control and ownership is at once dubbed a reactionary. But is he a reactionary? No. The reactionary is the man who would place us under the heel of a bureaucracy the man who favors state socialism. In claiming to be a reformer he is as inconsistent as the Bolshevist agitator who [illegible] infuriate labor against the so-called tyranny of capital, and then browbeats and stifles the voice of the conservative majority in our trades unions. It is the man who stands for the fullest exercise of the right of the individual to develop and prosper and reap the fruits of his labor and his brains who is the true liberal, the real supporter of advancement and progress. The whole history of civilization up to the present is the record of the struggle of the individual to secure a fair opportunity to improve his condition. As civilization progressed he refused to allow tribal chiefs and despotic kings and privileged ruling classes to fix the limits to which the ordinary individual could rise. In democratic countries, he has won for himself equality of opportunity—opportunity to improve his condition and to win a proper relative reward for his work, and to secure proper recognition of his character, qualities and abilities. The Bolshevist who prates about a redivision of the wealth of the world is simply trying to drag man back to a primitive condition, where a few Lenines and Trotskys will possess arbitrary power, and where the balance of the community will inevitably relapse into serfdom.

"It may seem a far cry from government control of industry to Bolshevism, but state socialism is only a milestone on the road to Bolshevism, and any further step in that direction we are entitled to view with suspicion. Instead of harassing our public men to rush through measures for the fettering of private enterprise and initiative, and reproaching them with indifference and inactivity, if they do not do so, we will secure much more prompt relief from our present economic troubles by relaxing burdensome regulations, and by encouraging private enterprise to resume business on the line of free competition, with the assurance that if the game is played fairly and if wealth assumes its fair share of taxation, there will be no further retrogression in the direction of socialism and bureaucratic control.

"The best economic and social policy for Canada and for the United States is one that will provide for equal opportunity for every man, no matter in what condition born, and which will guarantee him the peaceful enjoyment of the rewards of courage, foresight, prudence, temperance and hard work. It was suggested herein that we could afford to learn from the German some lessons in thrift, pertinacity, and the application of scientific methods to industry, but it would be a sad thing if after crushing the system of politics and government for which he stood, we should embrace his pernicious idea that the state must be supreme, and that the individual can only prosper and develop along rigid preordained lines, and can only enjoy such a measure of comfort and happiness as may be allowed to him by those permanently or temporarily in control of the machinery of the state."

Why Is a Hot Box?

By E. J. McVeigh, General Storekeeper, G.T.R., Montreal.

The expression "hot box" is the one generally used to describe that condition which results from the journal of a car truck becoming heated. This heating of the journal has a wide effect. It first sets fire to the waste and oil in the journal box, then it warms up the temper of the brakemen, this is transmitted to the conductor, and from him to the locomotive men. The next to hear of it is the dispatcher and he becomes "hot." Then the trainmaster comes in on the game and he heats up the superintendent and the car department. If there is sufficient fire it gets up to the president at times and great is the "passing of the buck" all along the line. The only one vitally interested who keeps cool seems to be the car knocker, who puts in the new brass and dope which costs the railway anywhere from $5 to $8. He seems to be a fatalist and regards the matter as an act of God, against which it would be futile for him to rage, or get hot.

I used the expression "passing of the buck" in this connection, and as I am afraid some readers may not know what I mean by that, I will explain that it is merely that regular routine of your daily life wherein you attempt to get from under, and put it on the other fellow, regardless of the merits of the case. In dealing with hot boxes, the "buck" is a lively animal, as he has a wide field to cover, but one thing we do know and that is that we are farther away from a solution of the problem today than we were 25 years ago.

Some young men of a serious turn of mind will no doubt resent me treating this matter in a semi humorous manner. Well, you see we get that habit of late years. The boy at the front, went out after the Hun with a joke, but he knew how deadly the thing was just the same. We at home joke about the high cost of living and other serious things, while [illegible] before last underwear and see that old suit turned wrong side [illegible] because we can't pay $70 for a new suit, and pay for a bond at the same time. I really am not disposed to treat the hot box in a light manner. It is far too important for that. It [illegible] danger to life and limb of the railway man and the travelling public. Nor am I disposed to give that lively animal the "buck" any more exercise than I can help in dealing with this matter.

There is no effect without a cause, and behind everything is a fundamental principal. The cause in the case of the hot box is 99% neglect—the effect is bad. The first thought in the minds of some of you is to protest that word neglect, but wait awhile and see how it turns out. In dealing with hot boxes you will find the "buck" turn up under many aliases—a few of them are: bad oil, bad waste, bad brass, rough journal, rough truck, truck out of square, overload, etc. Each and everyone of these spells "neglect" by someone.

A car truck mechanically correct requires very little lubrication to keep it running with cool journals. By mechanically correct, we mean that the truck has been properly constructed to do the work it was intended it should do. The journals on which it rides are of a size to carry the load they will be called on to carry, the saddle, or wedge, of proper shape, and the journal bearing of a quality of metal that will reduce friction to a minimum.

If we start out with such a condition, and maintain it, the question of lubrication is so simple that it is practically non-existent, or it would be if the conditions surrounding the working of a car truck were not so diversified. Now let us glance at a concrete example. We will take a train load of grain from the west, or the lake ports. The cars are, when loaded, in fair condition, not perfect, but fair. Some of them have new journals and wheels, some of them have old. Some new brasses and some part worn. This train starts out with a locomotive that leaves it at the end of 125 miles. The locomotive is carefully looked over by the locomotive man and then placed in the locomotive house where other men look it over and do any repairs necessary, and it starts out on its next 125 mile run in pretty good order. At least it has had a good deal of attention paid to it.

What about the cars? They are run on to a siding and two car men start down the line to inspect the boxes. How do they do it? They pull off the box cover, glance at the end of the packing in sight, see that there is no smoke, close the lid and go on. The locomotive man when going around his locomotive places his hand on the big end, the little end, the slide bars and many other parts to note how cool or warm they may be. He knows they are not hot, but he wants to know if they are thinking of becoming hot. Does the car man do this? He does not, and the cars start out on another 125 mile run. How many hot journals are there at the end of that run? We don't know, maybe one or six. These receive attention of a kind at this stop, and on they go again.

Before they reach the end of the next run some of those that were hot have had several brasses applied to them with more or less success. Some of them are in bad shape and must be stopped for new wheels, the journals have been cut, and some that did not give trouble at the first or second stop are giving trouble now, and so it goes on to the end of the run. Now, if these journals had all been tested with the hand at the first stop, and those showing an inclination to heat given a little attention, and the same thing done as often as the locomotive man tested his locomotive, do you believe there would have been so many hot boxes on that train?

Did any of you readers ever use a horse and buggy, and suddenly find one of the wheels sliding, and jump out and grab the nut with your fingers, and let it go again quick, because it was hot, and after it had cooled off and you removed the wheel you found plenty of oil on the journals, with the exception of a spot about half an inch wide? I have, and it made me realize that it is not necessary for a journal to be all dry to make it run hot. It is the back end of the car journal that needs attention, but how seldom it gets it until too late.

Do you agree that the hot boxes on the train we have tried to describe were due to neglect, and was that a fair skeleton description of the average train? Well, then was it not neglect to give the necessary attention that was the cause of 99% of the hot boxes. Why this neglect? Here is one reason; the railways haul freight as so low a figure that they feel they cannot afford to have the number of men necessary to give the cars the proper attention. What you can't do yourself you must trust in providence for, and providence does not look after box cars.

There are many other phases of this question apart from the above, and there is one that is most difficult to deal with. This is the car left at a way station, or siding, in winter until the dope is completely frozen, but the car is thrown on to a train and must get along as best it can. However, the better attention at divisional points hinted at above would help greatly in these cases. We cannot, I believe, totally eliminate the hot box on freight cars, but we can reduce the number 75% by spending the money to do it.

The foregoing few words will, I hope, introduce the subject of hot boxes on freight cars, but we still have the question of the same trouble on our passenger equipment. Some time ago I had the pleasure of looking into this matter, and after taking the statements of trainmen, trainmasters, superintendents, car men and others into account, and also watching the "passing of the buck" along the line, I came to the conclusion that here again we come down to that word neglect.

In a Canadian winter, our cars do have a hard time of it. Shoved into a yard with snow and ice often scraping the journal boxes, with the inside heated to 100 degrees and the outside frozen solid, they cannot be in good condition to give satisfactory service. The only answer to that problem is to have the cars placed in a building as locomotives are placed in locomotive houses. Such a building should be heated to about 60 degrees and no heat applied to inside of cars. Two hours after cars are placed in such a building all snow and ice falls away from trucks and running gear, leaving the car clean for proper inspection. The dope remains in the best possible condition, and the car goes out for its run in as good shape as we can make it. I have seen cars handled in this way, and I know that the results were good. Many people will say that it is impossible to house all of our passenger equipment, or not actually impossible, but that the cost would be prohibitive. I fully appreciate the fact that the cost would be great, that is the initial cost, but it is a question if it would not be quite as wise an investment as the locomotive house. It would not be necessary to place every passenger car, mail car and baggage car inside of a building. Many of the spare cars could be left outside as now, but I believe that we should have buildings to accommodate all cars on our regular trains, with room for a reasonable number of spare cars that should be available in case of accidents. The cost of such buildings would be considerable, but against this cost, what would we save? I believe that this building could be heated with less fuel than is now used for keeping the interior of cars warm while standing out of doors, and that the number of hot boxes could be greatly reduced, or practically eliminated. It is hard to tell just what a hot box costs, but we know that they cost considerable money. I also have statements from car men to the effect that in one year they have expended sufficient money in repiping cars that have been frozen to pay for a building to protect them. This may be exaggerating, but if the saving in this direction in five years would pay for the building, I believe it would be a good investment.

There is another phase of this question that in my opinion has not received the attention that it deserves, and that is the extent to which we are using, by wear, our journal bearings. I have made several tests of this, and have found that the quantity of brass actually used up by wear is very small indeed. We are practically running on white metal. This does not apply to any particular road, but to many roads, as I have reports from different places on the continent all bearing out what I have said. Now, what is the trouble here? I think we can all remember when journal bearings were very much more worn in service than they are today. I can remember journal bearings that had never given trouble and were finally removed because they were worn so thin that there was fear of them breaking or being worn clean through, allowing the journal to come in contact with the wedge. Such a condition, so far as I know, is practically unknown today. It may be stated that in the days when journal bearings were so worn, our cars and loads were lighter, and this is true, but in those days our journal and journal bearings were smaller. In other words, they were designed to carry the loads of that day. The journals and journal bearings in use today are supposed to be designed to carry the loads of today. They are not doing it in a satisfactory manner. Is this another case of neglect, that is, have we neglected to provide journals and bearings large enough to carry the loads?

I believe that these matters are of vital importance and they deserve all of the attention we can give them, and that any man who has an idea on the subject should feel at liberty to advance that idea. He may be wrong, as I may be in some of my ideas, but by advancing his proposition or idea he may bring out a better one, and that is what we want.

The foregoing paper was read before the Canadian Railway Club recently.

Deliveries on Public and Private Sidings in Montreal and Toronto Terminals.

The G.T.R. has adopted the same regulations as those applying on the C.P.R. at Toronto and Montreal, covering carload traffic received at these two points. As is generally known, the railways in Toronto and Montreal have divided their delivery facilities into what are known as "sub terminals." For example, in Montreal there is Outremont, Place Viger, etc., and in Toronto, Parkdale, West Toronto, etc. All carload shipments consigned to Toronto, are accordingly taken to Simcoe St., and all shipments consigned to Montreal, to Place Viger on the C.P.R., and Bonaventure on the G.T.R. The new arrangement which has been in vogue on the C.P.R. for some time requires that carload shipments must be consigned direct to the sub terminal, where delivery is desired. For example, a shipment from John Jones, Kingston, to William Smith, located at the Don, should be shown on the bill of lading as "William Smith, Don," followed by the words "Toronto, Ontario," in brackets.

The following circular has been issued by the G.T.R. in connection with the matter:

"Effective Nov. 18, the general system of billing carload traffic to Montreal or Toronto, as the case may be, will be discontinued and agents must ascertain from shippers the specific Montreal or Toronto terminal or sub-station within which delivery is required and see that bills of lading and waybills are issued accordingly, "Montreal" or "Toronto" being shown in brackets beneath the sub-station both at the heading and in the body of the waybill. Waybills should be made in accordance with example given below:

Local Freight Waybill.

From Kingston, Ont	To Don, Toronto	Date Nov. 12, 1918	Waybill no. 1	
Consignor, connecting line reference original car and waybill shipment	Marks consignee and destination	No. of packages	Articles and classification Conditions (O.R., C.R., Rel., Gtd., etc.)	Weight
Jno. Jones	W. Smith, Don (Toronto)	1	Car oats	60 000

"Traffic must not be billed to any specific siding but to the sub-station. If consignees having more than one warehouse or receiving yard within the same sub-station, or in different sub-stations, notify the railway company of change of delivery required prior to arrival of the freight at the sub-station to which it is originally billed, no additional charge will be made, otherwise, if a change is desired from the original billed delivery, switching charges as provided in tariff S-108, C.R.C. no. E-3292 supplements thereto or reissues thereof will be assessed.

"Traffic placed for delivery at one sub-station and ordered to another sub-station, will be subject to current switching charges as per tariff S. 108 C.R.C. no. E 3292, supplements thereto or reissues thereof."

If shipments are billed merely to "Toronto" or "Montreal," they will be taken to the terminal which is considered by the railways as Toronto or Montreal, and any deliveries to any sub terminals will be charged for in addition to the rate. The Canadian Manufacturers' Association has, therefore, suggested that all interested manufacturers in these two cities should give instructions to all those from whom they receive shipments, so that the goods will be properly billed, and thus avoid additional expense.

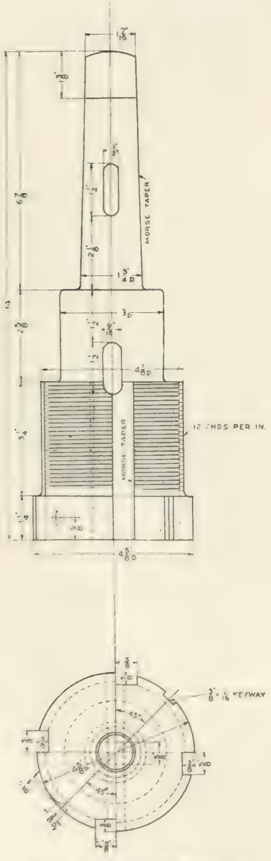
C.P.R. Social Clubs.—During the past few years a number of social and athletic clubs have been organized at various points on the C.P.R. Western Lines for the benefit of employes. To consolidate the interests of these clubs, and bring about some uniformity of aims, etc., a convention was held recently in Winnipeg, at which delegates representing clubs having a total membership of over 4,000 were present. It was decided to form a central organization with headquarters at Winnipeg, the first officers elected were: President, J. Benditt, President of the Winnipeg club; Secretary, R. W. Beatty. It was decided that the presidents of the existing clubs form the central executive committee. Plans were discussed for the extension of the movement to other centers; the standardization of the clubs' efforts and activities; the establishment of sporting competitions, and other measures calculated to increase interest in, and to promote the welfare of the club movement. It was agreed to hold an annual convention of the clubs, different centers to be visited as agreed upon.

Railway Mechanical Methods and Devices.

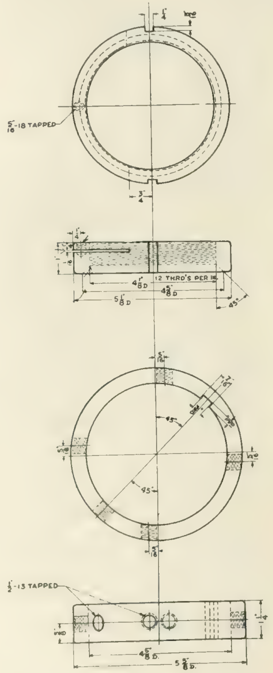
Boring Tool for Superheater Flue Holes.

The accompanying drawings show a tool for the removal of material from superheater flue holes in flue sheets. The tool consists of a body B, and adjusting collar C, a retaining collar D and cutting tools E, also an adjusting screw and 5 set screws, which are not shown in the drawing.

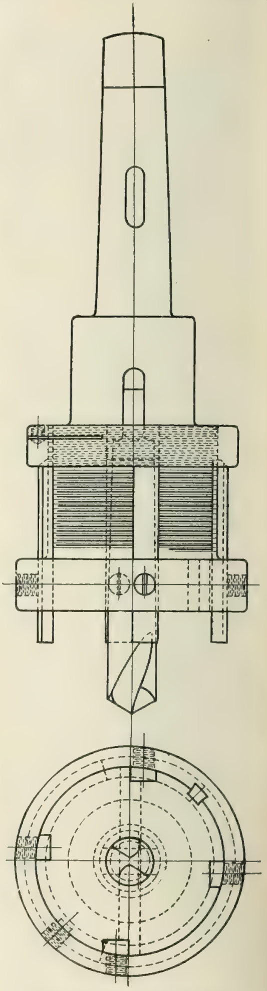
The main features of the body B are, a shank of standard Morse taper; the threading, which is made to fit the adjusting collar C, a hole bored longitudinally, also to a standard Morse taper; and 4 slots to receive the cutting tools. The adjusting collar C has a slot at S. The purpose of this slot is to produce a binding action upon the threads, by the use of an adjusting screw at T, so that the collar may be held in place at the proper adjustment of the cutting tools. There is also a recess at R to receive the ends of the cutting tools and help to bind them to the body of the tool. The retaining collar D is bored to a slip-fit for the largest diameter of the body B. As shown in the drawing, it is held in place by a key and a set screw. The cutting tools are made to the dimensions shown in the drawing. The angle shown at F is quite essential to the successful operation of the tool. This angle is made nine degrees. Two opposite tools have the high part of the cutting edge on the outside, while the other two have the high part on the inside. This not only reduces the strain on the tools, but also lessens the driving power required. The cutting tools are made of high speed tool steel, and the body and all other parts are made of machinery steel.



Boring tool for superheater flue holes.



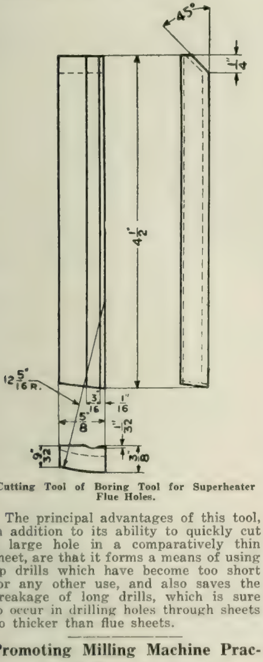
Boring tool for superheater flue holes.



Boring tool for superheater flue holes.

The complete tool is shown assembled at A. Its operation is simple. When the cutting tools are new, the adjusting collar is placed at the extreme shank end of the threading, and held in place by the binding screw. The cutting tools are then inserted in their respective slots and the retaining collar is placed on the end of the tool as shown. The set screws are then tightened, thus clamping the cutting tools, and the collar is clamped to the body of the tool by another set screw. A short drill is then inserted in the end of the tool and it is ready for use. This short drill first drills a pilot hole, and then acts as a guide for the cutters.

As the cutting tools wear, all that is necessary to keep the tool in good working order is to loosen the 4 set screws holding them, loosen the binding screw, and turn the adjusting collar the proper amount. When the various screws have been tightened, the tool is again ready for use. Reference to the threading will show that this adjusting may be continued until the cutting tools are practically used up.



Cutting Tool of Boring Tool for Superheater Flue Holes.

The principal advantages of this tool, in addition to its ability to quickly cut a large hole in a comparatively thin sheet, are that it forms a means of using up drills which have become too short for any other use, and also saves the breakage of long drills, which is sure to occur in drilling holes through sheets no thicker than flue sheets.

Promoting Milling Machine Practice in Railway Shops.

From a general view point it does not appear that milling machine practice in some railway shops has been given the attention or consideration that this particular method of machining would merit, for while there are some progressive shop men who have gone into the details of this class of work and made use of advanced tools and ideas concerning their application as evidenced by the results obtained, there are many places where the field for improvement along this line is large.

The average railway shop of fair size has in its machine tool equipment one or more of the horizontal knee type milling machines, usually found located in the tool room, and used for fluting reamers and taps or machining the shanks of such tools, also cutting shaft keyways and other miscellaneous jobs. In the main shops of large roads will also be found the larger horizontal mills commonly used for surfacing and fluting locomotive rods, machining shoes and wedges, eccentrics, etc., while the heavier vertical type machine is engaged on profiling and other irregular surface work or perhaps milling port openings in valve chamber bushings.

Some of the jobs above mentioned in connection with the different types of machines are no doubt being done by this method for the reason that it may have proved to be the best and most economical way, however, there is nearly always a chance to increase production or cut down the cost of same and it will no doubt be interesting for some to check up along this line with a view of getting more satisfactory and economical results or making a try at bettering the time on some job now being done in another way.

There is no question that modern high duty machines are conducive to more and perhaps better work, but they would be of little use if not equipped with proper cutting tools, and, in the case of milling machines, regardless of the typé, design or age it is essential that good cutters be used in order to obtain the best results therefrom.

The modern type of milling cutters as now used, in most up to date shops, differ considerably from those generally in use but a few years ago, both in devantages of these new type cutters over the old style until a comparison has been made of the work each will do. The wide spacing permits of larger and stronger teeth and better clearance and escape for good large chips, consequently of greater feeds, also lessens amount of grinding necessary and tendency to heat the cutter and work while in operation. It was noticeable that very soon after the introduction of these coarse tooth type cutters the leading manufacturers accepted the advanced design and are now showing them in their catalogues. In many of these new design cutters considerable attention has been given to the matter of spiral and for the various classes of work care should be taken to secure the proper lead, pitch and form of teeth for such cutters.

In the last few years nearly all milling cutters for rapid heavy duty work have been made of high speed steel, the sign and material. The old style carbon steel cutter with many teeth, narrowly spaced, had to give way to the high speed cutter having few wide spaced teeth. It is hard to realize the ad-small sizes being cut from solid stock and the large ones usually built with bodies of cheaper material and high speed inserted teeth. There is no question that high speed steel is the proper material for such tools and will continue to be used by exacting mechanics even at the present high price. The necessity for economy in this line, however, has caused wonderful development in the design and construction of inserted tooth cutters to fully meet requirements and which are equal in performance to those made from solid material.

One of the greatest factors for efficiency in milling is proper lubrication of the cutters. Without some good means of cooling, it is impossible to get near the maximum amount of work out of any design of cutters for the limit of speed is reached when the cutter burns, therefore, in order to prevent destruction and get the most out of the cutters it is necessary that they be kept cool. This is accomplished by the proper application of lubricants and it has been demonstrated that the nature of the lubricant is of minor importance so long as a sufficient quantity is provided. One of the prominent milling machine manufacturers after making exhaustive experiments along this line has developed a very complete system of cutter lubrication, which is featured in connection with its make of machines, special appliances being furnished for the equipment when required. This system provides for a liberal stream of fluid, which is forced upon the cutter through a hood, keeping the cutter cool and also serving to wash away the chips which adds to the life of the cutter.

The possibilities of milling with helical cutters are very great and many shops are employing this method for cutting blocks from solid in steel or iron, where formerly the job was done by drilling holes to release the block and then finishing to size on the slotter or shaper. Where proper equipment is used for such work, the time is greatly in favor of the milling process and the increasing amount of work being done in this manner bears evidence of the fact. One particularly small job of this character which may be interesting is the milling of keyways in piston rods or cross heads instead of drilling, chipping and filing them. This job may be done on a knee type milling machine, but there are some good small portable devices which were recently brought out by the use of which a considerable saving may be effected. A high speed three tooth helical cutter is used and if driven to capacity will cut keyways in piston rods in from 12 to 30 minutes each, depending upon the size and nature of the material. These rod keyways when drilled and chipped by hand usually take from three to five times as long as when done by milling process.

There are other well known operations in railway shop work which it is believed could be handled with more economy and satisfaction if a little preliminary time was given to the study and working out of the proper equipment and way to do the job. If you are interested, though doubtful, about some particular operation, which you think may be done by milling process, send in the blue print or sample of work to a good manufacturer for a guaranteed time and cost estimate of the job. This may save a lot of experimenting and they will be glad to tell you what it will cost and how it can be done.

It is always well to remember the following as essential to good results on the milling machine: Keep your machine in good condition at all times. Use arbors of as large diameter as possible to prevent chattering and springing away from the work. If a rigid intermediate support can be used with bearing close to the cutter, it will be helpful on heavy duty work. Use high speed coarse tooth cutters of design to suit your work and make them produce by keeping cool with lubrication when cutting steel. Increase the feed in proportion to the speed of the cutter to the limit of finish required. Good cutters will produce more work and stay sharp longer when used under these conditions.—C. H. Schaffer.

Steel Rail Requirements—C. M. Schwabb, of the Bethlehem Steel Corporation, is reported to have stated that United States railways will need approximately 5,000,000 tons of steel rails within a year.

Canada's Great National Asset.

By D. B. Hanna, President, Canadian National Railways.

I don't suppose many people in Canada are inclined yet to regard the Canadian National Railways as a great national asset. The general opinion—even, I am sorry to say, among those who make our laws and among newspaper men who mould public opinion—the general opinion seems to be that the railways are a liability that the country has had foisted upon it. The importance of impressing upon the people of Canada the true value from a national standpoint and the almost unlimited potentialities of the national roads cannot be overestimated. Canada must acquire a new angle of vision; the measure of our future depends upon it.

I want first to point out one way in which our ownership of a transcontinental railway can be turned to account at the present moment. We all know and all deplore, that there is not enough of the national spirit in Canada. The man in the Maritimes does not understand and, in fact, does not know very much about the people in the other provinces. In Ontario there is not much community of spirit with the people we call "Blue-noses" and even less with the hustling, wideawake citizens of the west. In the west there is a growing impatience with everything eastern. In fact, the westerner thinks in terms of the west; the Ontario man thinks in terms of Ontario; the Maritimer thinks in terms of the Maritimes. There are too few men broad visioned enough to think in terms of the Dominion of Canada.

This is bad business. Let's consider it purely and simply from a business standpoint and see what it means to us. We find the western grain grower demanding the sweeping away of tariffs, deaf to the argument that, by doing so the industrial life of the eastern provinces would be jeopardized. We find the easterner on the other hand ready and eager to tack on the ultimate fraction of protective duty, quite indifferent to the west, which he regards much as a market for his goods.

I have found the same sharp conflict between east and west in the matter of freight rates. The grain grower comes to me and complains bitterly about the way the freight rates hit him. "I get the worst of it coming and going," he declares. "When I ship my wheat to the east the charge for moving it comes off what I realize. But when I buy goods from the east, the wily manufacturer has it fixed so that the cost of the long haul is tacked on to the price I pay. I get soaked both ways."

When the manufacturer in the east comes to me he has almost the identical tale of woe. "I'm paying the cost of the long haul to the west," he asserts. "When you put up your rates, you take it out of me, every last cent. The westerner gets his price for his wheat and then you bring it on down to us and assess us for the haulage—", etc.

The truth, as always, is somewhere in the middle ground. Truth is seldom found at either extreme of an argument, but there are so few men unfortunately who can find the middle ground. If we had more men who thought in terms of the Dominion of Canada instead of in terms of Saskatchewan or Ontario, it would be much easier to shape the destinies of our broad Dominion along the lines that would give the broadest future. And right there is where the value of a national transcontinental enters. It can be used as a means of teaching Canadians to think in terms of Canada. At any rate it can be made the means of instilling the national viewpoint into the men who go to Ottawa to make laws for the Dominion.

I do not suppose that anyone will contradict me when I say that the sectional or provincial viewpoint is found at Ottawa quite as openly as anywhere. The average western member goes to Ottawa filled with the spirit of the west and convinced of the hundred per cent. justice of western conventions. The Ontario member goes to Ottawa to represent Ontario and he takes with him the viewpoint in regard to the west that prevails in the section he has been elected from.

I would like to see the members of parliament take the time to travel all over Canada. I know plenty of members from the east who have never been beyond the Great Lakes and there are western members to whom Montreal and Quebec and Halifax are geographical terms only. It would be in the interests of the country if all members took time between sessions to get around and see the whole of this man-sized country of ours. Let it be understood that it is part of their duty to find out what people are saying out beyond the Rockies and what they are thinking on the banks of the Bay of Fundy. Our legislators would become better fitted to legislate for a country that bristles with sectional interests and problems. There would be plenty of the time between sessions. In fact I am inclined to think that the sessions would be shorter if this plan were adopted. The broad plan that spells prosperity for the country as a whole can be more easily arrived at when the body of the House of Commons thinks in terms of Canada as a whole.

David Blythe Hanna,
President Canadian National Railways.

Canada has a splendid transcontinental system of railways all her own, so that the facilities for travel are provided. Would it not be a wise plan to see that the men we put in charge of this huge business of Canada Incorporated get a working knowledge of the whole plant? I am suggesting a course in travel as a duty for the member of parliament. Really there should be nothing optional about it as far as he is concerned. Let me suggest the same course for the private business man as well. Everyone should get acquainted with Canada. This seems to be the only way that we can slough our provincialism. No amount of talk or reading will enable the man who sticks within a radius of his Ontario home to see with the eyes of the west; and vice versa. As a result, I believe that soon the west would begin to take an interest in the welfare of the industrial east; and the east would see the problems of the west, even to the extent of boosting the cause of indusdustrialism there. The time has come when the west must proceed with the cooperation of the east, to develop its industrial possibilities. I am heartily in accord with the movement begun in Alberta to determine the resources of that province and to push for the establishment of industries.

"But," remarked a man to me the other day, "if you favor the establishing of factories out west, you'll hurt your own business. You'll lose your long hauls from the east."

"Long hauls are what railways are supposed to want," I told him, "but we also need to have vision. Look at a future with an enormously developed west as a result of industrial growth—and the importance of the freightage on the long hauls of today assumes lesser importance. Build the west—and you build up the future of the railways."

So much for that point. Before proceeding with what is a still more important factor of the relationship of the national railways to the future of Canada, I want to draw a moral from the history of railroading in Canada. When Mackenzie and Mann decided to build the first link of what became later the Canadian Northern System, their enterprise was considered a mad one. They decided to build a short line northwest from Gladstone, Man., to a point where Dauphin now stands. This part of Manitoba was settled sparsely. There were some hardy pioneers who had gone in despite the lack of transportation and a few settlers of the type known as "sherriff-proof," that is, men who had sought a retreat from debt. The wiseacres shook their heads when the doughty contractors, who later became so well known, decided to build through this country. "It's no good," they said. "It will never fill up. That section's off to a bad start. Anyway it's too far north and too cold."

It took nearly a year to build the 123 miles of road that had been projected. I was engaged to operate the road when it was completed and on Jan. 3, 1897, we started the first train north. The wiseacres were so far wrong that the first year we had a revenue of $60,000 and our operating expenses were $30,000 which was pretty good for a road doomed to failure! Of course, it was not an easy task to make the road pay, despite the fact that settlers poured into the country rapidly. We had to watch every item and every man on the staff worked morning, noon and night. We lived on the line.

I remember one occasion when I had boarded an accommodation to get north. It consisted of a long string of freight cars, with a couple of passenger cars in the rear and we carried, as I remember it, a large number of settlers going north. A heifer strayed on to the track and our locomotive lifted it nearly into the ditch. The accident worried me a little, because I knew the owner would promptly put in a claim for damages; and claims were a serious matter in those days. Then it occurred to me that the butcher for a construction camp at the end of the line was on board. So, while the train slowed up to a stop, I picked him out. "See here, Jim," I said, "this is a chance for fresh beef for the camp." The butcher dug up a cleaver from his belongings and, while we held the train, he skinned and quartered the victim of the accident and hung the meat in an empty box car. The beef was turned over to the camp commissariat and the hide was sold. After the irate owner's perfectly just claim had been met, we were $4 to the good on the transaction. That is a sample of the way we had to handle things to make both ends meet in the pioneering stages of the road.

Construction never ceased for a moment. We were pushing out more and more into territory that had been accepted as doubtful or impossible. This northern section was too cold or too remote or too wild to be suitable for settlement; so everyone said. But settlement kept pace with the steel or ran far ahead. People were frantic for land and they followed in droves in the wake of our construction gangs. Towns sprang up at suitable points and business generally became quickly established. It was our invariable experience that, as soon as a new link was completed and in operation, it carried enough business from the start to pay operating charges.

Mackenzie and Mann always had the big plan at the back of their minds, the grand idea of a new transcontinental. Each new bit of road built was but a link in the big plan. Gradually, as the system extended, the big plan began to show signs of coherency. They kept driving ahead toward the magnificent goal and in time every man on the system acquired a belief in the big plan and a zest for its accomplishment. If at any time the company had seen fit to forego the main objective and be content with the system as then completed, a commercial success would have been theirs. They persisted, however, until the fixed charges became too heavy to sustain through the war slump. The point I desire to make is that this line, which was persistently built out through territory that had been regarded as inaccessible and in the teeth of public indifference, opened up a tremendous new country and laid the foundations for what might be termed the greater Northwest.

No man deserves more credit for the opening up of Western Canada than the late A. D. Davidson. He became convinced that a tremendous future was ahead of the country of the Qu'Appelle Valley and in 1902, he staked everything by buying from the government part of the Qu'Appelle, Long Lake and Saskatchewan Ry. land grant to the extent of 800,000 acres at a price in the neighborhood of $2.50 an acre. Then he entered upon a campaign to attract United States settlers. Qu'Appelle at that time was considered to be next door to the north pole. Davidson was regarded as a dreamer and men freely predicted that he would be ruined. More than that, he was regarded as almost a menace. "If he takes Americans up to that frozen land, he'll give Canada a bad name," men said openly. Senator Perley from Saskatchewan made a speech at Ottawa in which he asserted that wheat could not be successfully grown north of Qu'Appelle.

There was no stopping Davidson, however. He went across the line and organized a train load of U.S. bankers. This party he took in a special train over the Prince Albert Branch as far as what is now the Town of Davidson. They went in the middle of the growing season and the visitors were thunderstruck. They saw rich, rolling country, well watered and open for cultivation, as far as the eye could see. They got down and scooped up the soil and found it rich. The sun beat down upon them as warmly as it did in the more settled sections they had come from and with as much promise of refining quality. In fact they saw lying before them an ideal wheat country. So this train load of Joshuas went back and reported that it was indeed a promised land—that Davidson was right and nearly all the rest of Canada was wrong. In 1902 the Western Canada Immigration Association was formed to launch a publicity campaign in the U.S. and, as a result, the huge wave of immigration from across the line started.

I am telling of these incidents to demonstrate that the opening up of new country is invariably contingent on the taking of huge risks and that the public is always sceptical. More important still the opening up has depended upon the building of a line of steel. Transportation is needed to effect permanent settlement on a large scale. Consider this in relation to the fact that Canada now owns a system of railways that stretch from Halifax and the Sydneys to Vancouver. If this system is considered as the means of opening up new territory, of developing new stretches of empire, then it becomes of tremendous importance indeed. No longer will we need to depend upon the daring and initiative of private individuals to blaze the trail to new fields; the country as a whole, which has always reaped the benefit of the pioneer efforts of our railway builders, can assume the risk and plan its own campaigns of extension.

There are already fields open for exploitation. The Peace River country has been established as a suitable field for agricultural settlement. To build a road through that northern section would be the prelude to a settlement as prosperous and successful as the Qu'Appelle. The value of the government roads from the middle prairie points to the Pacific as feeders for the Panama route can be developed. I am merely noting a few outstanding and obvious directions in which the aggrandizement of Canadian interests can be accomplished by the development of the national railways. Great things can be accomplished if the Dominion of Canada is disposed to regard railroading in the same light as the private railway builders have done in the past as a risk that must be taken to assure a big future.—Maclean's Magazine.

A Railway's Responsibility for Goods.

The question of how far a railway company is responsible for the loss of goods came before a Quebec court in a case in which Justice Maclennan gave judgment. Sept. 3. The action was brought by Greenshields Limited, Montreal, against the Canadian Northern Ry., to recover $1,564.43, the value of 6 cases of goods stolen from the C.N.R. carter's sleigh while it was standing in the yard at Greenshield's warehouse in Jan., 1918. After the cases had been loaded the carter went into the warehouse for some purpose in connection with the shipment, and when he came out he found the sleigh load of cases had been driven off. The sleigh and horses were recovered subsequently, but the goods were never traced. The railway company contended that as the bill of lading had not been signed it was not liable, and that the goods had been stolen from the plaintiff's-yard, where protection should have been provided by the shipper. The court held that the company's carter, by leaving the goods unguarded, facilitated the theft; that the carter had authority to sign the bill of lading on completion of the loading of the goods on the sleigh; and that the delivery of goods to him was delivery to the company. Judgment was therefore given for the amount claimed and costs.

Grain Inspected at Western Points.

The following figures compiled by the Dominion Bureau of Statistics, shows the number of cars of grain inspected on railways at Winnipeg and other points in the Western Division for August, and for 12 months ended Aug. 31, 1919 and 1918, respectively:

	Aug. 1919 Bush.	12 mons. to Aug. 31, 1919 Bush.	12 mons. to Aug. 31, 1918 Bush.
C.P.R.	2,343	70,203	91,827
C.N.R.	2,041	51,182	55,134
G.T.P.R.	286	15,311	23,405
G.N.R. (Duluth)	15	1,025	714
Total	4,685	137,721	171,080

Hamilton, Ont., Railway Yards—The Hamilton, Ont., City Council passed a resolution on Sept. 9, approving of its special railway committee's recommendation that the Hydro Electric Power Commission of Ontario be asked to survey, lay out, construct, build and operate a railway, and to acquire lands and yards, sidings and other facilities for railway traffic east of the city, and provide yards for the accommodation of the Toronto, Hamilton and Buffalo Ry. in lieu of the present Kinnear yards. In the [illegible] of the discussion it was stated that the proposal should take precedence over the Hydro Electric Power Commission of Ontario's general electric railway building, that the lands necessary for carrying it out should be acquired while the main line was being built, and that it was estimated that the suggested plans would not entail an expenditure of more than [illegible] in addition to the amounts provided for in the bylaw passed in January.

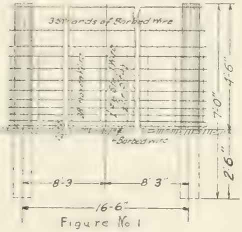
The Delaware & Hudson Co.'s mines resumed operation Sept. 15, it being reported that the 14,000 strikers had decided to await the Anthracite Conciliation Board's decision on their complaints' referring particularly to alleged excessive dockage, unnecessary laying off of men for alleged dirty coal, and use of mechanical loaders.

Fences, Anchoring of Fences, Gates and Cattle Guards.

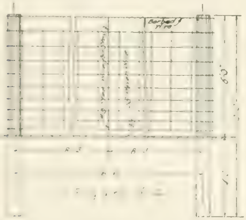
Following is the report of the committee on fences, anchoring of fences, gates and cattle guards, as adopted at the Roadmasters' and Maintenance of Way Association's last annual meeting:

Posts—Wooden posts, especially cedar, seem to be as yet the most favored, but the increasing scarcity of timber will eventually eliminate that kind of post. Round and split posts are being used, but the round post is preferable because the split post exposes the heart and thereby causes decay, and the dry-rot formed will easily catch on fire.

Iron posts are on the market and used to some extent, but it seems to be the opinion that they will rust off quickly at the ground surface. To overcome that difficulty some chemical solution is being applied, but its effect cannot as yet be determined. The iron posts are too small for use in a right of way fence, especially in the heavy cattle countries.



Concrete posts are being manufactured and used considerably. The initial price of the concrete posts and the cost of installation is somewhat higher than that of the wooden post, but considering its lasting qualities, it is undoubtedly the most economical. A well reinforced concrete post should last forever, as fire, water and climate do not affect it. The round post is preferable, as the corners of the square post will chip off and weaken the post. Railways may make their own posts by installing plants at points where sand and gravel are available.

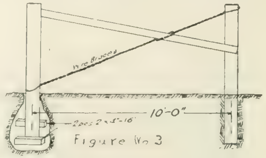


For general right of way fencing, the posts should be not less than 7 ft. and longer where necessary to suit the location. It has been suggested—in fact, some railways are using—an 8 ft. post at corners and gate openings, but it seems that a 7 ft. post is ample length, even for that purpose, when properly anchored and braced.

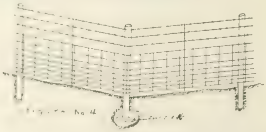
The 7 ft. post should be set in the ground 2½ ft. In swamp or wet ground the post should be tapered at the lower end and driven into the ground with a wooden mallet instead of the digging of holes by auger or digger.

The posts should be placed 16½ ft. or one rod apart, except at corners and gate openings, where they should be placed 10 ft. apart. Through large towns and other places where appearance is to be considered and also to keep off trespassers, a 10 ft. post is recommended, placing it 4 ft. in the ground and 10 ft. apart.

There are some steel posts manufactured, which it is claimed give satisfactory service. One type of post is made of heat-treated spring steel, in angle form, with a beveled point, which makes it easy to drive into the ground without the use of a driving cap. In connection with this post there is a triangular anchor plate that is driven into the ground, so that the post offers resistance to side thrusts. The post is punched so that ordinary size staples can be used. The installation of these posts is very cheap, as from 300 to 500 can be driven by one man in a day, and the decreased cost of installation will overcome the additional cost of the post. There is also a circular galvanized steel post, to which the fencing is fastened by clips. This post has been used to some extent by railways but more so in fencing parks and institutions and factories. The installation of this post is somewhat less than that of wooden or concrete posts, as it is driven in the ground by the use of a cap. Several steel posts can be shipped in the space occupied by one wooden or concrete post.



Wire—A combination barb and woven wire fence is recommended.



1—A barb wire at the ground, followed by a 28 in. woven wire and with 3 strands of barb wire at the top. (See fig. 1).

2—A barb wire at the ground followed by a 50 in. woven wire and one strand of barb wire at the top.

For use at station grounds when posts are set 6 ft. above ground, 58 in. woven wire with one strand of barb wire at the top. (See fig. 2).

When posts are set one rod apart, a stay of heavy wire should be placed in the middle of the panel.

The Anchoring of Fences is one of the vital factors in their permanence. The methods of anchoring vary considerably, but when wooden posts are used, the following is recommended:

The posts at corners and gate openings should have as anchors 2 pieces of 2 x 4 x 16 in. of pine lumber securely fastened to the post, one of the anchors at the lower end of the post and the other 12 in. higher.

In addition to the anchors, the posts at corners and gate openings should have a wooden brace 4 x 4 in. gained into the corner post 12 in. from the top and into the second post 24 in. from the ground and well spiked to the posts. As counterbrace, use 2 strands of no. 8 wire and twist until it becomes a hard and taut cable. (See fig. 3).

At sudden or abrupt changes of the ground along the fence line where post is liable to pull out, 2 anchors 2 x 4 x 16 in. should be fastened to the lowest point of the post. (See fig. 4).

Instead of using wooden anchors at corners and gate post, and whenever practicable, it is recommended that these posts should be placed in concrete 24 in. square and 8 in. below lowest part of the post. (See fig. 5).

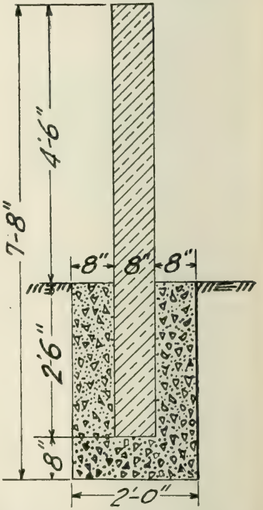


Fig. 5. Cross section showing concrete anchorage.

Gates—One of the section force's daily troubles is to keep farm gates closed and remind the farmers of same, and quite frequently the farmers refuse to keep the gates closed, due to the fact that the railway does not furnish a suitable gate. It has been shown that by furnishing light, swinging, gates the gates are kept closed more readily than with the heavy, sliding gates. The committee recommends a light, swinging, gate for use at private crossings, whenever possible, and, where ground formation allows it, that the gates should be hung so they would swing away from the track.

Cattle Guards—There are no cattle guards made that will turn cattle, and the stock will pass over the guard, also from data gathered it can be shown that it costs more to maintain cattle guards than to pay stock claims directly due to the absence of guards, but considering the necessity at present of conserving all resources of the country, especially the foodstuffs, the committee does not wish to recommend to entirely abolish the use of cattle guards. There are several makes of surface guards, but as none of them will turn cattle, the committee failed to agree on any certain kind to recommend.

Cross and Wing Fences—Some railways are using boards 1 x 6 in. for their cross fences at highways and are spacing them 6 in. apart. The committee recommends the use of the same material in the cross and wing fences as there is in the line fence and thereby lessen the cost in material and conserve the lumber.

Maintenance of Fences—It is the intention of the railways and the maintenance officials to keep the fences in good condition at all times, but due to shortage of laborers and other work it is given the last consideration and frequently we find at the end of a working season that no repairs have been made to the fences, and material allotted for this purpose is carried over to another season. With the postponement of the work from one season to another it is natural that the fences will be in such condition that they require rebuilding, which is more expensive than if they had been properly maintained at all times.

Due to soil formation and water, the work in keeping the fences in condition is more difficult in one section than in another. The average section foreman and laborer take very little interest in the condition of the fences and, in fact, do not know how to properly repair them.

It is the committee's opinion that in order to properly keep the fences in repair, a small fencing crew, consisting of foreman and 4 or more men, should be kept on each roadmaster's or supervisor's subdivision. By this arrangement better work will be obtained and more accomplished, as the men constantly engaged in the work will be more efficient; also it will not be necessary to distribute the fence material to the various sections.

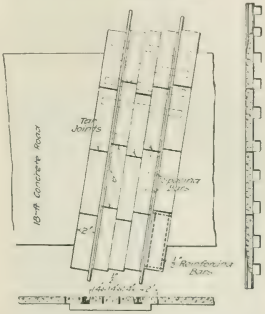
Safety—The committee recommends that laws should be enacted, prohibiting the destroying of railway fences and the opening of paths across the tracks.

A press report states that tourist and other travel on the C.P.R. transcontinental trains has increased very largely during this year, and that C.E.E. Ussher, Passenger Traffic Manager, on his present periodical trip over the company's western lines, is investigating with a view of making recommendations for the still further improvement of the company's train and hotel services.

J. D. McArthur, President, Edmonton, Dunvegan and British Columbia Ry. and its two subsidiary lines, on his return to Winnipeg recently from Edmonton, Alta., is reported to have said that during this year, 10,000 people had entered the areas served by these three railways for settlement purposes. The estimate of the grain crop in the district is from 5,000,000 to 6,000,000 bush., of which about 3,000,000 bush. will be brought out over these three railways.

Sectional, Removable Concrete-Slab Railway Crossing.

Sectional, concrete-slab railway crossings are proposed for Wayne County, Michigan road system. The general design and layout of these crossings are shown in the accompanying illustration. Each of the sections used between the rails is 6 x 1.4 ft., with a thickness equal to the height of rail. Sections outside the rail are 2 ft. wide. Reinforcement consisting of ½ in. bars is used as shown, and tar joints bind the sections together. Those inside and next the rail have projecting spacing bars which come in contact with the web of the rail, leaving clearance for the wheel flanges.



Surveys of the various railway crossings in Wayne County have been made, and the board of county road commissioners, has suggested to the engineering departments of the various roads that they be permitted to install this slab construction at county expense, the county also to maintain it after installation. It is believed that this will make a much smoother and more serviceable crossing than the old planked crossing, and, at the same time, leave the crossing equally accessible for repairs.

Freight and Passenger Traffic Notes.

St. John and Quebec Ry. trains, will, according to a press report, be operated through to St. John, N.B., regularly at an early date.

The Canadian National Rys. started on Oct. 5 a daily transcontinental passenger service, between Toronto, Winnipeg, Vancouver and Victoria, B.C.

The Halifax, N.S., Board of Trade's Council passed a resolution recently asking the Canadian National Rys. to reestablish a fast freight service between Halifax and Montreal.

Residents between Halifax and Yarmouth, N.S., have asked the Canadian National Ry.'s officials to operate a second train each way daily between Shelburne and Yarmouth on the Halifax and South Western Ry.

The C.P.R. is reported to be preparing to handle 90 train loads of Chinese coolies, who are returning from France across Canada and on to China. They were taken over in the early days of the war for service behind the lines.

The Quebec and Saguenay Ry., has, we are officially advised, been operating a daily train service from Quebec to Murray Bay, since July 1. The train leaves the Quebec Ry., Light and Power Co.'s station in Quebec, at 8 a.m., and returns to the same point at 8 p.m.

A Charlottetown, P.E.I., press report, Sept. 17, states that no. 1 train standard gauge, running from Charlottetown to Borden, will be made up of baggage, mail, express and first and second class passenger cars. The baggage, mail and express cars will be taken across to the mainland on the car ferry, and will be run through to Moncton, N.B.

The Grand Trunk Ry. is now operating sleeping and dining cars on a through service between Toronto and Philadelphia, Pa., over its own line, the Lehigh Valley Rd., and the Philadelphia and Reading Rd. The trains leave Toronto 5.45 p.m. daily, arriving in Philadelphia 10.25 a.m., and leaves Philadelphia 6.30 p.m., arriving in Toronto 9.40 a.m.

In reference to a large number of requests made to railway companies for reduced rates, to enable persons to go to places being visited by the Prince of Wales during his Canadian tour, it has been decided that, owing to the pressure upon the railways for equipment required to handle returning soldiers, repatriates, tourist traffic, and movement of returning harvesters from Western Canada, it would not be wise to grant general reduced rates at this time, and thereby add to the number to be carried. If, however, satisfactory arrangements for repayment, the usual military requisitions, at regular military fares, will be accepted for movement of members of the Great War Veterans' Association.

A new plan for handling freight between Truro, N.S., and eastern points, is reported to have been put in operation on the Canadian National Rys. Maritime District. Heretofore there has been one through freight train daily, each way between Truro and Mulgrave, all other freights and freight specials. Under the proposed new arrangement, traffic in both directions will originate in Truro and Mulgrave, cutting Stellarton out as a starting point for all freight, with the exception of that billed to points on the short line. The new plan will necessitate the removing of the train crews now residing in Stellarton to one or other of the terminal points of Truro or Mulgrave. It is claimed the new plan will effect a considerable saving in the cost of handling freight.

The Railway and Marine News, Seattle, Wash., says: "Every convention and a majority of the tourists coming to the Pacific northwest this summer, travelled one way over the Canadian railways. Both the Canadian Pacific and the Canadian National ably conducted an advertising campaign in the populous centers of the eastern United States. At the same time the U.S. Railroad Administration was still debating as to the advisability of advertising at all and when it did decide upon a policy it was too late in the season and the media were not well selected. Even in such a feature as this the Railroad Administration fell down and while the tourist travel to the Pacific coast has been heaviest in years, yet the fact remains that the great proportion of it was one way through Canada and the Dominion, following four years of active participation in the great war, has received untold benefits by the army of well to do tourists stopping at its famous hotels and resorts."

The Prince of Wales' Canadian Tour by Rail and Water.

After Canadian Railway and Marine World for September went to press, a slight change was made in the Prince's itinerary as published in that issue. The visits to Cobalt and Timmins, in northern Ontario, were cancelled, and instead of leaving Ottawa Sept. 1 for North Bay, the Prince went to Montreal by the C.P.R. for a flying visit. After leaving Montreal, the royal train was stopped at Dixie, where the Prince played a game of golf with W. R. Baker, C.V.O., ex-Secretary, C.P.R., and then proceeded direct to North Bay after which the schedule as published in our last issue was pretty closely adhered to. At Port Arthur the Prince officiated at the launching of the s.s. Canadian Adventurer by the Port Arthur Shipbuilding Co.

A. B. Calder,
Assistant General Passenger Agent, C.P.R., who is representing E. W. Beatty, K.C., President, C.P.R., on the Prince of Wales' tour through Canada.

Canadian Pacific Ry. officials accompanying the royal train—As stated previously in Canadian Railway and Marine World, A. B. Calder, Assistant General Passenger Agent, represents E. W. Beatty, President, C.P.R., on the special train provided by that company for the Prince's use during his entire Canadian railway tour. On the company's lines, in addition to Mr. Calder, the general superintendent of each district travels on the train over his district, the superintendent of each division travels on it over his division, and the division master mechanic rides on the locomotive cab over his division. The itinerary of the various C.P.R. officials is as follows:

J. M. Woodman, General Superintendent, Quebec District, Aug. 24-25, Quebec to Smiths Falls; Aug. 28, Smiths Falls to Ottawa; Sept. 2, Ottawa to Montreal; Sept. 2-3, Montreal to Chalk River; Oct. 27, Vaudreuil to Montreal; Oct. 31, Montreal to Ottawa.

Allan Purvis, General Superintendent, Ontario District, Aug. 25, Smiths Falls to North Toronto; Aug. 27-28, North Toronto to Smith Falls; Oct. 18, MacTier to Hamilton; Oct. 24, Windsor to North Toronto.

J. J. Scully, General Superintendent, Algoma District, Sept. 3-4, Chalk River to North Bay and Sault Ste. Marie; Sept. 8, Nipigon to Fort William; Oct. 11-12, Fort William to Biscotasing, Oct. 17-18, Biscotasing to MacTier.

A. E. Stevens, General Superintendent, Manitoba District, Sept. 8-9, Fort William to Winnipeg; Sept. 10, Winnipeg to Bredenbury; Oct. 10, Broadway to Winnipeg; Oct. 11, Winnipeg to Fort William.

W. A. Mather, General Superintendent, Saskatchewan District, Sept. 10-11, Bredenbury to Hardisty; Oct. 3-4, Swift Current to Regina; Oct. 9-10, Qu'Appelle to Broadview.

J. M. Cameron, General Superintendent, Alberta District, Sept. 11-12, Hardisty to Edmonton; Sept. 13, Edmonton to Calgary; Sept. 15-16, Calgary to High River, and return; Sept. 17, Calgary to Lake Louise; Sept. 18, Lake Louise to Field; Oct. 1-3, Crowsnest to Medicine Hat and Swift Current.

F. W. Peters, General Superintendent, British Columbia District, Sept. 20-28, Field to Vancouver; Sept. 29, New Westminster to Penticton; Sept. 30-Oct. 1, Midway to Nelson, Oct. 1-2, Kootenay Landing to Crowsnest.

O. M. Lavoie, Superintendent Montreal, Aug. 24, Quebec to Montreal.

T. A. Wilson, Superintendent, Smiths Falls, Ont., Aug. 24-25, Smiths Falls to Montreal; Oct. 31, Montreal to Ottawa.

H. J. Humphrey, Superintendent, Toronto, Aug. 25, Smiths Falls to North Toronto; Aug. 27-28, North Toronto to Smiths Falls.

H. B. Spencer, Superintendent, Ottawa, Aug. 28, Smiths Falls to Ottawa; Sept. 2, Ottawa to Montreal.

W. R. Boucher, Superintendent, Sudbury, Ont., Sept. 3-4, Chalk River to North Bay and Sault Ste. Marie! Oct. 17-18, Cartier to MacTier.

S. W. Crabbe, Superintendent, Schreiber, Ont., Sept. 8, Nipigon to Fort William; Oct. 11-12, Fort William to White River.

J. J. Horn, Superintendent, Kenora, Ont.; Sept. 8-9, Fort William to Winnipeg; Oct. 11, Winnipeg to Fort William.

T. R. Flett, Superintendent, Winnipeg, Sept. 10, Winnipeg to Minnedosa; Oct. 10, Brandon to Winnipeg.

R. Armstrong, Superintendent, Brandon, Man., Sept. 10-11, Minnedosa to Bredenbury; Oct. 10, Broadview to Brandon.

J. M. McKay, Superintendent, Saskatoon, Sask., Sept. 10-11, Bredenbury to Hardisty.

J. A. MacGregor, Superintendent, Edmonton, Alta., Sept. 11-12, Hardisty to Edmonton; Sept. 13, Edmonton to Red Deer.

G. J. Fox, Superintendent, Calgary, Alta., Sept. 13, Red Deer to Calgary; Sept. 17-18, Calgary to Field.

C. D. MacKintosh, Superintendent, Lethbridge, Alta., Sept. 15-16, Calgary to High River and return; Oct. 1-3, Crowsnest to Medicine Hat.

T. C. MacNabb, Superintendent, Revelstoke, B.C., Sept. 20-21, Field to Kamloops.

J. L. Jamieson, Superintendent, Vancouver, B.C., Sept. 21-22, Kamloops to Vancouver; Sept. 29, New Westminster to Spence's Bridge.

W. O. Miller, Superintendent, Nelson, B.C., Sept. 30-Oct. 1, Midway to Nelson.

C. S. Maharg, Superintendent, Cranbrook, B.C., Oct. 1-2, Kootenay Landing to Crowsnest.

J. M. MacArthur, Superintendent, Medicine Hat, Alta., Oct. 3, Medicine Hat to Swift Current.

A. Halkett, Superintendent, Moose Jaw, Sask., Oct. 3-4, Swift Current to Moose Jaw.

J. H. Chown, Superintendent, Regina, Sask., Oct. 4, Moose Jaw to Regina; Oct. 9-10, Qu'Appelle to Broadview.

W. C. Guthrie, Superintendent, Chapleau, Ont., Oct. 12, White River to Biscotasing; Oct. 17-18, Biscotasing to Cartier.

F. M. Rutter, Superintendent, Toronto, Oct. 18, MacTier to West Toronto.

R. W. Scott, Superintendent, Toronto, Oct. 18, West Toronto to Toronto.

A. Williams, Superintendent, London, Ont., Oct. 24, Windsor to North Toronto.

R. McAdam, Division Master Mechanic, Montreal, Aug. 24, Quebec to Montreal.

A. A. Sheppard, Division Master Mechanic, Smiths Falls, Ont., Aug. 25, Montreal to Smiths Falls; Sept. 2-3, Montreal to Chalk River; Oct. 27, Vaudreuil to Montreal; Oct. 31, Montreal to Ottawa.

A. J. Hills,
Assistant to President, Canadian National Rys., who represented the management, on the Prince of Wales' trip over the C.N.R. from Oba to Orient Bay, Ont., and during the Prince's fishing of the Nipigon River.

C. A. Wheeler, Master Mechanic, Quebec District, Aug. 24-25, Quebec to Smiths Falls; Aug. 28, Smiths Falls to Ottawa; Sept. 1, Ottawa to Montreal; Sept. 2-3, Montreal to Chalk River; Oct. 27, Vaudreuil to Montreal; Oct. 31, Montreal to Ottawa.

W. Borbridge, Master Mechanic, Ottawa, Aug. 28, Smiths Falls to Ottawa; Sept. 2, Ottawa to Montreal.

F. Ronaldson, Master Mechanic, Toronto, Aug. 25, Smiths Falls to North Toronto.

A. H. Binns, District Master Mechanic, Toronto, Aug. 25, Smiths Falls to North Toronto; Aug. 27, North Toronto to Smiths Falls.

T. Hambley, Master Mechanic, North Bay, Ont., Sept. 3-4, Chalk River to Sault Ste. Marie.

E. Freeman, Division Master Mechanic, Schreiber, Ont., Sept. 8, Nipigon to Fort William; Oct. 11-12, Fort William to White River.

W. Workman, Division Master Mechanic, Kenora, Ont., Sept. 8-9, Fort William to Winnipeg; Oct. 11, Winnipeg to Fort William.

J. C. Ironsides, Division Master Mechanic, Winnipeg, Sept. 10, Winnipeg to Minnedosa; Oct. 10, Brandon to Winnipeg.

A. West, Division Master Mechanic, Brandon, Man., Sept. 10-11, Minnedosa to Bredenbury; Oct. 10, Broadview to Brandon.

R. A. Jones, Division Master Mechanic, Saskatoon, Sask., Sept. 11, Bredenbury to Hardisty.

G. Moth, Division Master Mechanic, Edmonton, Alta., Sept. 11 to 13, Hardisty to Edmonton and Red Deer.

E. Lemieux, Division Master Mechanic, Calgary, Alta.; Sept. 13-18, Red Deer to Calgary, Calgary to High River and return, Calgary to Field.

G. H. Nowell, Division Master Mechanic, Revelstoke, B.C., Sept. 20-21, Field to Kamloops.

W. Evans, Division Master Mechanic, Vancouver, B.C., Sept. 21-22, Kamloops to Vancouver; Sept. 29, New Westminster to Spence's Bridge.

A. A. Brown, Division Master Mechanic, Nelson, B.C., Sept. 20-Oct. 1, Midway to Proctor; Oct. 1, Proctor to Kootenay Landing.

A. Smith, Division Master Mechanic, Cranbrook, B.C., Oct. 1-2, Kootenay Landing to Crowsnest.

G. Twist, Division Master Mechanic, Lethbridge, Alta., Oct. 3, Medicine Hat to Swift Current.

A. Peers, Division Master Mechanic, Moose Jaw, Sask., Oct. 3-4, Swift Current to Moose Jaw.

W. McPherson, Division Master Mechanic, Regina, Sask., Oct. 4, Moose Jaw to Broadview.

J. H. Brookes, Division Master Mechanic, Chapleau, Ont., Oct. 12, White River to Biscotasing; Oct. 17-18, Biscotasing to Cartier.

J. S. Allen, Division Master Mechanic, Sudbury, Ont., Oct. 17-18, Cartier to MacTier.

A. Maynes, Division Master Mechanic, Toronto, Oct. 18, MacTier to West Toronto.

C. Powers, Division Master Mechanic, Toronto, Oct. 18, West Toronto to Hamilton.

C. Gribbon, Division Master Mechanic, London, Ont., Oct. 24, Windsor to North Toronto.

The trips from Vancouver to Victoria, B.C., on Sept. 22, and from Victoria to Vancouver, Sept. 29, were made on the C.P.R. s.s. Princess Alice, J. W. Troup, Manager, B.C. Coast Steamship Service, representing the company.

At Penticton, Sept. 30, a steamboat and motor trip was made, visiting Kelowna and Vernon, the C.P.R. steamboat Sicamous being used on Okanagan Lake, and on Oct. 1 the royal train was sent by ferry and rail from Nelson to Kootenay Landing, and the party left Nelson, by C.P.R. steamboat Nasookin, for Kootenay Landing, calling at Balfour en route. Douglas Browne, Superintendent, B.C. Lake & River Steamships, C.P.R., was on the steamboats during the trips.

The Algoma Central & Hudson Bay Ry. was represented during the trip over its line from Sault Ste. Marie to Oba, Ont., on Sept. 4, by R. Home Smith, President, G. A. Montgomery, Vice President and General Manager, and R. S. McCormick, General Superintendent.

The Canadian National Rys. was represented during the trip over its line, from Oba to Orient Bay, Ont., on Sept. 4 and 5, and during the fishing and camping on the Nipigon River, Sept. 5 to 8, by A. J. Hills, Assistant to the President. The other officials of the company who travelled on the train from Oba to Orient Bay were: G. N. Goad, Superintendent, Hornepayne, Ont.; W. H. Long, General Car Foreman, Toronto, and W. G. Strachan, Road Foreman of Locomotives, Hornepayne. From Orient Bay, where the Prince left the train for his fishing trip, it was sent over the C.N.R. to Nipigon, and was afterwards returned to Cameron Falls, from which point it was backed up, over the Hydro Electric Power Commission of Ontario's spur line of about three-quarters of a mile, to within a few hundred yards of the head of the 2½ mile portage that has to be made in taking the trip to Nipigon. The water below Cameron Falls is uninteresting, and rough weather may be experienced on Lake Helen, where three members of a C.N.R. engineering party were drowned some time ago, so it was thought better to take the Prince's party out at Cameron Falls, instead of at Nipigon as intended originally. From Cameron Falls the train was run over the C.N.R. to Nipigon, where it was transferred to the C.P.R.

H. R. Charlton.
General Advertising Agent, G.T.R., who will represent that company during the Prince of Wales' trip over its lines in Ontario and Quebec.

Esquimalt & Nanaimo Ry. The following officials travelled on the train between Victoria and Qualicum: H. E. Beasley, General Superintendent; J. Goodfellow, Superintendent; R. A. Bainbridge, Engineer; W. Byrd, Master Mechanic.

The Grand Trunk Pacific Ry. will be represented during the trip over its line, from Regina to Edenwald, Sask., on Oct. 6, and from Edenwald to Qu'Appelle on Oct. 9, by I. A. Macpherson, Superintendent, Belville, Sask.

The Grand Trunk Ry. will be represented on the trips over its line on Oct. 18 to 23, from Hamilton to Niagara, Brantford, Guelph, Stratford, Woodstock, Chatham, London and Windsor, and on Oct. 25 to 27, from Toronto to Kingston, Brockville and Vaudreuil, by H. R. Charlton, General Advertising Agent. S. L. Trusler, Passenger Trainmaster, will accompany the train over the Ontario Lines, and R. E. Marks, Passenger Trainmaster, will accompany it over the Eastern Lines. The following superintendents will travel on it over their respective divisions: J. H. Gordon, Hamilton Division; R. H. Fish, Stratford Division; C. E. Forrester, London Division; J. C. Crombie, St. Thomas Division; J. D. McMillan, Belleville Division; J. J. Connelly, Montreal Division.

Canadian National Railways Earnings.

Approximate earnings for July, $7,657,402, and for 2 weeks ended Aug. 14, $3,702,567, against $5,733,299 and $3,219,878, respectively for same periods, 1918.

January	$ 6,744,018	$ 4,696,267
February	6,000,342	4,421,704
March	6,827,491	5,710,660
April	6,909,632	7,165,890
May	7,518,244	6,580,745
June	6,009,785	6,848,864
July	7,657,402	5,733,299
August	8,274,882	[illegible]
	$55,941,869	$49,433,471

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1919, compared with those of 1918:

	Gross	Expenses	Net	Increases or decreases
Jan.	$13,028,328	$11,474,816	$1,553,512	$ 387,519
Feb.	11,064,167	10,083,051	981,116	390,218

Timiskaming & Northern Ontario Railwaymen's Patriotic Association has contributed $99,446.40 to the Canadian Red Cross Society and the Canadian Patriotic Fund, exclusive of personal subscriptions by the commissioners and employes. This is the final total, the lists having been closed.

Traffic Orders by Board of Railway Commissioners.

Canadian Freight Classification and Express Classification for Canada.

General order 271, Sept. 10. Re Canadian freight classification and the express classification for Canada, and sec. 322 and 323 of the Railway Act, 1919, it is ordered as follows:

1. Any reissue of the Canadian freight classification, or of the express classification for Canada, or any supplement thereto, or any supplement to the issue of either now in force, shall be submitted in printed proof form for the board's approval before it is made effective.

2. Should such proposed reissue or supplement remove any goods from a lower to a higher class, or in any other way add to the cost of transportation of any goods, notice of the submission thereof shall be published by the applicant in the next two succeeding issues of The Canada Gazette, in the following form:

"Notice is hereby given that the .... will on the .... day of .... 19.., submit to the Board of Railway Commissioners for Canada, for its approval, the Canadian Freight Classification (or the Express Classification for Canada) no. .... (or Supplement no. .... to the Canadian Freight Classification no. ...., or to the Express Classification for Canada no. ....)."

3. (a) Unless, for special reasons, exemption be granted by the board, the following symbols shall be used in the said proof, and in the approved classification or supplement.

An asterisk, to denote an addition.

A large dot, to denote an increase in the previous rating, or charge, or cost of transportation.

A solid triangle, to denote a reduction in the previous rating, or charge, or cost of transportation.

A dagger, to denote any other change.

(b) Supplements shall show against each increase or reduction a reference to the previously approved item.

4. The application to the board shall be accompanied by—(a) Three copies of the said proof. (b) The reasons for proposed changes involving increased cost of transportation. (c) A copy of the notice furnished to the King's Printer for publication in The Canada Gazette.

5. One copy of the said proof and of the said notice for publication shall be furnished by the applicant to the following bodies, with the request that fully explained objections, if any, to proposed changes involving increased cost of transportation be filed by them with the Board of Railway Commissioners within 30 days from the receipt of the said proof and notice: Canadian Manufacturers' Association, Ontario Grocers' Guild. Manufacturers' Association of British Columbia, Vancouver, British Columbia Fruit Growers' Association of Ontario, Montreal Chamber of Commerce, Boards of Trade of Belleville, Ont.; Brandon, Man.; Brantford, Ont.; Brockville, Ont.; Calgary, Alta.; Chatham, Ont.; Collingwood, Ont.; Cornwall, Dnt.; Cornwall, Ont.; Edmonton, Alta.; Fort William, Ont.; Fredericton, N.B.; Galt, Ont.; Guelph, Ont.; Halifax, N.S.; Hamilton, Ont.; Kenora, Ont.; Kingston, Ont.; Kitchener, Ont.; Lethbridge, Alta.; London, Ont.; Medicine Hat, Alta.; Montreal, Que.; Nelson, B.C.; Ottawa, Ont.; Owen Sound, Ont.; Peterborough, Ont.; Port Arthur, Ont.; Preston, Ont.; Prince Albert, Sask.; Prince Rupert, B.C.; Quebec, Que.; Regina, Sask.; St. Catharines, Ont.; St. Hyacinthe, Que.; St. John, N.B.; St. Thomas, Ont.; Sarnia, Ont.; Saskatoon, Sask.; Sherbrooke, Que.; Stratford, Ont.; Three Rivers, Que.; Toronto, Ont.; Valleyfield, Que.; Vancouver, B.C.; Victoria, B.C.; Waterloo, Ont.; Windsor, Ont.; Winnipeg, Man., Woodstock, Ont., also, in the case of the freight classification, to the railway companies which are not members of the Canadian Freight Association.

6. Previous orders or regulations of the board conflicting herewith are rescinded.

27,717, Aug. 29. Approval of special tariff on cream in cans. See under "Among the Express Companies," on page 572 of this issue.

Carriers' Liability on Outbound Freight During Interswitching.

General order 272, Sept. 19. Re carriers' liability in connection with outbound freight traffic during interswitching operations: whereas, by order 7,562 (general order 41), dated July 15, 1909, the board prescribed conditions and limitations to be endorsed upon the forms of bill of lading therein approved for use in Canada; and it having developed that shippers and carriers are not always receiving the protection of the said conditions and limitations during the time when freight, in carloads, is being interswitched by the "terminal carrier" to the "line carrier" under the terms of the board's general interswitching order 252, Oct. 26, 1918; and it appearing to the board that such protection should be provided for, it is ordered that those terminal carriers that do not issue the bill of lading for the entire movement of such freight to its destination, and which are subject to the board's jurisdiction, shall give the shipper a local bill of lading on the appropriate form provided for in general order 41, covering the movement by interswitching service to the point of transfer to the line carrier that issues the bill of lading to the destination; or, if preferred, and in lieu thereof, shall give the shipper what is commonly known as an interline or switching ticket or receipt, which shall contain the words, "received subject to the conditions of the company's bill of lading, which are made a part hereof."

Increased Return Passenger Fares.

Assistant Chief Commissioner McLean gave the following judgment Sept. 9, as to the Toronto Board of Trade and the Border Chamber of Commerce, Windsor, Ont., complaint against the increased return passenger fares put into effect by the railways, Feb. 1, 1919:

"Canadian railways have for a considerable period provided round trip passenger rates at a reduction of one-sixth off the sum of the individual rates. This practice has been amended, effective Feb. 1, 1919, by limiting the reduction to 10%. After filing of complaints, answer and reply, the matter was set down for hearing. It has subsequently stood for further written submissions.

"The passenger rates practice involved developed, no doubt, as a means of building up traffic. In the case of round trips, between the points served by two or more lines of railway, the reduction from the sum of the rates held the traffic inbound to the line on which it had moved out. The practice, however, is general, not being limited to competitive situations. The board has approved standard passenger rates which are legally filed and published. The question is raised whether, this having been done, the board has power, in respect of traffic moving on said rates, to direct that a round trip rate shall enjoy a charge less than the sum held lawful where each portion of the journey is performed as an isolated unit, having no connection with a return.

"It is contended, on the one hand, that the round trip rate arrangement is a special rate arrangement, and that where such a rate arrangement has once been put in by a railway, the board has the same jurisdiction it has in regard to special rates generally. It was submitted in argument that the reduction from the sum of the rates was a concession which it was not obligatory on the part of the railways to give, and that, from the standpoint of principle, the railways would be within their legal rights in making no reduction. In substance, it was contended that the reduction on the round trip was in the nature of a privilege. Inferentially, this claims an analogy with the "privilege," e.g., of milling in transit and analogous arrangements, where the railway may initiate or terminate such an arrangement subject to the inhibitions against discrimination.

"The jurisdictional point involved is not free from difficulties. The Railway Act is silent on the question of round trip passenger rates. The special freight rates to which reference is made by way of analogy are concerned with a movement in one general direction. At the same time, the incidents attaching to some of these special rates, e.g., stop-off arrangements of various kinds, are matters which are not specifically set out in the Railway Act. It does not appear necessary, however, to pass on the jurisdictional matter. The main argument was directed to the merits.

"The railways contended that the amendment made was justified by increased costs. Reference was made to the freight rate increase allowed under order in council 1,863, and it was set out that the increases obtained thereunder fell short of the increased costs under the McAdoo award. Reference was made to the additional wage increases which have since been made. It was set out that the increase herein involved was so slight that even with it passenger traffic is "still far from bearing its adequate proportion of the added expenses of the railway companies." While there was contention as to the exact amount of traffic affected by round trip rates, it would appear from the statistics submitted, as to representative points, that they affected approximately one-third of the passenger movement. On this basis, the increase represents a diminution from a 16.6% reduction to a 10% reduction on one-third of the traffic.

"The material submitted as to costs both at the hearing and in written submissions is corroborative of what has been placed before the board in other connections. The material so submitted was subjected to a careful analysis and criticism by T. Marshall for the Toronto Board of Trade. Giving weight to the criticisms so advanced, it still appears that the railways have successfully borne the burden of proof placed on them and that the board would not be justified in disallowing the round trip arrangements herein involved."

In accordance with the foregoing judgment, order 26,791 was passed Sept. 13, dismissing the complaint.

Absorption of Switching Charges.

28,693. Aug. 15. Re application of the National Elevator Co., Winnipeg, for a ruling re absorption of switching charges by a railway company, in cases where a car of grain is shipped from the applicant's elevator at Port Arthur, on the Canadian National Rys., and then switched over to the C.P.R. and billed to Cartier for orders, the applicant paying a stop-off charge and then re-billing the car to Montreal or Quebec, or other common destination: Upon hearing the application at Ottawa, Oct. 29, 1918, in the presence of counsel for Canadian Pacific and the Canadian National Rys., and what was alleged, it is declared that, under the provisions of the tariff now in effect, grain consigned to Cartier "for orders," whence it is ordered to a final destination common to the Canadian Pacific and Canadian National Rys., or their connections, is entitled to the same absorption of interswitching charges as if it had been consigned through from Port Arthur or Fort William to its ultimate destination.

Demurrage on Grain at Keewatin.

28,708. Aug. 29. Re application of State Elevator Co., Winnipeg, for a refund of demurrage charges made by the C.P.R. on grain at Keewatin, Ont. Upon hearing the application at Winnipeg, Mar. 3, 1919, the Canadian Freight Association being represented, no one appearing for the applicant company, and what was alleged; and upon the report and recommendation of the board's Chief Traffic Clerk, it is ordered that the application be dismissed.

Commercial Travellers' Rates.

28,809, Sept. 20. Re order 27,718, Sept. 28, 1918, made upon the complaint of the Dominion Travellers' Association, the Northwestern Canada Travellers' Association of Montreal, and the Commercial Travellers' Association of Canada, Toronto, and suspending certain schedules of the Quebec, Montreal and Southern and the Napierville Junction Railways, cancelling reduced fares and special baggage allowance for commercial travellers: Upon hearing the matter at Ottawa, Oct. 16, 1918, the complainants, the Ontario commercial travellers, and the railway companies being represented at the hearing, and what was alleged; and upon reading the further submissions filed, it is ordered that the following schedules, cancelling reduced fares and special baggage allowance for commercial travellers, be disallowed, viz.:

Quebec, Montreal & Southern Ry., supplement 6 to C.R.C., 160; supplement 1 to C.R.C., 236; supplement 2 to C.R.C., 263.

Napierville Junction Ry., supplement 3 to C.R.C., 31; supplement 2 to C.R.C., 69; supplement 1 to C.R.C., 94.

Quebec Central Railway's Freight Tariff.

28,810. Sept. 22. Approving Quebec Central Ry.'s standard freight mileage tariff, C.R.C., 681.

Quebec Central Railway's Passenger Tariff.

28,811, Sept. 22. Granting application of Quebec Central Ry., under sec. 334 of the Railway Act, 1919, for approval of its standard passenger tariff, C.R.C., 174, on the basis of 3½c a mile.

Demurrage During Influenza Epidemic.

28,812, Sept. 17. The application of Imperial Oil Limited, of Sarnia, Ont., for a ruling in the matter of claims against the C.P.R. for a refund of demurrage charges which accrued during the epidemic of Spanish influenza, on a shipment detained at Shawinigan Falls: Upon hearing the application at Ottawa, Sept. 16, 1919, Imperial Oil Ltd., the Canadian Car Demurrage Bureau, and the C.P.R., being represented at the hearing, and what was alleged, it is ordered that the application be refused.

Milling in Transit Rules.

28,813, Sept. 18. Re complaint of Dominion Millers' Association and Canadian Manufacturers' Association against new milling in transit rules filed by the railway companies operating in Canada east of Lake Huron and the Detroit and St. Clair Rivers, to become effective Sept. 1: Upon hearing the complaint at Ottawa, Sept. 19, 1919, the complainants, the Montreal and Toronto Boards of Trade, the Grand Trunk, Canadian Pacific and Canadian National Railways, and the Canadian Freight Association being represented, it is ordered that the complaint be dismissed.

Grand Trunk Pacific Ry. Co. Defaults in Its Interest Payments.

The Secretary of the London, Eng., committee issued the following circular, Aug. 29:

"As you are no doubt aware, the Canadian Government took possession of the Grand Trunk Pacific Ry. some months back, by the appointment of the Minister of Railways as receiver of the undertaking, and in consequence the London committee of the G.T.P.R. Co., have no funds at their disposal out of which to defray the interest due on Sept. 1, upon the 4% debenture stock.

"The committee ask me to express their regret in having to make this announcement, but they feel that you ought to have notice of the position, as up to the present they have no information from Canada as to what arrangements, if any, the receiver is prepared to make for payment of the interest. The committee cannot call upon the Grand Trunk Ry. Co. of Canada, under the guarantee given by it, until it is ascertained whether the net revenue of that company for the year ending Dec. 31 next shows a surplus available for the purpose after payment of fixed charges."

English Railway Appointments—Chas. Addington has been appointed General Manager, Great Western Ry., succeeding Frank Potter, who died recently, after being in the company's service since 1869, and General Manager for 7 years. Mr. Addington has been in the company's service continuously for 36 years, except from 1899 to 1902, when he was Traffic Superintendent, Central London Ry. He was appointed Assistant General Manager, G.W.R. last spring, immediately previous to which he was Superintendent of the Line. F. J. C. Pole, heretofore Assistant to the General Manager, has been appointed Assistant General Manager, G.W.R. W. J. Grinling, Chief Traffic Manager, Great Northern Ry., has resigned after being in the company's service since 1871, and occupying his recent position since 1902.

Capreol Railway Y.M.C.A.—Tenders are reported to have been asked for the erection of a railway Y.M.C.A. building at Capreol, Ont., at an estimated cost of $75,000. The building was planned originally by the Canadian Northern Ry. and is said to have been approved by the Canadian National Rys. management.

Canadian Pacific Railway Construction, Betterments, Etc.

Chateau Frontenac Extension—A Quebec press report states that it is expected that work will be started early next spring upon the foundations for a new wing of the Chateau Frontenac at Quebec.

Three Rivers Station—A perspective view of the exterior of the station to be built at Three Rivers, Que., together with a plan of the ground floor lay out in contrast with the present station's layout were given in Canadian Railway and Marine World for September. A short general discription of the building was also given, and we are now enabled to give the following information as to the dimensions. The total length will be 127 ft., the width of the center block being 55 ft., and of the 2 wings, 35 ft. The central block will contain a general waiting room 50 x 70 ft., smoking room, ticket offices, news stand, women's waiting room, and lavatory accommodation. The two waiting rooms will be each 20 x 26 ft. The left wing will contain a buffet dining room, 56 x 32 ft., with seating capacity for 50, the kitchen being at the extreme end. The right wing will contain a baggage office and room 49 x 32 ft., and connected with this by a covered way will be the express room, 62 x 32 ft. The exterior is designed in the French chateau style. The building will have a concrete foundation, brick walls, reinforced concrete floors and roof, steel frame, main walls of Citadel, Quebec, brick, trimmed with Deschambault limestone, copper roof. The main waiting room walls will be marble wainscote and Caen stone or marble above tile floor. The lunch room and lavatories will be finished with marble dadoes and tile floors. The wood trimming generally will be red oak.

Place Viger Hotel—A Montreal press report states that the company proposes to rebuild the Place Viger Hotel, converting it into a 10 story building.

Wymark to Archive—A press report states that J. Sandgren, has arrived at Wymark, Sask., with his contracting outfit, and is preparing to start work on grading towards Archive, for 25 miles. J. Armstrong is reported to be making agreements with farmers along the route for men and teams. The general contract for the work was let to J. W. Stewart Construction Co., Vancouver, B.C.

Leader to Cantaur—A press report states surveys for a projected line from Leader, Sask., on the Swift Current-Empress-Bassano line, to the Bech Stach Lake, and thence to a junction with the same branch at Cantaur, Sask., have been completed, and that construction will be started at an early date. (Sept., pg. 489).

The Railways and Canals Department is reported to be undertaking a survey in survey in the neighborhood of Cardinal for the construction of a canal to take the place of the present system of canals between Cardinal and Cornwall. This work, it is stated, is to be undertaken, owing to the impossibility of accommodating Welland Canal size vessels farther down the river than Prescott on account of the size of the canal locks. The plan which is said to be under consideration, will do away with the locks at Cardinal, Morrisburg, Farran's Point and Cornwall, and will provide a new canal back from the river.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska—The U.S. House of Representatives on Sept. 6, voted an additional appropriation of $170,000,000 to complete the construction of the government railway from Seward to Fairbanks, Alaska. The original appropriation was $35,000,000, but the increased cost of labor and materials during the last five years has necessitated the additional expenditure. The main line is completed for 227 miles at one end, and for 106 miles at the other, with a gap of 138 miles between. The first section, with 32 miles of branch lines, serves the ports of Anchorage and Seward, with the interior settlements of Matanuska, Wasitla, Talkertua and the Mabanuska coal fields, while the second section, with 37 miles of branch lines, serves Fairbanks and Nenana, with their coal fields.

The present position of construction is 371 miles of line have track laid, and are being operated, and 34.5 miles of sidings are in place. Construction is in progress in various stages on other portions, but there is a gap between miles 265 and 365 from Seward, upon which no work has been done. (Aug., pg. 431).

Athabasca, Grande Prairie, Fort Vermilion Ry.—The failure of the application to the Dominion Parliament for the incorporation of a company with this title at the first session this year, was recalled in the Senate, Sept. 4, when Sir James Lougheed stated that an order in council, dated July 1, authorized the cancellation of 8 coal mining leases dated Aug. 29 and 30, 1918, issued in favor of A. E. Austin, W. Barnett, R. W. McClung, A. H. Weir, C. W. Coppock, G. E. H. Hauff, J. A. Leask and W. R. Gouin, all of which had been assigned Jan. 27, 1919, to C. A. Barnard, K.C., Montreal, and A. T. Shillington, M.D., Ottawa. The leases had accordingly been cancelled, and the rights described in the same had been reserved to the crown. C. A. Barnard, is a member of the legal firm who acted for the promoters of the company, among whom was Dr. Shillington. (Aug., 1919, pg. [illegible]).

Calgary South Western Ry.—We are officially advised that it has been decided not to do any construction on this projected railway from Calgary, to the coal fields in Sheep Creek district of Alberta at present. Should the conditions then warrant it, construction may be started early in 1920. (July, pg. 381).

Dolly Varden Mines Ry.—A Vancouver, B.C., press report of Sept. 3, states that the railway from the Dolly Varden and Wolfe mines in the Kitsault River valley to the sea coast on Alice Arm, B.C., 18 miles, has been completed and was opened for traffic Aug. 28. The railway is to be used mainly for mineral traffic. The work has been done by the Taylor Engineering Co., which took over the entire property early in the year. (Aug., pg. 431).

Edmonton, Dunvegan and British Columbia Ry.—Application is being made to the Board of Railway Commissioners for a recommendation to the Dominion Government to sanction an agreement entered into between the company and the Alberta and Great Waterways Ry., [illegible] 1919. The Edmonton, Alta., Board of Trade's council is giving consideration, [illegible] a special committee, [illegible] and prospects of the E. D. and B.C.R., and its subsidiaries, the Alberta and Great Waterways Ry. and the Canada Central Ry. The physical condition of the E.D. and B.C.R., including its branch to the Grande Prairie District, is unsatisfactory and the committee has been in consultation with the Alberta Government as to steps to be taken to have it put in condition for operation. A solution of the problem has not yet been received, but it was reported, Sept. 10, that a certain amount of work was being done on the worst parts of the line, to ensure safe operation, and that the additional rolling stock and motive power necessary would be obtained from other railway companies.

The question of the extension of the line to Dawson, Yukon, has been considered, on the invitation of the Dawson people, but the committee declined to express any opinion upon it, until the line from Edmonton to the Grand Prairie district is put in good condition. (Aug., pg. 431).

Esquimalt and Nanaimo Ry.—We are officially advised with respect to a recent press report that tenders would shortly be invited for the construction of a 12 mile extension from near Alberni towards the Great Central Lake, that the proposed extension will start from the present line at a point between Bainbridge and the Alberni terminus. The route has been located as far as Great Central Lake, about 12 miles; the surveys having just been completed. No date has been fixed for starting construction. The extension will be built to the same standard as the existing line to Alberni. When completed the extension will form part of any line to be built in the future to Ucluelet and Clayoquot, in one direction and to Comox Lake in another. No construction is contemplated at present beyond Great Central Lake. (Sept., pg. 491).

Grand Trunk Ry.—A press report states that negotiations are in progress for the erection of a coal terminal at Prescott, Ont. It is stated that it is proposed to operate a car ferry from Ogdensburg, N.Y., to Prescott, to carry coal and other freight cars over the river, and distribute them thence to eastern Ontario points. (Sept., pg. 491).

Kettle Valley Ry.—A recent press report states that J. J. Warren, President and General Manager, and A. McCulloch, Chief Engineer and General Superintendent, have completed an inspection of the proposed route for an extension of the line southerly, and that it is likely that construction will be started in 1920. (Sept., pg. 491).

Newfoundland Railway Extension—A press report states "it is understood that a railway will be constructed from Port aux Basques to Curling, Nfld., 130 miles." Port aux Basques is the terminus of the Reid Newfoundland Ry., whence steamship connection is maintained with Sydney, N.S., and Curling is a station on the line at mile 406 from St. John's. The mileage of Port aux Basques from St. John's is 546, the present railway distance between that point and Curling being 140 miles.

Pacific Great Eastern Ry.—A. F. Proctor, Chief Engineer, returned to Victoria, B.C., recently, after having completed an inspection trip over the line. He is reported to have said that track had been laid at the line of his visit to within 19 miles of Williams Lake, townsite and that it was expected to reach that place with the track by Sept. 15. This is expected to be the extent of tracklaying work this year. Beyond Williams Lake a gang is putting in the foundations for the bridge over Deep Creek, a structure which is estimated to cost $500,000. This work will be completed early in 1920, when track will probably be laid to the Fraser River at a point whence navigation is open to Prince George. (Sept., pg. 491).

Pas, Man., Northwesterly—A Winnipeg press of Sept. 25 stated that the Premier of Manitoba, on his return from Ottawa, announced that he had met with considerable success in impressing the Dominion ministers with the necessity of providing railway connection with the mining district northerly from Pas, Man. The projected line would be about 75 miles long, and it has been reported from Winnipeg that in the event of the Dominion Government declining to build the line the Manitoba Government would consider the feasibility of constructing it. This is probably the same line a project for the construction of which was submitted to the Canadian National Rys. directors in March, by the Flin Flan Mining Syndicate.

Quebec and Saguenay Ry.—We are officially advised that during this year about 30 miles of track has been laid with steel rails, and that its ballasting has been completed. (Sept., pg. 491).

The St. John and Quebec Ry. is now completed and in operation between Centerville and Westfield, N.B., has a total length of 158 miles, and is reported to have cost approximately $7,400,000. The most important piece of work on the line from an engineering standpoint was the rock cut at Nerepis, which cost about $1,500,000. The gradient is 0.4% to Westfield, the junction with the C.P.R., over which the through trains are operated into St. John. The gradient on the C.P.R. section operated over is 1%, and the length of the section is 14 miles. (Sept., pg. 491).

Algoma Central and Hudson Bay Ry. and Algoma Eastern Ry. Reports.

The Lake Superior Corporation director's report for the year ended June 30, deals with the operation of the Algoma Central and Hudson Bay Ry., and the Algoma Eastern Ry., as follows: The Algoma Central & Hudson Bay Ry. net earnings for the year, after depreciation, were $263,293, against $439,218 in the previous year. The decrease was largely due to falling off in freight traffic which, prior to the armistice, had consisted largely of munitions and raw materials for war supplies. Industrial development and settlement is proceeding along the line and should provide additional revenue.

The Algoma Eastern Ry. shows a deficiency for the year of $31,076, against a deficiency for the previous year of $130,615. Temporary shut-down in mineral production along the line decreased the earnings, but these operations are to be immediately resumed.

A committee of directors visited London in July and reached a tentative agreement with the Algoma Central Ry., and Algoma Central Terminals bondholders committee with a view to settling the Lake Superior Corporation's obligations under its guarantee of principal and interest. Full interest is being paid on the corporation's income bonds.

Re-employment of Returned Soldiers by Canadian Pacific Railway.

The re-employment of returned soldiers has been carried out by the C.P.R. so whole-heartedly that, according to the official records up to the end of August, actually more returned soldiers have been given employment than left the company for service overseas. The figures are as follows:

Total reported as joining the army	10,538
Dead	1,000
Wounded	1,952
Re-employed in the service	5,024
Other soldiers given employment	5,543
Total soldiers given employment to date	10,567

In finding employment for returned soldiers, the C.P.R. has found by experience that in most cases it is advisable to reinstate them in the same department as that in which they worked previous to enlistment. The freight handler, who has ambitions to become a dining car waiter, is not encouraged to change his vocation unless he can prove that he learned some thing about waiting, for instance, at an officers' mess during his military life. His military experience has probably made him a better man than before for handling freight, but has not qualified him for the skilled trade of a dining car waiter. Baggagemen who have served in the army come back as a rule all the better for their experience, but the army training has not qualified them to be sleeping car conductors or ticket clerks, and if they prove to be misfits at a new job the only result is friction and discontent. The general experience, however, is that the normal returned man who goes back to his old or a similar job is all right, indeed is often improved by the discipline and teamwork which he has learnt in the army. The C.P.R.'s policy is to find a position for a returned man at least as good as the position given up, and this policy has been carried out in the higher ranks of the service as well as in the lower ranks. The following are examples:

T. S. Acheson, who was General Agricultural Agent at Winnipeg, enlisted in Oct., 1915, and was re-employed in the same capacity Jan. 1, 1919.

G. W. Curtis, who was Industrial Agent at Montreal, enlisted in Nov., 1916, and was re-employed Jan. 1, 1919, in the same capacity.

M. L. Duffy, who was Chief Clerk, Freight Department, London, Eng., enlisted October, 1914, and was re-employed Mar. 1, 1919, as Agent at Glasgow.

F. A. Gascoigne, who was Superintendent of Car Service, Montreal, enlisted July, 1915, and resumed duty as Secretary-Treasurer, Canadian Pacific Ocean Services Ltd., Montreal, Oct., 1918. He is now Lieut.-Col. Gascoigne, D.S.O.

Gerald Hiam, who was District Freight Agent at Fort William, enlisted in June, 1915, and returned to duty Mar. 15, 1919, as District Freight Agent, at Cleveland, Ohio.

W. M. Kirkpatrick, who was Assistant Freight Traffic Manager, at Montreal, and enlisted in Sept., 1915, resumed duty Feb. 1, 1919, as Assistant Freight Traffic Manager at Winnipeg. He is now Major Kirkpatrick, M.C.

T. M. Leask, who was Chief Surgeon, Moose Jaw, Sask., enlisted in Feb., 1916, and resumed duty as Chief Medical Officer at Moose Jaw, June 1, 1919.

B. H. Muckleston, who was Division Engineer, Natural Resources Department, Calgary, Alta., enlisted in April, 1916, and resumed duty, as Division Engineer, Mar. 17, 1919.

G. G. Ommanney, who was Special Assistant Engineer, Montreal, enlisted in Aug., 1915, and resumed duty as Assistant Engineer, Chief Engineer's Department, Montreal, July, 1919.

L. C. Ord, who was Assistant Works Manager, Angus shops, Montreal, enlisted in Sept., 1915, and resumed duty in the same capacity in May, 1919.

C. W. P. Ramsey, who was Engineer of Construction, Montreal, and who took command of the Canadian Overseas Railway Construction Corps in Feb., 1915, resumed duty as Relieving Superintendent on Eastern Lines in Mar., 1919. He is now Col. Ramsey, C.M.G.

M. J. Robertson, who was Assistant to Manager, Real Estate Department, Montreal, enlisted in June, 1916, and returned to duty in his former position in Mar., 1919.

H. B. Yewdall, who was Purchasing Agent, Right of Way Department, Winnipeg, enlisted in Nov., 1914, and resumed his former position in June, 1919.

The British Commander in Chief's Special Train.

Owing to the abolition of censorship, the following information is now available: On April 10, 1917, the London and North Western Ry. of England, was asked to provide a train of 10 cars for the Commander in Chief of the British Army and his staff in France. Five cars left Wolverton on May 5, and the remaining five on May 12, so that the complete train of 10 cars was provided in a month from the date of the order. A further request for 4 additional cars was received later, and these were fitted up and sent out on July 20, 1917.

Car 1 comprised a dressing-room, bedroom and sitting room for the Commander in Chief; no. 2 a bedroom, bathroom and office for the Chief of Staff and his assistants; nos. 3, 4, 5 and 6 provided sleeping and office accommodation generally. No. 6 had an assembly room, and was placed next to the officers' mess car, no. 7. No. 8 was the kitchen car, and this also contained the electric lighting set and accumulator room. No. 9 was a car for officers' orderlies, servants, etc. No. 10 provided more sleeping accommodation, chiefly for junior officers. No. 11 gave a large office, and an officers' bed and bathroom. No. 12 was a telegraph and telephone vehicle. No. 13 was a stores van, and in this was fitted a small locomotive boiler for providing steam to heat the train when standing. No. 14 was an ordinary brake van for stores and other impedimenta. With the exception of the telephone and the two brake vans, the whole of the cars were converted from 42 ft. x 8½ ft. bogie picnic saloons taken from stock, and so far as lights and doors were concerned, lent themselves very well to the scheme without much structural alteration.

The train was electrically lighted by a petrol driven lighting set, steam heated by the locomotive when running and by a boiler fitted in the brake and stores car when standing, and was fitted with Westinghouse brakes. The telegraph and telephone car was fitted up with the necessary instruments, etc., by the General Post Office Engineering staff, but the vehicle itself and all furniture, counters, etc., were provided by the railway. There was telephone and bell communication throughout the train, and means were provided and cable carried on the telephone car for connecting up to any telegraph and telephone system in proximity to the train.

The interior painting was principally white enamel, while the exterior was finished off in lead color. Ventilation was studied, and there is an ample supply of fans and roof ventilators, while all the drop lights were fitted with louvres and gauze that could be used in the opening when lights were dropped.—Railway Magazine.

Arm the Railway Mail Clerks.

Dispatches about the robbery of the Ocean Limited on the Canadian National Rys., 25 miles below Levis, indicate that $100,000 was stolen. It is stated that the Postoffice Department regulations forbid mail clerks from carrying arms of any kind, and that the only weapon they had when attacked was a penknife. Such an improvident regulation ought to be rescinded at once. The railway clerks are entrusted every day with large sums of money, and important and negotiable documents, and they ought to be provided with the means of defending their trust. Bank clerks, express messengers, and others in charge of valuables are well armed for such emergencies, though the fact seems to be forgotten sometimes. The courage of the bank manager at Agincourt, near Toronto, and his woman assistant recently, in fighting off two burglars, will remind the underworld for many a day of the danger they run in attacking these institutions. On the other hand, the Postoffice Department's announcement that the railway mail clerks are unarmed will invite another attack, particularly when it is added that the amount carried on that train frequently runs up to $200,000—Toronto Globe.

Coal Shipments From United States—The Canadian Railway War Board has issued the following circular:—Reports received by the board indicate that the shipment of coal from mines in the United States is being reduced as a result of insufficient car supply. Any serious shortage in the output of coal will mean a corresponding reduction in the amount of fuel shipped on Canadian orders. Canadian consumers, including both the public and the railways, can assist in avoiding or reducing the anticipated fuel shortage by eliminating all unnecessary delay in the handling of coal cars. The railways are requested, therefore, to bring to the notice of all consignees concerned the vital importance of unloading cars within the shortest possible space of time. Hopper or self-clearing cars must, immediately upon release, be returned empty to the United States lines designated by existing orders of the U.S. Railroad Administration. Flat bottom cars may be used for return loading to U.S. points in accordance with current instructions when such loading will not involve undue delay.

The Caraquet and Gulf Shore Ry., has asked the Dominion Government to disallow an act passed at the New Brunswick Legislature's last session, ordering the making of certain repairs and the provision of an adequate train service.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has ordered 1 van, 29 ft. long, from its Winnipeg shops.

The Canadian Car & Foundry Co. has received an order for 15 car underframes and trucks from Bliss, Dallett & Co., New York, for Dorado Extension Ry., a European company.

The C.P.R., between Aug. 14 and Sept. 17, received 7 steel baggage and express cars, 70 ft. long, 1 steel tourist car, 6 freight refrigerator cars and 4 Pacific type locomotives from its Angus shops, Montreal.

The G.T.R., between July 11 and Sept. 11, received one switching locomotive from its Montreal shops, completing an order for 20 and 44 steel frame box cars, 2 steel frame stock cars and 9 all steel mail cars from Canadian Car & Foundry Co.

The National Steel Car Co. has received an order from the Government of Jamaica for 20 box cars, 30 tons capacity each, and delivered, between Aug. 14 and Sept. 12, 146 stock cars and 96 box cars to Canadian National Rys., and continued deliveries of railway material to the Federated Malay States Government Rys., the Paris Lyon, and Mediterranean, and the Midi Rys. (France).

The Canadian Car & Foundry Co., between Aug. 15 and Sept. 23, delivered 10 tourist car frames, completing an order for 30, and completed 20 tourist cars at its Montreal shops, and 213 stock cars at its Amherst, N.S. shops for Canadian National Rys., 42 box cars and 9 hopper cars for the Grand Trunk Ry., and 441 repaired cars, out of an order for 1,500 repaired cars, for Grand Trunk Pacific Ry.

The 44 box cars which the G.T.R. has received from Canadian Car & Foundry Co. are single sheathed, with steel superstructure and underframe, outside metal roof, friction draft gear, and Westinghouse K.C., 8 x 12 air brake, and the 2 stock cars also received from Canadian Car & Foundry Co., are open single sheathed with inside metal roof. The general dimensions of both types are:

Length inside of car	36 ft.
Length over end sills	37 ft. 2½ in.
Length over striking plate	37 ft. 11½ in.
Length center to center of bolster	26 ft. 10 in.
Length center of bolster [illegible] to end sill	5 ft. 2¼ in.
Width inside [illegible]	8 ft. 6½ in.
Width over side sills	8 ft. 9½ in.
Width over eaves	8 ft. 11¾ in.
Width of door opening	6 ft.
Height from [illegible] car	8 ft.
Height rail to center of coupler	2 ft. 10½ in.
Height rail to [illegible]	3 ft. 3¼ in.
Height rail to top of [illegible]	4 ft. 1 in.
Height rail to eaves	12 ft. 4 in.
Height rail to top of running board	13 ft. 11½ in.
Height rail to top of brakemast	1[illegible] ft. 11 in.
Height of door	7 ft. 7 15-16 in.

The 9 mail cars which the G.T.R. is having built by Canadian Car & Foundry Co. will be of the 6 wheel cast steel truck type with M.C.B. axles 5 x 9 in., and Simplex type of clasp brake; underframes of the fish belly type, center sills, bolsters and crossbearers of pressed steel, steel platform castings and pressed steel floor beams; superstructure of steel plate reinforced with pressed channel posts and special rolled belt rail; wood roof [illegible] canvas for upper and lower decks; Westinghouse automatic air brakes with hand brake at each end; Safety Car Heating & Lighting Co.'s electric lighting system with body hung generators; Vapor Car Heating Co.'s heating system, with an emergency stove; Mudge peerless ventilating system. All the interior fittings, are in accordance with the Canadian railway mail service specifications for mail cars. Following are the chief dimensions:

Length over couplers	63 ft. 7½ in.
Length over end sills	60 ft. 10 in.
Width over side sills	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to eaves	11 ft. 2½ in.
Height from rail to top of roof	14 ft. 1½ in.

The 9 dining cars which Canadian National Rys. have on order with Canadian Car & Foundry Co., will be of steel throughout, except the interior, which will be of quarter sawn oak, and the roof, which will be of poplar, with canvas for upper and lower decks. The steel underframe will be with center sill of the built up fish belly type, with pressed steel bolster and cross bearer, steel platform castings, with pressed steel floor beams. The braking system will comprise Westinghouse automatic air brakes type L.N. 18-12, with hand brakes at each end, one being operated from the inside and the other from the outside. The cars will be equipped with electric lighting system, with body hung generators, air pressure water raising system, Mudge peerless ventilating system, with one exhaust fan and a hurricane ventilator in the kitchen. Following are the chief dimensions:

Length over end sills	73 ft. 6 in.
Width over side sills	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Length of car coupled	81 ft. 10½ in.
Truck centers	57 ft. 6 in.
Truck wheel base	11 ft.
Total wheel base	68 ft. 6 in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to eaves	11 ft. 2¼ in.
Height from rail to top of roof	14 ft. 1½ in.

The 20 mail cars which Canadian National Rys. are having built by Canadian Car & Foundry Co., will be of steel throughout except the roof and interior fittings. The trucks will be of the 6 wheel type of cast steel with 5 x 9 in. M.C.B. axles and Simplex clasp brake. The underframe will be of the built up fish belly type center sills, with bolsters and cross bearers of pressed steel. Platform castings will be of steel with pressed steel floor beams. The superstructure will be of steel plate reinforced with pressed steel posts and special rolled shape belt rail. The roof will be of wood with canvas roof for upper and lower decks. Westinghouse automatic air brake with hand brake at each ends will be supplied, and the lighting will be the United States Heating and Lighting Co.'s system with body hung generators. Mudge peerless ventilators will be used, and all interior fittings will be in accordance with the requirements of the Canadian railway mail service specification for mail cars. Following are the chief dimensions:

Length over end sill	73 ft. 6 in.
Width over side sill	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to eaves	11 ft. 2½ in.
Height from rail to top of roof	14 ft. 1½ in.

The 20 first class passenger cars which Canadian National Rys. has on order with Canadian Car & Foundry Co., will be of steel throughout except interior finish and roof. The steel underframes will have center sill of the built up fish belly type with pressed steel bolsters and cross bearers; platform castings of steel and pressed steel floor beams. The vestibule will be of the wide type with 33 in. steps at each end of the car, Westinghouse air brakes with hand brakes at both ends will be supplied, and the Safety Car Heating and Lighting Co.'s system of electric lighting with body hung generators, and the Vapor Car Heating Co.'s duplex coil hot water heating system with thermostat control, will be used. Gravity water system with other well tanks will be installed, also Mudge peerless ventilators. The seats in the general section will be upholstered in standard plush, and in the smoking room in leather. Following are the chief dimensions:

Length over end sill	73 ft. 6 in.
Width over side sill	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Length of car coupled	81 ft. 10½ in.
Truck center	57 ft. 6 in.
Truck wheel base	11 ft.
Total wheel base	68 ft. 6 in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to eaves	11 ft. 2¼ in.
Height from rail to top of roof	14 ft. 1½ in.

The 18 sleeping cars which Canadian National Rys. have ordered from Canadian Car & Foundry Co., are being built under the general scheme of standardization, adopted recently for passenger car equipment by the C.N.R., details of which have been given in previous issues. The construction will be of steel throughout, except the interior and the roof, the former being of figured mahogany, with small marquetry design on the berth fronts only, and the latter will be of wood, with canvas for upper and lower decks. The steel underframe will be of steel, with center sill of the built up fish belly type, with pressed steel bolster and cross bearer, steel platform castings and pressed steel floor beams, and wide vestibule with 33 in. steps at each end of the car. Westinghouse automatic air brakes, with hand brakes at both ends, will be supplied, also an electric lighting system, with body hung generators, Vapor Car Heating Co.'s duplex coil hot water heating system with thermostat control, and air pressure water tanks. The water for washstands will be heated by steam, controlled by the temperature regulator. The berth light switches and push buttons will all be arranged with radiant caps, making them visible in the dark, and the cars will be equipped with floor lamps, lighting the passage way at night for the convenience of passengers. Mudge peerless ventilators and also one exhaust fan will be installed. Following are the chief dimensions:

Length over end sill	73 ft. 6 in.
Width over side sill	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Length of car coupled	81 ft. 10½ in.
Truck centers	57 ft. 6 in.
Truck wheel base	11 ft.
Total wheel base	68 ft. 6 in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to eaves	11 ft. 2¼ in.
Height from rail to top of roof	14 ft. 1½ in.

The 13 observation cars which Canadian National Rys. has on order with the Canadian Car & Foundry Co. will be of steel throughout except the interior, which will be figured mahogany and the roof will be of poplar with canvas roofing for upper and lower decks. The cars will be arranged with four compartments, one drawing room, one buffet, and one observation room, 25 ft. 2¾ in. long. The trucks will be of the 6 wheel type of cast steel with 5 x 9 in. axles and Simplex clasp brake. The underframe will be of steel throughout, center sills of built up fish belly type with pressed steel bolsters and cross bearers, steel platform, castings and pressed steel floor beam. There will be a wide type vestibule at one end and observation platform at the other end, with steps 3 ft. wide and with special design of platform railing, which will be fitted with C.N.R. standard illuminated end sign. Westinghouse automatic air brakes will be supplied with hand brakes at both ends. The electric light system will be the Safety Car Heating & Lighting Co.'s system with body hung generators, and the heating will be by the Vapor Car Heating Co.'s duplex coil hot water system with thermostat control. The cars will be equipped with air pressure, water raising system, and the hot water, which will be heated by steam will be controlled by a temperature regulator. Mudge peerless ventilators will be used for ventilation. The upholstering in the compartment will be in friezette and the cars in the observation room will be upholstered in Spanish leather. Following are the chief dimensions:

Length over end sills	73 ft. 6 in.
Length of car coupled	82 ft. 1½ in.
Truck centers	57 ft. 6 in.
Truck wheel base	11 ft.
Total wheel base	668 ft. 6 in.
Width over side sill	9 ft. 9⅝ in.
Width at eaves	10 ft. 2¼ in.
Height from rail to side sill	3 ft. 7⅝ in.
Height from rail to top of roof	14 ft. 1½ in.

Aerial Transportation Notes.

A. Baddeck, N.S., press report states that a hydroplane built there under the direction of Dr. Graham Bell, made a speed of 71 miles an hour on a recent test.

An aerial survey party, under Capt. Owen, is reported to have been landed on the Labrador shore, by the steamship Granville, which returned to Halifax, Sept. 7.

The British Columbia Department of Lands is reported to have had photographic survey of the head waters of Harris Creek, near Vernon, B.C., made by means of an aeroplane.

In Mar., 1918, the Liberty motor developed 432 h.p. for a weight of 808 lb., or 1.86 lb. per h.p. At present, the Liberty motor is developing a maximum of 450 h.p. for a weight of 825 lb., or 1.83 lb. per h.p.

The average consumption of fuel decreased from about 0.8 lb. per h.p. in 1903 to 0.55 lb. in 1918, and for the Liberty engine to 0.50 lb. The present consumption is about 0.46 lb. per h.p.

The dirigible R-33, sister ship to the airship which made the round trip between England and the United States recently, has completed a trip over the continent, visiting Holland, France and Belgium. The passengers were people interested in promoting commercial air navigation.

The Northern Canadian Traders Ltd., is being organized at Ottawa, with a capital of $75,000 to explore and establish trading posts in the north lands of Canada, particularly in Ungava. E. L. Janney, formerly of the R.A.F., and others in Ottawa, are reported to be interested.

Mayor Gray of Winnipeg, is reported to have expressed the opinion that within the next 18 months an aerial mail and passenger service will be provided for the city, and that the question whether the Dominion Government or the city should provide the air docks will have to be given serious consideration in the near future.

A London, Eng., cable states that a committee of leading financial representatives has been appointed to discuss with the Imperial Air Ministry, the ultimate disposal of government air ships, the use of government aerodromes, and the extent of government assistance to be given for the development of commercial flying.

A New York press dispatch of Sept. 21 said that Carl Riddick a former member of the United States aerial air service, had left for Toronto to complete plans for the establishment of a daily passenger and mail aerial service between Toronto and New York, and that he intended to buy a plane in Toronto with which to inaugurate the international service.

The route of the New York-Toronto and return aeroplane race carried out recently, was across Lake Ontario and on to Buffalo, thence to Syracuse and Albany, and thence to Moncton on Long Island, N.Y. The fastest trip was made in 564¼ minutes, by a Vought, VE-7 training plane, manned by Lieut. B. W. Maynard, and Major R. W. Schreider, of the U.S. army. According to regulations, these officers cannot accept the $10,000 prize, was was consequently awarded to a Curtis JN-4 plane, piloted by R. H. Depew, a civilian.

The United States National Advisory Committee for Aeronautics has issued the development in airplans which has been made since 1903. The first man carrying airplane flights were made in Dec., 1903, with the Wright Bros. engine, developing 12 h.p. and weighing 152 lb., or 12.7 lb. per h.p. In 1910, the average horsepower for aeronautic engines had increased to 54, and the weight had decreased to 5.7 lb. per h.p. After another seven years, in 1917, the average power output had advanced to 243 h.p., and the weight had decreased to 2.8 lb. per h.p.

Under the authority of the Act to Authorize the Appointment of an Air Board for the Control of Aeronautics, passed at the Dominion Parliament's first session this year, the following were appointed members of the Air Board, without salary: Hon. A. L. Sifton, Minister of Customs and Inland Revenue, Chairman; Col. O. M. Biggar, Judge Advocate General, Militia Department, Vice Chairman; Hon. C. C. Ballantyne, Minister of Marine and Naval Service; Hon. S. C. Mewburn, Minister of Militia; R. M. Coulter, Deputy Postmaster General; J. A. Wilson, Director of Stores, Naval Service Department; E. S. Busby, Chief Inspector, Customs and Inland Revenue Departments.

Confidential Information Not to Be Disclosed.—The Quebec Superior Courts decided recently that E. W. Beatty, K.C., President, C.P.R., was not in contempt in declining to answer questions put to him by a commission appointed to take evidence in Canada in a munitions case now before United States courts, the answering of which would involve the giving of confidential information which came into his possession as General Counsel, C.P.R., in 1915.

Steel Freight Cars for British Railway.—Cammell, Laird & Co., Sheffield, Eng., are reported to have acquired from the Imperial Government the ordnance factory operated during the war at Nottingham, and to be about to adopt it for building steel freight cars.

Grand Trunk Pacific Railway Operation by Receiver.

During the House of Commons current session, E. W. Tobin, M.P., for Richmond and Wolfe, Que., asked the following questions:

"1. Is the Grand Trunk Pacific Ry. still being operated by Hon. J. D. Reid, Minister of Railways and Canals, in his capacity of receiver?

"2. If so, in virtue of what authority was he so appointed?

"3. If by order in council, is it the intention of the government to introduce legislation during the present session to confirm the said order in council?"

The Minister of Railways, Hon. J. D. Reid, replied as follows:

"1. Yes.

"2. Order in council 517, dated Mar. 7, 1919, as amended by order in council 547 dated Mar. 13, 1919, and ratified and confirmed by act of parliament passed June 6, 1919, chap. 22, Statues of Canada, 1919.

"3. Already confirmed by above mentioned act."

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—There has been filed with the Secretary of State at Ottawa, duplicate original of collateral trust agreement dated Aug. 1, made between the C.N.R. Co. and Central Union Trust Co. of New York, securing an issue of 66 collateral trust gold notes.

Cumberland Ry. and Coal Co.—The National Trust Co., Montreal, recently invited proposals for the sale of 5% first mortgage bonds maturing Oct. 1, 1940, of the Cumberland Ry. and Coal Co., to be paid for by $22,782.04 lying at the credit of the sinking fund under the terms of the trust deed of Oct., 1910.

Grand Trunk Pacific Ry.—The annual meeting of shareholders called to be held in Montreal, Sept. 16, was adjourned until further notice.

Timiskaming & Northern Ontario Ry.

	June, 1919	June, 1918
Passenger earnings	$78,793.85	$54,149.64
Freight earnings	167,977.65	[illegible]
Total earnings	246,771.50	[illegible]

Hudson Bay Enquiry.—The Senate on Sept. 5, on motion of Hon. G. W. Fowler, appointed a committee to take evidence and report at the current session upon the navigability and fishery resources of Hudson Bay and Strait, and upon the character of the ports of Hudson Bay with regard to their fitness as railway terminals. The committee consists of Senators Bostock, Casgrain, Dandurand, Daniel, De Veber, Fowler, Lougheed, Michener, Schaffner, Sharpe, Watson and Willoughby. A similar committee was appointed during the 1918-19 session, but although a considerable volume of evidence was taken, the session came to a termination before the committee completed its work. A suggestion was made, but not acted upon, that the committee be authorized to continue its work after the close of the session and to make a report when ready. The present committee will have before it the work done by its predecessor.

The Board of Grain Supervisors for Canada, has issued notice that it will conclude its operations at an early date and close up all financial matters in which it is concerned. Accounts should be sent to the Secretary, 325 Grain Exchange Building, Winnipeg, before Nov. 1.

Mainly About Railway People Throughout Canada.

J. E. Armstrong, M.P., for East Lambton, Ont., was re-elected chairman of the House of Commons' committee on railways, canals and telegraph lines at the current session.

W. R. Baker, C.V.O., ex-Secretary, C.P.R., and Mrs. Baker, expect to leave Montreal for Europe shortly.

E. W. Beatty, President, C.P.R., has given $10,000 to assist in paying off the Vancouver General Hospital's debt. He has taken A. E. Holt's house, 570 Pine Ave. West, Montreal, for the winter. On Oct. 15 he will be installed as Chancellor of Queen's University, Kingston, Ont.

Lady Bury, wife of Sir Geo. Bury, ex-Vice President, C.P.R., and now President, Whalen Pulp & Paper Mills Ltd., Vancouver, B.C., has gone on a trip to Japan, accompanied by her son, Major G. A. E. Bury, and his wife.

A. B. Calder, Assistant General Passenger Agent, C.P.R., Montreal, who is representing the company's President, E. W. Beatty, on the company's special train during the Prince of Wales' Canadian tour, gave two luncheons while in Winnipeg, en route to the west. D. C. Coleman, Vice President, Western Lines, was the chief guest at one of them, and C. E. McPherson at the other, the representatives of overseas newspapers accompanying, the Prince being at both. Mr. Calder was born at London, Ont., Aug. 24, 1867, and from 1882 to 1887 was in various capacities on C.P.R. construction west of Brandon, Man. He entered C.P.R. service in 1887, since when he has been, to 1889, in Passenger Department, Winnipeg; 1889 to Oct., 1893, ticket clerk, Tacoma, Wash.; Oct., 1893 to July, 1895, Travelling Passenger Agent, Tacoma, Wash.; July, 1895 to Dec., 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec., 1897 to Nov., 1904, Travelling Passenger Agent, Tacoma, Wash.; July, 1895 to Dec., 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec., 1897 to Nov., 1904, Travelling Passenger Agent, Seattle and Tacoma, Wash.; Nov., 1904 to Nov., 1910, General Agent, Passenger Department, Seattle, Wash.; Nov., 1910, to Sept., 1911, General Agent, Passenger Department, Chicago, Ill.; Sept. 1, 1911 to Jan., 1916, associated with his father in a general ticket agency at Winnipeg, and since Jan., 1916, Assistant General Passenger Agent, C.P.R.

Mrs. A. D. Cartwright, wife of the Secretary, Board of Railway Commissioners, returned to Ottawa early in September, with her son, after spending several weeks at the Pacific coast.

Hon. F. B. Carvell, Chief Commissioner, Board of Railway Commissioners for Canada, presided, for the first time, at the board's sitting in Ottawa, Sept. 16.

Mrs. H. R. Charlton, wife of the General Advertising Agent, G.T.R., returned to Montreal early in September, after spending some time at Old Orchard Me.

H. R. Charlton, General Advertising Agent, G.T.R., who will represent the company during the portion of the Prince of Wales' Canadian tour over its line, [illegible] 6, 1866, and after engaging for three years in newspaper [illegible] Que., was on railway [illegible] and 1884, on the [illegible] Ry. He was in [illegible] St. John's, Que., until 188[illegible] [illegible] to June he [illegible] C.P.R. exhibition car, and after four years of newspaper work was given charge of the C.P.R. advertising department in April, 1891, remaining there until April, 1896, when he again went into business. In Jan., 1898, he was appointed to his present position as advertising agent of the G.T.R., and was subsequently appointed to act in a similar capacity for the Grand Trunk Pacific Ry. He has been the company's representative on various Canadian tours of important personages during the last 20 years. Following Prince Fushimi's visit to Canada, the Emperor of Japan gave him the Order of the Sacred Treasure.

Hon. Francis Cochrane, M.P., until recently, Minister of Railways and Canals, died of Bright's disease, at Ottawa, Sept. 22, after a long illness. He was born at Clarenceville, Que., Nov. 18, 1852, and for many years conducted a hardware business at Sudbury, Ont., and was also largely interested in mining, lumbering and other industrial operations. He served several terms as mayor of Sudbury. In June, 1905, he was elected to the Ontario Legislature as member for East Nipissing and in 1908 was elected for Sudbury. He was appointed Minister of Lands and Mines in the Ontario Government in 1905, the title being changed subsequently to Minister of Lands, Forests and Mines. He acted as a member of the Royal Conservation Commission in 1909, and was also a vice president of the Dominion Forestry Association. He entered the Dominion Government in 1911 as Minister of Railways and Canals and retired from that position in 1917 on account of ill health, but remained a member of the government for some time without portfolio. The funeral took place at Mount Pleasant Cemetery, Toronto, Sept. 24, when Hon. J. D. Reid, Minister of Railways and Canals; Sir Henry Drayton, Minister of Finance, and Major Graham A. Bell, Deputy Minister of Railways and Canals, attended.

Capt. A. H. Kendal, M.C.,
Master Mechanic, Quebec District, Canadian Pacific Railway.

D. C. Coleman, Vice President, Western Lines, C.P.R., was reported Sept. 29 to be confined to his house in Winnipeg, as the result of an accident at Spirit River, Alta.

Thomas Collins, who has been appointed Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, entered C.P.R. service, Sept. 2, 1885, since when he has been, to Mar. 7, 1887, brakeman, West Toronto, Ont.; Mar. 7, 1887, to Aug. 1, 1896, conductor, West Toronto, Ont.; Aug. 1, 1896, to Sept. 1, 1896, construction trainmaster, Guelph and Goderich Branch; Sept. 1 to Oct. 15, 1897, Trainmaster, London, Ont.; Oct. 15, 1897, to Jan. 1, 1908, construction trainmaster, double tracking, Montreal to Smiths Falls, Ont.; Apr. 15, 1908, to June 1, 1909, construction trainmaster, double tracking, Montreal to Smiths Falls, Ont.; June 1, 1909, to June 1, 1912, Assistant Superintendent, Smith Falls, Ont.; June 1 to Dec., 1912, Superintendent, District 2, Lake Superior Division, Chapleau, Ont.; Dec., 1912, to May 1, 1916, Superintendent, District 4, Ontario Division Toronto; May 1, 1916 to Aug. 1919, Superintendent, District 2, Ontario Division, London, and Superintendent, Toronto Terminals Division, Ontario District, Toronto.

Theodore Cooper, who died in New York, N.Y., recently, was one of the best known consulting engineers in the United States, and an outstanding authority on bridge design and construction. His first work of engineering responsibility was in connection with the construction of the Hoosac tunnel, on the Troy & Greenfield Rd., in 1861, the contractors for this work being the late Frank and Walter Shanly, both well known Canadian engineers. He was a consulting engineer in connection with the Quebec bridge construction.

C. Dowling, who resigned from the position of Traffic Manager, Edmonton, Dunvegan & British Columbia Ry., at Edmonton, Alta. recently, has been appointed Purchasing Agent, Co-operative Supply Department, United Grain Growers Ltd.

J. M. R. Fairbairn, Chief Engineer, C.P.R., and W. F. Tye, formerly Chief Engineer, C.P.R., were two of the arbitrators between the Cook Construction Co., and the City of Montreal recently, on claims connected with the contract for the enlargement of the Montreal aqueduct and the break in the water supply conduit.

John Gordon, who has been appointed Assistant Electrical Engineer, Western Lines, Canadian National Rys., Winnipeg, was born at Forres, Scotland, Jan. 29, 1884, and served an apprenticeship as mechanical and electrical engineer in Scotland, and later served in the Electrical Department, North Eastern Ry., in England. He entered railway service in Canada in 1909, since when he has been, to 1910, machinist and draftsman, C.P.R. Winnipeg; 1910 to 1911, mechanical draftsman, Grand Trunk Pacific Ry., Rivers, Man.; 1911 to 1914, Electrical Engineer, same road, Winnipeg; 1914 to 1918, General Electrical Foreman, Western Lines, Canadian Government Rys., Winnipeg; 1918 to July 31, 1919, Signal and Electrical Engineer, same road, Winnipeg.

F. Green, Roadmaster, C.P.R., Kamloops, B.C., was killed between Spences

Bridge and Kamloops towards the end of August, when his motor car was run down by a train in rounding a curve. He was for some time yardmaster at Brandon, Man.

Jas. Hardwell, Chief Traffic Officer, Board of Railway Commissioners, and Mrs. Hardwell, have returned to Ottawa after spending a month at Ocean Park, Me.

Mrs. Hays, widow of the late C. M. Hays, formerly President, Grand Trunk and Grand Trunk Pacific Rys., returned to Montreal recently, after spending the summer at Cushings Island, Me.

Mrs. Hills, wife of A. J. Hills, Assistant to President, Canadian National Rys., met with an accident in Toronto, Sept. 5, when the automobile in which she was driving, accompanied by her sister, was struck by a Toronto Ry. car at a street intersection. Mrs. Hills was badly cut about the right eye, several stitches being necessary to close the wound. Her sister was severely shaken, and the automobile was considerably damaged.

Sir Herbert Holt, one of the C.P.R. directors, has returned to Montreal from England.

C. R. Hosmer, one of the C.P.R. directors, and Mrs. Hosmer, returned to Montreal recently, after spending the summer at their house at St. Andrews, N.B., where he recuperated after undergoing two operations in the Royal Victoria Hospital, Montreal. He has resumed attendance at his office on Hospital street.

Capt. Albert H. Kendall, M.C., who has been appointed Master Mechanic, Quebec District, C.P.R., Montreal, was born at Aspatria, Cumberland, Eng., April 4, 1878, and entered railway service in June 1901, since when he has been, to Jan., 1904, locomotive foreman, C.P.R., Nakusp and Revelstoke, B.C.; Jan. to Nov., 1904, locomotive foreman, G.T.R., London, Ont.; Nov., 1906 to July, 1913, gang foreman, erecting shop foreman, and general foreman, successively, Angus shops, C.P.R., Montreal; July to Dec., 1913, locomotive inspector, C.P.R., Kingston, Ont.; Dec., 1913 to April, 1915, general foreman, C.P.R., North Bay, Ont.; April, 1915, to Aug. 28, 1916, Assistant Works Manager, Angus locomotive shops, C.P.R., Montreal; Aug. 28, 1916 to Jan., 1917, Master Mechanic, Ontario District, C.P.R., Toronto. In Jan., 1917, he entered military service as Captain, no 1 section, Skilled Railway Employes, and was later transferred to the 58th Broad Gauge Operating Co., B.E.F., in France. He was awarded the Military Cross, in the latter part of 1918, for superintending evacuation under heavy fire, and keeping lines running until the last moment.

O. M. Lavoie, who has been appointed Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, was born at St. Cyrille de Wendover, Que., Oct. 16, 1882, and entered railway service in March, 1889, since when he has been, to April, 1900, telegraph operator Intercolonial Ry.; Apr., 1900, to Sept., 1902, telegraph operator, Quebec, Montreal and Southern Ry.; Sept., 28, 1902 to July, 1909, operator, C.P.R.; July 19, 1909 to Jan. 15, 1916, dispatcher, C.P.R., Farnham, Que.; Jan. 15, 1916, to Oct. 30, 1917, Chief Dispatcher, Farnham Division, Quebec District, C.P.R., Farnham, Que.; Oct. 30, 1917 to Aug. 1, 1919, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal.

Lieut. M. P. MacLeod, son of M. H. MacLeod, Vice President, Operation, Maintenance and Construction, Canadian National Rys., Toronto, who was in the Royal Air Force in France, and on the borders of Belgium up to the close of the war, has been awarded the Distinguished Flying Cross, and the Belgian Government has given him the Croix de Guerre.

Sir Wm. Mackenzie, ex-President, Canadian Northern Ry., is stated to be the highest assessed person by the City of Toronto for income, his assessment this year being on a sworn statement for $125,700, against $225,000 fixed by the assessment commissioner in 1918.

Col. Frederick Mears, formerly of the 31st United States Engineers, and in charge of transportation of U.S. forces in France, has been appointed Chairman and Chief Engineer of the Alaska Engineering Commission, which is building the U.S. Government Railway in Alaska.

Mrs. Mills, wife of James Mills, formerly a member of the Board of Railway Commissioners for Canada and now the Board's librarian, died in Ottawa, Sept. 10.

Hector King Morrison, who was appointed recently Division Engineer, Superior Division, Canadian National Rys., Hornepayne, Ont., was born at Dartmouth, N.S., Oct. 12, 1885, and entered railway service in 1903, since when he has been, to 1904, chainman, Halifax and Southwestern Ry.; 1904 to 1905, rodman, same road; 1905 to 1906, topographer, Canadian Northern Quebec Ry.; 1906 to 1907, levelman, Canadian Northern Ontario Ry.; 1907 to 1910, transitman, same road; 1910 to 1912 in charge of location party, same road; 1912 to 1914 Resident Engineer, same road, Pembroke, Ont.; Jan. to June 16, 1919, Resident Engineer, Canadian National Rys., Hornepayne, Ont.

Capt. George Porteous, formerly chief draftsman, Division Engineer's office, C. P.R., Calgary, Alta., has returned to Canada after five years in active service and has resumed his profession. He enlisted with the Corps of Guides in Aug., 1914, at Calgary, and was later transferred to the Imperial Forces. He was twice wounded and at the time of the signing of the armistice was acting Major, 38th Division Tunnellers.

Allan Purvis, General Superintendent, Ontario District, C.P.R., Toronto, has been elected a vice president of the Old Time Telegraphers and Historical Association.

Osborne Scott, General Passenger Agent, Canadian National Rys., Winnipeg, is a son of Archdeacon Scott, Winnipeg, who died there recently, following an operation for appendicitis.

Lord and Lady Shaughnessy, and the Hon. Marguerite Shaughnessy, returned to Montreal early in September, after spending most of the summer at Fort Tipperary, St. Andrews, N.B.

The Hon. Mrs. Alfred Shaughnessy, daughter-in-law of Lord Shaughnessy, and her children, have returned to Canada from England.

Hon. Arthur Lewis Sifton, M.P., who has been appointed Minister of Public Works, of Canada, and member of the Privy Council, was born at St. Johns, Ont., Oct. 26, 1858, and educated in Ontario public schools, Wesley College, Winnipeg, Victoria University, Cobourg, Ont., and Alberta University. He commenced practice as a barrister in 1883 in the Northwest Territories and was made a Q.C., in 1892. He represented Banff in the Alberta Legislature from 1899 to 1903, and from 1903 to 1905 was Chief Justice of the Supreme Court, N.W.T., from 1905 to June, 1910 was Chief Justice of the Supreme Court of Alberta, and from June, 1910 to 1917, Premier of Alberta, holding the offices of President of the Council, Provincial Treasurer, and Minister of Public Works, and from 1917 to his present appointment, Minister of Customs and Inland Revenue in the Dominion Government.

Sir Thos. Tait, President, Fredericton & Grand Lake Coal & Ry. Co., and Lady Tait and daughter, have returned to Montreal, after spending the summer at St. Andrews, N.B.

T. Walklate, General Tie & Lumber Agent, C.P.R., Mrs. Walklate, and family, have returned to Montreal from Pine Point, Me.

E. Garth White, whose appointment as Superintendent of Department of Colonization and Development, C.P.R., Montreal, was announced in our last issue, was born at Charlottetown, P.E.I., Aug. 2, 1886, and is a son of the late W. C. White, at one time Commissioner of Public Lands of Prince Edward Island. He entered C.P.R. service in Apr., 1906, since when he has been, to Jan., 1910, clerk, Land Department, Calgary, Alta.; Jan., 1910, to Mar., 1912, clerk, Land and Irrigation Department, Calgary, Alta.; Mar., 1912, to Mar., 1913, chief clerk, Department of Natural Resources, Montreal; Mar., 1913 to Aug., 1919, Assistant to Manager, Department of Natural Resources, Montreal.

International Ry. of New Brunswick Transferred to Dominion Government—The ownership of the International Ry. of New Brunswick, extending from Campbellton to St. Leonards, 111.30 miles of single track, and 5.76 miles of yard track and sidings, was transferred to the Dominion Government on Aug. 1. The then Minister of Railways on Aug. 1, 1914, entered into an agreement with Thos. Malcolm, of Campbellton, since deceased, to buy, subject to certain encumbrances, the railway, its rolling stock and other property, for $2,700,000. Pending the completion of the purchase, the government was to lease the property for $90,000 a year. The property was turned over to the Canadian Government Rys. for operation on Aug. 1, 1914, since which date the rent has been paid, it being assigned to the Royal Trust Co., which acted as trustee. The agreement was confirmed by the Dominion Parliament in 1915, but owing to the war the payment of the purchase was deferred until recently, when it was made, and the ownership was transferred on Aug. 1, as stated above.

Light Railway in Arabia.—One of the war's benefits to Arabia has been the completion of a narrow gauge railway, approximately 30 miles long, from Aden, the seaport of Arabia, to Lahej, capital of the Abdali tribe in southwest Arabia. The first [illegible] miles were laid in 1915 as a supply route for British forces operating against the Turks in that region. The remainder was [illegible] after the armistice [illegible]. All work was done by the Royal Engineers. With the completion of the line to Lahej, its extension to the Yemen plateau, 200 miles north of Aden, where the world's supply of Mocha coffee is grown, becomes a matter of serious discussion.

The Canadian National Rys. freight offices at Brandon, Man., were broken into recently by burglars who secured about $2,000.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Eastern Ry.—R. E. KING has been appointed Assistant Comptroller, Sault Ste. Marie, Ont.

A. A. PINKNEY has been appointed Comptroller, vice T. H. Rahilly, resigned. Office, Sault Ste. Marie, Ont.

Canadian National Rys—JOHN GORDON, heretofore Signal and Electrical Engineer, National Transcontinental Ry., Transcona, Man., has been appointed Assistant Electrical Engineer, Mechanical Department, Western Lines, Canadian National Rys. Office, Winnipeg.

R. W. HANNINGTON, heretofore City Solicitor, Victoria, B.C., has been appointed General Attorney, C.N.R., Vancouver, B.C., and not Solicitor, as stated in our last issue. This is a new position.

A. M. MACGILLIVRAY, heretofore Resident Engineer, Fort William, Ont., has been appointed District Engineer, Saskatoon, Sask.

W. C. ROBERTS, heretofore Auditor of Stores and Mechanical accounts, Canadian Government Rys., Moncton, N.B., has been appointed Auditor of Stores and Accounts, Canadian National Rys. Office, Leaside, Ont.

E. W. ROBINSON, has been appointed Resident Engineer, Fort William, Ont., vice A. M. MacGillvray, promoted.

ERNEST SCHRANTZ, heretofore Supervisor, Electrical Maintenance, Canadian Northern Ry., Winnipeg, has been appointed Electrical Supervisor, Mechanical Department, Western Lines, Canadian National Rys. Office, Winnipeg.

The Electrical Department, Western Lines, consisting of the installation, operation and maintenance of all electrical equipment at the different shops and locomotive houses, train lighting, and the installing and maintaining of electric lighting in all buildings on Western Lines, which heretofore has been under the jurisdiction of the Superintendent, of Electrical and Telegraph Maintenance, H. McConkey, has been transferred to the mechanical department, and in future all matters in connection with electrical equipment will be handled directly with the Mechanical Superintendent's office. JOHN GORDON has been appointed Assistant Electrical Engineer and ERNEST SCHRANTZ has been appointed Electrical Supervisor, both with headquarters at the Mechanical Superintendent's office, Winnipeg. H. McCONKEY retains jurisdiction over construction and maintenance of telegraph and telephone lines and offices, west of O'Brien and Port Arthur, Ont.

Canadian Pacific Ry.—J. A. BERRY, heretofore Car Service Agent, Moose Jaw, Sask., has been appointed Car Service Agent, Winnipeg, vice G. S. Lytle, transferred to Moose Jaw, Sask., as announced in our last issue.

J. R. BRUCE, Director of Exhibits, Department of National Resources, Calgary, Alta., is reported to have been transferred to Montreal.

T. COLLINS, heretofore Superintendent, Toronto Terminals Division, Ontario District, Toronto, has been appointed Superintendent, Montreal Terminals Division, Quebec District, vice R. A. Sewell, whose appointment as Superintendent of Car Service, Eastern Lines, Montreal, was announced in our last issue. Office, Montreal.

JAS. COWLEY, Assistant Publicity Agent, Department of National Resources, Calgary, Alta., is reported to have been appointed Publicity Agent there, vice N. F. Rankin, transferred.

H. J. Humphrey,
Superintendent, Trenton Division, Ontario District, C.P.R.

M. F. Tompkins.
Assistant General Freight Agent, Canadian National Rys., Moncton, N.B.

G. FITZPATRICK, returned recently from military service overseas, has been appointed storekeeper, Sutherland, Sask., vice O. Gardner, resigned.

Capt. A. H. KENDALL, M.C., formerly Master Mechanic, Ontario District, Toronto, and latterly in military service overseas, has been appointed Master Mechanic, Quebec District, vice C. A. Wheeler, transferred. Office, Montreal.

O. M. LAVOIE, heretofore Superintendent of Car Service, Eastern Lines, has been appointed Superintendent, Laurentian Division, Quebec District, vice H. J. Humphrey, transferred. Office, Montreal.

C. L. LEIGHTY, heretofore Chief Dispatcher, Smiths Falls, Ont., has been appointed Assistant Superintendent, Montreal Terminals Division, Quebec District. Office, Montreal.

C. J. McGREGOR has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont.

N. F. RANKIN, Publicity Agent, Department of National Resources, Calgary, Alta., is reported to have been appointed Special Publicity Agent, same department, Montreal.

E. J. SEMMENS, heretofore chief clerk to Industrial Commissioner, Department of Colonization and Development, Calgary, Alta., has been appointed Travelling Agent, same department, Calgary.

A. A. SHEPPARD, heretofore Division Master Mechanic, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has resumed his former position as Locomotive Foreman, Ottawa.

J. F. SWEETING, Industrial Commissioner, Department of Colonization and Development, Western Lines, has had his office removed from Calgary, Alta., to Winnipeg.

C. A. WHEELER, heretofore Master Mechanic, Quebec District, Montreal, and recently on vacation, has been appointed Division Master Mechanic, Smiths Falls Division, Quebec District, vice A. A. Sheppard, who has resumed his former position. Office, Smiths Falls, Ont.

W. H. WORTMAN, heretofore Division Master Mechanic, Cranbrook Division, British Columbia District, Cranbrook, has been appointed Division Master Mechanic, Kenora Division, Manitoba District, vice J. Neill, transferred. Office, Kenora, Ont.

Edmonton, Dunvegan and British Columbia Ry., Alberta and Great Waterways Ry., Central Canada Ry.—C. DOWLING, Traffic Manager, having resigned from the service, all traffic matters are being handled by the General Manager and Chief Engineer, W. R. SMITH, Edmonton, Alta.

Grand Trunk Ry.—J. O. ADAMS has been appointed General Eastern Freight Agent, Lines in Canada, New York City, vice S. E. Dewey, deceased. Office, 1450 Woolworth Building.

French Railway and Tunnel Projects—Studies are reported as being made in France of a plan for a great international railway from Bordeaux to Odessa, There is also a committee studying the project of constructing a tunnel under the English Channel and another through the Vosges Mountains, west of Alsace.

The Denver, Boulder & Western Rd., which served various Colorado mountain resorts, has been authorized to cease operation entirely, a series of cloud bursts having destroyed the line in many places.

Railway Freight Delays in Great Britain.

From the Birmingham, Eng., Chamber of Commerce Journal.

"It is no exaggeration to say that the difficulties experienced by traders in connection with the collection and delivery of their railway traffic have never been greater than they are at present. We have before us a few instances of the kind of irritation which manufacturers are compelled to put up with. Here are a few:—

"1—Consignment to A handed to railway Apr. 3, returned to trader, reaccepted by railway Apr. 11, again returned, reaccepted April 22, once more returned, then transferred to another railway on April 30, which also returned it. Finally accepted by a third railway on May 12 and carried to B, whence it had to be conveyed by local carrier to destination.

"2—A consignment for C accepted Mar. 25, returned, reaccepted Mar. 29, again returned, finally accepted Apr. 28.

"3—Consignment to D handed to railway Mar. 24, returned Mar. 25, recollected April 5, again returned, finally collected April 20.

"4—Consignments for E and F ready for dispatch May 15; on June 17 still awaiting collection.

"If our information is correct, these —which are only samples of the complaints of one trader—are typical of the difficulties experienced by hundreds of others. It is no consolation to be told over and over again that the congestion has been caused by the almost entire cessation of coastwise shipping, which previously carried traffic to the extent of 75,000,000 tons a year. We make no complaint whatever against the local railway managers and their subordinates. On the contrary, we gratefully recognize that they are doing their utmost, and we believe that they are as much dissatisfied with the present position as the traders. If the country is to recover from the terrible effects of the war, however, it is essential that something drastic should be done, and done quickly; and for ourselves we believe something would be done if the government control of railways were abandoned, the Railway Executive Committee abolished, and the railway companies left free to deal with the problems which confront them."

American Railway Tool Foremen's Association.

This association's annual convention was held at Chicago recently. The meetings were devoted largely to the discussion of a number of papers were of interest to tool foremen engaged in railway work, and also to the consideration of the reports made by the several standardization committees, which were appointed at the last annual convention, to recommend such standards as would be advisable for general adoption in the toolrooms of railway shops. The principal work done was in connection with the development of standards for locomotive frame taper reamers. It was recommended that the standard taper reamers to be carried in stock should have a taper of 1/16 in. per foot, a shank $1\frac{3}{4}$ in. long, and the flutes should be milled with a left-hand spiral. Various lengths and sizes were specified for stock, and certain other features were noted in the committees' recommendation.

Committees were appointed to report at the next annual convention on the following subjects: standardization of boiler and staybolt taps; heat treatment of steel in locomotive shops; jigs and devices for use in locomotive and car repair shops; standardization of power press punches and ties for locomotive and car shops; issuing and checking of tools in locomotive and car shops.

How Parliament's Time is Wasted on Petty Questions.

During the House of Commons' current session, Jos. Archambault, M.P., for Chambly and Vercheres, Que., asked the following questions:—"Did the government, in any way, select or order the selection of the volumes of Canadian literature which were placed in the special car for the use of His Royal Highness the Prince of Wales? If so, were volumes of French-Canadian literature placed in the library of the special car for the use of His Royal Highness the Prince of Wales, who very well reads and speaks the French language? If not, why were such volumes not placed in the said library?"

Hon. N. W. Rowell replied as follows: "The works of reference placed on the royal train by government officials at Ottawa consjsted largely of maps and statistical information. The selection of general literature was left to the officers of the C.P.R. Co., and there is no information in Ottawa as to what books were placed on board, or in what languages they were written."

International Railway General Foremen's Association.

This association held its annual meeting at Chicago, Ill., Sept. 2 to 5. The general feeling expressed was that better times may soon be in sight for the railways, which will enable many of them to make such improvements around their shops as they have been desiring of making for years past; consequently, the discussion of present methods and future plans was of great interest to those actively engaged in this work.

Considerable discussion was aroused on the topic of safety first as it can be applied both in the shops and locomotive house service, and many of the general foremen described the methods which have been adopted not only in their own shops, but in shops throughout the entire systems for attaining a minimum record in the matter of accidents in the shop. Many of the accident-prevention schemes which have been recommended and are being tried, have evolved a system of reward to those shops or portions of railway systems which are most successful in reducing the percentage of accidents.

The welding of locomotive parts and castings, and particularly of locomotive cylinder by both oxy-acetylene and electric welding, was also the subject of discussion for a whole morning session. Several papers were presented upon draft gears.

The G.T.R. ran its first train between Montreal and Toronto, Oct. 27, 1856.

Grand Trunk Ry.—A press report states that the city engineer is completing plans for the building of the approaches to the subway, under the G.T.R. at St. Pauls Ave., Brantford, Ont., and that tenders for the work will be asked at an early date.

Orders by Board of Railway Commissioners for Canada.

[illegible] with June, 1904 Canadian Railway and Marine World has published in each issue [illegible] of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's [illegible]. No other paper has done [illegible].

[illegible]. Aug. 14.—Extending to Nov. 14, time [illegible] G.T.R. shall complete siding for [illegible] London, Ont.

[illegible]. Aug. 1[illegible].—Approving G.T.R. plan of [illegible] location of westbound home [illegible] Pere Marquette Rd. at Chatham, Ont.

[illegible]. Aug. 1[illegible].—Rescinding order 27,688, Sept. 1[illegible], [illegible] re G.T.R. train service at Oakville, Ont.

[illegible]. Aug. [illegible].—Authorizing C.P.R. to cross [illegible] Moose Jaw Southwesterly Branch [illegible] to Consul, Sask.

[illegible]. Aug. 1.—Ordering C.P.R. to rebuild [illegible] Elora St., Harriston, Ont., to [illegible] maximum highway grade of 6%, and [illegible] of 22½ ft., over track, work to be completed by Oct. 31.

[illegible]. Aug. 1[illegible].—Approving location of C.P.R. [illegible], North Branch, from mile 71 to 81, Alta.

[illegible]. Aug. 16.—Authorizing Saskatchewan Government to make highway across Grand Trunk Pacific Ry. in n.w. ¼, sec. 27, Tp. 35, Range 14, west [illegible] meridian, Sask.

[illegible]. Aug. 11.—Relieving C.P.R. from providing further protection at Valley Road crossing, mileage [illegible], St. Stephen Subdivision, N.B.

[illegible]. Aug. 16.—Rescinding order 25,998, Apr. 10, 1917, which authorized building of branch line from Buckeye Machine Co. in s.e. ¼, Sec. 1[illegible], Tp. [illegible], Range 2[illegible], west 4th meridian, South Alberta District.

[illegible]. Aug. 16.—Granting application of L'Air Liquide Society for modification of paragraph 18[illegible] of regulations for transportation of explosives and other dangerous articles, and specifications for shipping containers approved by the board in respect of transportation of compressed acetylene gas.

[illegible]. Aug. 16.—Authorizing Farnham West Tp., Que., to make crossing over C.P.R., in Lot [illegible], St. Romuald Parish, Que.

[illegible], [illegible]. Aug. 16, 15.—Ordering Canadian National Rys. to appoint station agents at [illegible] Lake, Man., by Sept. 1, and at Hamton, Sask., by Sept. 1[illegible].

[illegible]. Aug. 20.—Ordering Grand Trunk Pacific Ry. to file within 30 days detail plans of station as directed by order 22,995, to be built between Oak and Ash Sts., Prince George, B.C.

[illegible]. Aug. 20.—Authorizing Winnipeg Joint Terminals to rebuild Water St. subway, Winnipeg, to accommodate west approach to Provencher Ave. traffic bridge.

[illegible]. Aug. 20.—Recommending to Governor in Council, for sanction, agreement between Western Canada Telephone Co., and British Columbia Telephone Co.

28,683. Aug. 20.—Authorizing Grand Trunk Pacific Ry. to build extension to branch for Humberstone Coal Co. in s.w. ¼, Sec. 7, Tp. 53, Range 23, west 4th meridian, Alta.

[illegible]. Aug. 2[illegible].—Authorizing G.T.R. to build extension to siding for Massey-Harris Co., Toronto.

[illegible]. Aug. 21.—Authorizing C.P.R. to build [illegible] Coal Co., in Rocky Mountain [illegible], Alta.

[illegible]. Aug. [illegible].—Ordering G.T.R. to move [illegible] Chatham yard, Ont., [illegible]

[illegible]. Aug. [illegible].—Ordering G.T.R. and C.P.R. [illegible] bridges carrying Weston Road, Toronto, [illegible]

[illegible]. Aug. [illegible].—Authorizing C.P.R. to build [illegible]

[illegible]. Aug. 20.—Authorizing Hydro Electric [illegible] the railway [illegible]

[illegible]

[illegible] platform at Congress, Sask.

[illegible] orption of [illegible] had been consigned through to [illegible]

[illegible] Authorizing Canadian National Rys. [illegible] River [illegible] River Subdivision, Man.

[illegible] Canadian National Rys. [illegible] and divert highway in s. ½ of Sec. 31, Tp. 59, Range 11, west 4th meridian, Alta.

28,697. Aug. 21.—Authorizing C.P.R. to build bridge to serve Alberta Government telephones, Calgary, Alta.

28,698, 28,699. Aug. 21.—Authorizing Canadian National Rys. to cross and divert highways at two points between Sec. 36, Tp. 38, and Sec. 1, Tp. 39, and between Sec. 36, Tp. 38, Range 22, and Sec. 6, Tp. 39, Range 21, west 2nd meridian, Sask.

28,700. Aug. 21.—Authorizing Canadian National Rys. to double track bridge over Rosebud River, Alta.

28,701, 28,702. Aug. 21, 21.—Authorizing Canadian National Rys. to build bridges over Rosebud River, at mileage 322.8, Sec. 7, Tp. 28, Range 19, west 4th meridian, Alta., and mileage 321.1, Calgary Subdivision, Alta.

28,703 to 28,705. Aug. 21, 22.—Authorizing Canadian National Rys. to rebuild bridges over Black Rapids Creek, Nepean Tp., Ont.; over Green's Creek, mileage 106.84 from Montreal, and over Black River, mileage 86.90, from Toronto.

28,706. Aug. 22.—Authorizing G.T.R. to take additional lands at St. Agapit, Que., for approach to new station.

28,707. Aug. 30.—Authorizing C.P.R. to build spur for Vernon Storage Co., Vernon, B.C.

28,708. Aug. 29.—Dismissing application of State Elevator Co., Winnipeg, for refund of demurrage charges made by C.P.R. on grain at Keewatin, Ont.

28,709. Aug. 22.—Relieving G.T.R. from providing further protection at Carr's Crossing, near Cobourg, Ont.

28,710. Aug. 28.—Authorizing G.T.R. to extend Charles St. spur, Kitchener, Ont., for Ames-Holden Tire Co., and Lang Tanning Co.

28,711. Sept. 2.—Authorizing Michigan Central Rd. to connect with Hydro Electric Power Commission of Ontario's track in Niagara Tp., Ont.

28,712. Sept. 2.—Dismissing Montreal Tramways Co.'s application for leave to cross C.P.R. between Atlantic and Beaumont Aves., Montreal.

28,713. Aug. 30.—Rescinding orders 790 and 793, Nov. 28 and 30, 1905, re interswitching at Lindsay, Ont.

28,714. Aug. 27.—Authorizing Canadian National Rys. to take extra land for right of way and retaining walls at Athabasca St., Moose Jaw, Sask.

28,715. Aug. 26.—Authorizing Grand Trunk Pacific Ry. to build spur for U.G.G. Sawmills, Ltd., at mile 1,217.3, Cariboo District, B.C.

28,716. Aug. 29.—Extending to Nov. 29, time within which the C.P.R. may build spur for Gunns Ltd., Toronto.

28,717. Aug. 29.—Approving special tariff on cream in cans, C.R.C., no. E.T.-672, effective Sept. 1.

28,718. Aug. 27.—Approving Pere Marquette Rd. interlocking plant at Blenheim, Ont.; speed restricted to 15 miles an hour.

28,719. Aug. 27.—Extending to Nov. 27, time for completion of additional tracks on Talbot and Kain Sts., St. Thomas, Ont., by London & Port Stanley Ry.

28,720. Aug. 23.—Authorizing Canadian National Rys. to replace part of trestle bridge over Thunder River, at mileage 101.7 Blue River Subdivision, B.C., by a single 100 ft. through girder span on concrete substructure.

28,721. Aug. 26.—Authorizing G.T.R. to build spur for Public Highways Department.

28,722 to 28,724. Aug. 26.—Authorizing Canadian Northern Saskatchewan Ry. to cross highways at three points.

28,725. Aug. 29.—Authorizing Canadian National Rys. to build siding over north and south government road allowance between Sec. 6, Tp. 39, Range 2, and Sec. 1, Tp. 39, Range 3, west 3rd meridian.

28,726. Aug. 28.—Approving location of C.P.R. [illegible] Easterly Branch, Empress to Milden, mileage 217.45 to 251.11, and authorizing crossing of 30 highways.

28,727. Aug. 26.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for H. W. Farr & Co., Hamilton, Ont.

28,728. Aug. 27.—Approving location of Canadian National Rys. 3rd class station at Durban, Man.

28,729. Aug. 27.—Authorizing G.T.R. to install improved type of bell at Martin St. crossing, Beachville, Ont.

28,730, 28,731. Aug. 28.—Authorizing Canadian National Rys. to cross highways at two points in Tp. [illegible], Range 1[illegible], west 3rd meridian.

28,732. Sept. 3.—Authorizing G.T.R. to build spur for Wm. Clare Ltd., St. Remi Parish, Que.

28,733. Aug. 26.—Authorizing C.P.R. to remove portion of Motherlode spur from junction switch at Greenwood, B.C.

28,734. Aug. 29.—Extending to Nov. 24 time within which C.P.R. shall improve permanent culvert near Golden, B.C., as required by order 2[illegible], July [illegible].

28,735 to 28,738. Aug. 26, 30.—Authorizing Canadian Northern Saskatchewan Ry. to cross highways at [illegible] points.

28,739. Aug. 29.—Authorizing C.P.R. to build sidings 1,040 and 345 ft. long for North American Magnesite Co. at mileage 60, Lachute Subdivision, Que.

28,740. Aug. 26.—Amending order 28,569, July 24, Canadian National Rys. crossing of highway between Secs. 14-15, Tp. 40, Range 21, west 3rd meridian.

28,741. Aug. 28. Authorizing Canadian National Rys. to cross highway between Secs. 13 and 18, Tp. 45, Range 17, west 3rd meridian.

28,742. Aug. 29. Amending order 2,139, Dec. 6, 1906, as amended by order 8,897, Dec. 11, 1909, form, size and style of tariffs of tolls to be charged by telephone companies.

28,743. Aug. 27.—Relieving G.T.R. from providing further protection at crossing near Forest station, Ont.

28,744. Aug. 27.—Amending order 28,606, July 26, re highway crossing over Canadian National Rys. in s.w. ¼, Sec. 18, Tp. 15, Range 12, west 2nd meridian.

28,745. Aug. 26.—Extending to Nov. 1, time within which G.T.R. shall complete erection of station at Mille Roches, Ont.

28,746. Sept. 4.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in Samson Indian Reserve 137, Tp. 44, Range 24, west 4th meridian.

28,747. Sept. 4.—Ordering Grand Trunk Pacific Ry. at once to comply with order 21,937, and complete facilities for stock pen with platform and loading chute; also spur between Tofield and Deville, Alta.; work to be completed by Oct. 15.

28,748. Sept. 5.—Amending order 23,133, Jan. 12, re Canadian National Rys. and Grand Trunk Pacific Ry. closing at night, interlocking plant at Empire Ave., Fort William, Ont.

28,749. Sept. 3.—Approving Vancouver, Victoria & Eastern Ry. & Nav. Co.'s (G.N.R.) plan of interlocking appliances to be installed at the crossing of British Columbia Electric Ry., Georgia St., Vancouver, B.C.

28,750, 28,751. Sept. 4.—Approving Bell Telephone agreement with La Cie. de Telephone, St. Ours, Richelieu, St. Hyacinthe and Vercheres counties, Que., Aug. 18; and Crews Telephone Co., Northumberland County, Ont., June 11, 1915.

28,752. Sept. 5.—Authorizing Ottawa Electric Ry. to carry wires across C.P.R. at Queen Mary St., Overbrooke, near Ottawa.

28,753. Sept. 8.—Authorizing G.T.R. to build spur for T. Davidson Mfg. Co., Montreal Parish.

28,754. Sept. 8.—Authorizing G.T.R. to build spur for Lefebre and Mahon, Lachine Parish, Que.

28,755. Sept. 6.—Authorizing C.P.R. to build spur for York Shaw Fuel Co., Calgary, Alta.

28,756. Sept. 10.—Authorizing C.P.R. to build spur for Crescent Collieries, Bienfait, Man.

28,757. Sept. 6.—Authorizing G.T.R. to build spur for Crushed Stone, Ltd., near Kirkfield, Ont.

28,758. Sept. 8.—Authorizing Niagara, St. Catharines and Toronto Ry. to build branch for Imperial Oil Co., Welland, Ont.

28,759. Sept. 9.—Approving plant of G.T.R. overhead bridge, as authorized by order 27,838, Nov. 8, 1918, in Bayham Tp., Ont.

28,760. Sept. 6.—Authorizing C.P.R. to build spurs for Merritt Collieries at mileage 41.2 from Spences Bridge, B.C.

28,761. Sept. 8.—Authorizing Niagara, St. Catharines & Toronto Ry. to connect with Doheny, Quinlan and Robertson's tracks at Thorold, Ont.

Steel Rails for Canadian Railways.

We are officially advised, with reference to deliveries of 85 lb. steel rails by the Algoma Steel Corporation and the Dominion Iron and Steel Co., on orders placed by the Dominion Government during the autumn of 1918, a total of 204,870 gross tons have been delivered, of which, 100,188 tons were by the Algoma Steel Corporation, and 104,682 tons by the Dominion Iron and Steel Co. The following table shows the shipments to the various railways:

Algoma Steel Corporation.

	Gross tons
Canadian National Rys.	54,618
Canadian Pacific Ry.	39,500
Kettle Valley Ry.	2,670
Timiskaming and Northern Ontario Ry.	3,000
Toronto, Hamilton and Buffalo Ry.	400
Total	100,188

Dominion Iron and Steel Co.

	Gross tons
Canadian Government Rys.	36,153
Canadian National Rys.	2,865
Canadian Pacific Ry.	30,500
Grand Trunk Ry.	35,003
Timiskaming and Northern Ontario Ry.	161
Total	104,682

Canadian National Railways Construction, Betterments, Etc.

Prince Edward Island Ry.—A press report of Sept. 14, stated that the first standard gauge train on the line made a trip from Borden, to Summerside and to Charlottetown and return, on that day as a test. This marks the completion of the laying of a third rail on this section of the line. The distance between Summerside and Charlottetown, through Emerald Jct., is 48 miles, and the branch from Emerald Jct., to Borden is 13 miles, making a total of 661 miles on which standard gauge traffic can be moved. It was reported that regular freight and passenger traffic, with standard gauge trains, would be operated over this mileage from and after Oct. 1.

Dartmouth and Salt Springs Stations—Tenders are under consideration for the erection of a frame station building and platforms at Salt Springs, N.S. We are officially advised that a contract has been awarded to the Standard Construction Co., Halifax, N.S., for the erection of a station and freight shed at Dartmouth, N.S.

We are officially advised that the new station building at Dartmouth, N.S., will be of frame construction on concrete foundation, size 120 ft. 2 in. x 29 ft. 8 in.; the freight shed will also be of frame construction, 208 x 30 ft.

Sydney, N.S., Stores Building—We are officially advised that the contract for the erection of a stores building at Sydney, N.S., has been let to Chappell Bros. Co., Sydney. It will be a one-story frame structure 81 x 32 ft., on a concrete basement, with outside platforms and bins for storing castings. Oil storage equipment will be installed.

Sunny Brae-Guysboro-Mulgrave, N.S.—A press report states that a petition is being signed throughout the district asking the Dominion Government to build a railway from Sunny Brae to Guysboro and thence to Mulgrave, N.S., and that a strong delegation will go to Ottawa shortly to press the matter.

The present Intercolonial Ry. line between Ferrona Jct., via New Glasgow, and Mulgrave, is 87 miles, and owing to gradients and alignment, it is claimed not to be capable of carrying the present heavy traffic economically. There is a branch from Ferrona Jct. to Sunny Brae, 13 miles, and it is reported that a route has been surveyed from that point via Guysboro to Mulgrave, about 91 miles long. The gradients on this survey are said to be such that freight trains carrying from 50 to 60% more tonnage than it is possible for trains to carry over the existing routs, could be operated over it. Members of the railway's engineering staff are reported to have gone over the route recently and an additional report is to the effect that an engineering party is going over some sections of the route to obtain additional information.

Courtenay Bay Branch—A press report states the work was started Sept. 19 on a branch line at Courtenay Bay, St. John, N.B., to give greater yardage there. The new track starts at the foot of Duke St., and runs parallel to the present branch line as far as the Imperial Oil Co.'s works, 1,680 ft.

Fredericton to McGivney Jct—A press report states that Engineer McIsaac and staff are completing surveys for grade reduction and curvature elimination work on the section of the old Canada Eastern Ry., between Fredericton and McGivney Jct., where the Transcontinental Ry. is crossed. The work, it is reported, will cost about $1,500,000, exclusive of the strengthening of the bridge over the St. John River at Fredericton, the cost of which is put at $1,000,000.

Edmundston, N.B., Car Shop—We are officially advised that the contract for the erection of a car shop at Edmundston, N.B., on the National Transcontinental Ry., has been let to Jos. Gosselin, Ltd., Levis, Que. The building will be of frame, 200 x 48 ft., on concrete pedestals, and mill type roof. Offices, stores and lavatory space will be provided in a lean-to erection on one side of the main structure.

St. Malo, Quebec, Shops—A press report of Sept. 10 stated that about a fourth of the machinery for the locomotive and car shops at St. Malo, Quebec, had been installed. The passenger car repair shops are being operated, but owing to the slow arrival of machinery no repair work is yet being done in the locomotive shops. It is expected, however, to have all the machinery installed by Dec. 31.

Ouareau River Bridge—We are officially advised that plans for the renewal of one deck span of 105 ft., and the reinforcing of a similar span, on the bridge crossing the Ouareau River, mileage 7.20 from Joliette, Que., on the Lachute Subdivision, have been completed, but that part of the field work has been done.

Port Arthur Terminals—A. E. Warren, General Manager, Western Lines, and other officials, inspected the railway and steamship terminals at Port Arthur, Ont., Sept. 2. It is reported to have been stated that practically all the maintenance and betterment work for 1919 had been completed. The improvements and extensions necessary to meet future needs was discussed with the operating staffs.

Kindersley Subdivision Culverts.—We are officially advised that a contract for building concrete culverts on the Kindersley subdivision, Sask., has been let to Carter, Halls, Aldinger Co., Winnipeg.

Gravelbourg—Swift Current Extension—We are officially advised that in addition to the 27 miles of grading on the Gravelbourg extension, for which Gibbs Bros. have the contract, it is possible some further work will be done this year.

Prince Albert to Paddock Wood, Sask.—We are officially advised in respect of a press report that construction was to be started immediately on a branch line from Prince Albert to Paddock Wood, Sask., that a survey party is running a line from Prince Albert northeasterly for probably about 40 miles. Nothing has been announced in regard to construction.

North Battleford to Edmonton—A large amount of work is reported to have been done this year between North Battleford, Sask., and Edmonton, Alta. About 35 miles have been relaid with new 85 lb. rails, replacing 60 lb. rails; passing tracks have been provided at Kitscoty, Minburn, Innisfail, Lavoy, Chipman, and Bruderheim, and additional storage tracks have been provided at Vegreville, where the line southerly to Drumson Jct., Drumheller and Calgary, branches off.

Munson Jct. to Calgary—Munson Jct. is the point at which the line from Saskatoon, Sask., and the line from Vegreville, Alta. join, and then continue to Calgary, Alta. General betterments have been done on the Vegreville-Munson line, and a considerable amount of work has been done on the Hanna-Munson section of the line from Saskatoon, including passing tracks at Mecheche, Delta and Carrginyle. Extensive works have been carried out or are in progress between Munson and Wayne. A second track has been completed, according to a recent press report, from Munson to Drumheller, 11 miles, and is being extended to Wayne, a further distance of 7 miles. On this stretch a 300 ft. tunnel is being built, together with a number of diversions, to eliminate a number of trestles and bridges along the Rosebud and Red Deer River valleys, for which contracts were let in March. At Drumheller new freight yards, giving accommodation for 750 cars, and a new locomotive house, are reported to have been completed.

Oliver-St. Paul de Metis Line—A recent press report from Edmonton, Alta., stated track had been laid to mile 105 from Oliver towards St. Paul de Metis, that ballasting was in progress, and that the grading of the 23 miles into St. Paul de Metis, was almost completed, and it was expected to have the track laid into the town before many weeks. The telegraph line is reported to have been extended almost to the end of the track at present laid. Material for the erection of stations, section houses, etc., is being delivered.

Edmonton Terminal Yards—A press report states that the expenditure on the C.N.R. terminal yards at Edmonton, Alta., for this year will be in excess of $100,000. In addition to the laying of additional tracks, the work done, or in progress includes the addition of 4 stalls to the locomotive house, and the building of a new coal dock.

Sangudo to Whitecourt—A branch line from Peace River Jct., 36 miles westerly from Edmonton, Alta., is in operation to Sangudo, 31 miles. On the suspension of work for the season in 1914, grading had been practically completed upon an extension of this line to Whitecourt, a further distance of 42 miles. A recent press report states that gangs are restoring this 42 miles of grading and preparing it for tracklaying. About 100 cars of rails and other construction material was reported to have been delivered at Sangudo, at the end of August.

Nitinat Lake Extension—The [illegible] Bay Canning and Packing Co. is reported to have asked the British Columbia Government's help to get railway communication opened up from the Canadian Northern Pacific Ry. Victoria-Alberni line to Nitinat Lake, and a press report states that the B.C. Premier has taken up the matter with D. B. Hanna, President, Canadian National Rys. The suggestion is that the track graded during the war for a logging railway to reach the spruce areas could be utilized for the 6 mile line asked for by the company. (Sept., pg. [illegible])

Leaside Terminals, Toronto, Canadian National Rys., have not yet been opened for general transportation operation, but a portion of them is being used to do general locomotive repairs, Matthew Neil being the Superintendent of Shops

National Industrial Conference.

The following delegates were appointed, from the transportation and allied interests, to attend the National Industrial Conference which opened at Ottawa, Sept. 15.

Employers' Delegates.

Electric railways—G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Hull, Que.

Shipping—Thos. Robb, Manager Shipping Federation of Canada, Montreal; G. M. Bosworth, Chairman, Canadian Pacific Ocean Services Ltd., Montreal.

Shipbuilding—H. B. Smith, President, Collingwood Shipbuilding Co., Owen Sound, Ont.; R. M. Wolvin, Vice President and Managing Director, Halifax Shipyards Ltd., Montreal.

Telephones—J. E. Macpherson, Ottawa.

Steam railways and telegraphs—A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal; S. J. Hungerford, Assistant Vice President, Canadian National Rys., Toronto; F. P. Brady, General Manager, Eastern Lines, Canadian National Rys., Montreal; A. J. Hills, Assistant to President, Canadian National Rys., Toronto; G. C. Jones, Assistant to President, G.T.R., Toronto; Geo. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., Montreal. These are members of Canadian Railway Board of Adjustment no. 1.

Employes' Delegates.

Electric railway employes—J. L. Bourbonnier, Montreal.

Freight handlers—A. C. Hay, Winnipeg; A. R. Mosher, Ottawa.

Power house employes — Jas. W. Frame, Calgary.

Railway shop trades—Frank McKenna, Vancouver; R. J. Tallan, Calgary; Stanley Steevas, Moncton; James Somerville, Moose Jaw.

Shipping—J. E. Tighe, St. John, N.B.; A. F. Brunet, Montreal.

Woodworking manufacturing—T. Jackson, Toronto.

Steam railways and telegraphs—S. N. Berry, Toronto, Vice President, Order of Railway Conductors; Ash Kennedy, Winnipeg, Assistant Grand Chief, Brotherhood of Locomotive Engineers; J. M. Main, Winnipeg, Deputy President, Order of Railroad Telegraphers; James Murdock, Toronto, Vice President, Brotherhood of Railroad Trainmen; G. K. Wark, Toronto, Vice President, Brotherhood of Locomotive Firemen and Enginemen; Wm. Dorey, Montreal; W. L. Best, Ottawa; L. L. Pelletier, Ottawa.

During the discussions at the meetings, Senator Robertson, Minister of Labor, spoke of the importance of transportation to industry, and called upon Warren S. Stone, President of the Brotherhood of Locomotive Engineers. Mr. Stone said the problems on the other side of the line were the same as here. The social unrest was only slumbering under the crust and could easily be fanned into flame. The war was won, but the present period was even more critical, and in the next few months the clock of progress must either be moved ahead or retarded. The pay envelope does not solve the cost of living, and there lies the [illegible] problem at the present time. The peace period must end war profiteering and the cost of living must come down. Wages only mean what you can buy with them. A 20% increase in pay, and a 40% increase in living costs will never bring peace. The question must be settled man fashion, face to face across the table. The solution of the question between capital and labor is the human touch. Labor is always looked on as a producer. It is also your biggest consumer. "In the United States if we can't solve the problem any other way, we will have the price plainly marked on every article," and if there is profiteering we'll trace it.

He concluded by saying: "I hope some man will rise big enough and broad enough to put the word 'brother' back into the brotherhood of man. The cry 'Am I my brother's keeper?' never had such a vital meaning as today."

United States Railway Notes.

Senator Frelinghuysen introduced a bill in the United States Senate, Sept. 15, proposing a permanent policy of private operation of railways, under government control, which is said to embody the U.S. Chamber of Commerce's views.

Director General Hines of the U.S. Railroad Administration stated recently that the freight car situation was substantially more favorable than it was in recent years prior to the war. On Aug. 1, 1917, total car surpluses reported throughout the country were 43,481 cars, whereas on Aug. 1, 1919, total car surpluses were 107,900. Total number of unfilled car requisitions on Aug. 1, 1917, was 77,287, whereas total number of unfilled car requisitions on Aug. 1, 1919, was only 19,271.

Washington, D.C., press dispatch, Sept. 12.—Preparing for the return of the railways to private control, Director General Hines today ordered all roads to begin an inventory of supplies on hand as of Dec. 31, 1919, the date indicated by President Wilson in his address to Congress as the termination of government supervision. A few weeks before the government turns the roads back the former managements will be put in charge, so that some time before the Railroad Administration goes out of existence, they can reorganize their staffs.

The U.S. Railroad Administration is reported to have authorized the statement that during the week ended Sept. 13 5,341 new cars ordered by the administration were placed in service.

British Railway Accidents.—It was stated recently that since July 6, 1918, there had been no fatal passenger train accidents on railways in the United Kingdom. Prior to the accident at Aberdeen on July 6, 1918, there had been no fatal passenger train accident for a year and 16 days. These records were made in the face of adverse conditions; unusual density of traffic during the last two years, depleted staffs and the unavoidable lowering of standards in some departments of maintenance.

Electric Railway Department

Hydro Electric Railway Projects in Ontario.

There is a good deal of activity at present in connection with the various projects for the construction of electric railways under the Ontario Hydro Electric Railways Act of 1914 and its amendments. Three different lines have been projected, for which plans were prepared and bylaws passed and the present activities aim at the starting of construction on these lines and extension of them.

The first line was projected to run from Toronto easterly, and was fully described and a plan given in Canadian Railway and Marine World for Nov., 1913, pg. 540. The total estimated cost of this line, including branches, was estimated, at the time the bylaws were voted on in 1914, at $4,346,938. The bylaws were passed by Scarboro, Markham, Pickering, Whitby and Reach townships; Whitby town, and Markham, Stouffville and Port Perry villages, and was defeated by Uxbridge and Whitchurch townships, and the Uxbridge and Newmarket towns. The bylaws passed were confirmed by the Ontario Legislature in 1915, and the plans were changed to suit the altered conditions. The four municipalities where the bylaws were defeated were struck out of the contract, and the routes were re-arranged somewhat, the estimated cost of the revised project being put at $3,159,234. This act also gave the Hydro Electric Power Commission of Ontario power to acquire any existing electric railway and to utilize it as part of any of the lines to be built by the commission.

The second line was projected to run from Toronto westerly, in the following sections: Toronto terminal—Humber River; Humber River—Port Credit; Port Credit—Milton; Milton—Guelph; Guelph — Berlin; Berlin — Stratford; Stratford—St. Marys; St. Marys—London; at an estimated cost of $13,734,155. Bylaws approving of the building of this line were passed by London, Trafalgar, Waterloo, Blanshard, Wilmot, Downe, South Easthope, Toronto, Nassagawaya, Guelph, Etobicoke, North Easthope, Biddulph, Esquesing, Puslinch, Eramosa, Nelson, Ellice, East Zorra, townships; Toronto, London, Guelph and Stratford, cities; Waterloo, St. Marys and Milton, towns; and Mimico, New Toronto, Port Credit, and New Hamburg, villages, and were confirmed by the Ontario Legislature in 1916. The City of Berlin was the only municipality which failed to pass the bylaw, the estimated cost of the line there being $774,040.

The third line was projected to connect Toronto with the Niagara peninsula, and was to be in two parts, viz: Part one—Port Credit-Hamilton section; Hamilton city section; Hamilton-St. Catharines section, the estimated cost of which was $11,360,363. Part two—Welland-Port Colborne to Bridgeburg, estimated cost, $2,208,716. Bylaws for the part one lines were passed in 1917 and 1919 by Toronto, Trafalgar, Nelson, East Flamboro, Barton, North Grimsby, Clinton, Louth and Grantham, townships; Grimsby and Beamsville, villages; Oakville and Burlington, towns, and Hamilton and St. Catharines, cities.

West Flamboro and Saltfleet, townships defeating the bylaw in both 1917 and 1919. The proposed debenture issues in these townships are $66,669 and $1,002,296, respectively. The bylaws for the lines mentioned in part 2, were carried by all the municipalities interested in 1917, viz: Humberstone, Crowland and Bertie, townships; Port Colborne, Fort Erie and Humberstone, villages, and Welland and Bridgeburg, towns. All these bylaws were confirmed by the Ontario Legislature in 1919. This act authorized the municipalities passing the bylaws to assume their proportionate part of the cost of the line through municipalities which had declined to participate in the building of the line.

The commission's attention so far as construction activities are concerned, is apparently been given principally to the lines west of Toronto. Under the act of 1919, the municipalities interested in the building of the Toronto-London, and the Toronto-St. Catharines lines, are being asked by the commission to take up the liability of the dissenting municipalities, viz: Berlin, on the first mentioned line, and West Flamboro and Saltfleet on the second. It is reported that a number of the municipalities have already signed the supplementary bylaw but no definite information is available as to how many have. One statement reported to have been made by Sir Adam Beck, is that the City of Guelph is holding up progress in connection with the Toronto-London line, by not signing, and another statement is to the effect that a considerable number of the municipalities interested have not signed.

The surveys for the line from Toronto to Hamilton are reported to have been completed. The route, it is stated, is closely parallel to the G.T.R. from Toronto to Clarkson, thence southerly to Oakville, crossing the town about a quarter of a mile north of the Toronto-Hamilton highway, and then on to Hamilton, by a route some distance north of the Hamilton Radial Electric Ry. at Burlington. The terminus in Toronto, will, it is stated, be at Yonge St., while the exact route into Hamilton has not been definitely decided. Engineers are reported to be checking up the surveys for this part of the line, and it is said that as soon as this work is completed steps will be taken to buy the right of way.

In connection with the section of the line in the Niagara peninsula, surveys were reported to have been started recently between Bridgeburg and Port Colborne.

During the progress of the recent campaign in Guelph against the passing of the bylaw to lease the Guelph Radial Ry. to the Grand River Ry. Co., plans were suggested for linking up the Toronto-Hamilton Niagara Falls line with the Toronto-Guelph line, and for making Galt the center of a system of lines radiating to all points in that district. It was reported recently, that engineers were in various parts of the district looking over the territory, and laying down possible routes. Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario had a conference in Guelph with the mayor on Aug. 21. It is reported that he advised the mayor that until Guelph signed the additional agreement assuming a portion of the liability for the municipalities rejecting the bylaws, nothing could be done, and that the Guelph City Council should enter into an agreement with the commission for the operation of the Guelph Radial Ry. St. George residents are petitioning the commission to locate the proposed Hamilton-Galt line through that village. Sir Adam Beck is reported to have stated Aug. 29, that the estimates of the cost of the proposed electric railway from Hamilton to Galt, and other points in that area would be ready in time to have bylaws submitted to the various municipalities interested at the annual elections in Jan., 1920.

So far as the lines east of Toronto are concerned, it appears from a speech of Sir Adam Beck at Brougham, Ont., before the Pickering Township Council, Sept, 17, that the plans, as discussed and voted upon in 1913, have been rearranged, and practically a new project initiated. This project is based on the acquisition from the Canadian National Rys. of the partially constructed Toronto Eastern Ry., and its completion from Toronto, where terminals will be provided, to Bowmanville. The position of the Toronto Eastern Ry. in connection with the railway plans of the Hydro Electric Power Commission of Ontario has been under consideration for sometime, and various proposals have been discussed.

Sir Adam Beck is reported to have said that the present project is based on an offer by the Dominion Government to sell the Toronto Eastern Ry., at a reasonable price. It is intended to build a first class line from Toronto Bowmanville, and to provide adequate terminals in Toronto. The commission's engineers who had gone into the matter and prepared estimates, were of opinion that the line would be self sustaining from the beginning. "The Dominion Government," he said, "is adverse to building a radial railway in Ontario, because if it undertakes the construction of radials in Ontario it will be requested by other provinces to do the same, and it does not contemplate the construction of municipal railways. The Province of Ontario has enunciated a radial railway policy of its own and having electricity in abundance to operate them, it is obvious that it is not a function of the Dominion Government to undertake the radial projects." He then stated that in the event of the Dominion Government taking over the Grand Trunk Ry., the Canadian Northern Ry. lines between Toronto and Napanee would be abandoned, and that the Minister of Railways had suggested that these lines could be handed over to the commission or to the municipalities for electrification.

The report of F. A. Gaby, Chief Engineer of the commission, gave the following details regarding the proposal

Route—Commencing at Toronto terminal, the line runs easterly over Toronto Harbor Commission property across Queen St. near the junction of Kingston Road, thence northerly to a point near St. Clair Ave., overcrossing present

C.N.R. Toronto-Ottawa line, providing for grade separation from Toronto terminal to the above mentioned point. The line then extends easterly, roughly paralleling St. Clair Ave., extension to an undercrossing of the C.N.R. Toronto-Ottawa line, thence northeasterly roughly paralleling Kingston road at a distance of three quarters of a mile until Kingston Road is undercrossed by line near crossing of road with G.T.R. main line. Dunbarton, the old location of the Toronto Eastern, has been adopted, extending through Pickering, Whitby, Oshawa and Bowmanville. Estimated mileage, 4[illegible].

Capital Cost—Right of way, grading, track and overhead	
Yonge St. terminal to line between townships to undercrossing of C.N.R. mile [illegible]11 from Bowmanville	$4,132,212
From C.N.R. undercrossing, mile 35.11 from Bowmanville to mileage 19.60 from Bowmanville	
Estimated value of work done by Toronto-Eastern Ry. between Pickering (mile 19.60) and Bowmanville (mile 0.00) and cost of completing and repairing Toronto-Eastern Ry. partially constructed line from Pickering to Bowmanville	2,578,581
	$6,510,794

Rolling Stock, Car Barns, Etc.

Locomotives, interurban and suburban cars, car barns, sub stations and equipment	$1,830,000
Total	$8,360,794

Distribution of Cost—The following table shows the distribution of capital cost between the various municipalities:

Township of York	$ 381,587
Township of Scarborough	892,686
Township of Pickering	482,050
Township of Whitby	280,304
Township of East Whitby	299,943
Township of Darlington	429,680
Town of Whitby	277,955
Town of Oshawa	771,894
Town of Bowmanville	216,030
City of Toronto	4,328,665
	$8,360,794

Estimated Traffic—The estimated traffic is based upon an hourly passenger service between terminals, 6 a.m. to 12 p.m., together with 10 minute suburban service from Toronto to C.N.R. overcrossing, 6 miles from Toronto terminal. Two or three freight trains will be provided each week day, and in addition, switching locomotives at Toronto and Oshawa.

Estimated Annual Revenue:

Passenger, suburban, interurban, and tributary districts voted upon	$ 873,140
Freight, grain, package freight, express and milk business	244,863
Total	$1,118,003

Estimated Annual Operating Expenses:

Maintenance of track, buildings, and equipment, station operation and dispatching, way stations, terminals, pension charges, general expenses	$ 658,135
Interest at [illegible]	41,828
Net annual revenue	$ 41,828

Following the reading of the report from which the above particulars are taken, Sir Adam Beck, went on to say that it was estimated that the radial system would expend altogether about [illegible]000 on terminals in Toronto. There would be a central terminal at the foot of Bay St., with a loop around Queen St. to Bay St., south to Richmond St., [illegible] Church St. The radial lines would operate an express system. Construction on the line could go ahead at once.

After discussion it was agreed that Pickering Township ratepayers would be asked to vote on a bylaw on Oct. 12.

The Prime Minister of Ontario, Sir Wm. Hearst, in a pre-election address to the people, issued Sept. 23, read: 'Though the construction of hydro electric radial railways by the power commission has been delayed by the war, the time has not been lost. Investigations and surveys have been actively pushed forward. Enabling legislation has been enacted and all orders in council have been passed and all steps recommended by the commission have been taken to permit of active prosecution of this important work. We believe that as soon as the Dominion Government has acquired the G.T.R. certain of its lines should be transferred to the Hydro Electric Power Commission to be electrified, thereby avoiding duplication, and bringing to the farmer and urban dweller the advantage of cheap transportation."

A press report states that a meeting representing Woodstock, Ingersoll, Brantford and Beachville, met in Brantford, Sept. 16, to discuss a project for an electric railway under the Hydro Electric Railways Act; from Brantford, via Woodstock and Ingersoll to a junction with the London and Port Stanley Ry. between London and St. Thomas. A committee was appointed to arrange for a general conference of all the municipalities interested. It is suggested that the Brantford and Hamilton Ry., owned by the Dominion Power and Transmission Co., and running between Hamilton and Brantford, should be acquired in connection with the project.

Fenelon Falls, Ont., Village Council, proposes to ask the Hydro Electric Power Commission of Ontario to build an electric railway from Port Perry, via Lindsay and Fenelon Falls, and on through Victoria County. The Lindsay Town Council has already asked for the building of a line to Lindsay, and there have been a number of meetings of residents in Haliburton County, at which resolutions have been passed favoring the building of a line through Minden to Haliburton.

Hydro Electric Railway Association of Ontario's Meeting.

The Hydro Electric Railway Association of Ontario held its annual meeting in Toronto, Aug. 29, when the following resolution was passed: '"That the time is now ripe for the construction and operation of hydro electric railways in Ontario, and that the construction of all such railways which have received the necessary consent of the ratepayers of the municipalities interested, and are considered advisable by the commission, should be proceeded with at once by the Hydro Electric Power Commission of Ontario, and that the Lieut.-Governor in council be requested to issue all orders in council.

Officers were elected as follows: Hon. President, Sir Adam Beck, Hon. Vice President, Hon. I. B. Lucas; President, J. W. Lyon, Guelph; Vice Presidents, T. L. Church, Toronto; A. F. Wilson, Markham; C. R. Somerville, London; Geo. Duncan, Peterborough; G. C. Brooker, Hamilton; W. B. Burgoyne, St. Catharines; F. Milman, Picton; John Derbyshire, Brockville; P. Ray, Waterdown; Secretary, T. J. Hannington, Guelph; Treasurer, G. P. Hamilton, Guelph.

Sir Adam Beck in the course of his address to the delegates, is reported to have said that as regards the London to Toronto line, he wished to inform the Guelph members that it could not at present be constructed, for the simple reason that Guelph had not yet joined with the other municipalities in assuming responsibility for the share of the four municipalities, which had not passed bylaws in connection with it. For the present the whole system from Toronto to Port Credit and London was held up until Guelph took this step, or the four municipalities in question passed bylaws endorsing its construction. Because that section of the Toronto-St. Catharines line between Toronto and Port Credit constituted part of a system for which bylaws had not been passed by all the municipalities it touched, this line also was held up, although he had advised the municipalities concerned to request the government for permission to proceed with it regardless of this. The St. Catharines-Niagara branch also hinged on this section. Construction of the Port Colborne-Bridgeburg division hinged on the acquisition from the Dominion Government of of the existing line between St. Catharines and Port Colborne, and, pending the outcome of negotiations for the nationalization of the G.T.R., which has a line parallel to the road in question, the purchase of this link from the government had not been accomplished.

Sir Adam said that surveys on the Toronto and Eastern division had been completed, and that he had applied to the Ontario Government to submit agreements on it to the municipalities.

With reference to the passing of orders in council for the construction of radial railways, he pointed out that the radials were entirely a municipal affair. The government could not be made liable unless the municipalities were to become bankrupt. He could see no justification or reason for a refusal to pass orders in council.

The delegates passed resolutions to the effect that candidates for election to the legislature be asked to give a pledge to support the hydro electric railway's plan as well as the commission's power plans; calling upon the Province of Ontario to make a definite statement as to the government's attitude towards the hydro electric railways, and calling upon the Dominion Government to take over the G.T.R.

Proposed Municipal Purchases of Electric Railways.

Niagara, Welland & Lake Erie Ry.—A press report states that the Welland, Ont., City Council, has arranged for the company's books to be audited, with a view of negotiating for the purchase of the line by the city. The mayor is reported to have stated that $350,000 is asked for the company's property.

Sandwich, Windsor & Amherstburg Ry., Windsor, Ont.—City Council instructed its solicitor, recently, to notify the company of the city's intention to take over the railway, on the expiration of the franchise, in Dec., 1922.

Fort William Municipal Ry.—**Port Arthur Civic Ry.**—In connection with the recently reported statement of Sir Adam Beck respecting the willingness of the Hydro Electric Power Commission of Ontario to take over the electric railway lines in Port Arthur and Fort William, and the interurban line connecting the two cities, at present operated by them under separate managements, it was stated at a meeting of the Port Arthur City Council, recently that the proposition was a trifle premature. Alderman I. L. Matthews is reported to have stated that he did not think the commission would take over and operate the lines. The lines could be run more economically and more efficiently under one management than under two as at present. (Sept., pg. 504).

The Niagara, St. Catharines and Toronto Ry. Employees Strike.

Canadian Railway and Marine World for September had a brief reference to the N., St. C. & T. R. employes' strike, which started Aug. 21, and ended Aug. 25 in a complete victory for the company. The strike commenced at 4 a.m., and the St. Catharines afternoon paper of that day contained the following as an advertisement:—

"The Niagara, St. Catharines & Toronto Ry. regrets that its service has unavoidably been temporarily discontinued, commencing this morning at 4 o'clock. This cessation of operation is due to the action of some of our employes refusing to remain on duty as a protest against the dismissal from the service of certain conductors. This railway is owned by the Dominion Government and operated under the Canadian National Rys. board. In view of these facts the management feels that it will serve the best interests of all concerned to give the public some of the facts which have resulted in the cessation of service. We have found it necessary to release from our service certain conductors against whom we have corroborative evidence that they have defrauded the company with regard to the collection of fares on the cars. Several months ago the management was confronted with indisputable evidence that a large amount of revenue was being lost through the dishonesty of certain employes. A request was accordingly made to have the line properly checked by government detectives. A thorough investigation for an extended period was made by officers. Sufficient evidence was collected to warrant the company in relieving several men from its employ, since their retention would have cast reflection on the honesty of a large number of faithful operators on our lines and would have placed them in a false position in the eyes of the public. The following data is taken from the reports made by the government operatives showing the results of investigation on single trips on the various lines:

Date—Division	Fares Collected	Fares Reported	Shortage
July 14—Local line..........	54	48	6
" 18—Lake shore	100	93	7
" 22—Welland	61	57	4
" 28—Main line	92	76	16
" 30—Main line	132	107	25
" 30—Pt. Dalhousie..	109	81	28
" 30—Pt. Dalhousie..	56	45	11
" 30—Pt. Dalhousie..	26	22	4
" 31—Pt. Dalhousie..	71	58	13
" 31—Main line..........	92	72	20
Aug. 7—Pt. Dalhousie..	49	42	7
" 8—Main line	63	59	4
" 8—Main line	105	95	10
" 9—Main line	66	61	5
" 9—Pt. Dalhousie..	62	52	10
" 10—Main line	134	115	19
" 11—Main line	89	74	15
" 11—Pt. Dalhousie..	51	45	6

"Realizing that, under certain conditions, the collection of fares may be omitted by the conductor without reflection upon his honesty, the government operatives have, in such cases, reported the number of people so carried, but have not included them in the above figures. This is the only part of the evidence which is in the company's possession and which we refused to hand over to the employes for their perusual, as the same is reserved for the use of the Department of Justice in any action that they may see fit to institute.

"In order to show the public at large that these men are not underpaid, we quote the amounts paid to 20 of our conductors and motormen selected at random. Only men who were in the service on Sept. 15 last have been considered and the totals show what has actually been paid to them from Sept. 15, 1918, to Aug. 1, 1919, a period of 10½ months. On this basis the earnings for a full year are computed for comparative purposes."

Sept. 15, 1918, to Aug. 1, 1919	Yearly basis	Sept. 15, 1919, to Aug. 1, 1919	Yearly basis
$1419.64	$1623.45	$1479.98	$1691.41
1159.55	1325.20	1367.08	1562.38
1353.00	1546.29	1285.38	1469.01
1300.72	1486.53	1296.01	1481.15
1315.06	1502.92	1321.17	1509.91
1120.72	1280.83	1297.99	1483.42
1351.36	1544.41	1101.42	1258.77
1546.64	1767.59	1223.48	1398.26
1498.69	1712.79	1217.04	1390.92
1463.06	1672.07	1012.21	1156.85

"The management is pleased to report a large number of cases were instanced by the government operatives in which honesty, courtesy and attention to the travelling public was commented upon. The company feels gratified that it has in its employ so many men of high standard, In fairness to the employes, in fairness to the company, and in sincerity to the public, representing the owners, we take the ground that the existence of dishonesty in the service cannot be tolerated.

"It is the aim of the officials to bring the service of the Niagara, St. Catharines & Toronto Ry. up to the highest possible degree of efficiency. To achieve this, we earnestly solicit the co-operation of the public and our employes."

The company also published the following advertisement, addressed to its employes:—

"The management feels that a large number of employes have failed to report for duty through some misunderstanding of the facts which led to the removal of certain men from the service. We have endeavored to place certain evidence before you to make the issue a clear-cut one of honesty vs. dishonesty. We would fail in our duty to the greater portion of our employes, to ourselves and to the public in general if we did not insist upon honesty in every form.

"An attempt has been made to accuse the management of being hostile to the employes' organization. Any statements of this character are not based upon facts. The company has recognized the right of its employes to organize, and such right is clearly shown in the existing agreement; but in a straight case of criminal dishonesty, the management will not consider whether the offender is a member of an organization or not. We claim the right in such cases to deal with the man in question as an individual.

"We trust that the spirit of friendly co-operation shown by so many of our employes in past years will continue in the future. The company's attitude to its employes in the past justifies our request for their loyal support; we fully realize the necessity of having this as well as the support of the general public in order to serve the district covered by our lines in the most efficient manner. It is perhaps doubtful if any organization in this section of the province has done more to advance the interests of its employes than the Niagara, St. Catharines & Toronto Ry. Active assistance has been given to various sports, celebrations, every victory loan, patriotic fund, every unit organized for the front and to many men returning from overseas.

"The strike which has been declared by our employes is illegal under the provisions of the Lemieux Act. By this legislation, each employe is liable to incur a penalty by thus deliberately absenting himself from the service. The company does not wish at this stage to take advantage of the act in this respect, and, after placing before our men the statements which have appeared officially in the press, we hereby give notice that all employes not concerned in the charges in respect to which we have evidence may return to the service on or before Aug. 25 at 10 a.m., and be reinstated in their former positions. Any employe who has not returned to duty by that hour will be considered as having permanently left the service."

The Ottawa Electric Railway's Insurance and Benefit Plan.

F. D. Burpee, Superintendent, Ottawa Electric Ry., issued the following bulletin, Sept. 15: "The company's insurance and benefit plan has been completed, and will be put into operation on Oct. 1. The following benefits can be obtained by enrolment:

"1. In case of death from any cause, $1,000 will be paid to the family, wife, mother, or other beneficiary named.

"2. Upon retirement from the service, at the age of 65 or over, $1,083, in cash, will be paid to each member, or he can take a payment of $100 a year for the balance of his life, with a total payment of $1,000 guaranteed, in case he dies before the age of 75.

"3. If an employe leaves the service for any cause at any time before reaching the age of 65, the total money paid in by him will be returned to him, with interest at the rate of 3% per annum; or if he wishes he can continue the policy getting credit for a like amount. At such time the employe might not be in physical condition to secure insurance, so that he has this policy guaranteed to him, in any case.

"4. If an employe is off duty, due to sickness, or accident, occurring when not at work for the company, he will receive $10 a week, but no payment shall be made for disability resulting from venereal disease or from any disease for which he is not treated by a physician, nor for the first 7 days of disability, nor for disability in excess of 26 consecutive weeks duration.

"5. When absent from duty, on account of illness, or accident, as above mentioned, free medical attendance will be provided.

"The weekly sick benefit is open to all employes who are paid by the hour or day, but not to those on a monthly salary. The assessment for the above benefits will be $1.50 a month, to be deducted from the pay roll. No entrance fee, or charge of any kind, except the monthly assessment, will be made. To those who are paid by the month, and who do not participate in benefits 4 and 5, the monthly assessment will be $1.25.

"The above plan is open to all employes. Those who have not enrolled to date, can do so by giving their names to Mr. Lang, at 248 Albert St. (ground floor)."

The Winnipeg Electric Ry., early in September, received 2 semi-steel cars from Ottawa Car Manufacturing Co.

Basis for Appraisal of the British Columbia Electric Railway's Plant Contributory to its Railway Activities.

The British Columbia Public Utilities Commissioner in giving judgment in this matter recently, detailed the contentions of the City of Vancouver's solicitors and the company's representatives regarding the basis of the appraisal, and said:

"To deal first with the request that the appraisal should be made by a board of three members—one to be appointed by the municipalities, two to be appointed, either by this commission, or one by the company, and one (the chairman) by this commission. A board so constituted and selected does not appear likely to ultimately differ in any material respect from an ordinary board of arbitration, members of which usually resolve themselves into two opposing partisans and a referee or chairman. I cannot agree that to leave the appraisal, which may well prove to be the crucial element of the enquiry, to the decision of such a board is in conformity with my duties as laid down in the act, or with what has been referred to as the spirit of the legislation which created the act. I am directed by the act to make a special enquiry to determine the just and reasonable rate to be charged by the British Columbia Electric Ry. for the carriage of passengers on any line of electric railway which enters or traverses any portion of the City of Vancouver. To carry out such enquiry, I am authorized to ascertain the value of the company's property, by an appraisal, if in my opinion it is necessary. In my opinion, it is necessary, and I may thus select and appoint persons to carry out such appraisal, under my direction. I have no authority to delegate appointment, and, as appointment and selection are so interlaced as practically to constitute one act, I consider I should not delegate selection. In carrying out my duties under the act, I am acting for the people of the province, through the legislature, and I cannot agree that the representatives of any particular city of other municipal area or district, or of any particular company, should exort the authority which has been given to me in the interest of the people of the whole province. The representatives of local municipal areas already differ as to the expediency of such a suggestion. This commission will, therefore, select and appoint the appraiser or appraisers.

"As to the request that the appraisal be conducted by a board of three members, all selected and appointed by this commission. The reasons for my decision as to selection are applicable also, in a measure, to a decision as to this request. With the precedent of my own appointment, viz., that the legislature of this province has enacted that the duties of this commission are to be carried on by one person, I consider that I am justified in deciding that a subsidiary duty can also be properly so carried on. This commission will, therefore, appoint one chief appraiser, who will be assisted by such assistant appraisers as in the judgment of the chief appraiser, in consultation with this commission, are required for the proper consideration of the different technical units of the company's property. Such chief appraiser will direct the assistant appraisers, receive and co-ordinate their reports, and make use of the information so derived in his own report. The chief appraiser will be subject to cross-examination by the company and the assistant appraisers will also be retained with a view to such cross-examination, if the necessity arises. I reserve a decision as to cross-examination by the representatives of the city and municipalities, or by others who may later appear and be admitted by me as interested parties, until I can obtain the advice of the law officers of the crown.

"It seems probable that I shall have to further define or perhaps amend my ruling as to procedure, of June 10 last, which I also quoted at the hearing of Aug. 18 last, and in which I said 'A copy of the appraiser's report will be supplied to the company and interested parties. Both sides may then examine the appraiser in relation to his report, produce and examine witnesses and make their argument as provided above.' It now appears, that the company having, in compliance with the act, as regards burden of proof, commenced its case by, among other things, giving the book value of its properties, this commission in making an appraisal to check the accuracy of such value, is acting, as described above, viz., in the interest of th epeople of the province and thus of such particular units of the people as have seen fit to aid this commission by appearing. It therefore, does not seem logical that the representatives of such units should cross-examine the appraisers, who will be, in effect, their own witnesses; or expedient, inasmuch as such representatives will not have access to all the data on which such appraisers will base their reports. It does seem logical, however, that, following cross-examination of the appraisers by the company, such representatives should aid this commission in arriving at a just decision of re-examining such appraisers. However, I am waiting for competent legal advice in this matter. In the meantime, I shall be glad of an expression of opinion from the legal gentlemen present on behalf of the city and municipalities.

"I agree with all that has been said as to the necessity of obtaining the services of expert and unbiased authorities as appraisers. With this essential in view, I have addressed the principals of Toronto, McGill and Dalhousie Universities, the Board of Railway Commissioners and the Manitoba Public Utilities Commission, asking them to suggest the names of persons qualified, in their opinion, to carry out the duties of chief appraiser. I propose to exercise equal care in selecting assistant appraisers, who would be of the highest reputation, technically and otherwise. In this connection, I shall be glad to receive suggestions from those appearing on behalf of the public.

"The legal point raised by Mr. McCrossan, viz., that lines which are not in this commission's jurisdiction, should not be dealt with in the appraisal, I have also referred for competent legal advice. I take it, however, there can be no objection to a consideration of the effect of the operation of such lines by the company as I note that sec. 35 (1) of the act authorizes this commission to 'enquire into every fact which in its judgment has any bearing' on the value of the company's property.

"Coming now to the very important question of the instructions to be given the appraiser. Before dealing with the proposals in this respect put forward by Mr. McCrossan for the City of Vancouver, and by Mr. Kidd for the B.C.E.R. Co., in their arguments at the hearing of Aug. 18, I will briefly review how far, in my opinion, the act itself and my rulings as already given under the act, have given such instructions. The Public Utilities Act, sec. 11 (4) specifies the reason for the appraisal viz., 'to determine the just and reasonable rate to be charged by the B.C.E.R. Co. for passenger traffic, on any line of electric railway which enters or traverses any portion of the City of Vancouver.'

"Sec. 26 (2) gives the following mandate: 'In fixing any rate the commission shall have due regard, among other things, to give the public utility company a fair and reasonable return upon the appraised value of the property of the company.'

"Sec. 35 (1) says 'Whenever in the opinion of the commission it is necessary for the purpose of carrying out any of the provisions of this act, the commission may, by appraisal, from time to time, ascertain the value of the property of any public utility company, and may inquire into every fact which in its judgment has any bearing on that value, including the condition and value of the undertaking of the company as a going concern, and the amount of money actually and reasonably expended in that undertaking in order to furnish service reasonably adequate to the requirements of the community served by the company as that community exists at the time of the appraisal.'

"My ruling of Aug. 6, as to scope of evidence admissable, admits evidence as to the company's investments of capital, either directly, or through its subsidiary companies, in its electric railway system, as constructed and operated in the District of Vancouver (being the area contiguous to and inclusive of the Delta of the Fraser River, the Cities of Vancouver and New Westminster, the Municipalities of Point Grey, South Vancouver and Burnaby, the City and District of North Vancouver and the districts served by the New Westminster and Chilliwack line, and whether directly or through its subsidiary companies, in its power and electric lighting systems in said district, and also admits evidence as to the present values of the properties covered by such investments. I excluded the company's investments in land or other property in such district, for any purpose except directly for the purpose of its power, light and railway systems, and its investments in its gas system. Therefore, as the appraisal is for the purpose of producing evidence, I have thus instructed the appraiser to ascertain the amount invested by the company in such properties and also to ascertain their present values.

"I have thus also given instructions essential to compliance with the proposals made at the hearing of Aug. 18, by both Mr. Kidd, or the B.C.E.R. Co. and Mr. McCrossan for the City of Vancouver. Such instructions, however, by no means cover in detail the points raised in their proposals. In my opinion, the fundamental difference between Mr. Kidd's and Mr. McCrossan's proposals arises out of their respective interpretations of the meaning of the words 'value' and 'property,' in the mandate of the act. Out of this fundamental difference arise their differing suggestions for ascertaining value. I find that the same differences as to meaning have arisen in many important appraisals, to the extent that the advisability of establishing a recognized legal definition of the word 'value' in its relation to the appraisal of public utilities, has been suggested in the United States. The question has concerned the highest legal authorities in that country, where the operations of public utilities commissions are more general than in Canada, and, in default of a standardized definition of 'value,' I find that a principle has been accepted, viz., that the problem of valuation should be worked out with reference to what is just and reasonable for the specific purpose involved. This principle, I unhesitatingly adopt in the present enquiry. I am not prepared, until I am more fully informed, to accept either Mr. Kidd's or Mr. McCrossan's proposals as to what is just and reasonable. I sonsider that this problem can only be justly worked out by the appraiser, as the appraisal proceeds. Until the appraisal has progressed, there is not sufficient information available to justify anyone arriving at definite conclusions as to how the appraisal should be made. I therefore do not propose to further instruct the appraiser, for the present, except to now decide that all the economic, financial and physical circumstances which attend the formation of the company and the acquisition and construction of its property and plant as limited above shall be considered by the appraiser in arriving at its value. I leave the appraiser to decide how they shall be considered. I shall place before him, all the proposals and suggestions which have been or may be received from interested parties and the company, and, if difficulties arise during the appraisal, I shall be prepared to hear all parties and to give a decision as to how the appraiser should proceed."

Port Arthur Civic Railway's Financial Position.

The city auditor's report on the accounts for the calendar year 1918, of the public utilities operated by the City of Port Arthur, Ont., has been issued by the Public Utilities Commission. The following information is given concerning the Port Arthur Civic Ry.

The Public Utilities Commission came into existence in its present form at the end of 1914, and the deficits on the operation of the electric railway since then have been as follows:

1915	$61,268.79
1916	51,311.16
1917	43,837.79
1918	30,154.90

The auditors draw attention to the fact that the reserves for depreciation in all the utilities are very inadequate.

The following remarks are made on the electric railway department:

"There was paid off during the year the final instalment of serial debentures under bylaw 656, the original amount of which was $10,000. This liability now having been paid off, an entry was made reducing the amount of instalment (or serial) debenture reserve on the other by $10,000. No new debentures were issued in 1918, but we understand that an issue is contemplated by the city to cover capital expenditure made which has not already been provided for by the issue of debentures. This capital expenditure amounts to $19,118.36, but extends back for a number of years, $13,360.65 being on the books at Dec. 31, 1915, and we trust that before issuing debentures, a careful scrutiny will be made of these assets and the original amounts reduced by the depreciation for the length of time between the construction or purchase and the issue of the debentures, and the term of the debentures will be made to correspond with the remaining expected lifetime of the assets. The point to be kept strictly in view is that the amount of the debentures to be issued must be accumulated and on hand either by way of sinking fund or depreciation, or by both sinking fund and depreciation, at the end of the expected productive lifetime of the assets created.

"We notice that an effort has been made to provide for depreciation in 1918, but this has been done in an arbitrary way and the provision of $4,689.72 was not based upon any specific rate. This is one of the difficult problems to be dealt with by the commission and, in view of the overcapitalized state of the railway, we must urge that a policy in regard to providing ample depreciation be adopted. To guide you in this, it would be necessary to make up an inventory of the assets, so far as it is possible to obtain details, from the books, showing a classification according to the lifetime of the various assets, and base a rate of depreciation according thereto.

"We have reported in previous years upon the balance at debit of this account, and our information now is that all possible enquiry has been made to locate this shortage in the stores inventory, without success. This account should be closed, and, as the shortage was discovered in years previous to 1918 and as there is no person who can be held responsible therefor, it should now be written off to surplus and deficiency account.

"There is a credit balance of $514.21 upon which we have reported in previous years, and we think that it should now be written off to credit of surplus and deficiency account or carried to the credit of depreciation reserve."

Granting of Transfers in South Vancouver Ordered.

J. L. Retallack, Public Utilities Commissioner for British Columbia, on Sept. 4, granted South Vancouver Municipality's application for transfers between the British Columbia Electric Ry.'s Main St. and Fraser St. lines. These lines are from 4 to 6 blocks apart for some 3 miles, and the company's contention was, that to grant transfers from one line to another at their junction point in Vancouver, would result in the company being defrauded by people returning home by one or other of these lines. The commissioner said:

"I do not accept the company's evidence that people might better walk from Fraser to Main, or vice versa, than to take the transfer sought. There are people, old and young, unable to walk. The municipality has made its application on behalf of such people and of others who do not wish to walk, and its commissioner has testified under oath that the matter is a serious one. I accept the company's argument that the principle of refusing transfers between parallel streets is generally recognized and acted on by street railway companies, but without now examining into the merits of the principle, I do not consider its application in the present instance affords just and reasonable service to South Vancouver.

"The municipality has granted or acquiesced in concessions valuable to the company. Thus by the agreement of July, 1918, it agreed to fares being raised to 6c, and it previously acquiesced in the company ceasing to operate on 34th St. The municipality is entitled to a return for such concessions beyond the company's normal service, which principle the company itself acquiesced in, when, in the agreement of July, 1918, it agreed to transfers between all points in the municipality, and as the municipality deals, as a separate municipal entity, with the company, the municipality is entitled to be specially considered by the company. The municipality is now asking a concession which its commissioner testified is very important to its welfare, and which the company's Traffic Superintendent testified may result in the company being defrauded by a negligible number of persons. The company has power to make bylaws to protect itself against such frauds.

"I therefore consider that the subsisting agreement as to points between which transfers may be made should continue in effect, or that if it is amended, such amendment should not alter its existing provisions as to transfers between any place in the municipality to any other place in the municipality, and, if such agreement is cancelled, a new agreement should not deprive the municipality of such existing rights of transfer."

Quebec Railway, Light and Power Co. Annual Report, Etc.

The following report for the year ended June 30, was presented at the annual meeting, Dec. 9:

The gross earnings from operation were $2,077,621.43, compared with $1,797,852.83, an increase of $279,768.60. The operating and maintenance expenses were $1,444,516.08 compared with $1,235,724.33, an increase of $208,791.75, leaving a net revenue of $633,105.35 compared with $562,128.50, being an increase of $70,976.85. After adding miscellaneous income $27,722.61, not including earnings on Quebec & Saguenay Ry. Co.'s securities, and deducting fixed charges, taxes, depreciation on cars, etc., of $726,101.55, there remains a deficit of $65,273.59, leaving a balance at the credit of surplus account to date of $682,464.20.

The railway between St. Joachim and Nairn's Falls under construction for the Quebec & Saguenay Ry. Co., one of this company's subsidiaries, has been acquired by the Dominion Government. This sale took place Mar. 4, 1919, and the trustees are now in possession of the funds for disposal in accordance with the bondholders' instructions. The construction of the road is being continued by the government, and, when completed, should prove a valuable source of revenue for the Quebec Ry., Light & Power Co.'s Montmorency Division. A train service to Murray Bay, operated by the contractors, has been in effect since July 1, the results of which have proved satisfactory.

It is with feelings of deep regret that your directors have to report the death in February last of Sir Rodolphe Forget, President, who devoted much time to the company's organization and operations. On Feb. 27, Senator D. O. L'Esperance was appointed a director and subsequently appointed Vice President. The directors desire to express their appreciation of the efficient services rendered by the officials and staff.

The following were elected directors for the current year: Lorne C. Webster, President; Hon. D. O. L'Esperance, Vice President; Paul Galibert, C. G. Greenshields, J. N. Greenshields, K.C.; Brigadier General A. E. Labelle, Chas. Lavigne, Arthur Picard, T. J. Stewart, M.P., L. J. Tarte, Senator Jules Tessier. The following, who were directors before, were not re-elected: Chas. Donohue, J. T. Donohue and L. G. Morin. W. J. Lynch is General Manager and Arthur Le Moine, Secretary.

Increases in Electric Railway, Freight and Passenger Rates.

British Columbia Electric Ry.—In presenting the company's case recently for no reduction of the 6c fare in Vancouver, George Kidd, General Manager, informed the Public Utilities Commissioner that there was a possibility that a 7c fare might be necessary to pay increased wages. He stated that the company was preparing an application for the increase of fares on its interurban lines, and if the application of the employes for another increase in wages was granted it would mean a corresponding increase in expenses with a necessity for further revenue. Wages have gone up from 20c an hour, when the company started operations in 1897, to 51c at present. The men are asking for 65c as the maximum for day work and 70c for night work.

See also 'Basis for Appraisal of B.C. E.R. Co.'s Plant, etc." on another page of this issue.

Dominion Power and Transmission Co.—A press report states that this company, which owns and operates the Hamilton, Grimsby and Beamsville Electric Ry., and the Brantford and Hamilton Ry., issued an order, Sept. 10, that students' tickets are to be sold only to scholars under 18 attending public institutions. Under this order students in neighboring villages who are enrolled in Hamilton business colleges are refused the special tickets, which in the past they bought at greatly reduced rates. Hamilton's City Solicitor is reported to have stated that there is no provision in the franchises of the several lines nor is there any general law providing for special rates to students. The Board of Railway Commissioners could, however, issue an order to stop discrimination if it was practised. The Hamilton, Grimsby and Beamsville Electric Ry., and the Brantford and Hamilton Ry., are under the Board of Railway Commissioners' jurisdiction, while the other two are subject to the Ontario Railway and Municipal Board. The steam railways issue books of tickets at a specially reduced rate to students up to 18 years of age, on production of a monthly certificate signed by the principal of the school they are attending.

A press report of Sept. 15 states that the chairman of Hamilton's City Council's street railway committee, had been assured by G. E. Waller, General Superintendent Dominion Power and Transmission Co., that the Hamilton and Dundas Electric Ry. proposed to put on a half hourly service on its line as far as West Hamilton, the cars to be of the ordinary city type. The fares charged will be 6 tickets for 25c, good to Garth St., but no transfers from the Hamilton St. Ry. lines will be accepted; 5c each way to and from Ainslie's Woods; 10c single to and from West Hamilton, with a [illegible] return fare. The service was reported to have been put in operation [illegible]

Montreal Tramways Co.—The following decision was given by the Montreal Tramways Commission, Aug. 29:

Whereas an operating allowance of [illegible] per revenue car mile for cars equipped with motors and an operating allowance of 17.4c per revenue car mile for trailers, used for transportation of passengers, have been granted, this day, to the Montreal Tramways Co. for its operating expenses and taxes for the year ending June 30, 1920;

Whereas a maintenance allowance of 8.54c per revenue car mile for cars equipped with motors and a maintenance allowance of 7.05c per revenue car mile for trailers, used for the transportation of passengers, have been granted, this day, to the Montreal Tramways Co. for its maintenance and renewal expenses for the year ending June 30, 1920;

Whereas under the contract executed between the City of Montreal and the Montreal Tramways Co. on Jan. 28, 1918, the company shall receive, yearly, out of gross revenues: 1.—As its annual return upon the capital value therein fixed, 6% on such capital value. 2.—On all amounts added to the capital value of the company, since Dec. 31, 1917, an annual return of 6% and an additional return of 1% per annum. 3.—Upon the working capital furnished by the company, during the year ending June 30, 1920, a return at the rate of 6% per annum. 4.—For the purpose of covering the expenses to be incurred by the company, in procuring additional capital, an amount of $181,431.47.

All these charges being estimated by the Montreal Tramways Commission, at $2,491,303.13 for the year ending June 30, 1920.

Whereas the City of Montreal shall receive, out of gross revenues, over and above all other amounts to which it may be entitled under the said contract, $500,000 a year. Whereas a sum equal to 1% of the gross revenues must be paid into the contingent reserve fund, during said year. Whereas the company's gross revenues in the year ended June 30, 1919, were insufficient to provide for the payment of all sums payable in accordance with article 92 of the contract, leaving a deficit of $1,264,111.14 for the year, and that such deficit must be made up. Whereas the Montreal Tramways Commission must increase the tariffs to the extent necessary to provide sufficient gross revenues to meet all the payments hereinabove mentioned;

Be it resolved: that the following tariffs be established for passengers carried by the Montreal Tramways Co., in the uniform tariff territory comprising the City of Montreal, as it exists at present, and the cities or Towns of Westmount, Outremont, Verdun, St. Laurent, Mount Royal, also the territories of that portion of St. Laurent Parish, and of that portion of the municipality of Cote St. Luc lying to the east of the line of the Montreal Tramways Co., running from Snowdon Jct. to Cartierville, including the land occupied by the said line:

(a) Day tariff—From 5 a.m. to midnight, 7c cash, or a ticket to be sold in series of 4 for 25c.

(b) Special day tariff—A ticket to be sold in series of 5 for 25c, to be good only between 6 and 8 a.m. and between 5 and 7 p.m., on week days only.

(c) The present night tariff and school children tariff shall remain in force.

For municipalities outside of the uniform tariff territory, the present tariffs remain in force, with the exception of the City of Lachine, where the following tariffs are established: Local tariff: (a) Day tariff—From 5 a.m. to midnight, 5c cash, or a ticket to be sold in series of 8 for 25c. (b) Night tariff—From midnight to 5 a.m., 10c. Interurban tariff—For persons travelling from any place within the limits of the City of Lachine to the western limits of the uniform tariff territory and vice versa, the present tariffs remain in force.

Note: the local tariff in Lachine providing for 8 tickets for 25c, is said to be a reduction.

The new tariffs were to go into effect on Sept. 15, unless appealed against. On Sept. 5, the Montreal Administrative Commission instructed the City Attorney to appeal to the Quebec Public Utilities Commission, on the ground, among others, that the estimates of expenditure made by the Tramways Commission could be considerably curtailed. The Cities of Westmount and Verdun have also appealed. The going into effect of the new fares is therefore delayed until the Public Utilities Commission gives judgment, and the necessary eight days public notice of the change is given thereafter.

The Montreal Tramways Co. has also appealed against the Montreal Tramways' Commission's decision, fixing the fare rate for the current year in uniform territory, and asking for revision by the Quebec Public Utilities Commission of various amounts arrived at by the Tramways Commission for maintenance, upkeep, and renewal and the remuneration of the capital value of the company. The company also appeals from the Tramways Commission's decision, rejecting various items which it is claimed by the company should be added to the capital value for power-house equipment, a turbo generator costing $195,195.40, motor generator, William St., power house, $39,263.21, and three transformers, St. Denis St. substation, $9,000. An amount of $534,055.08 is claimed by the company and which was refused by the Tramways Commission, as representing the reproduction costs of stores in hand, and, accordingly withdrawn from the amounts of working capital for which interest at the rate of 6% is claimed by the company from Feb. 10 to June 30.

The hearing of the appeals was commenced before the Quebec Public Utilities' Commission in Montreal, Sept. 23. Counsel for the City of Montreal asked that the hearing be adjourned and that B. J. Arnold, Chicago, Ill., be engaged to make an investigation of the affairs of the company's affairs and report thereon. The commission decided to permit the city to engage Mr. Arnold as its expert to enquire into the company's operating and maintenance expenses, but declined to grant an adjournment until the report was presented. Certain statements were put in by the company as to operating and maintenance costs, and on Sept. 24, the commission refused the city's application for the appointment of accountants to examine the statements put in. After some evidence had been given by J. E. Hutcheson, General Manager, the further hearing was adjourned to Oct. 2.

Moose Jaw Electric Ry.—The Moose Jaw, Sask., City Council was reported to have passed a bylaw, Aug. 27, subject to the ratepayers ratification agreeing to amend the company's franchise along the lines suggested by the company. The matter has been under discussion for a considerable time. The new agreement is reported to permit the charging of a 6c fare, and the operation of one-man safety cars, and the company agrees to resume within six months the operation of cars over the South Hill belt line, and within the same period to complete and commence operations on the Hall St. line. The city agrees to suspend until the franchise is completed all debts of the company to the city, and to accept 80% of the net profits after provision has been made for a dividend of 6% a year to the shareholders, and the setting aside of $20,000 a year as a sinking and renewal fund for all repairs and maintenance of equipment.

The Quebec Ry., Light and Power Co. is applying to Quebec City Council for authority to advance fares on its city lines.

W. J. Lynch, General Manager has written the Quebec City Council asking authority to charge increased rates for gas, and increased fares on the electric railway in the city. Following are extracts: "During the past six months as you are aware, great inconvenience has been caused to the travelling public in many cities in Canada and the United States, due to the suspension of railway operations on account of the delay in meeting the demands made by employes for increases in wages or in granting by regularity bodies permission to various companies to increase fares. There is in effect between this company and our street railway conductors and motormen, an agreement covering rules and wages and which agreement does not expire until Mar., 1921. Notwithstanding this fact, however, in June last our employes, due to the continued high cost of living, requested an increase in wages which increase the company granted in part effective July 1, 1919, and further will grant an additional increase to these employes, just as soon as the following demands, which we herewith apply for, are granted by you:

"We request that the following tariff be authorized: Seven cent cash fare. Seventeen tickets for $1. Eleven tickets for 50c (workmen's tickets), good between 6 and 8 a.m., and 5 and 7 p.m. Not good on Sundays. Rules at present in force. Two cent transfer. School children and children same fare as at present in effect. Fare after midnight, same as at present, viz: 10c cash fare.

"Also, that the payment to the city of Quebec of 4% on gross earnings of city street railway be discontinued, and that this company be no longer obliged to bear the cost of paving and maintenance of roadway between the tracks, and limited space on either side. This, in our opinion, is an unreasonable charge and is simply a continuance of the principle in effect at the time of the operation of horse cars. At that time, due to the constant wear and tear in the center of track by horses drawing cars, the street railway companies were obliged to maintain the roadway between the tracks. In the operation of electric cars, however, the center of tracks is not used by street railway companies and therefore the maintenance of same should not be borne by the company."

Winnipeg Electric Ry.—A press report states that the company's application for authority to charge increased fares will be heard by the Manitoba Public Utilities Commissioner, at the October sittings.

When the company's application to the Public Utilities Commission for authority to charge a 6c fare came up for hearing, Sept. 26, the city solicitor opposed it and an adjournment was made for a week. The city solicitor opposed it and is reported to have said that he would apply for an injunction if higher fares were granted and would question the commissioner's constitutionality.

Mainly About Electric Railway People.

J. Davidson, director and acting Secretary British Columbia Electric Ry., London, Eng., and managing director British Empire Trust Co., has been visiting Vancouver, for the first time since 1907.

J. F. Fozzard has been appointed Accountant, Lethbridge Municipal Ry., Lethbridge, Alta., succeeding E. H. Duricott.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Mrs. Gale and family, have returned to Ottawa from their summer house at Aylmer, Que.

Jas. Gunn, Superintendent, Toronto Ry., who died recently, left an estate valued at $23,190.

R. C. Harris, City Works Commissioner, Toronto, has declined to accept a cheque for $500 sent him by the Toronto Ry. Co., under the Ontario Railway & Municipal Board's direction, as remuneration for acting as manager of the railway for a few days recently, when it was taken over by the O.R. & M. Board, owing to the conductors' and motormen's strike. He said he could not accept any payment, as he was in receipt of his salary from the city at the same time.

H. M. Mallison, heretofore managing director, Nova Scotia Tramways and Power Co., has been appointed Secretary-Treasurer.

W. H. Moore, General Manager, Toronto & York Radial Ry., has written a novel, "Polly Masson," dealing with relations between the English and French in Canada.

N. N. Oille, heretofore Special Agent, International Ry., Buffalo, N.Y., which also operates the Niagara Falls Park & River Ry., in Canada, has been appointed Secretary, International Ry. Co.

P. C. Reinhardt, heretofore Assistant Treasurer, International Ry., Buffalo, N.Y., which also operates the Niagara Falls Park & River Ry. in Canada, has been appointed Treasurer, International Ry. Co.

S. Rosevear, Electrical Engineer, Toronto Suburban Ry., has also been appointed Superintendent of Electric Lines, F. Mitchell, having left the company's service and gone to England.

Theodore P. Shonts, President, Interborough Rapid Transit Co., New York, N.Y., died there Sept. 21.

Lorne C. Webster, Montreal, has been elected a director of the Montreal Tramways Co. He is also President, Quebec Ry., Light, Heat & Power Co.; President, Webster Steamship Co., and a director of the Quebec and Levis Ferry Co.

W. L. Weston has been appointed Manager, Nova Scotia Tramways and Power Co., Halifax, N.S. He first entered the electric railway and lighting business in Fort Worth, Texas, in 1906, and subsequently occupied the position of Manager, Tampa and Sulphur Springs Traction Co., Tampa, Florida; Manager, Paducah Traction Co., and Paducah Light and Power Co., Paducah, Kentucky, and Manager Houghton Traction Co., and Houghton Electric Light Co., Houghton, Mich. Previous to going to Halifax, he served in the United States army for about 18 months.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that as a result of conferences between the company's officials and C.P.R. officials, it has been arranged that the line on Granville St. South will be extended from the corner of King Edward Ave., southward past the golf links, and will be joined up to the track on Wilson Road, which was laid two or three years ago, but which has not been used. (Sept., pg. 501).

Calgary Municipal Ry.—We are officially advised that there is under construction 1.25 miles of single track on Center St., and 0.75 mile of single track on 29th St. West, and 23rd Ave., Calgary, Alta. T. H. McCauley, Calgary, is Superintendent.

A recent press report stated that the Center St. extension had been so far completed that it was expected to have it in operation Oct. 1. A decision is reported to have been reached to recommend the city council to authorize a further extension of the line to 20th Ave.

Grand River Ry.—A press report states that 85 and 90 lb. rails are being laid on the line between Preston and Kitchener, Ont., and that the rails being taken up will be laid on the 2 mile revision being built between Preston and Hespeler. Work on these two sections is said to have been restarted Aug. 29, after having been held up on account of shortage of labor.

A press report states that the Kitchener, Ont., City Council has before it an application for the construction of a switch from the company's line to the Ames-Holden Tire Co. plant. (Sept., pg. 501).

Moose Jaw Electric Ry.—Under an agreement entered into between the company and the Moose Jaw, Sask., City Council, Aug. 27, the company agrees to complete and put in operation the Hall St. line, within six months.

Niagara, Welland and Lake Erie Ry.—A press report states that the company proposes to extend its line from Welland, Ont., to Parkway Heights.

Winnipeg Electric Ry.—A press report states that the rerouting of the car line in the vicinity of the Tuxedo Hospital, Winnipeg, has been completed and that the new line runs within 25 ft. of the building, whereas previously it ran half a mile away. (June, pg. 324).

The Ottawa Traction Co. has declared a dividend of 1%, payable Oct. 1.

Electric Railway Employes' Wages, Working Conditions, Etc.

The British Columbia Electric Ry.'s employes decided at a meeting in Vancouver, Aug. 30, to apply for the appointment of a board of conciliation to arbitrate as to increases of wages, and altered working conditions asked for. The last agreement terminated Sept. 8, and the employes ask that any new scale put in force under the arbitration proceedings be made retroactive to that date.

Dominion Power and Transmission Co—A Hamilton, Ont., press report says that Hamilton St. Ry. employes have asked for increases of 25%, which the company says it cannot pay.

Fort William Municipal Ry. employes' wages have been advanced, dating from June 16, to the following rates per hour: Conductors and motormen, first 6 months, 45c; next 18 months, 47½c; third year, 50c. On one-man cars, 2½c an hour extra. One uniform free a year. Overcoat free every two years.

Barn employes: Foreman, $150 a month; armature winder, $135 a month; pitmen, first class, 53c an hour; second class, 47½c an hour; cleaners, 45c an hour; carpenters, 57c an hour; painters, 55c an hour.

Guelph Radial Ry.—A board of conciliation was appointed by the Labor Department recently to adjust differences as to wages and working conditions. H. Mahoney of Guelph, representing the City of Guelph, and T. Hall, of Guelph, representing the employes. Judge C. G. Snider, of Hamilton, was appointed chairman, on the recommendation of the two other members of the board.

Niagara, St. Catharines and Toronto Ry.—A press report of Sept. 11, stated that representatives of the company and the employes, had agreed to the appointment of a board of conciliation in regard to wages and working conditions. The men are reported to be asking for an 8-hour day, and for an increase in wages of approximately 35%.

The Quebec Railway, Light & Power Co. has increased its shopmen's wages 4c an hour, dating from July 1, and they are now as follows:

	An hour
Day car foreman	41c
Armature winders	41c
Blacksmiths	40c
Blacksmiths' helpers	32c

No change has been made in the working hours.

Toronto Civic Ry.—The City Works Commissioner wrote the Board of Control Sept. 8, as follows:—Since July 4 last, the Toronto Ry. Co.'s employes of the classes indicated below, have been paid the wages therein set out, these rates forming part of majority finding of a board of conciliation. I recommend that increased rates be paid the Toronto Civic Railway employes, dating from July 4 last, as per the following schedule, viz.:

Conductors and motormen:

Existing hourly rates		Proposed hourly rates	
1st 6 mons	40⅛c	1st 3 mons.	50c
2nd 6 mons	43⅜c	Next 9 mons.	52½c
2nd year	45¾c	2nd year and after	55c
3rd year and after	48c		
Shedmen	44⅝c		50c
Car repairers	48c		55c

"In order that the rates for roadmasters, mechanics and foremen will conform to those of the employes scheduled above, I recommend that roadmasters, be increased from 50¼c to 57c, and that mechanics and foremen, be increased from 51⅜c to 65c. Owing to civic railway employes receiving two weeks' annual vacation, with pay, additional allowance is not made for overtime, except on Sundays, when conductors, motormen and roadmasters receive an extra 4c an hour, and shedmen, car repairers, mechanics and foremen, an additional 2½c an hour. The payment of the rates recommended will entail an additional expenditure of $16,907, from July 4 to Dec. 31.

The City Council approved the report.

Toronto Ry. and Toronto Electric Light Co.—On Aug, 19, the Minister of Labor, on the application of electrical workers, machinists, blacksmith, pattern makers, brass moulders and core makers of these companies, appointed a board of conciliation, consisting of W. H. Moore, representing the companies; F. Bancroft, representing the men, and County Judge Denton as chairman. Subsequently F. Bancroft resigned and W. H. Harper was appointed in his place. After the board had been appointed a dispute arose between the Toronto Power Co., and certain of its employes at Niagara Falls, members of the International Brotherhood of Electrical Workers which was also referred to the board. The Toronto Power Co. consented to the board dealing with the dispute with its electrical employes in Toronto, but not as to those employed at Niagara Falls, and the board therefore limited its action accordingly At the board's first meeting, it was stated that the dispute between the companies and their machinists, blacksmiths, pattern makers and core makers, had been amicably adjusted, so the board confined its hearings to the electrical workers. On Sept. 2, the chairman of the board and the employes' representative, W. H. Harper, signed a report recommending certain increases in wages and changes in working conditions, the companies' representative, W. H. Moore, making a minority report. The board's decision was communicated to the companies' General Manager, R. J. Fleming, on Sept. 3, the employes demanded an immediate answer, and as this was not forthcoming at 5 p.m. they struck, stopping the entire street railway traffic in the city and causing great inconvenience, not only to citizens, but to thousands of visitors who were at the Exhibition. At 8 p.m. Mr. Fleming signed his acceptance of the award and the car service was resumed at 9.30 p.m.

Winnipeg Electric Ry.—A press report of Sept. 18 stated that the employes had decided to accept the award of the board of conciliation, presided over by Justice Mathers. The text of the award is not yet to hand, but the report says that the men's original demand was 60c an hour for the second six months, and 70c an hour for the second year and thereafter. The award, which they have accepted, gives 46c for the first six months; 49c for the second six months; 52c for the second year and 55c for the third year and thereafter. It also provides for an 8-hour day, instead of 9 hours as heretofore. The nine-hour rate was 39c, 41c, 44c nad 47c, respectively.

Electric Railway Notes.

The International Ry., Buffalo, N.Y., has been refusing to accept Canadian coins on its lines on the United States side of the Niagara River, since Aug. 3. Similar action is reported to have been taken at other boundary points.

The Regina, Sask., City Council, has under consideration an offer from the Canadian Street Car Advertising Co., of $1,700 a year, with an additional $50 a year for every additional car beyond the 34 at present operated, for advertising in the Regina Municipal Ry. cars.

The Toronto Suburban Ry. will, a press report states, shortly put a number of new cars in service between Keele St., Toronto, and Guelph. During the past year the regular service has been three trips a day in each direction, on week days and four trips in each direction on Sundays.

The Levis County Ry. has ordered a single truck snow sweeper with steel underframe and wood body, from Ottawa Car Manufacturing Co. The sweeper brooms are to be driven by bevel gears, and the car will have the following chief dimensions: length, over all, 28 ft. 2 in.; length, over cab, 24 ft.; width of cab, 7 ft. 1½ in.; height, top of rail to top of roof, 11 ft. 10 in.

Tourist traffic on the Quebec Ry., Light and Power Co., Montmorency Division, between Quebec and Ste. Anne de Beaupre, is reported to have increased about 300%. Without taking into account the regular pilgrimage traffic, the company operated four special trains daily to handle the tourist traffic during the past summer, in comparison with a single train of two cars in previous summers.

Winniueg Electric Ry. employes have formed an athletic association which, in point of numbers, is one of the strongest in western Canada. The association is encouraged in every way by the company, and A. W. McLimont, Vice President and General Manager, takes a personal interest in its activities. The association's annual meet on Sept. 6, is said to have been the biggest success of any athletic meet ever held in the city. There were over 30 events, including 9 championship contests, and over 4,000 people attended.

The Nova Scotia Power Commission, appointed under a statute passed rerecently, held its first meeting Sept. 9, and decided to appoint an engineer to prepare plans and estimates for the development of the water power on Indian River, about 15 miles from Halifax. It is proposed simply to develop current and to deliver it to municipalities for distribution.

Waterloo-Wellington Ry.—The Kitchener, Ont., Light Commissioners have recommended the City Council not to accept the offer to lease this line to the city for a year for 12% of the gross receipts, but that it be bought by the city if it can be secured at a price in accordance with its earning power.

Report on Condition of Toronto Railway Co.'s Tracks.

H. W. Middlemist, Consulting Engineer, Bridges and Substructures of Railways, Ontario Railway and Municipal Board, who was instructed recently by A. B. Ingram, Vice Chairman, to examine the Toronto Ry. tracks on a number of street, has reported as follows:

Parliament St., between Carlton and Gerrard Sts., length 797 ft. Double track, laid in 1893, with Dick, Kerr & Co. rails, section 56 A, on ties, with concrete slab in between to support the block pacing. These rails are completely worn out, the heads split and crushed and the grooves cut away. The paving is also in very bad condition. This section is in the same state as that reported by me on June 12, 1918, on the same street from Gerrard to Queen Sts., and I consider it a waste of time and money to attempt any repairs.

Gerrard Street, from the Don bridge to Broadview, length 645 ft. Double track, laid in 1893, with Dick, Kerr & Co., 73 lb. grooved section. Block paving between rails. This track is constructed the same as Parliament St. mentioned above, and is, if anything, worse. The sooner it is removed the better, more particularly as it is on a steep grade, descending to the bridge. I picked up bolts, with the nuts on, that had been broken off the cars coming in contact with the paving.

Ossington Ave., from Queen to College Sts., length 3,691 ft. Double track, laid in 1893. Intersection at Queen St., much worn. The section between King and Dundas Sts., is laid with 669 lb. grooved section, Dick, Kerr & Co., rails, on ties with concrete between. The whole street is paved with bricks, which are very dilapidated between the rails. The rails are all worn away and spit, the grooves tearing off in long shreds. I understand that repairs have been made recently, but, in my opinion, they are useless. This section can only be made good by entirely new track. The special work at Dundas St. is badly worn.

From Dundas St. to College St. the rails are 73 lb. grooved section, laid on a concrete slab, with brick paving between the rails. The repair gang was working here trying to shim up the joints and putting in new tie rods in places. The slab is, I understand, broken away and sunk. The rails here are the best I have seen, and some are still in a serviceable state, but of course, could not be laid down again on a new base. The paving is badly worn, but, with the unsound condition of the slab, it would be no use renewing it, unless the track is relaid with new rails on a solid base. The intersection at College St. is good and sound.

Bathurst Street, from Queen St. to King St., length 1,036 ft. Double track laid in 1893, with 73 lb. grooved section Dick, Kerr & Co rails. The crossing at Queen St. requires refixing, but is still good for use. The tracks are on ties, with concrete between. The paving is of brick between the rails, and is in a bad state of repair. Rails are completely worn out and are beyond repair. The intersections at Adelaide and King Sts. are good.

While passing along Bathurst St. to go to this section, I examined the track from Bloor St. to Dundas St. It was laid at the same time, with the same section of rail. The paving is of brick, which is in very bad repair. The rails are quite worn out and no amount of repairs will do any good. This section was not mentioned on the list for examination in your letter, but I feel it my duty to report what I saw. Its length is 4,730 ft.

Lansdowne Ave., from Dundas St. to College St., length 215 ft. Double track laid in 1893, with 69 lb. grooved Dick Kerr & Co. rails, laid on ties, with concrete between. Brick paving between rails badly worn. The rails are practically worn out and the whole need renewing. The intersection at College St. is good, but that at Dundas St. will have to be taken out and a new one put in.

Dundas St., to Howard Park Ave. to Ritchie St., length, 586 ft. Double track laid in 1893 on ties with concrete between. Brick paving between rails, and in better condition than I have seen on the other streets, but will have to be renewed if new tracks are laid. The rails are 69 lb. grooved Dick Kerr & Co., section, and are worn out. The intersection at Howard Park Ave. needs renewing.

All lengths giving are street measurements which will have to be multiplied by four to get the rail length required.

I also went over some of the sections I reported on last year, and see no reason to change the opinion I then formed, except that I would urge the renewal of the same as speedily as possible, and in this I would include the additional sections mentioned in this report. In fact, I do not understand how the cars keep on the rails on most of them, the latter being so completely worn out, and I am afraid if this condition continues much longer, there may be bad derailments.

I understand that tenders are being called for for the reconstruction of the Broadview Ave. line from Danforth Ave| to Queen St., all of which is in a very bad condition.

I looked over the rails the company has in hand in its yard and found that the total quantity was 28,285 lin. ft., made up as follows: 524, 90 lb. grooved rails, each 62 ft. long, equals 28,024 ft.; 2 90 lb. grooved rails, 59 ft.; 2 90 lb. rails, 58 ft.; 2 90 lb. rails, 56 ft.; 2 90 lb. lb. rails, 46 ft.; 2 90 lb. rails, 42 ft.; equals 261 lin. ft.; making a total of 28,024, plus 261, equals 28,285 lin. ft., or 37 tons.

Taking the length of street inspected by me, I make the street measurements 797, plus 645, plus 3,691, plus 1,036, plus 215, plus 586, equals 6,970 lin. ft. total, which, multiplied by 4, give 27,880 lin. ft. of rail, or 373 tons. If Bathurst St., between Bloor St. and Dundas St. is added, it would be 27,880, plus 4,730 ft., multiplied by 4, equal to 46,880 lin. ft. of rail, or 627 tons.

In addition to these, there are the streets mentioned in my last year's report, which, excluding the Spadina Ave. section already renewed, is made up of the following streets: Ossington Ave., from Queen to Dundas, 1,850 ft.; Carlton St., between Sherbourne and Parliament, 1,205 ft.; Parliament St., from Gerrard to Queen, 2,197 ft.; Broadview, from Gerrard to Queen, 2,265 ft.; Gerrard St., from Broadview and Carlaw, 2,587 ft. Total, 10,104 ft. This multiplied by 4, equals 40,416 lin. ft. of rail, which, multiplied by 30 lb. equals 541 tons required. If the whole of Broadview Ave. is to be done, for which I believe tenders are being asked, the street measurement will be increased by 2,871 lin. ft., equal to 11,484 ft. of rails, or 154 tons.

The total quantity of rails required to complete all the streets mentioned in my report of June 12, 1918, and this report will be 373, plus 541, equal to 914 tons, not counting the addition to Broadview Ave., which will make 154 tons more, or a total of 1,068 tons. Bathurst St., between Bloor and Dundas, is not included in this total, as it was not on the list of streets to be inspected. It would add another 255 tons.

Waterloo-Wellington Railway Offered for Sale.

Canadian Railway and Marine World for August contained an article under the above heading, in which there were two typographical errors, one in the first paragraph, where some lines of type were accidently dropped and the other in the second paragraph, where the omission of a decimal point, gave the length of the line as 35 miles instead of 3.5 miles. The article should have read as follows:

A press report states that the electric railway owned by the Berlin and Bridgeport Electric St. Ry., the title of which was changed in 1912 to the Berlin and Northern Ry., and which was further changed at the Ontario Legislature's last session to the Waterloo-Wellington Ry., has been offered to the City of Kitchener, Ont., which already owns the street railway in the city. The line extends from Kitchener to Bridgeport, and the act above referred to authorizes the company to extend its line from Bridgeport to Elora and Fergus. The present franchise has three years to run. W. H. Breithaupt, Kitchener, Ont., is President.

We were officially advised that the proposal was being considered by the Kitchener Light Commissioners who have charge of the city's street railway department. Under the terms of the franchise the city has the option of taking over the railway in 1922, but W. H. Breithaupt is willing to sell the line, plant, etc., at once. The property consists of 3.5 miles of line, with a park and casino at Bridgeport; 1 double truck car and 2 single truck cars. Power is supplied from the Kitchener and Waterloo St. Ry.'s plant.

We have since been advised that the Kitchener Light Commissioners, to whom the offer was referred, have reported that it would be inadvisable for the city to buy the line until the expiration of the franchise on April 11, 1922, as there is a difference of approximately $40,000 between the commissioners' estimate of the value of the road and the price asked by the company.

After the presentation of the report referred to, W. H. Breithaupt, President, Waterloo-Wellington Ry., made a new proposition to the City of Kitchener, viz.: that the city lease the line for a year at the rate of 12½% of the gross receipts.

The Hydro Electric Power Commission of Ontario will, it is announced, erect an exhibit building on the National Exhibition grounds at Toronto, in time for next year's exhibition.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and Allied Companies:

	July, 1919	July, 1918
Gross	$642,090	$413,968
Expenses	492,981	394,803
Net	149,109	19,165

Edmonton Radial Ry.—The Edmonton, Alta., City Comptroller reports that for July the public utilities operated by the city had a surplus, inclusive of capital and depreciation charges, of $13,854.33, against a deficit of $1,993.52 for July, 1918. The gross earnings of the public utilities for the seven months ended July 31 were, $1,148,314.40; operation and maintenance expenses, $618,526.92; net earnings, $529,787.48, against $468,-426.84, for corresponding period of 1918. The capital and depreciation charges, and the deficit on the Edmonton Radial Ry. were $383,279.99, leaving a net surplus of $85,146,85. The figures for the E.R.R. are not given separately, but the report concludes:—"For the first occasion within several years, there is a net surplus of $2,218.67 for July, in the operation of the street railway department, after providing for capital and depreciation charges, against a net deficit for the same month last year of $7,-514.98."

The Montreal Tramways Co's annual meeting called for Aug. 27 was adjourned until Sept. 25, after a resolution had been adopted, changing the date from August to September for the future.

Regina Municipal Ry.—The City Auditor's report on Regina, Sask., finances for the seven months ended July 31, shows that the deficit on the operation of the Regina Municipal Ry. was $22,-217.39, and an estimated deficit for the 12 months to Dec. 31, of $27,911.

Regina Municipal Ry.—A press report states that the deficit increased from $22,217 on July 31 to $23,848 on Aug. 31.

St. Thomas Municipal Ry.—A press report states that the deficit in operation for July was $1,000.

Toronto & York Radial Ry. and Allied Companies:

	July, 1919	July, 1918	7 mons. to July 31, 1919	7 mons. to July 31, 1918
Gross	$997,262	$1,049,936	$7,110,558	$7,406,105
Expenses	695,027	589,964	4,338,323	4,045,377
Net	282,235	459,972	2,772,235	3,360,728

Toronto Railway:

	Aug., 1919	Aug., 1918	8 mons. to Aug. 31, 1919	8 mons. to Aug. 31, 1918
Gross earnings	$629,540	$551,709	$4,565,553	$4,369,545
City percentage	125,908	111,142	871,073	832,606

Windsor, Essex and Lake Shore Rapid Ry.—For the annual meeting of shareholders called to be held at Windsor, Ont., Sept. 22, the following business was on the agenda;—The consideraton and confirmation of the report of the directors with the accompanying financial statements and the confirmation of the adjustments of certain of the assets and the adjustment and settlement of certain of the company's liabilities and other financial arrangements recommended by the directors, confirmation of bylaws amending the present general and special bylaws and [illegible]ng the duties of the officers of the company and reducing the number of directors to five and fixing their remuneration, and the election of directors and auditors of the company and such other business as may lawfully be transacted by the annual general meeting or a special general meeting of shareholders.

The Windsor, Essex & Lake Shore Rapid Ry. Co.'s annual meeting was held at Windsor, Ont., Sept. 22, among other business transacted being the completion of arrangements for refinancing, which will provide funds for betterments and other requirements. The following are the directors and and officers for the current year: President, G. R. Cottrelle, Secretary, Board of Management, I.O.F., Toronto; Vice President and General Manager, A. Eastman, Kingsville, Ont.; Secretary Treasurer, W. R. Phillimore, Chatham, Ont., J. W. McColl, Toronto, and T. P. Pinkard, Windsor, Ont.

Winnipeg Electric Ry.—A recent press dispatch stated that the Winnipeg Electric Ry. had been given one week by the city to make some statement regarding what it intended doing in connection with overdue taxes, aggregating $400,000, and that if a satisfactory agreement was not made at the expiration of the week the city would enforce payment by seisure of the company's property. The company states that the city overcharged it $300,000 for pavements, and has suggested that it be reliever of pavement charges, as they necessitate higher fares.

Winnipeg Electric Ry. and Allied Companies:

	July, 1919	July, 1918	7 mons. to July 31, 1919	7 mons. to July 31, 1918
Gross	$337,978	$288,155	$2,212,618	$2,099,493
Expenses	283,014	218,454	1,741,501	1,603,747
Net	154,964	69,701	471,117	495,746

There was a net deficit after allowing for fixed charges for July, of $9,732.95.

Montreal Tramways Co's Annual Report, Etc.

The following report for the year ended June 30, was presented at the adjourned annual meeting, Sept. 25:

Your directors, in submitting their eighth annual report, wish to point out that for the first period of operations, being from Feb. 10, 1918, to June 30, 1919, the revenue has not been sufficient to meet the requirements under the new contract, the shortage being $1,364,-111.74, of which amount $692,694,05 is payable to the City of Montreal, when received. As the amounts to be received by the company from revenue for account of the City of Montreal of $692,-604,05, and for the contingent reserve fund of $115,722.10, are only to be paid when receiver, these amounts have not been brought into the statement of assets and liabilities, but are shown on statement of operations under new contract. The gross income accruing to your company from all sources from the year was $2,303,783.50, and the expenses, $1,800,537.25, leaving a balance carried to the credit of the general surplus account of $503,246,25, which, added to $536,571.61 at the credit of this account last year, after sundry deductions, makes a total of $1,039,817.86.

Under the authority of a resolution of the shareholders, adopted Sept. 30, 1919, your directors during the year authorized an issue of $4,000,000.00 of 5% debenture stock, to be disposed of from time to time as required. Of this amount, $1,000,000.00 was sold during the year.

The board regrets that the increase in the rates of fares during the past year did not provide sufficient revenue to meet the whole of the company's interest allowances, and in consequence the regular quarterly dividends on the common stock for the year were deferred.

In January last the employes made a general demand for an increase in wages to start from Feb. 1, but in view of the conditions of the franchise, under which the necessary allowances for expenditures are provided for yearly, this could not be entertained. Upon the demand of the employes a board of conciliation, as provided under the Industrial Disputes Act, 1907, was authorized. The board, after consideration, authorized a general increase in wages to all employes, effective from July 1, 1919, amounting approximately to $1,000,000.

The Tramways Commission, after due consideration of the operations of the past year, and after taking into consideration the requirements for the forthcoming year, rendered its decision on Aug. 29, granting a further increase in the rates of fares, which decision has been appealed from to the Quebec Public Utilities Commission by the City of Montreal and some of the other municipalities, and this company.

During the year F. H. Wilson tendered his resignation as Vice President and director. The board desires to place on record its appreciation of the very valuable services rendered by him to the company. Lorne C. Webster was elected a director to fill the vacancy caused by F. H. Wilson's resignation.

Your directors desire to place on record their appreciation of the valuable and faithful services rendered by the officers and employes.

Statement of Operations Under New Contract, Feb. 10, 1918, to June 30, 1919.

Gross earnings		$11,572,210.48
Operating expenses and taxes	$6,640,715.22	
Operating profit	45,927.82	
Maintenance and renewals	2,098,120.81	
Total		8,784,763.85
Balance		$2,787,446.63
Allowances due company:		
6% on capital value	$3,019,224.42	
6% on worknig capital	40,645.44	
7% on addition to capital	32,919.35	
Expenses of financing	251,353.01	
Total		3,343,142.22
Balance dr.		$ 555,695.59
Payable when earned:—		
City of Montreal rental	$ 692,694.05	
Contingent reserve	115,722.10	
Total		808,416.15
Balance dr.		$1,364,111.74

During the 16 2-3 months covered by the report, $980,801.58 was spent on new construction.

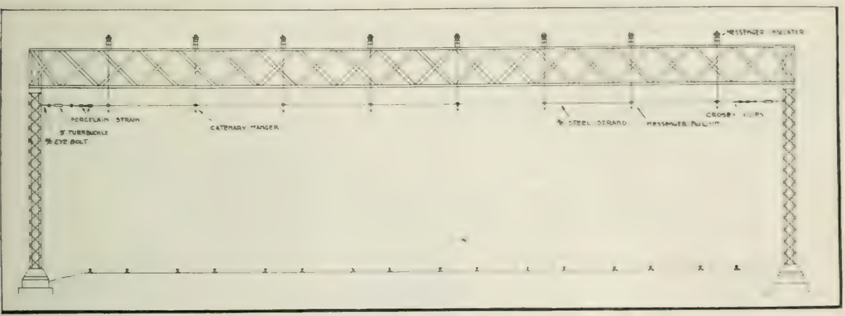
Proposed Purchase of London Street Railway—A special meeting of the London, Ont., City Council's committee in charge of street railway matters, was called to be held at the end of September to discuss the terms upon which the city would be willing to take over the line. Some time ago the company offered to sell its stock in the company at $50 per $40 share, and this was followed by some negotiations between the mayor and the company's President. The committee desires that progress be made in the matter so that a bylaw may be voted upon at the elections in Jan., 1920. Under the terms of the franchise the city can take over the line at any time upon terms fixed by arbitration. The mayor is opposed to arbitration and desires to have a price fixed by agreement.

Marine Department

Montreal Harbor Commissioners' Terminal Railway Electrification.

The Montreal Harbor Commissioners have taken the first step toward the electrification of their 55.35 miles of steam operated lines along the waterfront. The first portion of the lines to be electrified will be those north of Beaudry St., extending to the Canada Cement Co.'s works, comprising the equivalent of about 20 miles of single track. The intention is to electrify the whole of the harbor railway terminals, but at present only the electrification of the high level part and a portion of the lower level will be done. It is said that this will be the first harbor in the world to be electrified.

The overhead construction will be of the cross-span cantenary type, with wooden poles spaced 150 ft. on tangent track, using one 0000 grooved copper trolley wire, located in the center of each track 20 ft. above the head of the rails. All the rails will be bonded with 0000 bonds.



Elevation of Steel Bridge Construction, Montreal Harbor Commissioners' Terminal Railway Electrification.

The substation will be on the commissioners' property at the foot of Beaudry St., and in addition to the apparatus for the electric railway operation, will contain the compressor sets for the cold storage building, which is now being built by the commissioners.

The extension of the overhead construction which will later on be carried out over the lines south of Beaudry St., will utilize steel bridges for spanning the tracks and supporting catenary construction. The general design of these steel bridges will be as shown in the accompanying plan, and their location along the water front, with reference to the main piers, will also be as indicated in the plan. The same height of trolley wire above the head of the rail will be maintained as in the present construction, namely, 20 ft.

Motor Generator Unit—The first installation for the railway service will consist of 1 1000 k.w. motor generator set, with provision for a second duplicate set. This motor generator set will conform to the following specifications: The substation equipment is laid out on the basis of the present installation of 1 1000 k.w. motor generator set for the supply of energy of 2,400 volts d.c., with provision, in the switchboard, of blank panels, for the future installation of a second set of the same capacity. This 1000 k.w. set is specially designed for very heavy over-load capacity, for a short period, to meet railway operating conditions, and must be capable of carrying 250% load for 5 minutes. The set is to consist of a 3 phase, 60 cycle, 5 unit, 6 bearing synchronous motor generator set, rated as follows, to operate on 62½ cycles:

1—1,450 h.p. 2,300 volt, 3 phase, 60 cycles, 720 r.p.m., self starting synchronous motor.
2—500 k.w. 1,200 volt, 720 r.p.m. compound wound, commutating pole d.c. generators.
1—Exciter, shunt wound, 20 k.w., 125 volts, 720 r.p.m., for the excitation of the synchronous motor.
1—Exciter, 15 k.w., 125 volts, 720 r.p.m. for the excitation of the generator fields.

The above set, consisting of 2 500 k.w. compound wound, commutating pole generators wound for 1,200 volts, insulated for 2,400 volts, will be direct connected to the synchronous motor.

Base, Bearings and Shaft—The direct current generators, the synchronous motor will be mounted on a common cast iron base, which will carry the standards and self aligning, self oiling bearings, each machine having its own shaft.

Generator Field—The pole pieces, both main and commutating, will be of laminated steel, and bolted to a cast steel magnet frame. All the field windings will be wound on insulated spools, copper strip will be used in the series and commutating field construction. The pole face winding, series and commutating field windings, will all be connected on the ground side of these machines, so that the armatures will be the only portion of the direct current generators subjected to the full line potential of 2,400 volts. The shunt field of the direct current generators, and the synchronous motor field will be arranged for 125 volt excitation. This set will be equipped with a voltage limiting device to deenergize the separately excited generator fields whenever the circuit breaker is opened.

Pole Face Winding—The heavy overload capacity of this machine will be obtained by the use of a compensating, or pole face winding; this winding to be so connected as to directly oppose the armature reaction, thus ensuring satisfactory operation under any of the specified loads, or over-loads, without necessitating a machine that is normally underrated.

Motor Field—The field spider of the revolving motor field will have ample strength to resist any stresses to which it may be subjected under normal operating conditions. The field poles will be built up of steel laminations, securely fastened to the spider, while the field coils will consist of copper strip, wound on edge, and clamped firmly between the pole tip and field spider.

The Generator Armature will be of the drum type, the core being constructed of thin laminated steel, with large radial air ducts for ventilation, and mounted on a cast iron spider. Cast iron flanges will be used to hold the core together, and support the end windings. The armature windings will be made up of thin strip copper, varnished and insulated with mica and asbestos.

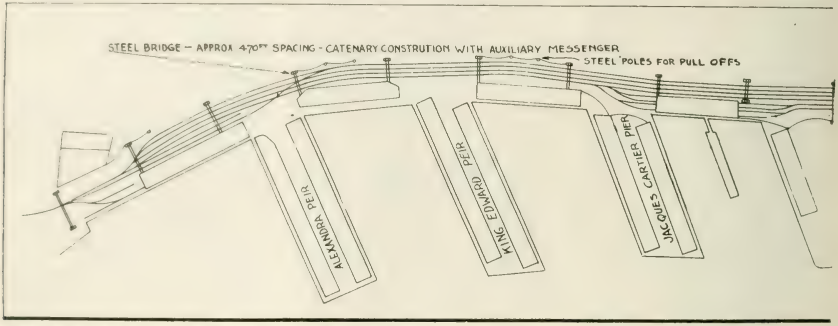
Motor Armature — The stationary armature frame will be provided with ventilating openings, so as to allow a free circulation of air through the ducts in the laminated core, and the ends of the windings. The core to be built up of the best grade of thin sheet iron, and provided with slots on the inner circumference, to receive the windings, and with dovetails on the outer circumference, by which the laminations are to be attached to the frame. The windings will be form wound and placed in open slots. The insulation will be of high dielectric strength, and of such a quality that no appreciable deterioration will take place when subjected to normal temperatures.

The Commutator will be built up of hard drawn segments of copper insulated throughout with mica, and held by iron clamping rings mounted on a cast iron shell. The armature spider and commutator will be keyed to the shaft, so that no movement between the two can take place.

Brush Mechanism—Carbon brushes are to be used for the generators, being carried in individual adjustable holders, bolted to cast iron brackets, or arms.

The arms will be bolted to a heavy iron ring, or yoke, which, will be in place by special supports from the base, or frame.

High Speed Circuit Breaker—A special feature in connection with the installation of the motor generator set will be the use of a high speed circuit breaker. The function of this breaker, in conjunction with flash barriers installed on the commutators of the generators, being to prevent flashovers, in the event of a severe short circuit occurring outside the station from any cause. This high speed circuit breaker has been specially developed in connection with electric railway operation, and has already secured remarkable protective results when used for this work.



STEEL BRIDGE – APPROX 470FT SPACING – CATENARY CONSTRUTION WITH AUXILIARY MESSENGER
STEEL POLES FOR PULL OFFS

Side View of Steel Bridge Construction, Montreal Harbor Commissioners' Terminal Railway Electrification.

The Switchboard will consist of 21 panels of blue Vermont marble, made up as follows:

1—charging generator set panel
1—blank distribution lighting panel
2—distribution lighting panels
1—single phase station lighting service panel
1—single phase incoming line panel
1—blank station power panel
1—3 phase station power service panel
1—3 phase recording panel
1—3 phase incoming line station power panel
1—3 phase incoming line panel
1—synchronous motor panel
1—blank synchronous motor panel
1—d.c. exciter for d.c. generator panel
1—blank d.c. exciter for d.c. generator panel
1—Tirrill regulator panel
1—d.c. generator panel
1—blank d.c. generator panel
3—d.c. feeder panels.

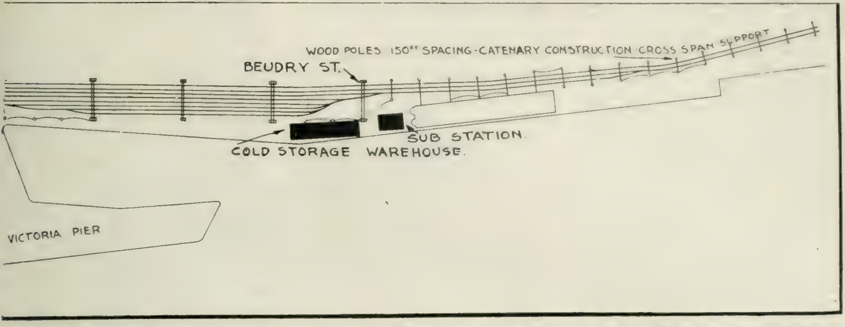
The switchboard will control:

2—3 phase, 2,300 volts, 650 amps. 63 cycles, incoming lines
1—motor generator set, consisting of one 3 phase, 2,300 volts, 1,150 k.v.a., 60 cycle synchronous motor.
2—500 k.w. 1,200 volt, d.c. generator (permanently connected in series)
1—20 k.w. 125 volt exciter (for synchronous motor)
1—15 k.w. 125 volt exciter (for d.c. generator)
1—motor generator set as above (future)
3—1,200 ampere, 2,400 volts, d.c. feeders.
1—3 phase, 2,300 volts, 73 amp., 63 cycles incoming line.
3—single phase, 2,200-1,100, 550-275 volt, 50 k.v.a., 60 cycles station power transformers.
1—single phase, 2,300 volts, 75 amps., 63 cycles incoming line
3—single phase, 2,200-1,100, 220-110 volt, 50 k.v.a., 60 cycles station lighting transformers
1—3 phase, 550 volts, 150 amperes, station power circuits
24—single phase, 110 volts, 60 amperes station lighting circuits
1—110 volts, a.c., d.c., emergency lighting feeder for station
1—motor generator set for charging batteries, consisting of: 1 3 phase, 60 cycle, 550 volt, 15 h.p., induction motor; 1 10 k.w., 125 volt, d.c. generator, compound wound
1—storage battery, consisting of 65 type E-11 E.s.b. cells, 200 ampere hours
6—125 volt 50 ampere control circuits.

There will also be a storage battery of 240 ampere hours capacity for oil switch operation and emergency lighting, with a 10 k.w. motor generator set for charging the storage battery.

Locomotives—In order to initiate electric operation, the commissioners have leased from the Canadian National Rys. 2 of the 83 ton, 2,400 volt d.c. locomotives at present operating in the Mount Royal tunnel zone. The general features of these locomotives are as follows: The weight of the complete locomotive is 83 tons. The locomotive has 4 axles, with all of the weight of the locomotive upon the 8 driving wheels, thus securing the maximum adhesive weight on drivers. The running gear consists of two 4 wheel trucks, articulated together by a heavy hinge. The equalization of the trucks is accomplished by a heavy, locomotive type, semi-elliptic leaf spring, over each journal box, connected through spring hangers to the frame and to the equalizer bars. Practically a 3 point suspension is thus supplied through the side equalization of one of the trucks, and both cross and side aqualization of the other truck. With the friction draft gear mounted in the end frame casting of this truck, this type of construction restricts the hauling and buffing stresses to the truck side frame and articulated joint, instead of through the cab center plate.

Both the box cab and platform are built of plates, sheets, angles and heavy channels and are thoroughly reinforced throughout. The box cab is divided into 3 compartments; the apparatus compartment in the center and the 2 operator's compartments at the ends. Each operator's compartment has a full complement of apparatus, consisting of controller, control switches, meter, air brake control apparatus, air gauges, pantograph control and heaters, thus providing the locomotive with a complete double end control. All apparatus subject to 2,400 volt potential is located in the center apparatus compartment and properly screened to protect against accidental contact. The location and general arrangement of this apparatus is such as to provide easy access from all sides, for inspection, cleaning and repairs.



WOOD POLES 150FT SPACING-CATENARY CONSTRUCTION-CROSS SPAN SUPPORT

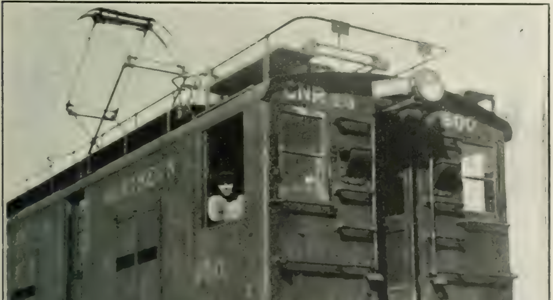
SUB STATION.
COLD STORAGE WAREHOUSE.
VICTORIA PIER

Plan View of Steel Bridge Construction, and portion of Wooden Pole Cross Span Catenary Construction, Montreal Harbor Commissioners' Terminal Railway Electrification. See also opposite page.



Electric Locomotive, Canadian National Railways.
Two of these locomotives have been leased by the Canadian National Rys. to the Montreal Harbor Commissioners, to be used in connection with the terminal railway electrification. A number of similar locomotives will probably be ordered by the commissioners in the near future.

The Sprague-General Electric type M multiple unit double end control equipment is used on these locomotives, all the control points being proportioned and adjusted so as to secure a smooth and even acceleration, at all times, corresponding to a current consumption near the slipping point of the wheels. The transition between series and series parallel is effected by a special electro pneumatically operated change over switch and the motor fields are always on the ground side of the armature. A motor generator set supplies 125 volt energy for the operation of the control, and a 2,400 volt air compressor of 100 cubic feet free air piston displacement is provided as part of the air brake equipment. Two air operated slider pantographs are located upon the roof.

The motor equipment consists of 4 CGE-229 commutating pole type motors, wound for 1,200 volts, and insulated for 2,400 volts, so that two may be connected permanently in series and operated on a 2,400 volt circuit. These motors are geared to the wheels through twin gears, there being one pinion on each end of are armature shaft. The CGE-229 motor is especially designed for locomotive service and is provided with forced ventilation by a blower located in the apparatus compartment. The locomotives are geared for a free running speed on tangent, level track of approximately 30 miles an hour (locomotive by itself without trailing load) and are operated by 2 speed machines with 10 points in series and 9 points series parallel.

The air brake equipment is the straight air and automatic type, so as to combine the desirable features for train operation through an equalizing reservoir and the independent operation of the brakes upon the locomotive. Provision is made for the multiple operation of the compressors upon all locomotives when operating in multiple, so as to distribute the duty upon all the compressors in the train. Each locomotive is provided with 2 2,400 volt electric heaters, one for each of the operating compartments.

The Harbor Commissioners will probably require 5 or 6 electric locomotives, which it is expected will be similar to the Canadian National Rys. ones described above, but they will probably have a higher gear ratio, to reduce speed and give greater tractive effort with corresponding current input.

The commissioners applied recently to the Board of Railway Commissioners for authority to carry a railway track along a portion of Common St. and to connect its tracks with the G.T.R. tracks on Common St., also for authority to cross the Canadian National Rys. tracks in order to reach the Canada Cement Co.'s yard at Pointe Aux Trembles, and the Imperial Oil Ltd. refinery.

The Canadian General Electric Co. has the contract for supplying the complete substation equipment and a portion of the overhead line material, and built the electric locomotives which will commence the service under electrical operation. The electrification work will be done by the commissioners' own forces.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships—As stated in Canadian Railway and Marine World for August, the Minister of Marine had decided to give orders for 2 more steel cargo steamships to the Collingwood Shipbuilding Co., and negotiations were in progress with other builders. Following is the official information which is now available as to orders placed:

Marine Department contracts 46 and 47; dated Sept. 11, 1919; 2 steel cargo steamships; builder, Collingwood Shipbuilding Co., Collingwod, Ont.; builder's yard nos. 65 and 66; approximately 3,950 d.w. long tons each; price per d.w. ton, $180; type, lake, single deck, poop, bridge and forecastle; classification, Lloyd's, 100 A1; speed, 11 knots trial; approximate delivery dates, June 1 and 15, 1920.

Marine Department contracts 48 and 49; dated Sept. 2, 1919; 2 steel cargo steamships; builder, Dominion Shipbuilding Co., Toronto; builder's yard nos. 10 and 11; approximately 3,500 d.w. long tons each; price, per d.w. long ton, $180; type, lake, single deck, poop, bridge and forecastle; classification, Lloyd's, 100 A1; speed, 11 knots trial; approximate deliverly dates, May and June, 1920. The company has entered into a subsidiary contract with the department to install twin decks in each ship. The keels will probably be laid early in October.

Canadian Vickers Ltd., Montreal, are reported to have offered the Marine Department to build 4 more steel cargo steamships of approximately 8,400 d.w. tons each, at about $170 a ton, as against $188 for the contracts placed previously for very similar ships. It is said that British quotations are now only very slightly lower, viz.: about $166 a ton. We were advised, Sept. 23, that contracts were being arranged for 4 steamships, but had not been signed.

Negotiations are also said to be in progress with the Midland Shipbuilding Co., Midland, Ont.

Keels Laid—Since Canadian Railway and Marine World for September was published, we have been advised of the laying of the following keels:

Marine Department contract 30; builder's yard no. 2; approximately 8,100 tons d.w., Harbour Marine Co., Victoria, B.C., Aug. 9.

Marine Department contract 32; builder's yard no. 43; approximately 4,300 tons d.w., Port Arthur Shipbuilding Co., Port Arthur, Ont., Aug. 29.

Marine Department contract 33; builder's yard no. 44; approximately 4,300 tons d.w., Port Arthur Shipbuilding Co., Port Arthur, Ont., Aug. 29.

S.S. Canadian Fisher; Marine Department contract 15; builder's yard no. 7; approximately 5,100 d.w. long tons; Tidewater Shipbuilders Ltd., Three Rivers, Que., Sept. 20.

Launchings of Steamships—Since Canadian Railway and Marine World for September was published we have been advised of the following launching:

S.S. Canadian Adventurer; Marine Department contract 19a; builder's yard no. 41; approximately 3,400 tons d.w., Port Arthur Shipbuilding Co., Port Arthur, Ont., Sept. 8.

S.S. Canadian Settler; Marine Department contract 13; builder's yard no. 5; approximately 5,100 d.w. long tons, Tidewater Shipbuilders Ltd., Three Rivers, Que., Sept. 20.

Names of Steamships—We were officially advised Sept. 5, that no additional names for steamships had been decided on by the Marine Department, since those published in Canadian Railway and Marine World for September.

Officers of Steamships—Following is a list of captains and chief engineers of steamships appointed by Canadian Government Merchant Marine Ltd., in addition to those mentioned in Canadian Railway and Marine World for September. The first column contains the name of the vessel, the second that of the captain and the third that of the chief engineer:

Canadian Settler	M. Robertson	S. Evans
Canadian Spinner	J. Reitch	J. R. Pringle
Canadian Trooper	R. J. Fisher	F. W. Wilson

Delivery of Steamships—In addition to the steamships mentioned in Canadian Railway and Marine World for September, the following has been delivered to the Marine Department, and was transferred to Canadian Government Merchant Marine Ltd., for operation, on the date mentioned.

Aug. 30, s.s. Canadian Signaller, approximately 3,750 tons d.w., Collingwood Shipbuilding Co., Collingwood, Ont. This ship sailed from Montreal, Sept. 15 with a general cargo for London, Eng.

Canadian Voyageur put in at Halifax, N.S., Sept. 14, on account of her high pressure cylinder cover having been blown off while at sea. An emergency cover was made at sea and the damage was permanently repaired at Halifax.

Sailing of Steamships—Canadian Government Merchant Marine Ltd., has established regular freight services to Liverpool, Eng., from Montreal, Halifax, N.S., and St. John, N.B.; to London, Eng., from Montreal and Halifax, N.S.; to Glasgow, Scotland, from Halifax, N.S.; to Avonmouth, Eng., from St. John, N.B.; to Buenos Aires, from Montreal and Halifax, N.S.; to Australia, from Vancouver, B.C.; to St. John's, Newfoundland, from Montreal, to Havana, Cuba; from Montreal and Halifax, N.S.; to Barbadoes, Trinidad, and Kingston, Jamaica, from Montreal; to Barbadoes, Trinidad and Demerera, from Montreal and Halifax, N.S.; to Kingston, Jamaica, and Havana, Cuba, from Montreal and St. John, N.B.; and sailings have been announced as follows, the dates given being "on or about" and subject to change without notice:

Liverpool Service, From Montreal.

Canadian Miller	8100 tons	Sept. 25, 1919
Canadian Ranger	8100 "	Sept. 28, 1919
Canadian Seigneur	8100 "	Oct. 10, 1919
Canadian Navigator	4300 "	Oct. 20, 1919
Canadian Trooper	4300 "	Oct. 25, 1919
Canadian Miller	8100 "	Nov. 12, 1919
Canadian Ranger	8100 "	Nov. 15, 1919
Canadian Spinner	8100 "	Nov. 24, 1919

Liverpool Service, From Halifax, N.S.

Canadian Seigneur	8100 tons	Nov. 28, 1919
Canadian Rancher	5100 "	Dec. 4, 1919
Canadian Miller	8100 "	Dec. 29, 1919
Canadian Ranger	8100 "	Jan. 2, 1920
Canadian Spinner	8100 "	Jan. 10, 1920
Canadian Seigneur	8100 "	Jan. 15, 1920
Canadian Rancher	5100 "	Jan. 22, 1920

Liverpool Service, From St. John, N.B.

Canadian Hunter	5100 tons	Dec. 5, 1919
Canadian Trooper	4300 "	Dec. 10, 1919
Canadian Hunter	5100 "	Jan. 20, 1920
Canadian Trooper	4300 "	Jan. 26, 1920

London Service, From Montreal.

Canadian Voyageur	4300 tons	Nov. 15, 1919
Canadian Volunteer	4300 "	Nov. 21, 1919

London Service, From Halifax, N.S.

Canadian Voyageur	4300 tons	Dec. 31, 1919
Canadian Volunteer	4300 "	Jan. 5, 1920
Canadian Voyageur	4300 "	Feb. 15, 1920

Glasgow Service, From Halifax, N.S.

Canadian Trapper	5100 tons	Nov. 28, 1919
Canadian Navigator	4300 "	Dec. 5, 1919
Canadian Aviator	5100 "	Dec. 30, 1919
Canadian Trapper	5100 "	Jan. 12, 1920
Canadian Aviator	5100 "	Feb. 14, 1920

Avonmouth Service, From St. John, N.B.

Canadian Beaver	3750 tons	Jan. 7, 1920
Canadian Navigator	4300 "	Jan. 15, 1920
Canadian Beaver	3750 "	Feb. 22, 1920

Buenos Aires Service, From Montreal.

Canadian Settler	5100 tons	Oct. 15, 1919
Canadian Planter	8100 "	Nov. 25, 1919

Buenos Aires Service, From Halifax, N.S.

Canadian Pioneer	8100 tons	Dec. 15, 1919
Canadian Settler	5100 "	Jan. 15, 1920
Canadian Planter	8100 "	Feb. 15 1920

Australian Service, From Vancouver, B.C.

Canadian Raider	5100 tons	Nov. 15, 1919

St. John's, Newfoundland, Service, From Montreal.

Canadian Volunteer	4300 tons	Sept. 30, 1919
Canadian Adventurer	3400 "	Oct. 15, 1919
Canadian Adventurer	3400 "	Oct. 29, 1919
Canadian Sower	3400 "	Nov. 1, 1919
Canadian Adventurer	3400 "	Nov. 12, 1919
Canadian Sower	3400 "	Nov. 15, 1919
Canadian Adventurer	3400 "	Nov. 26, 1919

Havana, Cuba, Service, From Montreal.

Canadian Sailor	3400 tons	Oct. 7, 1919

Havana, Cuba, Service, From Halifax, N.S.

Canadian Voyageur	4300 tons	Oct. 7, 1919
Canadian Trader	3400 "	Oct. 26, 1919
Canadian Sailor	3400 "	Nov. 9, 1919
Canadian Trader	3400 "	Nov. 23, 1919
Canadian Sailor	3400 "	Dec. 7, 1919
Canadian Trader	3400 "	Dec. 21, 1919

Barbadoes, Trinidad and Kingston Service, From Montreal.

Canadian Recruit	3750 tons	Sept. 30, 1919

Barbadoes, Trinidad, and Demerera, Service, From Montreal.

Canadian Signaller	3750 tons	Oct. 25, 1919
Canadian Gunner	3750 "	Nov. 12, 1919

Barbadoes, Trinidad, and Demerera, Service, From Halifax, N.S.

Canadian Signaller	3750 tons	Dec. 12, 1919
Canadian Gunner	3750 "	Jan. 10, 1920
Canadian Signaller	3750 "	Jan. 29, 1920
Canadian Gunner	3750 "	Feb. 16, 1920

Kingston, Jamaica and Havana, Cuba, Service, From Montreal.

Canadian Warrior	3750 tons	Oct. 29, 1919
Canadian Recruit	3750 "	Nov. 18, 1919

Kingston, Jamaica, and Havana, Cuba, Service From Montreal.

Canadian Warrior	3750 tons	Dec. 8, 1919
Canadian Recruit	3750 "	Dec. 28, 1919
Canadian Warrior	3750 "	Jan. 12, 1920
Canadian Recruit	3750 "	Jan. 27, 1920

Canadian Vickers Ltd., Montreal, advise us that it is expected to launch 3 steel cargo steamships for the Marine Department as follows:

S.S. Canadian Navigator; Marine Department contract 23; builder's yard no. 73; approximately 4,300 tons d.w., in October.

S.S. Canadian Spinner; Marine Department contract 27; builder's yard no. 71; approximately 8,100 tons d.w., in November.

S.S. Canadian Planter; Marine Department contract 28; builder's yard no. 72; approximately 8,100 tons d.w., in November.

Collingwood Shipbuilding Co., Collingwood, Ont., having completed the s.s. Canadian Signaller; Marine Department contract 11; builder's yard no. 63; approximately 3,750 tons d.w., delivered her to the Marine Department, and she was transferred to Canadian Government Merchant Marine Ltd., Aug. 30, and sailed for Erie, Pa., for a cargo of coal, with which she arrived at Montreal, Sept. 7.

Dominion Shipbuilding Co., Toronto—For particulars of orders for 2 steel cargo steamships see under sidehead, "Orders for Steamships," in an earlier part of this article.

Harbour Marine Co., Victoria, B.C., which has contracts from the Marine Department for 2 steel cargo steamships, approximately 8,100 tons d.w. each, for Canadian Government Merchant Marine Ltd., and which laid the keel for its yard no. 1, July 14, laid the keel for its yard no. 2, Aug. 9.

Nova Scotia Steel and Coal Co., New Glasgow, N.S.—The employes at the company's shipbuilding plant struck work Sept. 5, demanding an 8-hour day, the

Halifax scale of pay, and the recognition of their union. The company has 2 steel steamships of approximately 2,800 d.w. tons capacity each, under construction for Canadian Government Merchant Marine Ltd., the keels of which were laid Mar. 27 and 31, respectively.

Port Arthur Shipbuilding Co., Port Arthur, Ont., laid keels for 2 steel cargo steamships, Marine Department contracts 32 and 33; builder's yard numbers 43 and 44; each approximately 4,300 d.w. tons, Aug. 29.

The company launched the s.s. Canadian Adventurer, Marine Department contract 19a; builder's yard no. 41; approximately 3,400 d.w. tons, Sept. 8, the christening being performed by the Prince of Wales, by request of Mrs. James Whalen, wife of the company's President, who carried the christening bouquet and presented the Prince with the bottle of champagne for the christening. As the Prince pressed the electric button which released the ship and broke the bottle over her stern, he said: "I christen this boat Canadian Adventurer. I wish it and all who may sail it good luck and God speed." The Prince is reported to have stated afterwards that this was the first launching at which he had officiated, and the first side-launching he had ever seen, and to have expressed his pleasure that it had taken place in the very heart of Canada and that the vessel is to be one of the Canadian Government Merchant Marine fleet, to carry Canadian cargoes throughout the world. He was keenly interested in the method of launching, and particularly on learning that by pressing the electric button he would trip the trigger that would release the boat. He complimented the company's General Manager, J. F. Paige, and his organization, on the success of the launching.

The Canadian Adventurer, during the launching, flew the Union Jack at her bow and the Canadian Government Merchant Marine ensign at her stern, the Port Arthur Shipbuilding Co.'s flag being in the center. Code flags, stretched from stem to stern, spelled out the name Canadian Adventurer. The ship is a full canal sized ocean freighter, approximately 3,400 d.w. tons, length over all 260 ft., breadth moulded, 43½ ft.; depth moulded, 23 ft. She is built to British Lloyd's 100 A1 classification, the fitout being in accordance with British Board of Trade rules. The propelling machinery, to develop about 1,500 h.p., will be placed amidships. The 3,400 ton ships are, generally speaking, the same as the 3,750 ton type built for the Marine Department, a full description of which was published in Canadian Railway and Marine World for September, 1918.

The company expects to launch the s.s. Canadian Sower, Marine Department contract 20a; builder's yard no. 42; approximately 3,400 d.w. tons, about the end of September or early in October.

Tidewater Shipbuilders Ltd., Three Rivers, Que., launched the steel cargo steamship Canadian Settler; Marine Department contract 13; builder's yard no. 5; approximately 5,100 d.w. long tons; Sept. 20; and immediately afterwards laid the keel for the s.s. Canadian Fisher; Marine Department contract 15; builder's yard no. 7; approximately 5,100 d.w. long tons.

The company expects to launch the s.s. Canadian Ranger, Marine Department contract 14; builder's yard no. 6; about Oct. 10; immediately after which it will lay the keel for the s.s. Canadian Forester, Marine Department contract 16; builder's yard no. 8; approximately 5,100 d.w. long tons.

Wallace Shipyards Ltd., North Vancouver, B.C., delivered the s.s. Canadian Trooper, approximately 4,300 tons d.w., to the Marine Department on Aug. 26.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the seven different types of steamships being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton
Length, overall	280 ft.	260 ft.	260½ ft.	333 ft. 7 ins.	344 ft.	413 ft. 1 in.	445 ft.
Length, bet. perpendiculars	270 ft.	251 ft.	251 ft.	320 ft.	331 ft.	400 ft.	430 ft.
Breadth, moulded	38 ft.	43½ ft.	43½ ft.	44 ft.	46½ ft.	52 ft.	56 ft.
Depth, moulded	20½ ft.	23 ft.	26 ft.	25 ft.	25½ ft.	31 ft.	38 ft.
Draft, loaded	17¾ ft.	20 ft.	22 ft. 2 in.	21 ft. 2 ins.	21 ft. 8 ins.	25 ft. 1 in.	29 ft.
Type	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	Lake, s.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	2d., p.b. & f'c's'le	3d., p. & f'c's'le
Engines—Type	Tri-compound	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion
Cylinders, diam.	17½ x 28¾ x 47 ins.	20½ x 34 x 56 ins.	18 x 30 x 50 ins.	25 x 41 x 67 ins.	25 x 41 x 68 ins.	27 x 44 x 73 ins.	29½ x 50 x 80 ins.
Stroke	33 ins.	40 ins.	36 ins.	45 ins.	45 ins.	48 ins.	54 ins.
Ind. h.p.	875	1,300	1,200	1,800	2,500	3,000	4,000

She was transferred next day to Canadian Government Merchant Marine Ltd., loaded lumber at Fraser Mills, Vancouver, and sailed for Panama about August 13.

The company advised us Aug. 29 that it expected to launch the s.s. Canadian Aviator, approximately 5,100 tons, for the Marine Department, about Sept. 14.

The Carmichael Shipping Co. Discussed in Parliament.

J. W. Edwards, M.P., for Frontenac, Ont., in speaking in the House of Commons, Sept. 5, said among other things: "The member for Antigonish and Guysborough (J. H. Sinclair), has frequently spoken in this house on the subject of shipping, to such an extent as almost to make us believe that he was an expert on that matter. Where did he obtain his knowledge of shipping? In his part of the country there is a firm known as the Carmichael Shipping Co., and I believe he has a very direct and personal interest in its prosperity of it. That company before the war was receiving freight rates on deals and lumber of 35 shillings a standard, and during the latter part of the war it received as high as 350 to 380 shillings a standard. There are pirates in this country as well as profiteers. Some men take their profit on the land and others on the water, and I confess that I must take with a liberal amount of salt any statements made by the member for Antigonish and Guysborough to the effect that he is greatly concerned about the bleeding of the people by the profiteers. He has had considerable experience along that line. He has profited very materially in the shipping business, and who will deny that the shipping business and freights on the water have a very important effect on the cost of living? Unquestionably they do."

Mr. Sinclair rose to a question of privilege in the house on Sept. 8, quoted Mr. Edwards' remarks, as given above, and said: "This statement is untrue and has not the slightest foundation in fact. I do not say that the hon. member deliberately made a false statement, because I have no doubt that this story was told him by some malicious person. Whoever told it to him must have had some knowledge of the deal trade, because the hon. member is about correct in regard to the rates. The company in question carried no deals since the war broke out. It owned only one steamship which was commandeered by the Admiralty early in the war. She was placed on duty in the most dangerous part of the coast of Europe, carrying goods to the army at Salonika. She made five trips to Salonika and on the sixth, when bound for an Italian port, was torpedoed by an enemy submarine and is now at the bottom of the Mediterranean. Her captain and chief engineer were confined for 19 months in a German prison and during that time their wages were paid by the company that owned the vessel. This was the only steamship owned by the company and there could be no question of profiteering, for the Admiralty paid monthly freight at what was known as the blue book rate, which was less than one third of the commercial rate current at the time. I would not have troubled the house with this explanation but for the fact that the statement of the hon. member involves to some extent the reputation of an important business firm that has borne an honorable name in Nova Scotia for over 100 years."

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contractions are used in the column giving the type of the vessels to be built:- s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Control of Canadian Steamships by Great Britain.

Montreal press dispatch:—The Dominion Steel Corporation has received back three steamships from the British Shipping Control, the Lord Strathcona of 11,000 tons, and the Wabana and Kamouraska of 7,500 tons each. Two of the largest, the Rose Castle and the Daghill, are still over there, undergoing repairs, it is reported, and it may be months before they are sent back. Constant protests, it is understood, have been sent to the Shipping Control against the detention of those boats, but the time has dragged on. Meanwhile the Steel Corporation is prevented from carrying any but a small portion of the coal it mines to Montreal, as its own fleet is required on the coast. There is beginning to be an impression among the various companies thus handicapped, either by Canadian vessels being detained so long overseas, or British vessels under control in Canada, that the higher profits made overseas by those who had control of the vessels, may have had some influence on their return to Canada. The three boats now received by the Dominion Steel Corporation will help, of course, to provide a market for the coal that is produced.

The President of the Privy Council, Hon. N. W. Rowell, said in the House of Commons, Sept. 10: "For a considerable time the Canadian Government have had under consideration the question of securing the transfer to Canadian registry of Canadian owned ships at present on the United Kingdom registry. Many Canadian owners wish to make this transfer, but in view of the pressing need for tonnage the Minister of Shipping has heretofore refused to sanction such a course. As a result, however, of representations recently made by the Canadian Government, the government of the United Kingdom have consented to alter their policy in this respect, and they have agreed to the announcement of the change in the following terms set forth in a telegram from the Colonial Secretary, dated Aug. 16:

" 'Subject to adequate safeguards of the maintenance of our present rights in regard to the carriage of government cargo by liners, it is proposed that all ships that were Canadian owned before the war, and any ships transferred to Canadian owners during the war, are now to be transferred to Canadian registry if their owners desire it.'

"A subsequent telegram from the Colonial Secretary, dated Aug. 19, explains that the above proposal concerning transfer to Canadian registry is not intended to apply to cases where there has been a special stipulation to the contrary. This refers to cases of the sale by British owners to Canadian purchasers of ships of British registry. Owing to the great demand it was found necessary to retain rigid control of British ships and no British owners were permitted to transfer their ships without definite stipulation that such a transfer should not carry with it any rights other than those of the seller. The purchaser, therefore, in that case would receive the ship, subject to the government right of requisition, and of preventing transfer to another registry."

Mr. Rowell, also said in the House of Commons on the same day: "The leader of the opposition asked me yesterday if I could give any information whether ships not British, which were under charter to Canadian companies, and which were commandeered by the British Government, will be returned to the former charterers, and I promised to enquire and make answer today. The question doubtless refers to ships owned in Great Britain and registered there, under long term charter, to Dominion Coal Co. These ships were requisitioned during the period of the war by the British Government. Immediately following the termination of the war, representations were made by the Canadian Government to the British Government, requesting that these vessels should, with the least possible delay, be returned to the chartering company. In a dispatch from the Secretary of State for the Colonies to the Governor General dated June 26, the contents of which dispatch were communicated to the House of Commons by the Prime Minister on July 1, it is stated that the 5 vessels in which the Dominion Coal Co. are interested, 3 have been released from requisition and returned to the owners, and the remaining 2 are to be released as soon as present cargoes are discharged. It is understood that these 2 were undergoing extensive repairs, and if they have not already been released to the owners, they will be as son as they are ready to be placed in commission. We have not heard that they have not been released."

London, Eng., press cable, Sept. 12, Hon. N. W. Rowell is reported as having stated in the Canadian House of Commons that the British Ministry of Shipping had agreed to transfer to Canadian registration all Canadian-owned ships now under British registration. W. Grant Morden told the Canadian Press today that this was incorrect. He had seen a copy of the cable sent by the Colonial Secretary, which said that they would be transferred after August, 1920, but that in the meantime the British Ministry's control over the ships would not be affected, "which means," said Mr. Morden, "we are no better off than before."

A. R. McMaster, M.P., for Brome, Que., in speaking in the House of Commons recently, said in part: "Canada could improve her constitutional position by insisting upon all those sovereign rights which she does not now possess, the acquisition of which will make her a sister nation equal with the United Kingdom of Great Britain and Ireland. What are those rights? Great Britain has complete command of her own ships; we have not. While the war was on the British Admiralty commandeered Canadian ships without, I think, obtaining the consent of this parliament. Am I wrong in that?"

Hon. N. W. Rowell, President of the Privy Council: "I think my hon. friend is mistaken. I think the Dominion Government took the position that the British Government had no right to commandeer our ships, that that action could only be taken by this government; and I think we co-operated in the action taken."

Mr. McMaster: "The government has not continued to co-operate. It has asked for the return of those ships. They are being returned subject to certain obligations placed upon them when they were under the control of the British Government."

Mr. Rowell: "I speak subject to correction, because I am not familiar with the details of the matter which my hon. friend is now discussing. But I think that the hon. gentleman is incorrect in that. Certain ships are being returned subject to certain conditions imposed by the British Admiralty, but these are ships that were transferred from British registry to some other registry, the British Admiralty imposing the condition on the transfer that they should be subject to all obligations to which they would have been subject had they not been transferred."

Mr. McMaster: "As I understand it, these ships which are being transferred from British to Canadian registry are Canadian ships, owned by Canadian companies or individuals. I am not criticizing the government for this action. I am merely pointing out that if we are to have a status equal to that of Great Britain, we should absolutely control the fate of our own ships."

Sales of Imperial Steam Wooden Drifters.

The Anderson Co. of Canada, Montreal, advise us that they have made the following sales of steam wooden drifters, built in Canada during the war for the British Government through the Canadian Naval Service Department.

Nos. 30 and 46 6to Empreza de Pesca Vianese Limitada, Portugal. On Sept. 16 the ships were being outfitted at Halifax, and were expected to sail within a few days thereafter.

No. 35 to Job Bros., St. John's, Nfld.

Nos. 90 and 92 sold through the Anderson Co.'s New York office to the W. R. Grace Co.

No. 50, sold by the Naval Service Department to the Marine Department.

The Great Lakes Dredging Co. Ltd., the incorporation of which was announced in our last issue, with office at Union Bank Building, Ottawa, is, as stated, an amalgamation of the Great Lakes Dredging and Contracting Co. and the Thunder Bay Contracting Co. The officers are: President, Senator M. J. O'Brien, Renfrew, Ont.; Vice President, J. A. O'Brien, Ottawa; Managing Director, Lt.-Col. L. T. Martin, Renfrew, Ont.; other directors, W. O. Matthews, Ottawa, and J. L. Murray, Renfrew, Ont.; Secretary-Treasurer, T. Fisher, with office at Port Arthur, Ont. The company is carrying on dredging at Port Arthur and is building a slip at Ojibway, which will be the largest on the Great Lakes, for the Canadian Steel Corporation. The company's plant consists of 8 dipper dredges, 1 hydraulic dredge (Shuniah), 9 tugs, one of which, the E. C. Whalen, is suitable for ice breaking, 2 single derrick barges, and 1 double derrick barge, together with a number of steel and wood scows, barges, floating pile driver, etc.

The Dredge P.W.D., No. 106, was offered for sale by tender, Sept. 25, as she lay at the Marine Department's shipyard at Sorel, Que. The dredge is owned by the Public Works Department, and is equipped with two 9 x 12 engines and one upright boiler 4½ x 7 ft. The dimensions of the vessel are length, 54.8 ft.; breadth, 24.1 ft.; depth, 4.9 ft.; tonnage, 110.

Canada Steamship Lines Ltd. is reported to have earned over $1,000,000 more on its excursion business during the past season than in 1918. The overseas freight business is also reported to be in excess of 1918. J. W. Norcross, President, is reported to have stated in London, Eng., Sept. 18, that the company is preparing plans for large expansion.

Additional Canal Lock at Sault Ste. Marie.

A fourth lock in the United States Sault Ste. Marie canals, was opened for traffic Sept. 18, making, with the lock on the Canadian side, five locks for handling traffic through the St. Marys River.

The first canal was built on the Canadian side of the river in 1798, with a lock 38 ft. long, 8¾ ft. wide with a lift of 9 ft., and with a tow path alongside for the oxen utilized in hauling boats through. This was destroyed by U.S. troops in 1814.

The first ship canal was built on the U.S. side in 1855, and was 1½ miles long, 64 ft. wide at bottom and 100 ft. wide on the water surface. There were 2 tandem locks, each 350 ft. long, 70 ft. wide. with a lift of about 9 ft., a canal depth of about 13 ft.; and a lock depth of about 11½ ft. These locks were razed in 1888 during the excavations for the present Poe lock.

The first of the existing U.S. locks, the Weitzel lock, was completed in 1881, and is 515 ft. long, 8 ft. wide in the chamber, and 60 ft. wide at the gates, with 17 ft. of water on the sills. At that time the canal was deepened and widened to 160 ft.

The Canadian canal, 1⅛ miles long, was completed in 1895, and is 150 ft. wide, and 23 ft. deep. The lock is 900 ft. long, 60 ft. wide, with 22 ft. of water on the sills. The second U.S. or Poe lock, was completed in 1896, and is 800 ft. long, 100 ft. wide, with 23 ft. of water on the sills.

The third U.S. lock was opened for traffic Oct. 21, 1914. It is 1,350 ft. long, 80 ft. wide and has 24½ of water on the sills.

While the third U.S. lock was under construction, it was decided to duplicate it, and this, the fourth lock, is the one just opened for traffic, and which has been named Sabin, after the Superintendent of the canal. The second (Poe) lock, was 100 ft. wide, so as to enable two vessels to be locked through side by side, but in operation this was found to cause delay in getting the vessels into position, and passing them through the gates, so it was decided not to follow the same course in the later locks.

The traffic passing through these canals is greater than passes through any other canal in the world, the volume for 1918 being 85,680,327 tons. There were 20,610 vessels passages, the vessels having a registered tonnage of 661,100,244. Prior to 1881, the U.S. canals were operated by the State of Michigan and tolls were charged to cover operating expenses, but since that year, when control was taken over by the U.S. Government, no tolls have been charged, vessels of all nations being granted free use, as on the Canadian canal.

Mainly About Marine People.

Sir H. Montagu Allan, formerly of the Allan Steamship Co., made a trip from Montreal to the Pacific coast recently, with other directors of the Merchants Bank of Canada, of which he is President.

Hon. C. C. Ballantyne, Minister of Marine, who, as stated in Canadian Railway and Marine World for September, after returning from recuperating at St. Andrews, N.B., had to re-enter the Royal Victoria Hospital in Montreal, on Aug. 7, was able to be removed to his house early in September, but he had to return to the hospital again in a few days, as he missed the treatment which he had been receiving there and was not making satisfactory progress without it. We were advised Sept. 20 that he hoped to be able to leave the hospital in about a week thereafter. The date on which he will start for the Pacific coast depends largely on circumstances which may arise after his return to Ottawa, which is hoped to be early in October.

Lieut.-Col. A. E. Dubuc, D.S.O., is reported to have been appointed Superintendent of Canals for the Province of Quebec, vice E. Marceau, deceased.

Capt. Bertram Hayes, commander of the White-Star Line's s.s. Olympic, has been made a Knight Commander of the Order of St. Michael and St. George in recognition of his services, while in command of this vessel which acted as a troop transport during the war. During his services, while the vessel was under government requisition, thousands of troops were conveyed across the ocean without a life being lost.

Mrs. F. S. Isard, wife of the Director of Finance, Canada Steamship Lines, and her family, returned to Montreal recently after spending the summer at Elizabethtown, N.Y.

J. W. Norcross, President, Canada Steamship Lines, and W. Grant Morden, M.P., a member of the company's London, Eng. advisory board, are reported to have made a record air trip from Paris to London recently, in an hour and 55 minutes.

Jno. Barton Payne, heretofore General Counsel, United States Railroad Administration, has been appointed Chairman of the U.S. Shipping Board, and President of the Emergency Fleet Corporation.

S. McC. Smith, who died at Victoria, B.C., Sept. 7, was associated with shipbuilding and ship repairing work on the Pacific coast for over 40 years. He was born at Maitland, N.S., and went first to San Francisco, Cal., and later settled in Victoria, B.C. He was for some time before starting business on his own account, Superintendent, B.C. Marine Railway Co., Esquimalt, and supervised the building of several of the larger vessels used in the Pacific coasting trade.

E. K. Spinney, M.P., for Yarmouth and Clare, N.S., was elected chairman of the House of Commons Committee on Marine and Fisheries, at the recent session, replacing Hon. W. S. Fielding.

Mrs. Thom, widow of James Thom, formerly Manager of the White Star-Dominion Line at Montreal, has returned there, after spending some four years in England, while her sons, Lieutenants Balfour and Gordon Thom, were in Belgium and France.

Robert Weddell, harbor and marine contractor, Trenton, Ont., died there Sept. 11.

F. A. Weiss, Passenger Agent, Canadian Pacific Ocean Services Ltd., Shanghai, China, was found murdered, in the outskirts of that place, Aug. 24. He went from Montreal to Shanghai in March, 1917, and was appointed Passenger Agent there in June last.

The Louisburg Drydock and Shipbuilding Co., is stated, in a dispatch from Sydney, N.S., to have been incorporated to build a dry dock at Louisburg, N.S., to cost approximately $5,000,000. J. W. Maddin, who is said to be interested in the project, is reported to have stated that the plans and specifications have been completed and placed in the hands of the government, with an application for aid under the Dry Docks Subsidies Act. We have been officially advised that an application has been made to the Public Works Department for a subsidy, for the construction of a drydock at an approximate cost of $2,500,000. The dimensions of the proposed dock are: length, 650 ft.; width, 85 ft.; depth, of sill at high water spring tide, 30 ft.

British Shipbuilding experienced a rather healthy improvement during the second quarter of 1919; 782 vessels, of a gross tonnage of 2,524,050, being under construction. This was an increase of 269,000 tons on the amount under construction at the end of March and 709,000 tons more than the amount building a year ago. Records show that 181 vessels of 514,240 tons were launched during the second quarter, which compares with 72 vessels of 203,966 tons launched during the first quarter of 1919.

United States Shipbuilding—The Bureau of Navigation states that during the 12 months ended Aug. 31, the output of U.S. shipyards reached 4,187,670 gross tons of merchant vessels officially numbered by the bureau. The bureau also reports 236 sailing, steam, gas, and unrigged vessels of 454,887 gross tons, built in the U.S., and officially numbered during August.

Bonus for Shipbuilding Steel—The Welland, Ont., Board of Trade has passed a resolution in favor of the Dominion Government granting a bonus of $10 a ton on all steel entering Canada, during the next 10 years, for use in building vessels.

The Canadian Towing and Wrecking Co.'s steam tug James Whalen, which has been operating under lease in the lower St. Lawrence and on the Atlantic coast, for the last two or three years, returned to Port Arthur, Sept. 16.

Vessels Added to and Deducted From the Canadian Register During July and August, 1919.

Customs Requirements re Coastwise Clearances and Entries.

As stated in Canadian Railway and Marine World for March, in the report of the Dominion Marine Association's annual meeting, a letter was read from C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, inviting general support in a movement for relief from alleged unnecessarily onerous customs requirements, in the matter of coastwise clearances and entries, and it was decided to advise Mr. Nicholson that there was fairly general satisfaction with existing conditions on the Great Lakes in respect of the matters mentioned, and to ask for particulars of difficulties experienced on the Pacific coast.

We are now advised that the proposal from the Pacific coast for the abolition of the requirements for clearing ships at customs, where the business is purely coasting, meets with the general approval of the Dominion Marine Association's members, who believe the requirement, enforced as it is, for purely statistical purposes, throws a much heavier burden upon ship owners than is justified by the benefits received, and it is desired that, as in many countries, transires be issued good for an extended period.

United States Shipping Board Notes.

The board announces that of the 512 steamships which it requisitioned for war purposes, it had, up to Sept. 2, released 478 with total tonnage of 2,727,421 d.w. This does not include 87 Dutch ships, aggregating 579,975 tons d.w., which were released some time ago.

The board has issued a statement giving analysis of commerce carried in vessels under the board's control. A fleet of 293 freighters steamed from U.S. ports during June, carrying 1,177,444 tons of cargo. Of these 243 went out of Atlantic ports, 33 from Gulf ports and 17 from Pacific.

P. A. S. Franklin, President, International Mercantile Marine, expressed himself recently, as optimistic about the outlook for U.S. shipping if the Federal government will turn over steamships it controls to private firms for operation in passenger and freight business to all parts of the world.

The U.S. War Department announced Sept. 11 that during August 151,000 d.w., tons of shipping were redelivered to commercial owners and 74,000 tons to the U.S. Shipping Board, making a total of 225,000 for the month. This brings total redeliveries to 3,282,000 tons. There are in operation in the army's transatlantic fleet 519,000 d.w. tons of shipping.

New York press dispatch, Sept. 8:—Local shipowners were inclined today to interpret the announcement by the Shipping Board that less than 35 privately owned ships remain under its requisition, as further indication that government operation of ships will eventually cease. Recent reports that the chairmen of both the Senate and House committees are opposed to government competition with private shipping concerns were well received and sentiment is much improved over the general outlook. Of course, most shipowners realize that new shipping legislation must await the disposition of such matters as the ratification of the peace treaty and the framing and enacting of a new railway bill, but shipping affairs have started to shape toward a definite end, and there are many who believe that a real solution of the U.S. merchant marine problem will come much sooner than had been generally expected.

Proposed Control of Steamships by Board of Railway Commissioners.

In the House of Commons, Sept. 12, J. E. Armstrong, M.P., for Lambton, Ont., introduced a bill to amend the Railway Act, in reference to which he said: "This bill is for the purpose of bringing under the control of the Board of Railway Commissioners, ships plying on our inland waters and engaged in coastwise trade. At present only a few ships connected with the railways are under the control of the commissioners. The intention is to make such ships as I have mentioned subject to that control as regards tariffs, tolls, trade agreements, time of call, duration of stay. and many things of public importance connected with transportation on our waters. There are 4,500 ships on the Canadian register, and they employ 45,000 people. The bill is pretty nearly the same as the one I presented last year. Then I asked that the board should have control as regards maximum freight rates. That is embodied in this bill. But there is another clause which exempts sailing vessels and small boats."

At the time of writing (Sept. 23), the bill had been read a first time, and it was not considered likely that it would make much further progress without being referred to a committee, probably the railway committee, so that evidence of interested parties might be heard. The bill, like its predecessors, is meeting with the continued opposition of the leading boards of trade, commercial organizations, shippers and water carriers throughout the country, and of the Dominion Marine Association.

The Sydney Dry Dock and Engineering Co. has applied to the Dominion Government under the Dry Dock Subsidies Act for aid in the construction of a dry dock of 15,000 tons lifting capacity at Sydney, N.S. The application is being dealt with by the Public Works Department's engineering branch, and it is not expected that a decision will be announced for some little time. In this connection the Sydney Foundry & Machine Co. has applied to the Dominion Government for the granting of a water lot at Anderson's Point, Sydney, N.S., for the construction of a dry dock, and the Sydney Dry Dock and Engineering Co. is, apparently, a subsidiary company for the carrying out of the work.

Wireless Telegraph Installations—The 40 wooden steamships which are being built at the Pacific coast, for the French Government, are being equipped by the Marconi Wireless Telegraph Co. of Canada. The sloop Alverine, sold recently by the Dominion Government to the Pacific Salvage Co., and which has been remodelled for use as a salvage vessel, by Yarrows, Ltd., has been equipped with a Canadian Marconi 2 k.w. installation.

Ocean Cargo Carriers Co. Ltd., has been granted supplementary letters patent converting it from a private company into a public company.

Cargo Shipbuilding in Canada for British Government.

J. Coughlan & Sons, Vancouver, B.C. With the launching of the s.s. War Chariot at this yard, September 24, the last of the steel steamships ordered on the Pacific coast by the Imperial Munitions Board for the British Government, was floated and, on its equipment, the contracts with the Imperial Munitions Board will have been completed. These steel steamships were of approximately 8,800 tons d.w. capacity each, and 9 of this type were ordered for the British Government, and in addition, the s.s. Alaska, a vessel of a similar type and capacity, which was under construction in the early stages of the war for Norwegian interests, was taken over by the British Government.

Shipbuilding in Australia.

The Australian Government's shipbuilding programme covers the construction of 14 steel steamships of the shelter deck type, from 5,500 to 6,000 d.w. tons, of the following approximate dimensions: length, between perpendiculars, 331 ft.; breadth, moulded, 48 ft.; depth, moulded to shelter deck, 33 ft. 7 ins. It is reported that the cost of these vessels is about $141 a d.w. tn, the prices during May, averaging from $140 to $165 a d.w. ton. The contract price of the 5,100 ton steel steamships which are under construction in Canada for Canadian Government Merchant Marine Ltd., is $210 a d.w. ton for those being built on the Pacific coast, and $200 a d.w. ton for those building on the St. Lawrence. No figures are available as to wages paid in Australia, so that it is not possible to make any comparisons, but in one sase cited, the rate in Canada is nearly double that paid in Australia.

The Frontenac Dredging Co. Ltd., has been incorporated under the Ontario Companies Act with $75,000 capital, and office at Toronto, to carry on a general dredging, contracting and construction business, to own and operate dredges and dredging plants, and to take over the dredging and contracting business formerly carried on by Manley and Co.

Port Colborne Elevator Disaster—At the inquest into the cause of the explosion at the Dominion Government elevator at Port Colborne, Ont., Aug. 9, which caused the death of 8 men, it was stated that the explosion was caused by sparks from a defective motor setting fire to an accumulation of dust in a confined space. During the parliamentary recess, a Governor General's warrant for $400,000 was issued, for the reconstruction of the elevator.

The Motor Schooner Neophyte, owned by the Railways and Canals Department which was offered for sale by tender, as she lay at Port Nelson, Hudson Bay, has not been sold, only one tender being received and it was considered too low. Owing to the lateness of the season, it will not be possible to get the schooner out until next year.

The Easton Fish Co. Ltd., has been incorporated under the Manitoba Companies Act to carry on a general fishing and fish dealing business, and to own and operate steam trawlers, steamships and vessels, of all descriptions, wharves, docks and works for the improvement of navigation. The head office is at The Pas, Man., and the authorized capital is $40,000.

Proposed Development of St. Lawrence River Navigation and Power.

Ottawa press dispatch, Sept. 18. Preliminary steps in the direction of the preparation of an international scheme for the improvement of facilities for navigation on the St. Lawrence River and also for the development of the vast power potentialities of that stream, have been taken by both the Canadian and the United States Governments. Inasmuch as the St. Lawrence from Lake Ontario to Cornwall, a distance of 113 miles, is a boundary river, joint action by the two countries is necessary in this important enterprise. The U.S. Government, acting upon an instruction from Congress, has asked Canada to be a party to the submission of the question to the International Joint Commission, composed of representatives of both countries, for a report upon the feasibility, desirability and cost of such an undertaking. Canada, through her government, has consented to associate herself with the reference. Both governments have, therefore, named representatives, whose duty will be to prepare the questions to be laid before the International Joint Commission. The U.S. Government has appointed as its representative, Lieut.-Col. Charles Kellar, of the War Department. The Canadian Government has selected W. J. Stewart, of Ottawa, Dominion Hydrographer.

Mr. Stewart and Lieut.-Col. Kellar will meet shortly, probably at Washington, to consider the scope of the reference to the International Joint Commission. F. H. Keefer, M.P., who was formerly counsel for the Canadian and the Ontario Governments before the commission, and who is now Parliamentary Secretary for External Affairs, when questioned as to the progress of the negotiations looking to the development of the St. Lawrence for navigation and power purposes, spoke of the appointments which have been made and expressed the opinion that the question should be ready for submission to the commission within a month. The commission, he said, will then be in a position to proceed with its enquiry. In the meantime in anticipation of the investigation, certain surveys have been carried on on behalf of the Dominion Government. The Hydro-Electric Power Commission of Ontario, too, has been securing data and preparing plans, according to a recent announcement by its chairman, Sir Adam Beck.

The course of action being taken through the International Joint Commission is entirely in accord with the policy which has been laid down on behalf of Canada by Sir Robert Borden and his government. On several occasions, notably last year, when an application was made to the Joint Commission by a U.S. corporation for permission to construct a weir at the Long Sault Rapids, to increase the head of water in its power canal, the government declared itself opposed to piecemeal development by private interests, but announced its willingness to enter into negotiations with a view to the adoption of a general scheme of development of both the navigation and power possibilities of the river by the two governments. Several of the Canadian ministers at that time went to Washington to impress this view upon the U.S. Government. The result of the application was that the corporation was authorized to erect a temporary weir, because it was engaged in the manufacture of war materials. This weir, it was decided, should be removed when the war was over.

The U.S. Government made no pronouncement upon the proposal that a joint scheme of development be undertaken. Within the past year, however, a new factor has entered into the question. Many interests in the interior states realized the importance to them of a deep waterway from the head of Lake Superior to the Atlantic. They saw that with the completion of the new Welland Ship Canal by Canada the barrier which prevented ocean freighters from penetrating to the heart of the continent could be removed by the deepening of the St. Lawrence route between Lake Ontario and Montreal. They have formed an organization, known as the Great Lakes-St. Lawrence-Tidewater Association, with official and civic support in ten states, to educate public opinion to the importance of the project they have in view and to press for action by the U.S. Government. As a result, in some measure at least, of the activity of this association, Congress took official action last spring. To the Rivers and Harbors Appropriation Act, approved on March 2, 1919, Congress added a section directing "that the International Joint Commission be requested to investigate what further development of the St. Lawrence River between Lake Ontario and Montreal is necessary, to make the same navigable for ocean going vessels, together with the estimated cost thereof, and to report to the Canadian Government of Canada and to the U.S. Congress with its recommendation for co-operation between the U.S. and Canada in the improvement of the said river."

Upon this enactment, the U.S. Government acted in requesting a joint reference to the International Joint Commission. The project which the commission will consider will have, as has been indicated, two aspects: first, the improvement of navigation on the St. Lawrence, and, second, the development of water powers in the stream. Both aspects are of immense importance to Canada. If an arrangement was made whereby the St. Lawrence waterway would conform in depth to the new Welland Ship Canal which is to have 25 ft. of water with 30 ft. on the sills, nine-tenths of the seagoing vessels of the present time would be able to steam from the Atlantic to the head of the Great Lakes. Any ordinary ocean going ship would thus be able to travel 2,100 miles inland from the Gulf of St. Lawrence and the Great Lakes would be transformed into an American Mediterranean, discharge their cargoes at any of the Great Lakes' ports.

Furthermore, the 500-ft. grain carriers which ply on the upper lakes and which now can proceed seaward only as far as Port Colborne, the Lake Erie terminus of the Welland Canal, would be able to carry their half million bushel cargoes to Montreal, there to be discharged into ocean going ships. Hitherto large lake freighters have been compelled to discharge their cargoes into the government elevator at Port Colborne, from which it has been loaded into smaller boats capable of passing through the St. Lawrence Canals. A waterway which would permit large vessels to carry the grain from the head of the lakes to sea-board would, it is contended, materially reduce carrying charges and facilitate the movement of the western wheat crop. It would also provide water transportation for other products of the great inland territory tributary to the Great Lakes and westward and for the manufactured articles of the industrial centres at less than rail rates.

As a power proposition, the project is also a great one. It has been estimated that the water powers of the St. Lawrence could generate 3,000,000 h.p. of electricity, if not more. As yet a comparatively small proportion of this has been developed. The value of this for industrial and other purposes is not difficult to realize. Between Lake Ontario and Cornwall, where the St. Lawrence constitutes the International Boundary line, it is estimated that 1,000,000 h.p. of electricity could be delivered for the common use of the two countries. The International Joint Commission will be called upon to consider by what method the navigation and power of the river should be developed, whether by canalization of the river channel itself by the construction of storage dams at two or three points with lock gates, or by a system of canals parallel to the river after the fashion but on a larger scale than the existing St. Lawrence Canals.

The commission's report will be submitted to the Dominion and U.S. Governments, each of which will be free to approve or reject the plan it proposes. The undertaking would, no doubt, involve a large investment. It will be some time, however, before the details of the scheme can be worked out by the engineers and be reported upon by the International Joint Commission, probably several years.

Navigable Waters Protection Act Amendment.

The Minister of Public Works, Hon. A. L. Sifton, introduced a bill in the House of Commons on Sept. 16, to amend the Navigable Waters Protection Act, in reference to which he said: "The bill has reference to an amendment which was made a year or so ago in the Navigable Waters Act in connection with permission given by the Public Works Department for the construction of bridges or wharves upon navigable waters. The act that was passed provided for this permission, but not for the removal of obstructions if people should build without having obtained permission. The purpose of this bill is to authorize the department, in the event of the violation of the law, to remove obstructions from navigable waters."

The bill was read a third time and passed in the Commons, Sept. 24.

Princess May Steamship Co. Ltd. has been incorporated, under the Dominion Companies Act, with authorized capital of 10 shares without nominal or par value, but with the proviso that the business shall be carried on with a capital of $125,000 and with office at 701 Dominion Express Building, Montreal. The President of the company is S. Di Giorgio, President of Di Giorgio, Inc., fruit merchants, New York, and the Secretary is J. Fechtig, Jr., New York. The company has been formed to own and operate the s.s. Princess May, purchased recently from the C.P.R., as mentioned in our last issue.

General Shipbuilding Matters Throughout Canada.

Acadia Shipbuilding Co., Saulnierville, N.S., launched the tern schooner Nettie C., Sept. 16. She has been classed in Bureau Veritas for 12 years. Her dimensions are: length, over all, 150 ft.; breadth, 33.4 ft.; depth, 13.1 ft.; tonnage, 515 gross, 450 net.

Annapolis Shipbuilding Co., Annapolis, N.S., launched a 3 masted schooner, 287 tons gross at the end of August, which was named Peaceland. Her dimensions are: length, over keel, 100 ft.; beam, 29 ft.; depth of hold, 10½ ft.; tonnage 261 register. She was launched fully rigged with all masts and top masts.

Canadian Vickers Ltd., Montreal—The s.s. Alsace was launched at this yard, Sept. 27. She is being built for French interests.

I. M. Comeau & Co., Little Brook, N.S., launched the schooner Charlotte Comeau, 799 gross tons, at the end of August. She is classed in Bureau Veritas for 12 years, and is equipped with a 12 h.p. engine for hoisting, pumping, etc. Her dimensions are: length, over all, 172 ft.; length, over keel, 150 ft.; breadth, 37.4 ft.; depth, 13.4 ft.; tonnage, 728 register.

J. Coughlan & Sons, Vancouver—A press report stated recently that J. J. Coughlan was in Ottawa negotiating for further orders for steel cargo steamships. He has advised Canadian Railway and Marine World that his firm is open to accept orders for its standard steel cargo steamships, approximately 8,800 d.w. tons; length, over all, 427 ft.; beam, 54 ft.; depth, moulded, 29¾ ft.; three Scotch marine boilers, 15½ x 11 ft.; triple expansion engines, 27 x 44 x 73 x 48 in.; stroke, sea speed 11¼ knots; delivery March, April and May, 1919, and one a month thereafter.

Davie Shipbuilding and Repairing Co., Lauzon, Que., is building a new bow section to the stern end of the s.s. North West. The work is expected to be completed within the next few weeks and is being supervised by N. E. McClelland & Co., Ltd., naval architects, marine engineers, etc., Montreal. The s.s. North West was owned formerly by the Northern Steamship Co., Buffalo, N.Y., and was taken over by the U.S. Shipping Board for ocean service, and cut in two at Buffalo for passage through the various canal locks. While passing through the lakes, the bow end of the vessel was lost during a storm and the stern end was taken on to Quebec and drydocked at Lauzon.

Dominion Shipbuilding Co., Toronto—The s.s General Williams, which was completed by this company, and delivered to the owners, Sept 25, is one of 6 similar type vessels built and under construction She is of steel, with 2 holds, and 1 screen and 4 watertight bulkheads, double bottom fore and aft peak for 672 tons; 4 cargo hatches, each 22 x 18 ft She is of the single deck type, with poop, bridge and forecastle, steel texas on bridge, with wing deckhouses, chart room and pilot house above, and is constructed on the transverse system. Her dimensions are: length, over all, 261 ft.; length, between perpendiculars, 251 ft.; breadth, moulded, 43½ ft.; depth, moulded, 24 ft 2½ in.; tonnage, 2,489.79 gross; 1,518.56 net; cargo capacity, 181,793 cu. ft. grain with bridge: 150,197 cu. ft. grain without bridge; deadweight capacity, including bunkers, 3,550 tons; draft loaded, 21 ft.; draft light, 7 ft. 2 ins. The propelling machinery consists of triple expansion engines with cylinders 20, 33 and 54 in. diar. by 40 in. stroke; 165 n.h.p.; 1,250 i.h.p., at 87.5 r.p.m., placed amidships, and supplied with steam by 2 Scotch boilers, each 14½ ft. diar. by 11 ft. long, at 180 lb. under forced draft; heating surface, 2,730 sq. ft. in each boiler, coal consumption in 24 hr., 23½ tons for an average speed of 10.2 knots an hour. The bunker capacity is 436 tons with bridge, and 186 tons without bridge. She is equipped with 8 reversible single drum, 2-speed, 7 x 12 in. cargo winches, and an 8 x 8 in. anchor windlass, and 7 x 7 in. steam steering gear. The crew's accommodation is arranged in the bridge and the poop decks, for 35 officers and men.

William Lyall Shipbuilding Co., North Vancouver, B.C.—It is announced that this yard is to close down, Oct. 1, on the completion of the contract with the French Government for 8 wooden steamships. The yard was established chiefly to build wooden steamship hulls under orders from the Imperial Munitions Board for the British Government, and since completing these orders, the company has built several for the French Government, and also some on its own account.

A. McLellan, Campbellton, N.B., launched the 4 masted schooner, Harry A. McLellan, 719 tons gross, at the end of August. She is to be rated at Lloyd's in the first class for her type of vessel. Her dimensions are: length over all, 186 ft.; length, over keel, 157½ ft.; beam, 35 ft.; depth of hold, 14 ft.; tonnage, 643 net. This is the first vessel launched at Campbellton since 1860.

Miramichi Construction Co., Newcastle, N.B., launched a 4 masted schooner, 600 tons register, at the end of August, she was completed and ready for sea by the end of September.

The National Shipbuilding Co., Goderich, Ont., has commenced the reconstruction of the lake freight steamship Lehigh at its shipyard at Levis, Que., for Cuban shipowners, for which purpose the ship was taken out of the water on the company's marine railway and has since been dismantled. The work consists of removing and replacing all damaged shell plates and frames, the construction of new poop and forecastle of steel, with new accommodations throughout, construction of new main deck with cargo hatches, new masts, cargo booms, with all standing and running rigging, new rudder post and rudder stock, etc. The contract calls for the delivery of the vessel completed and ready to sail for Cuba before the close of this navigation season. The company is preparing plans and estimates for considerable extensions to the Levis yard in view of important contracts now under negotiation.

Nova Scotia Shipbuilding and Transportation Co., Liverpool, N.S., launched the tern schooner, Audrey Brown, Sept. 13. Her dimensions are: length overall, 138 ft.; breadth, 28 ft.; depth of hold, 11½ ft.; tonnage, 240 net She is owned by Ritcey Bros., Riverport, N.S. The company is laying keels of two similar schooners for delivery during the winter.

Port Arthur Shipbuilding Co., Port Arthur, Ont. In connection with the launching of the s.s. Canadian Adventurer on Sept. 8 for the Marine Department, this company states that it is the largest shipbuilding company and has the largest drydock on the Canadian Great Lakes. In 1918 it built and delivered six ocean freight steamships, aggregating 21,400 d.w. tons for the British Government, 6 trawlers, aggregating 1,767 gross tons, for the Naval Service Department, and an ocean going tug of 240 gross tons for private owners. This output is said to have been second only to Canadian Vickers Ltd., for the whole Dominion. The company built the largest bulk freighter on the great lakes, the W. Grant Morden, 14,000 tons d.w., of the Canada Steamship Lines freight fleet; also the Northern Navigation Co.'s s.s. Noronic, the largest Canadian passenger steamship on the Great Lakes.

The Sorel Shipbuilding & Drydock Co., which was incorporated recently with $350,000 capital and office at Sorel, Que., has taken over the plant of the Leclaire Shipbuilding Co., which had a contract from Christoffer Hannevig, Inc., New York, for building a number of trawlers at $160,000 each. The Sorel Shipbuilding & Drydock Co. is controlled by C. Hannevig, who is President, and who is chiefly interested in the Dominion Shipbuilding Co., Toronto, and Pusey and Jones Co., Wilmington, Del.

Three Rivers Shipyards Ltd., Three Rivers, Que., is reported to have received an order to build 4 steel steamships. The company, which was organized originally to build wooden steamship hulls under orders from the Imperial Munitions Board for the British Government, was sold subsequently to the National Shipbuilding Corporation, of Delaware, which latter company completed and remodelled the yards to enable steel vessels to be built. Orders were received for 2 wooden steamship hulls 3,080 tons d.w. capacity for the British Government and these were launched Oct. 15 and Nov. 2, 1918, and named War Mingan and War Radnor, respectively. Another order was received for the construction of 10 wooden steamships of 1,500 tons d.w. capacity each for the French Government.

Yarrows, Ltd., Victoria, B.C., which was reported to be tendering for the construction of steel freight steamships suitable for the fruit trade between the West Indies and New York, for the Di Giorgio Co., of New York, had not, we were advised recently, submitted any tender for such vessels, and very little has been done so far as the proposal to build them was concerned. The s.s. Princess May, owned formerly by the C.P.R., and which was purchased recently by the Di Giorgio Co., as stated before, is being altered and overhauled at Victoria. Extensive alterations are being made, which will convert her into a fruit carrying steamship, and the hull, engine and boilers are being thoroughly overhauled. Yarrows, Ltd., has made 2 manganese bronze propellers to replace the old built up cast iron propellers, thus giving her greater speed. The existing fuel oil burning system on the vessel is being changed from the steam atomizing system to the Dahl pressure system. When the alterations, which will cost approximately $70,000, are completed, the vessel will be classed in the American Bureau of Shipping.

Atlantic and Pacific Ocean.

The s.s. Kerry Range, owned by the [illegible] Co. of Canada, Montreal, has had its name changed to Blossom Heath.

Canadian Pacific Ocean Services Ltd. has commenced an ocean steamship service between Canada and Norway. The Canadian summer port will be Montreal; the winter port, St. John, N.B., and the Norwegian port, Christiania.

S. McRae of Vancouver, second engineer of the s.s. Melville Dollar and [illegible] firemen of the same vessel were reported to have been killed on board while the steamship was on the Chinese coast, Sept. 4. The nature of the accident has not been reported.

The Royal Mail Steam Packet Co.'s s.s. Chaudiere ran ashore at Bermuda towards the end of August while navigating the Two Rock Passage and tore a hole in her starboard side. She was able to reach her dock safely and remained there until some repairs were made.

Toyo Kisen Kaisha Steamship Line announces acquisition of 7 more steamships. One is a 20,000 ton passenger ship for Orient and Yokohama service; 3 for South American trade and 3 for other points. British Columbia ports are reported to have shipped 19,776,814 ft. of lumber in August.

The s.s. Imperator, owned formerly by the Hamburg-American Steamship Co., and one of the steamships forfeited by Germany according to the terms of the armistice, will in future be operated by the Cunard Line, in conjunction with the steamships Aquitania and Mauretania, in a weekly service between Southampton, Eng., Havre, France, and New York.

The three steamships which Canadian Pacific Ocean Services Ltd. is having built for its Atlantic service are expected to be ready in about a year. They will be named Montcalm, Metapedia and Montmorency, and the approximate dimensions will be: length, b.p., 566 ft.; breadth, 70 ft.; depth, 51½ ft.; tonnage, 16,000 gross. The first two steamships are under construction by John Brown & Co., Clydebank, and the third one by Fairfield Shipbuilding & Engineering Co., Govan, Scotland.

Maritime Provinces and Newfoundland.

The Pauline Martin Shipping Co. Ltd., St. John's, Nfld., is being wound up voluntarily, with E. R. Watson as liquidator.

White Point, N.S., harbor limits, have been fixed as from Cape Egmont to Cape North, including all the navigable waters in Aspy Bay.

The Dominion Public Works Department will receive tenders to Oct. 6, for the construction of a grain conveyor without equipment, at West St. John, N.B.

The St. Lawrence, N.S., harbor limits, have been [illegible]ed as extending from [illegible]rth, N.S., to the division line [illegible] and Inverness counties.

[illegible] Halifax, N.S., have [illegible] between North Sydney, N.S., and St. John's, Nfld., with the s.s. Sable leaving North Sydney [illegible].

Bowring Bros., are reported to have arranged to build a steamship to replace the s.s. Stephano of the Red Cross Line which was sunk by a German submarine while on a short visit to the Canadian Atlantic coast.

The St. John Drydock and Shipbuilding Co. has purchased the dredge Leaconfield for use on its improvement work in Courtenay Bay. It had previously been sold to an English company, and was about to be removed to England.

St. John Steamship Co.'s stockholders were informed at a meeting at St. John, N.B., Sept. 3, that the damage to the company's s.s. Glenhome, which ran ashore at Spencers Island recently, was not extensive, and that the vessel would soon be able to resume service to Minas Bay points.

The British s.s. Chelston, owned by the Waverley Shipping Co., Glasgow, Scotland, was reported badly aground on St. Paul's Island, between Cape Breton and Newfoundland, Sept. 12. She was stated to be in a precarious position, being on a rocky bottom and exposed to high seas. She was en route from Chatham, N.B., to Glasgow.

The United States s.s. Westmoreland, was towed into Halifax, Sept. 8, in a disabled condition, owing to a breakdown of her turbines, while en route from Baltimore to Rotterdam with coal. The s.s. Mackinaw towed the Westmoreland about 400 miles, both vessels being heavily laden, and subsequently continued her voyage to London, Eng.

Two channels have been dredged to a depth of from 11 ft. at the outer end to 5 ft. at the inner end, on the east and west sides of the head of Queen's wharf, Alberton, P.E.I., the channel on the east side of the wharf is 110 ft. long with a least width of 60 ft. at the shore end, and 70 ft. at the outer end. The channel on the west side is 150 ft. long and otherwise of the same dimensions.

A board of conciliation has been appointed by the Labor Department to deal with the dispute between the Bedford Construction Co., sub-contractors for the St. John Drydock & Engineering Co.'s harbor and drydock works at St. John, N.B., and their employes. Brig.-Gen. C. L. Hervey, D.S.O., represents the company, J. E. Tighe, the employes, and Sir Ezekiel McLeod is chairman.

Sir Edgar Bowring, High Commissioner for Newfoundland, in London, Eng., and of the firm of Bowring & Co., in a speech at a Board of Trade dinner at Smithville, Nfld., Sept. 2, said that an offer had been made in London to build a breakwater between Newfoundland and Labrador at a cost of £500,000 to prevent Arctic ice from passing down the straits of Belle Isle and thereby improve the climate in the neighbourhood of the Dominion.

The Quebec Salvage and Wrecking Co. has salved the s.s. Admiral Hastings, which was wrecked on Bagots Bluff, Anticosti Island, recently, and taken her to Halifax for overhaul and repair. The damage is not so serious as was at first anticipated, but it is stated that she was driven about 3 ft. bow on, on the rocks. During the salving operations about 1,000 tons of her grain cargo was jettisoned, to hasten the salving operation, as the vessel was exposed on all sides to the severity of the weather.

The s.s. Codorus, owned formerly by the Anchor Line, Buffalo, N.Y., and taken over by the U.S. Shipping Board for war purposes, and which was wrecked at Escuminac Point, N.B., while on the way from the Great Lakes to the ocean about two years ago, has been salved by the Maritime Wrecking and Salvage Co., and taken to Halifax. She appears to be in good condition, but whether she will be repaired at Halifax or taken to a U.S. port had not been decided upon at the time of writing.

Province of Quebec Marine

The s.s. Captain Dan, which was wrecked at the Louise docks breakwater, Quebec, recently has been sold to The National Shipbuilding Co., Levis, who will probably salve the vessel before the winter sets in.

Canada Steamship Lines' s.s. Syracuse, completed her summer service Sept. 9, and has been berthed at Sorel for the winter. She was formerly known as Geronia, and is one of the vessels taken over when the Ontario and Quebec Navigation Co. was absorbed.

The National Shipbuilding Co., Levis, who have purchased the wreck of the Dominion Government s.s. Montmagny, which has been lying submerged off the Isle of Orleans for the past four years, were working on the salvage of the vessel recently, and it was expected that it would be raised and placed in their yard during September.

The Quebec Harbor Commission is carrying out a number of improvements and repairs to the Louise docks, a new roadway is being laid to the recently erected freight sheds, and the freight sheds are being reinforced with concrete facings. Shed 27 is being raised 18 in. and other sheds will be similarly raised along the breakwater.

A green spar buoy has been placed on the west side of the wrecked barge Bengalore, which lies on the east side of the Richelieu River, below Ste. Victoire wharf, and a red spar buoy has been placed on the west side of the channel opposite, to mark the width of the navigable channel. As soon as the wreck is removed the buoys will be discontinued.

Sincennes - McNaughton Line, Ltd., Montreal, has put into service the steam tugs Andree Dupre, Fredmac and Virginia, which have been built at Sorel. The Andree Dupre is screw driven, by engine of 66 n.h.p., and her dimensions are: length, 109.2 ft.; breadth, 25.5 ft.; depth, 10.8 ft.; tonnage, 233 gross, 30 net. The Fredmac is screw driven by engine of 54 n.h.p. and her dimensions are: length, 81.1 ft.; breadth, 23.5 ft.; depth, 10.7 ft.; tonnage 159 gross; 44 net. The Virginia is screw driven by engine of 54 n.h.p., and her dimensions are: length, 80.8 ft.; breadth, 23.5 ft.; depth, 10.8 ft.; tonnage, 159 gross; 14 net.

Ontario and the Great Lakes.

The Northern Navigation Co. has denied the report that it had purchased land in Sarnia for park purposes.

The Canadian Towing and Wrecking Co., Port Arthur, has purchased the s.s. Vulcan from the U.S., and has changed her name to Vinmount.

The Dominion Towing & Wrecking Co.'s steam tug Strathbell, was running during August in excursion service between Fort William, Port Arthur and Silver Islet.

The s.s. Imperial, owned in Montreal, commenced a weekly freight and passenger service between Montreal and Trenton, Sept. 18. Capt. H. Rinfret, formerly of the s.s Alexandria, has been appointed master

Masters of steamships are advised to exercise care in passing the shoal near the international boundary in the St. Clair River, between the mouth of the Black River, Mich., and Sarnia, Ont., as a dredge will at times be working in that neighbourhood.

The Detroit and Windsor Ferry Co. has been granted a supplementary license under the act respecting extra provincial corporations, authorizing it to use in Ontario a capital of $1,000,000, provided that if it uses any larger amount than authorized the license may be suspended or revoked.

The G.T.R. is reported to be conducting negotiations for the organization of a coal terminal at Prescott, and in connection therewith to operate a car ferry service to connect with the New York Central Rd., at Ogdensburg, N.Y. At present coal is carried across the St. Lawrence River to the G.T.R. at Cobourg by the Ontario Car Ferry Co.'s vessels from Charlotte, N.Y.

The United States Lake survey reports the stages of the Great Lakes in feet above mean sea level for August, as follows: Superior, 602.59; Michigan and Huron, 581.14; St. Clair, 575.92; Erie, 573.14, and Ontario, 247.33. Compared with the average Aug. levels for the last ten years, Superior was 0.03 ft. above; Michigan and Huron, 0.29 ft. above; Erie, 0.52 ft. above; Ontario, 0.84 ft. above.

The wooden steamship Toltec, owned in Detroit, Mich., was destroyed by fire near Prescott, after having been beached. She was en route from Montreal to Buffalo in ballast. The crew were saved and taken ashore by the Dominion Government s.s. Alert. The Toltec was built at Marine City, Mich., in 1889, and was extensively repaired in 1911. She was of the following dimensions: length, 191 ft.; breadth, 32½ ft.; depth, 15 ft.; tonnage, 767 gross; 621 net.

The Pittsburg Steamship Co.'s s.s. Charles R. Van Hise, which was taken over by the U.S. Shipping Board, last year, and which was cut in two to pass through the Welland Canal to the ocean, has been sold to the Morrow Steamship Co., Cleveland, Ohio. Owing to her width, 50 ft. beam, it was decided to attempt to pass her through the Welland Canal on her side, but the experience gained in passing the first section through the first lock, was sufficient to cause the abandonment of the scheme. The two sections have since been towed to Buffalo, where they are to be rejoined.

Canada Steamship Line, Ltd., has purchased the s.s. Cherokee, owned formerly in Saginaw, Mich., and has transferred her to the Canadian register under the name of Maplegrove. She was built at Marine City, Mich., in 1889, and underwent extensive repairs in 1913. She is of the well deck type, with oak hull, with diagonal strapping on frames, steel arches, and bow sheathed for navigation in ice. Her dimensions are: length, b.p., 208 ft.; breadth, moulded, 35¾ ft.; depth, moulded, 14 ft.; tonnage, 1,177 gross; 636 net. The propelling machinery consists of a fore and aft compound engine with cylinders 25 and 50 in. diar, by 40 in. stroke, 575 h.p. at 86 r.p.m., supplied with steam by a single fire box boiler, 11 ft. 4 in. diar. by 16 ft. long at 124 lb.

The s.s. Cabotia, which ran aground at the Main Ducks near Kingston, recently, has been abandoned, having broken in two. She was owned by the Cabotia Steamship Co., Montreal, and was built at Gibraltar, Michigan, in 1880, when she was named Hiawatha. She had an oak hull, with diagonal strapping on frames, and steel boiler house. She was equipped with fore and aft compound engines, with cylinders 21 and 50 in. diar., by 46 in. stroke, 700 i.h.p., 85 r.p.m., supplied with steam by one Scotch boiler 12 x 12½ ft. at 125 lb. Her dimensions were: length, 234 ft.; breadth, 36 ft.; depth, 30 ft.; tonnage, 1,530 gross, 932 net. The wreck is reported to have been sold to the Donnelly Wrecking & Salvage Co., and to have been refloated.

The s.s. F. P. Jones, owned formerly by the Geo. Hall Coal Co., Ogdensburg, N.Y., and latterly under requisition by the United States Shipping Board has been sold to Jas. Playfair, President, Great Lakes Transportation Co., Midland, Ont. She was built at Wyandotte, Mich., in [illegible], and is of steel construction, on the channel system, with steel tank top where no wood ceilings are fitted, 5 watertight and 2 non watertight bulkheads, steel boiler house, steam pump wells, electric lighting equipment, and with hatches spaced 24 ft. centres. She is equipped with triple expansion engine, with cylinders 18, [illegible] and 48 in. diar. by 40 in. stroke, [illegible] i.h.p. at [illegible] r.p.m., and supplied with steam by two Scotch boilers, 12 x 11½ ft. at 170 lb. Her dimensions are: length, 244 ft.; breadth, 43 ft.; depth 21 ft.; tonnage 1,706 gross, 1,059 net. She was wrecked off Connecticut during the war, and was repaired at the U.S. navy yard, Brooklyn, N.Y.

The Cleveland-Erieau Steamship Co., has notified the London and Port Stanley Ry. that an all winter freight and passenger service will be maintained between Cleveland, Ohio, and Port Stanley, Ont., commencing, Sept. [illegible], passengers and package freight will be handled. It is announced that the s.s. Pere Marquette No. 8 has been secured from the Chicago and South Haven Steamship Co. for the service. The Pere Marquette No. 8 was built at South Haven, Mich., in 1888, and rebuilt in 1897. She is of the awning deck type, with oak hull, wooden boiler house, windlass between decks, with no efficient bulkhead abaft same, electric lighting equipment, and was formerly known as Tennessee. Her dimensions are: length, 171 ft.; breadth, 35 ft.; depth, 20 ft.; tonnage, 691 gross, 548 net. She is equipped with fore and aft compound engine, with cylinders 18 and 36 in. diar. by 30 in. stroke, 375 i.h.p. at 100 r.p.m., and supplied with steam by a single Scotch boiler 11 x 12 ft. There is cabin accommodation for 60 passengers and large freight carrying capacity.

British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co. is reported to be considering the establishment of a ferry service between Prince Rupert, B.C., and Ketchican, Alaska.

The C.P.R. s.s. Princess Mary has been overhauled and repaired at Victoria, and was placed on the Alaska route, Sept. 9, the s.s. Princess Alice being transferred to the Gulf route.

The C.P.R. s.s. Princess Ena left Victoria at the end of August, after having been repaired by the Victoria Machinery Depot Co., subsequent to grounding on Ripple Rock early in August.

The British Columbia Express Co.'s s.s. B.X. was wrecked near Woodpecker Island recently, the vessel and cargo being a total loss, but the crew were saved. She was a paddle wheel steamship, with engines of [illegible], and was built at Victoria in 1910, her dimensions being: length, [illegible] ft.; breadth, [illegible] ft.; depth, [illegible] ft.; tonnage, [illegible] gross, [illegible] net. The service is being continued by a sister vessel.

With reference to the report mentioned in our last issue that the C.P.R. was contemplating the building of additional and larger steamships for its British Columbia coast service, we are officially advised that no additional plans have been made and no expenditure authorized. It is very likely that a decision will be arrived at about the end of the year.

The s.s. Blue Queen has been [illegible]

by Wallace Shipyards, Ltd., North Vancouver, on a claim for $17,600 for repairs and supplies between Aug. 26 and Sept. 4. There is also litigation between two parties in Vancouver on a claim for $1,000 commission on the sale of the vessel, which has had a rather romantic career. She was formerly a motor driven ship named Bowler, and prior to that she was known as Zafiro, and under this last name was utilized as a coaling vessel for Admiral Dewey's flag ship at Manila Bay during the Spanish-American war. After the war was over she was bought by Capt. S. McKenzie, Vancouver, and remodelled, but was idle for a number of years.

Resumption of Normal Passenger Business.

Montreal press dispatch, Sept. 18—Indications point to an early ending of the requisition of passenger space for government requirements on both the Canadian and United States routes, and from British ports. A circular was received today at the White Star offices advising that third-class bookings could now be accepted on the steamships Lapland and Adriatic, sailing from Southampton to New York, beginning with the sailing of the Lapland from Southampton, Sept. 16. This is taken as the beginning of the end of war activities, and will open the way to the resumption of normal ocean travel. It was stated that the indications are that plenty of space on all lines will soon be available for civilian travel, on both the New York and Canadian lines to British ports. Probably the end of October will see the close of the military monopoly of passenger service, which has caused so much dislocation during the war.

Port Wade Shipbuilding Co., Port Wade, N.S., has launched the schooner Jean F. Anderson, 443 net tons. Her dimensions are: length, 140 ft.; breadth, 33.3 ft.; depth, 12.7 ft.

Vessels Registered in Canada During July and August, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

Grain Shipping Statistics.

The following statements, prepared by the Board of Grain Commissioners, show the total quantities of each kind of grain, shipped in vessels from Fort William and Port Arthur, during the crop year 1918-1919, according to the ports at which the cargoes were discharged, and also the comparative figures for the crop year just before the war, and for the five war years. In addition to the figures given below, 16,171,288 lbs. of sample mixed grain was shipped to Canadian ports in Canadian vessels, 9.749-0700 tons of elevator screenings in Canadian vessels, and 18,178-1870 tons of elevator screenings in U.S. vessels, to Canadian and U.S. ports.

The German Submarines which were allotted to the Japanese Navy arrived in Japan recently after a voyage of over 10,000 miles under their own power. It is said that almost no difficulty was encountered on the voyage which speaks volumes for the durability of the Diesel engine as built for the Germany Navy.

The Northern Navigation Co., recently offered to moor one of its steamships at the foot of Brush St., Detroit, Mich., for use as a winter hotel to relieve hotel congestion there. We have been officially advised that this matter was duly considered, but owing to difficulties, which were considered insuperable, the proposal will not be carried out by that company.

The Public Works Department received tenders during September for the rebuilding of the lock and dam at Bobcaygeon on the Trent Canal. This work has been rendered necessary on account of the worn out and leaky condition of the existing lock. The new lock will be 175 ft. long; 33 ft. wide and with 8 ft. 4 ins. of water on the miter sills, the same as the other locks on the Ontario-Rice Lake Division. Both the lock and dam will be of concrete, and the work will include some dredging at both the upper and lower entrances.

British Columbia vs. Great Britain for Shipbuilding.

The Canadian Gazette, London, Eng., says: "Englishmen will be wise if they look facts in the face and realize the possibilities of their displacement in leadership on the sea. Harold E. Yarrow, of the famous Scottish-Canadian shipbuilding firm, tells the Briton quite bluntly in the London Evening Standard that he is profoundly mistaken in supposing that Americans cannot build ships because of want of experience. He says the truth is that Americans are building ships not less efficiently than we are, and that their costs of construction are slowly but surely approximating to our own. They are being greatly helped by the 'ca' canny' policy of British trade unions and their passive resistance to pneumatic tools and other labor-saving appliances. Yarrow & Co. have no illusions on the subject. 'We have,' says Mr. Yarrow, 'a yard on the Canadian Pacific coast as well as one on the Clyde, and are therefore in a position to know exactly how costs of production compare. We are ready to increase our output in British Columbia and reduce it here if and when the circumstances demand. Our yard at Scotstoun is one of the best equipped on the Clyde, and, given a chance, it can turn out work as well and as cheaply as any yard in the country. But we have no intention of waiting until the business there gives us up. We shall give it up before it gives us up.' There is no mistaking the tone and meaning of that warning."

Marconi Wireless Telegraph Co. of Canada's Annual Meeting.

The report for 1918 was presented at the annual meeting held at Montreal, Sept. 17. The profits were $138,647, compared with $114.953 for 1917. After providing for interest on advances, $25,057, and reserve for depreciation, $19,216, a balance of $293,787 was carried forward, compared with $198,413 from 1917. It was announced that the company had a contract with the Dominion Government for equipping 40 of the steamships built and under construction in Canada for Canadian Government Merchant Marine Ltd. Ship rentals increased from 44 in 1913 to 132 in 1918. A tribute was paid Hon. C. C. Ballantyne, Minister of Marine, for his services in securing permission to resume commercial operation of the trans-Atlantic wireless telegraph service.

The President, J. N. Greenshields, K.C., in dealing with the action of the Canadian and British governments with regard to the company's stations during the war, said: "No settlement has been arrived at with the Canadian Naval Service Department in respect of the company's claim for compensation for the closing down of east coast stations for the period subsequent to Aug., 1916. Claim has also been presented against the British Admiralty for loss of revenue owing to the closing down of the company's high power stations at Glace Bay and Louisburg, and steps have been taken to press for an early settlement of same. Your company had still to contend with adverse traffic conditions during practically the whole year, and government restrictions on wireless working deprived the company of much traffic revenue. After the signing of the armistice on Nov. 11, 1918, a gradual [illegible] of war restrictions took place. [illegible] coast stations, which had been closed [illegible] to be taken over by the Canadian Naval Service Department, were turned back to the company for operation, and every effort made to rebuild a profitable [illegible]. During the concluding weeks of the year, revenue from this source showed good progress and your directors look forward confidently to increased returns in the future."

J. N. Greenshields, K.C., was re-elected President; Thos. Robb, heretofore General Manager, was elected Vice President, and A. H. Morse, heretofore representative of the English company, was appointed Managing Director, with a seat on the board, vice E. J. Nally, New York, who retired.

Following the annual meeting, a special meeting of shareholders was held to ratify a bylaw reducing the amount of the common stock from $5,000,000 to $2,500,000, by reducing the par value of the shares from $5 to $2.50, and providing for the issue of $1,250,000, additional shares of stock. The English company is taking $1,000,000 of the new issue.

Among the Express Companies.

The Dominion Ex. Co. has added a number of 5 ton motor trucks to its equipment in London and Liverpool, Eng., owing to the remarkable increase of package traffic there, to and from Canada.

The Canadian National Ex. Co. has opened a waybill office at Neelin, Man., and an agency at Dropmore, Man. The offices at East Selkirk, Scanterbury, Grand Beach, and Victoria Beach, Man., were closed for the season Sept. 3.

The Canadian National Ex. Co. has opened offices at Graysville, Sandy Lane, and Erickson, Man., and temporary offices at Dropmore, Man., and Kylemore, Sask., for the rush of grain traffic. The offices at Port Carling and Rosseau, Ont., and Alberta Beach, Alta., were closed Sept. 1, and Sept. 17, for the winter.

The Winnipeg Board of Trade Shippers' Bureau requested the Board of Railway Commissioners recently to postpone the going into effect of the new express rate schedule from Sept. 1. to Oct. 1, it being claimed that the new rates discriminate against the west and that they contain many discrepancies.

The Board of Railway Commissioners passed order 28,784, Sept. 18 as follows: Re application of Central Canada Express Co., under section 323 of the Railway Act, for approval of bylaw 10, passed at a meeting of the directors, Sept. 6, authorizing C. Hope, Assistant Superintendent of the company, to prepare and issue all tariffs of tolls to be charged by the company for the carriage of express, upon the report and recommendation of the board's Chief Traffic officer, it is ordered that the said bylaw be approved, and that order 26,419, Aug. 14, 1917, approving the company's bylaw 7, be rescinded.

The Board of Railway Commissioners passed order 28,717, Aug. 29, as follows: Re application of Express Traffic Association of Canada on behalf of Canadian, Canadian National, and Dominion Express companies, for approval of a special tariff on cream in cans, with or without jackets, to be charged by those companies [illegible], between points [illegible] Fort William, Ont. [illegible] that the said tariff [illegible] rates 5c a can lower than formerly in effect, which rates do not include waggon service; with the option to the consignee of requiring waggon delivery by the express companies at an additional charge of 5c a can, subject to notice to that effect by the consignee as set out in the tariff, it is ordered that the said tariff C.R.C., no. ET-672, published to take effect Sept. 1, 1919, be approved. And it is further ordered that order 14,594, Aug. 21, 1911, be rescinded.

Express companies operating in Canada put into force Sept. 1 a new set of tariffs and a classification, applying on Canadian traffic only, and not on business to or from the U.S. A joint directory of express stations throughout Canada has been issued, giving a complete list of express offices arranged alphabetically by provinces. An important change has been made in connection with the collection and delivery of express matter, the companies not now being required to collect or deliver above the ground floor of any building, any articles of such size or weight as cannot be handled by one man, unless elevator facilities are available; companies are also not required to collect or deliver shipments of extraordinary weight or bulk, such as boats, pianos, live animals not in crates, etc. Such shipments may be delivered to the company by an independent carter. In the special commodity tariffs thus provided, no cartage will be performed on commodities at special carload rates; on l.c.l., carried at such rates, no collection service will be given, but delivery will be made at destination where a cartage service is maintained, and companies will not be required to collect returned empty cream cans.

Express Rates on Fish From Selkirk to Chicago.

In 1916 Booth Fisheries Co. complained to the U.S. Interstate Commerce Commission of the express rates on fresh fish from Selkirk, Man., to Chicago, Ill., and the following decision was given recently:

Complainant is a corporation engaged in the business of catching and selling fish. By complaint filed May 3, 1916, it is alleged that the rates of $3 and $3.20 per 100 lb., charged for the transportation of fresh fish, in less than carloads, from Selkirk, Man., to Chicago, Ill., in Oct., 1914, and June, 1915, were excessive, unreasonable, unjust, and unduly discriminatory, in violation of sections 1, 2, 3, and 4 of the act to regulate commerce in so far as said rates exceeded $2.60. It asks for reparation on 4 shipments, 2 of which moved in Oct., 1914, and 2 in June, 1915. That portion of fourth section application 4,306 of American Express Co., by which authority is sought to continue to charge lower rates on shipments of fresh fish from Selkirk to Detroit, Mich., and Buffalo, N.Y., than to Chicago and other intermediate points was assigned for hearing with the complaint.

The shipments moved via Dominion Express to Emerson, Man., on the International Boundary, thence via Western Express to St. Paul, Minn., and American Express to Chicago. The Western Express Co. was not made a defendant. The transportation performed by the Dominion Express Co. was beyond the boundaries of the U.S.

In their answers and at the hearing the defendants questioned our authority to award the reparation sought. We have held that our jurisdiction over through rates from points in Canada to points in the U.S. is limited to the portion of such transportation performed by the carriers from the port of entry. No evidence was submitted by complainant to show that the portion of the rate which accrued to the U.S. lines was unreasonable, unjustly discriminatory, or unduly prejudicial. It relied solely on the lower rate to Buffalo applicable over the route through Chicago.

At the time the shipments moved the American Express Co. concurred in a rate of $2.60 per 100 lb. from Selkirk to Detroit, and Buffalo, and this rate was applicable over the route through Chicago and intermediate points. A fourth section application was filed for authority to maintain the rate of $3 to Chicago, but no further application was filed for authority to increase the rate to that point to $3.20, and to thereby increase the spread between Chicago and the farther distant pints. It is asserted for the defendants that the rate to Detroit and Buffalo is controlled by the Dominion Express Co., which performs all the transportation from and to those points over routes almost entirely outside of the boundaries of the U.S. In a letter filed subsequent to the hearing, complainant admitted that no shipments have been forwarded to Detroit and Buffalo through Chicago by express, such shipments as may have moved via that route were by freight. Since this case was submitted the fourth section departure as to Chicago has been removed. At the hearing witness for complainant stated that no shipments were then being made by express to Chicago, but that they were handled by freight from Selkirk to Winnipeg and thence by express to Chicago. The complainant's interest in the case is therefore solely on the question of reparation on the particular shipments which had moved.

We find that the rates assailed are not shown to have been unreasonable or unduly prejudicial. There is no proof of damage by reason of the maintenance of a lower rate to Detroit and Buffalo than to Chicago, and, following Appalachia Lumber Co. v. L. & N.R.R. Co., 25 I.C.C., 193-197, and Iten Biscuit Co. v. C.,B. & Q.R.R. Co., 50 I.C.C., 724, ante 729, reparation is denied.

No evidence was offered in justification of departures from the provisions of the fourth section, and since they have been corrected an order will be entered denying the application to the extent that it is involved.

Commissioners McChord and Meyer dissented.

W. H. Burr represented the Dominion Express Co.

Armament on Canadian Steamships—Ship owners are instructed that guns which have been mounted on steamships during the war need not now remain. The policy with regard to British register vessels is as follows: On removing the guns, the gun seating is to remain in vessels of 3,000 tons gross, and stiffening to remain in all cases, except in vessels under 1,600 tons, where, in the opinion of the naval authorities, it materially affects cargo or passenger accommodation; the stiffening for howitzers may also be removed if it interferes with cargo or passenger accommodation. A similar policy is recommended for Canadian vessels and the Naval Service Department requests vessel owners to advise as to what action they propose to take in the matter.

The Telegraph Profession.

By H. Hulatt, Manager of Telegraphs, Grand Trunk Ry., and Grand Trunk Pacific Ry., Montreal.

The head of a telegraph organization is very frequently asked by parents: "What prospects has a young man entering the telegraph service?" Personally my invariable reply has been that prospects are good, provided the applicant aims to become something more than an ordinary operator, by taking steps through constant study to equip himself for the bigger positions, thereby keeping abreast of the times. In this connection it is well for us all to realize that today the telegraph profession is entering a period of new development and of great changes.

Not so many years ago, if a railway superintendent of telegraph could use the Morse code, had a knowledge of wire testing, understood the proper care of gravity batteries, how to set up a duplex or quad, coupled with a rough and ready knowledge of construction matters, he, to use a common expression, filled the bill. Needless to say such requirements did not call for highly trained technical men, and as a result salaries could not be said to be attractive. Are prospects today any brighter?

It can probably be stated without fear of contradiction that the first move to place the railway telegraph profession on a higher plane, was the inauguration of telephone train dispatching, necessitating apparatus developed mainly, not by telegraph men, but, by the highly trained technical men of the telephone profession, and affiliated manufacturing interests. As a result of this development, railway telegraph men have gradually been obliged to study and be able to intelligently and efficiently handle simplexes, private long distance telephone circuits, also the phantoming of circuits, the installation and maintenance of motor generators, installation and care of printer telegraphs, telautographs, and other types of electrical and mechanical labor and time-saving devices. These developments have also as a result brought prominently before superintendents of telegraphs and their staffs that most complex problem "inductive interference," and necessity for close study of same by keeping posted on the results of the various researches made by experts making a specialty of such problems.

A perusal of the report of committee no. 5, of the Telegraph and Telephone Division of the American Railroad Association, presented at the Chicago meeting of the division in June last, covering as it does recent developments in telegraph and telephone practice and apparatus, indicates very clearly that we are just entering an era of great changes. There is little doubt that in the near future such problems as multiple telephony, wireless telephony and telegraphy, also many new methods of multiplying the use of existing facilities without the erection of additional outside plant will have to be considered by the men of the railway telegraph departments.

While there are undoubtedly exceptions, and some extremely bright ones, —as a general rule are the employes of railway telegraph departments technically equipped to meet the everchanging conditions? Frankly, I think it must be admitted that they are not, and in their own interests, and particularly in the interests of their employers they should undoubtedly take prompt steps to remove the disability under which they are laboring. Such action on their part will be to the benefit of their companies, and incidentally do much toward improving their own financial status.

Our profession has entered into what may be termed the higher technical field, and the necessity is present for us all, whether we be officers or privates, to endeavor to equip ourselves mentally for the much greater problems and responsibilities we shall undoubtedly be called upon to study and assume in the coming years. If we fail to measure up to requirements, our employers can easily replace us by securing from the outside men having the requisite technical training; consequently I am writing this article from a selfish point of view, feeling as I do that the plums from the tree should be for those who are members of the family, therefore we, who are in the profession or family, should ensure that we have the ladder to reach the fruit, and that ladder, to my mind, is better education and technical training.

H. Hulatt,
Manager of Telegraph, Grand Trunk Ry., and Grand Trunk Pacific Ry.

I can imagine some old timer (and by the way we of the younger generation have a great deal to thank the old timers for) on reading this, saying: "Technical training only creates theorists; what we need is practical men." This prejudice against theory is out of date; the law of gravitation is a theory—no man ever saw it actually in operation. As Dr. J. F. Johnson, Dean of the New York University School of Commerce, Accounts and Finance, states in his really wonderful book, "Business and the Man":

> "Our railways, steamships, bridges and factories with all their machinery have been constructed in harmony with theories that have been carefully thought out and tested. If man theorized no more and began to forget what theory has already taught him, in a few generations the human race would again be in a state of barbarism."

What we need is a thorough knowledge of theory, and the best method of applying it in practice.

It is possible I have in the foregoing looked upon the dark side, but it has always seemed to me, especially within the past eight to ten years, that the rank and file and also subordinate officers of railways, in so far as promotion is concerned, have been satisfied to adopt a policy of watchful waiting, in the hope that the man above them would retire, be promoted, or transferred, and that if they were lucky possibly they might be promoted to the higher position.

The majority of such men are doing their level best to give their company one hundred cents or more for every dollar of salary they receive, yet, it has not seemed to dawn upon them that a much more rapid promotion awaits them provided they equip themselves mentally over and above their competitors by studying not only the technical features of their work, but, what is even more important, by securing a thorough knowledge of the laws and principles governing business phenomenae, and the practical application of same.

The executive today (and to be one should be the ultimate aim of the latest messenger boy added to the pay roll), must be an intellectual power, aggressive, and broadminded. Such attributes he can only attain by practical experience backed up by thorough and ever progressive education.—Telegraph and Telephone Age.

Telegraph, Telephone and Cable Matters.

The British cable ship Colonia has completed the laying of a new telegraph cable between England and Brazil.

Mrs. W. M. Camp, wife of the Assistant Manager, C.P.R. Telegraphs, Montreal, spent part of the summer at Sharbot Lake, Ont.

Senatore Marconi is reported as saying that wireless telephony, when less expensive, will speedily become a necessity to business.

Miss M. B. Campbell has been appointed local manager, Western Union Telegraph Co., Glace Bay, N.S., vice Mrs. P. H. Roach, resigned.

G. G. Ward, Vice President, Commercial Cable Co., is reported as stating that a second cable from San Francisco to Japan, by way of Midway Island, is practically assured.

By means of the "Great Voice," a wireless magnifying telephone, installed at the direction of the Chief Signal Officer, United States Army, the address of Vice President Marshall, delivered at Trinity Church [illegible], Washington, recently, was heard throughout a radius of approximately 4 miles.

The Board of Railway Commissioners' general order [illegible], Aug. 29, amending order [illegible], Dec. 6, 1906, as amended by order 8,897, Dec. 11, 1909, substituting a new clause, providing that tariff and telephone tolls hereafter filed with the board shall be printed on sheets, or in books, of a size not to exceed 11 in. long by 8½ in. wide. Order 8,897, Dec. 11, 1909, has been rescinded.

The Commercial Cable Co. is reported to have decided to lay a second cable across the Pacific Ocean from San Francisco, Cal., to Japan, via Midway Island. It is stated that the company is not asking any financial assistance or guarantee from the U.S. or Japanese governments, merely asking landing rights. It is also announced that Japanese interests at Tokio have formed a company, with a capital of $25,000,000, to lay a cable between Japan and the U.S.

The British House of Commons, has, it is stated, voted $850,000 for the commencement of an Imperial wireless telegraph service for commercial messages. Construction of the terminal station in England is said to have been commenced at Leafield, Oxfordshire, and the first eastern station is said to have been located in Egypt. This report should be treated with some reserve, on account of the comparative smallness of the vote mentioned, and of the reported location of the terminal station in England.

The Great North Western Telegraph Co. has opened offices at Summit, N.B., Langlade, Pointe a la Fregate, Que., Allandale, Banning and Glenorchy, Ont.; Dropmore, Ericksdale, Fork River, Graysville, Neelin and Sandy Lake, Man.; Hamton, Sask.; and Radway Center, Alta.; and has closed its offices at Bellevue Jct., Clarenceville, Manoir Richelieu, Mount Johnson, Sabrevois, St. Barnabe, St. Demase, and St. Louis de Bonsecoeur, Que., Minataree, Queen's Royal Hotel, Royal Muskoka Hotel, Shakespeare, Smithville and Vankleek Hill, Ont.

The 36th annual meeting of the Old Time Telegraphers and Historical Association was held at Cleveland, Ohio, Sept. 18. G. D. Perry, General Manager, Great North Western Telegraph Co., was elected President; and E. R. Wood, President, Dominion Security Corporation, J. J. Seitz, President, United Typewriter Co., and Allan Purvis, General Superintendent, Ontario District, C.P.R., all of Toronto, were elected vice presidents for the current year. Following the usual custom of holding the meeting at the home town of the President, the 1920 meeting will be held at Toronto.

R. N. Young, Superintendent of Telegraphs, British Columbia District, C.P.R., is reported to have stated at Penticton, early in September that the C.P.R. intended completing a commercial telegraph line between Penticton and Princeton, B.C., in order to give Similkameen a direct wire outlet to the coast, that in the meantime the section to Princeton will be completed and the Princeton business handled via Penticton and Vernon, and that when the portion to Hope is erected, the Princeton business will go that way and Penticton will have its own commercial wire, as well as one north to Vernon and thence to the coast.

Sir Charles Bright in addressing the British Association in London, Eng., Sept. 12, urged the need for Imperial cable communication to be established on a satisfactory basis. He said that the present Atlantic link in the proposed all-red route is the old German cable which was seized during the war and which at best is a poor affair. He [illegible] the duplication of the Pacific cable and said that the only satisfactory method of communication to Australia would be a direct line from London to Melbourne, and he considered that the government should lay a cable. He also [illegible] the establishment of an all British wireless chain, with every Imperial cable supplemented by wireless.

[illegible] of the Canadian Pacific Ry.'s telegraph lines has been practically

ANNUAL REPORT

OF

The Quebec Railway, Light, Heat and Power Co., Limited

FOR THE
FISCAL YEAR ENDING 30TH JUNE, 1919

Submitted at the Annual Meeting held in Montreal on the 9th September, 1919.

TO THE SHAREHOLDERS:—

Your Directors beg to submit the following report and Financial Statement of the Company's operations for the fiscal year ended 30th June, 1919.

The Gross Earnings from Operation for the year were $2,077,621.43 as compared with $1,797,852.83, being an increase of:

$279,768.60

The Operating and Maintenance Expenses were $1,444,516.08 as compared with $1,235,724.33, being an increase of:

$208,791.75

leaving a Net Revenue of $633,105.35 as compared with $562,128.50, being an increase of:

$70,976.85

After adding Miscellaneous Income $27,722.61, not including earnings on Quebec & Saguenay Railway Company's securities, and deducting Fixed Charges, Taxes, Depreciation on Cars, etc., of $726,101.55, there remains a deficit of $65,273,59, leaving a balance at the credit of Surplus Account to date of:

$682,464.29

The line of railway between St. Joachim and Nairn's Falls under construction for the Quebec & Saguenay Railway Company—one of this Company's subsidiaries—has been acquired by the Dominion Government. This sale took place under date of March 4th, 1919, and the Trustees are now in possession of the funds for disposal in accordance with the bondholders' instructions. The construction of the road is now being continued by the Government and, when completed, should prove a valuable source of revenue for the Montmorency Division of the Quebec Railway, Light & Power Company.

The accounts of the Company have been duly audited and certified to by Messrs. P. S. Ross & Sons, Chartered Accountants, Montreal.

In conclusion, the Directors desire to express their appreciation of the efficient services rendered by the officials and staff of the Company.

Respectfully submitted on behalf of the Directors,

LORNE C. WEBSTER, President.

Statement of Assets and Liabilities at 30th June, 1919.

in abeyance for the past few years on account of war conditions, but the company has now commenced extending its system. On the prairie sections, extensions to branches of 208 miles of pole line carrying 2 wires, have been authorized. On existing lines 6,275 miles of 210 lb. copper wire has been authorized and most of the stringing has been completed This includes wires from Halifax to Montreal, 2 from Montreal to Winnipeg, 1 from Toronto to Winnipeg, 1 from Toronto to Port Arthur and Fort William, Toronto to Windsor, Ont., etc. The company is also installing a telephone despatching circuit between Port Arthur, Ont., and Winnipeg (including the Molson Branch), covering 468 miles of track. This fills in the last gap in telephone train dispatching on the line between St. John, N.B., and Vancouver, B.C. The company has also authorized considerable sums for reconstruction and renewals.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

B. J. Coghlin Co. Ltd., railway supplies, etc., Montreal, has been granted supplementary letters patent under the Dominion Companies Acts, authorizing it to increase its capital from $200,000 to $500,000 by the issue of 3000 shares of $100 each.

Davis Bournonville Co., Niagara Falls, Ont., has developed a number of mechanically operated welding and cutting oxy-acetylene torches. The latest development is the camograph no. 2, an automatic hole cutting machine, for boiler shops, fabricating plants, shipyards, and other users of steel plates.

Edison Storage Battery Co. — John Kelly, who for a number of years was New York District Manager, Edison Storage Battery Co., and who on July 1 was appointed Assistant General Sales Manager, has been appointed General Sales Manager, at Orange, N.J. He was a salesman for Westinghouse Storage Battery Co. for two years; for Swinehart Tire & Rubber Co., for three years; for Firestone Tire and Rubber Co. for two years, and for New York Edison Co. for nearly four years, and was District Manager, Edison Storage Battery Co.'s New York office for 9½ years.

Mudge & Co., Chicago, have arranged with Canuck Supply Co., Montreal, to represent them in the sale of Mudge motor cars in Canada.

Nova Scotia Steel & Coal Co.—A press dispatch says that large extensions at Sydney mines are under consideration, including a plant to handle by-products which will cost some $2,000,000. New ovens now being erected will call for an enlargement of the present plant, and a new blast furnace that will cost about $1,500,000.

Canadian Pacific Ocean Services, Ltd., has moved its Chicago passenger offices from 140 South Clark St. to 40 North Dearborn St. R. S. Elworthy is General Agent, Passenger Department, there.

November, 1919

The Canadian Engineers' First Tramways Company's Work in France.

By F. E. Collinson, Mechanical Engineer, Motive Power Department, Grand Trunk Pacific Ry., Transcona, Man., formerly Lieutenant, Canadian Engineers, and Adjutant, Canadian Engineers First Tramways Co.

Among all the various units engaged on railway work in France, the Canadian tramways companies did their share with the best, though their work is not very generally known and they are often confused with the "Railway Troops," which were army troops, while the tramways companies were throughout their history Canadian Corp Troops.

The 1st and 2nd Tramways Companies, Canadian Engineers, were among the few units which were authorized, formed, worked, and finally were demobilized in France, and never existed as units in any other place than the forward area. The early history of the first company from its inception in May, 1916, was briefly as follows: On May 19, 1916, the Composite Pioneer Company, Canadian Corps, was formed to construct and operate light railways in the Ypres sector and the personnel was drawn from the 1st, 2nd, and 3rd Canadian Pioneer Battalions and the Canadian Overseas Railway Construction Corps, the total number being approximately 280, all ranks, under Capt. D. H. Williams; Major Goldie, D.S.O., being Field Engineer, and Major R. P. Rogers being Assistant Field Engineer.

The company built and operated about 14 miles of 60 c.m. track, and the first power for operating was two small locomotives salvaged from Dickebusch Lake. On Sept. 3, 1916, the company left Vlamertinghe and moved south to Albert, with the Canadian Corps, for the Somme battle, and did good work on the lines from Albert to Becourt Wood, and Pozieres, working with tractors up to Gordon dump, and from there the trains were taken forward by horse or mule power until sufficient ballast became available to make the track fit to use tractors forward of that point. The company left the Somme on Oct. 26, 1916, and returned to the Lens front, locating at the Bois-de-la-Haie, and extending the line, that already ran to Carency, forward to Souchez and across Zouave Valley to Dingwall tunnel at the west foot of Vimy Ridge. On the return from the Somme a section of the company, under Lieut S. F. Workman, proceeded to Bois-de-Bray to form a second company, which eventually became the Canadian Engineers 2nd Tramways Company.

Before the Vimy show in April, 1917, the average daily tonnage hauled was about 125 tons, but after the taking of the ridge the tonnage steadily increased, when the new lines were pushed through.

Construction was carried on steadily throughout 1917, and the ground won in the battles of Vimy Ridge, Hill 65, Avion, and Hill 70, was covered with 60 c.m. tracks, so that by the end of the year, by which time the 2nd Tramways Co. was located to the north of the 1st Tramways Co., the Canadian front was better served by light railways than any other sector on the British front, and all classes of traffic were handled.

About June, 1917, the transport of guns was inaugurated, and all sizes from 18 pr. to 8 in. Howitzers were moved; a number of batteries choosing positions which were entirely dependent on the tramways for getting in their guns, ammunition, and all other supplies.

Lieutenant and Adjutant F. E. Collinson.

After the battle of Vimy Ridge, the company's headquarters were located at Lens Junction, between Souchez and Ablain St. Nazaire, and remained there for over 15 months, and with the advantage of a permanent location the company got forward area railroading nearly to a peace basis; all tracks were heavily ballasted, steel renewed, road crossings fixed up, grades revised and the control system made thoroughly efficient, though the whole territory was exposed to shell fire at all times, and forward of Vimy Ridge, operation was only possible at nights.

The British system of handling trains on the single tracks was from a central control, similar to dispatching on Canadian railways, whereas the 1st Tramways Co.'s system in France was station to station control, similar to the English railway system of control from one signal cabin to the next.

Before the end of 1917, due in large measure to Major R. P. Rogers' energy in getting business for the tramways, the company was handling close to 700 tons, and making over 2,000 ton miles daily.

Traffic was worked as far as the tramways' yards at Lens Junction by the Army Light Railway, with steam and from there the company worked it forward in army cars by tractor. The three types of tractor used were:

20 h.p. simplex, capable of handling	15 tons
40 h.p. simplex, capable of handling	30 tons
45 h.p. petrol electric, capable of handling	35 tons

The army cars generally were double bogie flats and gondolas, with a tare of 2½ tons and a capacity of 10 tons. In addition the company had for local traffic on its own lines a considerable number of small springless cars, capacity 1½ tons, and captured German cars with a capacity of 5 tons.

Troops movements were next undertaken, and the passenger traffic in the winter of 1917-1918 grew to considerable dimensions, and on a number of occasions, two battalions were moved close up to the front line and 2 battalions brought out in a night; and regular night trains were run to take working parties to and from their work on the defense lines; the regular schedule handling about 1,200 men nightly. Hospital trains were also run on a regular schedule from the forward dressing stations.

The company's organization at this time consisted of a headquarters at Lens Junction, including tractor repair sheds, blacksmiths and carpenters shops, quartermasters stores, etc., with the operating department, under the Chief Traffic Officer, also at headquarters. The construction department was divided into three sections, which were quartered at Whiz-Bang corner, in Lievin, in Cite de Caumont, Angres, and at Kootenay Camp, on the east face of Vimy Ridge. The two latter camps, though pretty well forward, were lucky locations, but at Whiz Bang the section lived constantly alongside the infantry in support, and on two occasions practically the whole section became casualties, through shell fire. Trains could be operated as far as Lievin in daylight, and a considerable number of batteries on this line could be served by day, but forward of this and the whole of the territory south of Givenchy could only be served at night. The record for one night was 37 trains going forward from Lens Junction, and the average was about 25 trains.

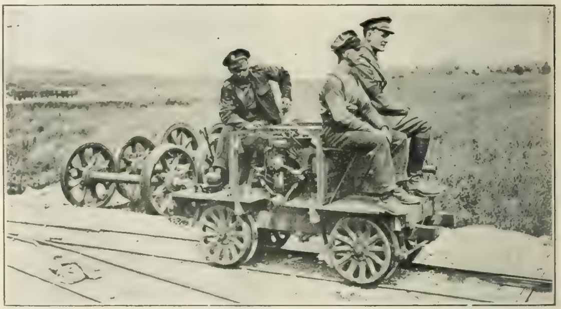
In Nov., 1917, an establishment was authorized, and the company was given the name of No. 1 Section, Canadian Corps Tramways, but in Mar., 1918, a complete establishment was approved and the name changed to Canadian Engineers, 1st Tramways Company, all attached personnel was then transferred to the engineers, and the company brought up to establishment of 20 officers and 142 other ranks, and was reorganized into headquarters and four sections, under the command of Major R. H. Winslow. Road transport was supplied to the company, consisting of 4 motor lorries, 2 motor cars, 23 horses, and 7 wagons, with 21 Canadian Army Service Corps personnel. In the spring of 1918, the company, in addition to its regular work, reclaimed and cultivated a was the largest farm of any in the Canadian Corps.

Lens Junction Yard.

This yard was located on the old French metre gauge station grounds, and the line followed the metre gauge right of way forward to Cite de Caumont. A petrol electric tractor is shown switching in the yard. The black line running up the hill in the background is the Y of the old French Bajolle line.

Gas warfare was extensively carried on in the spring of 1918, and a heavy traffic in gas projectors was handled, the tramways company also undertook cloud gas work. In this latter case the gas cylinders were loaded on cars, and worked up forward, and when all the trains were delivered just behind the front line, the cylinders were electrically connected and detonated, releasing the gas from about 1,500 cylinders at once.

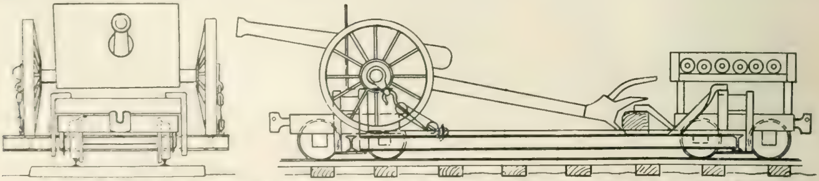
Another phase of the company's activity was providing cars, from which 18 pr. guns could be fired. Two of these were made up at the company's shops, from steel army gun cars, and were known as 'International No. 1 and 2," They were turned out at nights with a 20 h.p. tractor, and a small car for ammunition, for the use of sporting field artillery batteries, which provided gun crews and went away up forward, and from just behind the front line spent the night harassing the Hun, moving to avoid retaliation and retiring before daylight, leaving no trace.



The Adjutant's Speeder.

This inspection car, known as the "Mechanical Bug," was built at Lens Junction from salvaged material. The Douglas motor cycle engine was found in a shell hole, other parts were obtained from the remains of a reaping machine and a French automobile, and the counter shaft from the ruins of Ablain St. Nazaire sugar refinery.

When the Canadian Corps moved south in April, 1918, the company remained on the old front, with the 8th and 18th British Corps until July, when it moved by rail to the Scarpe and rejoined the corps, and maintained and operated 30 miles of lines on the north side of the river, with 70 acre farm at Lens Junction, which headquarters at Artillery Corner near Anzin.



International No. 1 Gun Car, converted by Canadian Engineers, First Tramways Co., for 18 in. Moving Guns, on 60 c.m. Light Railway.

On Aug. 10, 1918, the company received orders to move to Amiens on Aug. 11, and left Anzin by road to entrain on the standard gauge, reaching Longeau on Aug. 12. From there it was a 15 mile march to Cayeux-en-Santerre, which was reached in the afternoon. By the 14th the company had the line repaired up to Rosieres, a distance of about 6 miles, had acquired tractors to operate it, and had started construction of a new line through Vrely, towards Mehanicourt. Railway troop battalions and engineer battalions were also working on construction, and by the 19th the company was operating about 14 miles of track, when orders were received to pull out.

After a 10 days rest at Boves, the company was ordered to rejoin the Canadians at Arras, and reached there by standard gauge on Sept. 2, and located headquarters at Wancourt. The 2nd Tramways Company was then at Arras and had already followed up the corps across the old no-man's land, and with the help of engineer battalions, had joined up to the German steel and repaired the track almost to Vis-en-Artois.

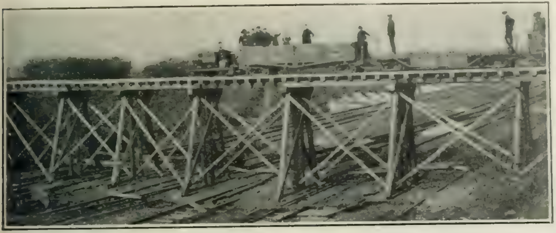
From this time until the armistice, the two tramways companies worked unceasingly to keep railhead up with the corps throughout the advance, and it is believed that the Canadians were the only corps that were served by light railway through this period. To cope with the work two Canadian infantry works companies were attached to the tramways companies, the 4th C.I.W. Co., operating with the 1st Tramways throughout. While at Wancourt Major Winslow was unfortunately wounded while reconnoitering up forward, and later died of his wounds. Capt. S. F. Workman took over the command of the company.

The 2nd Tramways jumped ahead of the 1st just previous to the attack on the Canal du Nord and followed up this advance, moving forward from Hendecourt to Inchy, and then to Sailly, on the outskirts of Cambrai; while the 1st Tramways undertook the operation and improvements of the lines behind it and followed up at each successive move.

On the old settled front the army light railways acted as the connecting link between the standard gauge and the tramways companies in the forward areas, but in the advance of 1918, the standard gauge kept so well up that the tramways companies were handling ammunition direct from the standard gauge to the ammunition dumps. During Sept., 1918, the average daily tonnage was 723 tons and 4,003 ton miles, rising in October to 1,243 tons and 7,268 ton miles, with a record for one day of 1,782 tons and 10,325 ton miles.

On Oct. 19, 1918, the 1st Tramways Co. moved up to Oisy-le-Verger, at which point the Hun 60 c.m. tracks ended and behind this was the metre gauge zone, though the metre gauge through a part of this zone was fitted with a third rail for 60 c.m. gauge. On Oct. 18 and 19 the

Huns retired very quickly for about 16 miles to the outskirts of Denain, and on the morning of Oct. 20 the 1st Tramways Co. got orders to push ahead by road to Roeulx, 4 miles West of Denain. A hard march in heavy rain brought the company into Roeulx 30 hours after the Huns had blown up the cross roads, and evacuated the town, and work was commenced at once to work back, closing in the metre gauge tracks to connect with 2nd Tramways Co.'s tracks, which was done in 3 days. This was the first place where the Hun had left civilians behind and the company had a great welcome.



Roeulx Trestle.

Built in two days, to carry a light railway over a standard gauge yard. On the trestle are a 20 h.p. Simplex tractor and two classes of 10-ton army cars. Every frog and switch in the standard gauge yard had been blown up by the Huns.

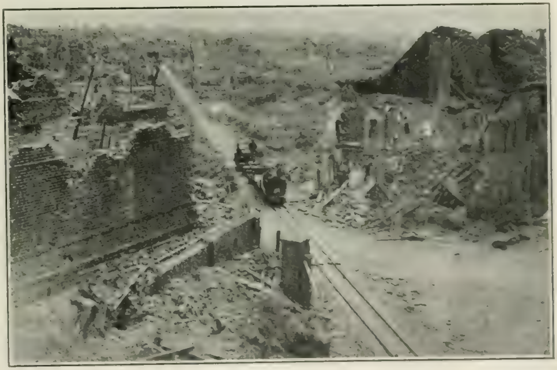
The big obstacle ahead was the bridge over the standard gauge cut, 6 tracks wide, which was completely demolished. A diversion had to be made, and a trestle put across, and to do this, all bridge timber had to be salvaged from the surrounding country, as supplies could not be brought up from the rear. However, in two days sufficient had been collected, and in 23 working hours, from 6 a.m. on Oct. 24 to 5 p.m. on Oct. 25, a trestle 130 ft. long, with 7 bents, 20 ft. high, was constructed, under the supervision of Lieut. C.E.V. Daveney, C.E., and the railhead was into the western suburbs of Denain the same night.

By Nov. 3, the end of steel was at the western suburbs of Valenciennes, while the Hun was just beyond the eastern edge of the town, and the officers detailed for reconnaissance of a way through Valenciennes were carrying on their work with the front line infantry. To get track through this sector, metre gauge lines, street car tracks and standard gauge tracks were closed in to 60 c.m. gauge, and in addition, Hun 60 c.m. steel and British 20 lb. steel was shipped forward and French steel salvaged in the surrounding country. Owing to the inundations and the demolition of the bridges into Valenciennes a grade could not be made quickly into the town and the street car lines were therefore followed round the north of Valenciennes through Buray-sur-Escant, and Thiers, and thence standard gauge was followed to Vicq and a new line 2,500 yards was graded and laid to connect to the street car tracks on the Valenciennes-Mons road, east of Quarouble.

On Nov. 11, 1918, our advance parties were at Quievrain, the first town on the Belgian side of the border, and the company had located billets and was preparing to move there, when orders were received that steel was not to be pushed ahead of Quarouble, and at that point on the Mons road the war activities of the tramways companies ceased.

Between Sept. 2 and Nov. 11, 1918, in 70 days, the tramways companies repaired, laid, or converted to 60 c.m., 50 miles of main line, and approximately as much in branch lines, keeping up with the corps throughout, with a move on an average of once every 5 days, and while so doing, handled a daily average of 1,000 tons.

After the armistice the company prepared to march into Germany with the Canadian Corps, but when it was finally decided that only the 1st and 2nd divisions were to go, the company was transferred to the 1st Army Troops, and was sent back to the devasted area on the old front, to work salvaged material from that area for shipping to the base. The move from Valenciennes was made by road, a three days march bringing the company to Henin Lietard, east of Lens, on Dec. 5, 1918. After working in that area for a short time, the company returned to the old territory and located east of Souchez, as the Lens Junction yards and camp had been demolished. The company worked in that area from Dec. 14, 1918 until Jan. 24, 1919, when relieved by the 231st Forward Light Railway Company, and proceeded to Etaples, where the unit was demobilized on Feb. 1, 1919; the personnel returning by drafts to the engineers' reserve battalions at Seaford, Sussex, England, and thence to Canada.



Lievin.

The main line through the town. The construction sub-section men were billetted in the cellars in the foreground.

First Tramways Company's Water Train, Loading at Souchez Dump.

This train ran every afternoon from Souchez to Lievin and Angres, to supply batteries and other troops with water. Vimy Ridge is seen in the background, across Zouave Valley.

Editor's Note—F. E. Collinson was born at Halifax, Eng., Apr. 28, 1883, and entered railway service Feb. 13, 1901, since when he has been, to Apr. 28, 1904, apprentice, North Eastern Ry., Gateshead-on-Tyne, Eng.; May, 1904 to Mar., 1905, Assistant Foreman, Motor Car Shop, same road, Darlington and York, Eng.; May to Nov., 1907, Locomotive Foreman, same road, Botanic Gardens, Hull, Eng.; Nov., 1907 to Feb., 1908, Locomotive Foreman, same road, Dairycoates, Hull, Eng., Feb., 1908 to June, 1911, Locomotive Foreman, same road, Tweedmouth, Eng.; June, 1911 to May, 1912, Inspector for the Crown Agents for the Colonies, Birmingham and Manchester, Eng.; May, 1912, to June, 1915, Mechanical Engineer, Grand Trunk Pacific Ry., Transcona, Man.; June, 1915, to Dec., 1916, Mechanical Engineer and Chief Draftsman, same road, Transcona, Man. He enlisted as a private in the 203rd Battalion, Feb. 19, 1916, and became subsequently Sergeant Major, then Lieutenant and then Assistant Adjutant in that battalion. He joined the 44th Battalion in France, June 19, 1917, and was with C. Company until Sept. 30, 1917, after which he was Battalion Transport Officer. He joined the Tramways, Jan. 19, 1918, as Traffic Officer, transferred to the Canadian Engineers, Mar. 4, 1918, and became Adjutant of the Canadian Engineers' First Tunnel Co., May 13, 1918. He returned to Winnipeg, May 5,, 1919, and resumed his old position as Mechanical Engineer, Motive Power Department, Grand Trunk Pacific Ry., Transcona.

Project for All Rail Connections Between Canada and Newfoundland and Damming of Belle Isle Straits.

Attention is being directed to a project, which it is claimed is possible from an engineering point of view, the object being to dam the Strait of Belle Isle, and build a railway through Labrador and across the dam to Newfoundland. The proposal was originally made many years ago, but nothing has been heard of it for the last 20 years or so. It is reported that Dr. Pelletier, Agent General for Quebec in London, Eng., and Z. A. Cannon, M.L.A., Quebec, have been in Ottawa recently discussing the matter with Dominion Government officials and that a plan will be submitted for consideration shortly. The project is being reviewed, it is said, by English capitalists, who are prepared to invest considerable money.

The Strait of Belle Isle is about 9 miles wide and comparatively shallow, so that, in the light of the construction many years ago of the Plymouth breakwater in England, and in more recent years of the railway construction along the Florida Keys, from an engineering point of view the building of a dam to connect the Labrador coast with Newfoundland is claimed to be quite within the region of possibilities. The railway projected in connection with the dam, would run along the north shore of the St. Lawrence River—probably in continuation of the Quebec and Saguenay Ry., to the starting point of the dam, across the dam to Newfoundland, and thence to some point on the north coast of the island, where it is projected to establish a port for trans-Atlantic trade. Such a port would undoubtedly be the nearest one to Europe, but as against the attraction of the short ocean trip, there would have to be taken into consideration the long railway trip from present centers of population. The port would have to depend almost entirely for its trade on passenger traffic, as the long railway haul from the sources of production to the port could not compete, in rates with the railway hauls to the ports at present existing.

Another consideration put forward as an argument for the building of the dam, is its possible effect on the climate of the Maritime Provinces, and the St. Lawrence Valley. It is claimed that the building of the dam would deflect the Arctic current from the coast, and permit the Gulf stream to reach Canadian shores, opening up for all the year round navigation many ports on the Atlantic coast, and the St. Lawrence River as far as Quebec, if not Montreal. Dr. Dawson, Chief Dominion Hydrographer, in a report on the hydrographic survey of Belle Isle Strait, some ten years ago, stated that the Arctic current does not sweep down the Strait into the Gulf of St. Lawrence, that there is no great constant stream of water coming in from the north, and that the prevailing winds in the Maritime Provinces are off shore. Under such circumstances it does not seem at all likely that the suggested alteration of climatic conditions in the Maritime Provinces and the Gulf of St. Lawrence are likely to be realized.

The building of a dam across the Strait, the building of a railway to connect with existing railways in Canada, and the laying out of a port in Newfoundland, may be all practicable, but their utility when built is another question.

Transportation Companies' Splendid Work in Demobilizing Troops.

The Minister of Militia, Major General Mewburn, said in the House of Commons, Oct. 1: "I desire to give the following information with regard to the progress of demobilization:

"Total C.E.F. troops embarked from overseas from Nov. 11, 1918, to Sept. 30, 1919, 264,045.

"Total troops discharged from C.E.F. in Canada up to Sept. 15, 1919, 70,731.

Siberian force returned to Canada and demobilized, 4,057.

"Total troops demobilized to Sept. 30 (including those still at sea, about 367), 338,833.

"Total number of hospital patients still overseas to be returned to Canada as of Sept. 19, 126. All other military patients have been returned to Canada. The total number of hospital cases now in military hospitals in Canada is 6,598. We have now reached our peak load and there will be a very rapid clearing of the hospitals.

"It is gratifying to know that in the handling of this large number of men, not a single life has been lost through accident at sea. Three casualties occurred by derailment of a train in Dec., 1918. The rapid handling of the troops by the Canadian Pacific, Canadian National, and Grand Trunk Railways, has been carried out with the greatest possible efficiency."

Railway Mechanical Conventions—The American Railroad Association's Mechanical Section General Committee has decided to hold the 1920 and 1921 conventions at Young's Pier, Atlantic City, N.J., the dates for 1920 being June 9 to 16. The first three days will be devoted to papers on locomotive subjects and the last three to car subjects, consolidated committees reporting on June 14. An invitation was extended to section 6, Purchases and Stores, to hold its convention simultaneously with section 3, in order that members might avail themselves of the opportunity to visit the exhibit. A number of new committees were appointed and important changes were made in the personnel of others. The Railway Supply Manufacturers' Association will hold its usual exhibit.

Italian-Greek Railway Connection—A London, Eng., cablegram states that an Italian-Greek convention has been concluded for direct railway communication between Rome and Athens, through Otranto and Valona, on ferry boats.

German railway officials are reported to be preparing to increase transportation rates 100%.

Railway Mechanical Methods and Devices.

Device for Milling Teeth in Quadrants and Latches.

The accompanying fig. 1 shows a device for milling the teeth in quadrants and latches. The latch is clamped to the frame and the teeth are cut with a cutter of the desired shape. The radius bars are fastened to the same frame as the latch. The spacing is regulated by the teeth in the frame shown in fig. 1.

In cutting the quadrant the bars are fastened to the ends of the quadrant, which are clamped on top of a device in which there is a dog to engage in the tooth of the quadrant. This is clamped to the table of the miller. The first tooth is shaped by moving the table and for the succeeding teeth the dog is used. The clamp on the quadrant is loosened and the quadrant is moved to engage the dog.

Fig. 2 shows a jig for drilling the piston heads and follower plates, the proper holes and bushings being used corresponding to the different heads and followers.

Milling Cylinder Ports.

One of the uses to which the horizontal boring machine is put in railway shops is shown in the accompanying illustration. Here a locomotive cylinder and half saddle are mounted on the table of a no. 32 Lucas horizontal boring machine, while the valve seat is being machined.

Extension Staybolt Tap.

All railway shops have use for staybolt taps, with pilots of sufficient length to extend through the water space and inside sheet of firebox, whilst thread is being cut on the outside sheet and then sufficient length of shank to permit the threading of inside sheet without removing the tap from the hole. When it is considered that taps for this purpose are required to be as much as 60 in. long and are only handled by the manufacturer as "special" it will be understood that the cost of such taps would be a matter worthy of consideration. The following practice is reported to have proved very satisfactory:

Take a standard staybolt tap 21 in. long, which is carried in stock, and with the aid of the electric welder, attach a connection 2 in. long without annealing the tap. The tap is then put on the lathe, held with draw in or bar chuck and the welded connection turned and threaded ⅝ x 1 in.—12 threads, using the ⅝ in. taper boiler tap as the guide. The extension end can then be drilled and threaded allowing ¼ in. for draw to keep tight and in line. Any length of extension can be used on taps. The shank end can be pieced out to the desired length by welding as before to soft steel bar and squaring end.

Railwaymen's Union's Dispute at Winnipeg—Proceedings were taken in a court at Winnipeg, Oct. 3, by the Brotherhood of Railway Shopmen, local branch, against the One Big Union unit of Railway Shopmen, Section B, for $11,000 damages for wrongful appropriation of funds, and for illegal detention and conversion of the property and documents of the international branch. The men forming the defendant order split from the international organization in April.

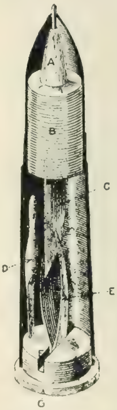
Preheating Reamers and Taps.

A correspondent reports splendid success with large reamers by preheating, by simply laying the reamer on top of a heating furnace for a day previous to placing inside the furnace. This process seems to relieve the strain of the intense heat necessary for the tempering process when the reamer is brought up to the proper heat, then it is plunged into a bath of tepid water for 10 or 15 seconds, depending on the thickness of the flute and weight or bulk of the reamer, the reamer should be quickly removed to oil bath and allowed to remain there until perfectly cooled. This process hardens the flutes to the necessary degree of hardness by the body of the reamer retaining heat sufficiently to draw the flutes to the proper temper. Thus having tempered flutes and a soft center makes a very strong and durable reamer. This process applies to reamers 1½ in. up to any size crosshead knuckle pin or other reamers coming within this range of sizes.

The same process applies to taps large enough to hold sufficient heat to draw the flutes in the tap to the required hardness and at the same time leave the center of the tap soft, which is very desirable when the strain of tapping comes upon it. The best results are obtained with taps running from 1½ in. diameter up to any size. Smaller sizes will not retain sufficient heat after the water plunge to draw them to the proper temper while in the oil bath.

A Useful Combination.

A small but useful combination, which I have used for the last two years, contains four articles which are continually required in any machine shop; viz.: a pair of tweezers E, a knife C, an eye magnet D, and a pencil A. The case was made from an ordinary 0.303 rifle cartridge. To make one, remove the bullet and melt out the lead from the jacket. Then drill a hole in the nose end, say 1-16 in., for the pencil point to project through, and tap out rear end. Next get a ¼ x ¾ in. headless setscrew, and make the slot deeper with a hacksaw. Out of an old hacksaw blade grind the knife blade and sweat it into the slot in the screw. The bottom of the shell G should be cut off with as thin a tool as possible, say 1-32 in. (before cutting off see that the cap has been fired). This leaves a disc ½ x 1-16 in. which is put aside till later. The remainder of the shell still has a solid bottom. This is drilled out to ⅜ in. until it meets the powder chamber. Turn a piece of brass rod to ⅜ x ¼ in., drill a 1-16 in. hole in the position shown in the sketch for the eye magnet. Also saw a slot across the middle and sweat on to the disc C. The tweezers are of spring steel, made in any shape desired and sweated into the slit in F. The eye magnet is of 1-16 in. drill rod hammered out in the middle to the flat shape shown in the sketch. This flat serves two purposes, first as clearance for the tweezers, and second as a grip when in use. The knife slides down between the tweezers. As the pencil gets worn it can be sharpened and by screwing up the screw B the point is always ready for use. The bottom of the shell should be pressed slightly in a vise and a few thousandths of an inch filed off the sides of the plug F. The bottom will then be found to go on easily one way and by a twist will tighten up and so prevent any tendency to drop out.—N. Renwick, Lithgow, New South Wales.



Canadian Railway Club—Major S. P. Robins, General Manager, Dearborn Chemical Co. of Canada, delivered a lecture before the club on Oct. 14 on competition, combination and co-operation.

Birthdays of Transportation Men in November.

Many happy returns of the day to—

J. O. Apps, General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

W. C. Blake, Division Accountant, Canadian National Rys., Winnipeg, born at Liverpool, Eng., Nov. 28, 1865.

C. C. Bonter, General Baggage Agent, Canada Steamship Lines, Ltd., Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'Or Coal Co., Ltd., North Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Western Lines, Canadian National Rys., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Assistant Foreign Freight Agent, C.P.R., Vancouver, B.C., born at Mntreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, General Advertising Agent, Canadian National Rys., Toronto, born at Derby, Eng., Nov. 9, 1871.

E. C. P. Cushing, Purchasing Agent, C.P.R., Calgary, Alta., born at Ottawa, Ont., Nov. 13, 1886.

W. R. Davidson, General Superintendent, Eastern Lines, G.T.R., Montreal, born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, Superintendent, Moncton Division, Maritime District, Canadian National Rys., Moncton, N.B., born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, acting Assistant General Purchasing Agent, C.P.R., Montreal, born at Montreal, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitby, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, Jr., Manager, Canadian Pacific Car & Passenger Transfer Co., and President, Prescott & Ogdensburg Ferry Co., Ltd., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, General Passenger Agent, Eastern Lines, Canadian National Rys., Toronto, borrr at Stillwater, Minn., Nov. 24, 1880.

J. E. Gibault, Resident Engineer, Quebec District, Canadian National Rys., Quebec, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

Grant Hall, Vice President, C.P.R., Montreal, born there, Nov. 27, 1863.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

J. McMillan, Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1866.

A. B. McNaughton, Superintendent, Grand Trunk Ry. Lines in New England (U.S.R.A.), Portland, Me., born at Arnprior, Ont., Nov. 10, 1877.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Revelstoke Division, British Columbia District, C.P.R., Revelstoke, born at Montreal, Nov. 13, 1885.

W. J. Quinlan, District Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Nov. 21, 1883.

J. J. Rose, ex-General Agent, Union Pacific System, Toronto, born there, Nov. 22, 1878.

G. H. Shaw, ex-General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, ex-General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, now General Storekeeper, Canadian Car and Foundry Co., Montreal, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

Guy Tombs, ex-Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., now Traffic Manager, Canadian Export Paper Co., Montreal, born near Lachute, Que., 22, 1877.

T. W. White, District Engineer, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., Nov. 29, 1880.

W. A. Whyte, District Freight Agent, Canadian National Rys., Calgary, Alta., born at Hornsey, Eng., Nov. 24, 1890.

Gauthier, Charles	Helper	Angus	Wounded
Gay, Marwood Ralph	Locomotive fireman	Moose Jaw	Wounded
Gill, James	Clerk	Montreal	Wounded
Glenn, Norton William	Operator	Winnipeg	Wounded
Graham, Thomas	Locomotive fireman	Calgary	Wounded
Hardy, Roy	Brakeman	Schreiber	Wounded
Harrington, John Harold	Trainman	Minnedosa	Wounded
Hoerder, Max Eric	Timber inspector	Brooks	Wounded
Hubbard, Joseph	Sectionman	St. Mary's	Wounded
Hughes, Richard	Checker	Winnipeg	Wounded
Jackson, Alfred	Watchman	Nelson Division	Wounded
Kay, Abel	Carman	Alyth	Wounded
Lee, Arnot Brown	Clerk	Regina	Wounded
McClain, Walker, B.	Porter	Brownville Jct.	Gassed
McDougall, Reginald St. Clare	Clerk	Regina	Wounded
McInnis, Alexander	Trainman	Revelstoke	Wounded
McKinnon, Donald	Section foreman	Whitewood	Wounded
Martin, Albert	Helper	Angus	Wounded
Milne, Robert	Fitter	Angus	Wounded
Mole, Charles Addney	Clerk	Vancouver	Wounded
Morgan, Wm. Clement	Clerk	Montreal	Gassed
Morris, Charles Eric	Clerk	Montreal	Died of wounds
Mossman, William Smith	Weighman	Fort William	Wounded
Munro, Neil	Painter	Sudbury Division	Wounded
Palmer, Charles Duncan	Trainman	Revelstoke	Wounded
Price, Charles Edward	Brakeman	Cranbrook	Wounded
Purton, Fred. Thos.	Locomotive man	Woodstock Division	Wounded
Reeves, Wm. Hodgson	Apprentice	Ogden	Wounded
Rheaume, Joseph Elzear	Porter	Terrebone	Wounded
Scotland, Alexander	Helper	Kenora	Wounded
Smith, James Albert	Yardman	Toronto	Wounded
Staves, Edward	Assistant lineman	Strathmore, Alta.	Wounded
Tidy, William Halmond	Messenger	Edmonton	Gassed
Wadsworth, William	Yardman	Moose Jaw	Wounded
Watson, William	Machinist	Ogden	Wounded
Wells, Frank Thomas	Coppersmith	Winnipeg	Wounded
Zavitz, Gordon Eugene	Locomotive fireman	London	Wounded
Zetterland, John	Conductor	Brandon	Died of wounds

Shown on honor lists to Oct. 1: Killed, 908; wounded, 1,995, total, 2,903.

Following is a partial list of officers and employes who enlisted for active service in Europe, to whom the King has awarded decorations and medals for bravery, gallantry and devotion to duty in the field:

Victoria Cross:
†Robertson, John Peter, Locomotive man, Medicine Hat.

Distinguished Service Order:
Leask, Thas. McCrae (a), surgeon, Moose Jaw.
Maitland, Oliver Mowat, clerk, Moose Jaw.

Military Cross:
Double, Thomas Henry, constable, Montreal
*Hertzberg, Olaf Phil, levelman, North Toronto.
Jennings, Alfred William, cashier, Toronto.
*McKillop, Donald, conductor, Cranbrook
May, Frank Randolph, inspector, Angus.

Distinguished Flying Cross:
Hallonquist, Jos. Eskil, clerk, Moose Jaw.

Distinguished Conduct Medal:
Bain, James, section foreman, Bredenbury.
Collis, William Orme, Trackman, Sudbury
*Holmes, W. Jackson, Locomotive fireman, Calgary.
McMahon, Frank, Brakeman, Smiths Falls.
*Malkinson, Wilfred, helper, Ogden Shop.
*Rhoades, Rupert, [illegible], Ignace
Thorpe, Percy, constable, Winnipeg
*Townsend, Gordon James, constable, Fort William

Military Medal:
Ba[illegible] James, section foreman, Bredenbury
*Campbell, John Charles, machinist, Ogden
*Cassidy, Thomas Joseph, porter, Campbell's Bay
*Costigan, Patrick, trainman, West Toronto
*Crawford, Edward [illegible], constable, Fort William
Daum, Alfred Lester, Yardman, Swift Current
Ferguson, Robert John, brakeman, [illegible]
Flett, Charles Joseph, assistant agent, [illegible]
Gordon, John Lawson, clerk, Toronto
Hewitt, Clarence S., operator, Glen [illegible]
Jackson, George [illegible], carpenter, Winnipeg
McMahon, Frank, Brakeman, Smiths Falls.
McMorran, Roy, clerk, Vancouver
*Malkinson, Wilfred, helper, Ogden shops.
Nelson, Frederick William, fireman, B.C. Lake and River steamboats
Sellen, Charles, checker, Toronto
*Staves, Edward, assistant lineman, Strathmore.
Taylor, Wesley Alexander, operator, Hazel Hill.
Thomson, Stewart, clerk, [illegible]
Thorne, Percy, constable, Winnipeg.
Wilson, George [illegible], fitter, Lethbridge
Yeates, Charles, trainman, [illegible]

Second Bar to Military Medal:
*Lawson, Frederick, fireman, Revelstoke

Meritorious Service Medal:
*Gardner, Charles Robert, clerk, London, Ont.
Graham-[illegible], Thomas H., clerk, Antwerp
Kearney, Thomas William, clerk, Moose Jaw
[illegible], Charles, clerk, Winnipeg
Smith, Charles Arthur, clerk, [illegible]

The following decorations have also been presented to employes by governments of allied nations:

Collis, William Orme, trackman, Sudbury, Croix de Guerre.
[illegible], Gordon Wesley, [illegible] agent, Montreal, [illegible] Medal for Valor.
[illegible], Robert H[illegible], [illegible], Vancouver, [illegible]
Hallonquist, Joseph Eskil, clerk, Moose Jaw, Italian Medal for Valor.
[illegible], William, checker, Fort William, Croix de Guerre.

Military Cross (a) with bar. †Killed in action. * Wounded.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 271. Sept. 10.—Ordering procedure and form to be used in submitting proofs of Canadian Freight Classification or Express Classification for Canada or any supplement thereto.

General order 272. Sept. 19.—Ordering terminal carriers not to issue bill of lading for entire movement of freight which is interswitched, but to give shipper local bill of lading covering movement by interswtiching service to point of transfer to line carrier that issues the bill of lading to destination.

28,762. Sept. 4.—Ordering C.P.R. to install distant signals where it crosses at Canadian Northern Ontario Ry. at Central Jct., Bonarlaw.

28,763. Sept. 5.—Relieving G.T.R. from providing further protection at crossing near St. Marys Jct., Ont.

28,764. Sept. 9.—Authorizing Canadian Northern Pacific Ry. to build interchange track with British Columbia Electric Ry., near Tripp station, B.C.

28,765, 28,766. Sept. 9.—Authorizing Saskatchewan Government to build highway crossing over Grand Trunk Pacific Ry., north of Sec. 1, Tp. 31, Range 26, and in n.w. ¼, Sec. 2, Tp. 31, Range 26, west 3rd meridian.

28,767. Sept. 9.—Authorizing Canadian North-Western Ry. to cross highway between Secs. 9 and 10, Tp. 25, Range 7, west 4th meridian, Alta.

28,768. Sept. 9.—Approving plan of Canadian National Rys. station at Chicoutimi, Que., work to be completed Jan. 1, 1920.

28,769. Sept. 11.—Approving extension of Canadian National Rys., Oakland Branch (Amaranth extension), mile 43.97 to 79.49.

28,770. Sept. 11.—Approving location Canadian National Rys., Ste. Rose du Lac Branch (Amaranth extension), mile 100.31 to 121.04.

28,771. Sept. 11.—Approving location of Canadian Northern Saskatchewan Ry., Lampman-Peebles Branch, mileage 0 to 22.39.

28,772. Sept. 11.—Approving location of Canadian National Rys. Eston Southeasterly Branch, mile 0 to 31.13.

28,773. Sept. 12.—Authorizing G.T.R. to build spur from near Spring St., Cobourg, Ont., northerly to G.T.R. right of way lands.

28,774. Sept. 11.—Relieving C.P.R. from providing further protection at crossing near Wolseley station, Sask.

28,775. Sept 12.—Authorizing Canadian National Rys. to build gauntlet track across bridge over Red Deer River, in Sec. 9, Tp. 29, Range 20, west 4th meridian.

28,776. Sept. 13.—Extending to Dec. 3, time within which Canadian National Rys. may operate over portion of Victoria and Sidney Ry., in British Columbia, from Sidney to Canadian Northern Pacific Ry. crossing.

28,777. Sept. 11.—Ordering Canadian National Rys. to keep station platform at Longlet Port, B.C., lighted; and to place three lights along right of way at entrance from Mavis St.

28,778. Sept. 13.—Authorizing Michigan Central Rd. to remove station agent at Attercliffe, Ont., caretaker to be appointed.

28,779. Sept. 16.—Authorizing Grand Trunk Pacific Ry. to cross and divert highway on its Melville-Regina Branch in n.w. ¼, Secs. 9 and 10, Tp. 22, Range 8, at mileage 11.2, Yorkton District, Sask.

28,780. Sept. 13.—Dismissing Canadian National Rys. application for order amending order 19,[illegible], which authorized Canadian Northern Ry. to cross highway at McGee Townsite, in n.w. ¼, Sec. 19, Tp. 29, Range 16, west 3rd meridian, to provide that cost be paid by the municipality and Canadian Town Properties, Ltd.

28,781. Sept. 15.—Authorizing C.P.R. to make road diversion in lieu of road allowance on western boundary of n.w. ¼, Sec. 11, Tp. 16, Range 13, west [illegible] meridian, across its tracks at mileage [illegible], and to close diverted portion within its right of way.

28,782. Sept. 18.—Dismissing application of [illegible], Vaudreuil, Que., for order directing C.P.R. to replace crossing on his farm by overhead crossing.

28,783. Sept. 17.—Approving agreement, July [illegible], between Bell Telephone Co. and Bradden Telephone Co., Hastings County, Ont.

28,784. Sept. 18.—Approving Central Canada Express Co.'s [illegible] No. 10, authorizing C. Hope, Assistant Superintendent, to issue tariffs of tolls.

28,785. Sept. [illegible].—Authorizing G.T.R. to build [illegible] Hall Coal Co., Montreal.

28,786. Sept. [illegible].—Authorizing G.T.R. to operate over siding to be built by Toronto Harbor Commissioners on the south side of Fleet St. [illegible]

28,787. Sept. [illegible].—Authorizing G.T.R. to re[illegible] across Little Trout Creek, near [illegible], Que.

28,788. Sept. 16.—Authorizing G.T.R. to build [illegible] for Canadian Packing Co., Montreal.

28,789. Sept. 16. Approving C.P.R. location of its Russell-Northerly Branch from mile 0 to 12.31 and authorizing it to cross 14 highways at grade in Manitoba.

28,790. Sept. 15. Authorizing G.T.R. to operate trains over sidings or spurs to be built by Toronto Harbor Commissioners for Anthracite Briquette Co., Toronto.

28,791. Sept. 13. Dismissing complaint of Toronto Board of Trade and Border Chamber of Commerce, Windsor, Ont., against increased return passenger fares put into effect by railway companies, Feb. 1.

28,792. Sept. 12.—Approving Canadian Northern Western Ry. location, mileage 58.94 to 75.3, and mileage 77 to 92.40, Alta.

28,793. Sept. 15.—Authorizing G.T.R. to operate trains over spur to be built by Toronto Harbor Commissioners, across Fleet St., Toronto.

28,794. Sept. 12.—Ordering C.P.R. to have distant signals at crossing by its Calgary-Edmonton Branch, of Grand Trunk Pacific Ry. Tofield-Calgary Branch, connected and operated electrically and automatically through home signal levers.

27,795. Sept. 18.—Dismissing application of Rockwood municipality, Man., for order directing C.P.R. to make highway crossing at Carson St., Teulon, Man.

28,796. Sept. 19.—Relieving G.T.R. from providing further protection at crossing of Main St., Vankleek Hill, Ont.

28,797. Sept. 20.—Extending to Oct. 15, time within which Canadian National Rys. shall complete freight and passenger station and passing track at Rosebud, Alta., as directed by order 27,875, Nov. 18, 1918.

28,798. Sept. 22.—Authorizing Grand Trunk Pacific Ry. to cross and divert highway at mileage 347.4, Sask.

28,799. Sept. 22.—Ordering C.P.R. to proceed with building of storage tracks at Port Arthur, Ont., as required by order 27,910, Dec. 2, 1918.

28,800. Sept. 19.—Amending order 28,648, Aug. 9, re building of culvert by G.T.R., near White's station, Que.

28,801. Sept 22.—Authorizing City of Hamilton, Ont., to widen King St. to 66 ft. at its intersection with Toronto, Hamilton and Buffalo Ry.

28,802. Sept. 22.—Authorizing Canadian Bank of Commerce, Calgary Branch, to pay $500, deposited in connection with C.P.R. spur, authorized by order 27,427, July 10, for Simington Co., Calgary, Alta., $393.90 to C.P.R., and $106.10, with accrued interest, if any, to Simington Co.

28,803. Sept. 17.—Authorizing G.T.R. to cross Common St., Montreal, and to connect with Montreal Harbor Commissioners' tracks.

28,804. Sept. 12.—Ordering G.T.R. to build siding 2 miles west of Brockville into Mrs. Bressee's farm on Lot 22, Con. 1, Elizabethtown Tp., Que.

28,805. Sept. 22.—Approving Canadian National Rys. of overhead unloading apparatus for tank cars to be built for Imperial Oil Ltd., Athens, Ont.

28,806. Sept. 22.—Authorizing G.T.R. to build passing track at grade across Muskoka Road, Gravenhurst, Ont.

28,807. Sept. 20.—Authorizing C.P.R. to build spur for Vancouver Ice and Cold Storage Co., Vancouver, B.C.

28,808. Sept. 22.—Relieving Pere Marquette Rd., from providing further protection at crossing near Leamington, Ont.

28,809. Sept. 20.—Disallowing three supplements of Quebec, Montreal and Southern Ry., and Napierville Jct. Ry., which cancelled reduced fares and special baggage allowance for commercial travellers.

28,810, 28,811. Sept. 22.—Approving Quebec Central Ry. standard freight mileage tariff C.R.C. 681, and its standard passenger tariff C.R.C. 174, on basis of 3½c a mile.

28,812. Sept. 17.—Dismissing application of Imperial Oil Ltd., Sarnia, Ont., for ruling in matter of claims against C.P.R. for refund of demurrage charges accrued during influenza epidemic on shipment detained at Shawinigan Falls, Que.

28,813. Sept. 18.—Dismissing complaint of Dominion Millers' Association and Canadian Manufacturers' Association against new milling in transit rules filed by railway companies operating east of Lake Huron and Detroit and St. Clair Rivers, effective Sept. 1.

28,814. Sept. 23.—Authorizing Canadian Northern Western Ry. to cross C.P.R. near Princess, Alta.

28,815. Sept. 23. — Approving Michigan Central Rd. plan of additional lever at crossing of G.T.R. at Canfield, Ont.

28,816. Sept. 24.—Authorizing G.T.R. to renew overhead bridges at mileposts 92.42 and 92.62, carrying Wilmot and Oxford Sts., Drumbo, Ont.

28,817. Sept. 24. Authorizing G.T.R. to build two spurs for Hunt Bros., London, Ont.

28,818. Sept. 24. Authorizing C.P.R. to remove station agent at Eholt, B.C., caretaker to be appointed.

28,819. Sept. 24.—Authorizing Canadian National Rys. to rebuild subway across Bowes St., Parry Sound, Ont.

28,820. Sept. 24.—Authorizing C.P.R. to move Nitschke's crossing now located on lots 13, 14 and 15, Range C, and Lot 23, Range 6, Petewawa Tp., Ont.

28,821., Sept. 24.—Authorizing C.P.R. to build extension of siding for Canadian Tube and Iron Co., Montreal.

28,822. Sept. 24.—Authorizing Canadian Northern Western Ry. to cross 25 highways with its Hanna-Medicine Hat Branch in Alberta.

28,823. Sept. 22.—Authorizing C.P.R. to build 4 spurs for Three Rivers Shipyards, Three Rivers, Que.

28,824, 28,825. Sept. 25, 26.—Authorizing Canadian Northern Western Ry. to cross highway between Secs. 15 and 10, Tp. 20, and to cross road allowance between n.w. ¼, Sec. 19, and s.w. ¼, Sec. 30, Tp. 21, Range 12, west 4th meridian, Alta.

28,826. Sept. 29.—Authorizing C.P.R. to build spur for Alberta Stockyards Co., Calgary, Alta.

. 28,827. Sept. 29.—Amending order 28,673, Aug. 16, re highway crossing over Grand Trunk Pacific Ry. in n.w. ¼, Sec. 25, Tp. 35, Range 14, west 3rd meridian.

28,828. Sept. 27.—Authorizing Canadian National Rys. to cross highway between Lots 32 and 33, Con. 2, Cramahe Tp., Ont.

28,829, 28,830. Sept. 30, 20.—Authorizing C.P.R. to divert road allowances in s.e. ¼, Sec. 3, Tp. 22, n.w. ¼, Sec. 35, Tp. 21, and s.e. ¼, Sec. 13, Tp. 22, Range 27, west 3rd meridian, and to cross same at mileage 6.05 and 321. Leader Southeasterly Branch, Sask.

28,831. Sept. 25.—Authorizing C.P.R. to cross Canadian National Rys. at mileage 0.02 Rossburn Subdivision, Man.

28,832 Sept. 29.—Authorizing C.P.R. to build highway crossing over its tracks in s.e. ¼, Sec. 1, Tp. 4, Range 3, west 2nd meridian, Sask.

28,833. Sept. 25.—Authorizing Canadian National Rys. to cross highway at mile 7.55 near Vegreville, Alta.

28,834. Sept. 30.—Authorizing Canadian National Rys. to extend spur for H. Cater, Brandon, Man.

28,835. Sept. 17.—Authorizing G.T.R. to connect with siding to be built by Toronto Harbor Commissioners across Steel Co. of Canada's lands, Toronto.

28,836. Sept. 30.—Approving location of C.P.R. Leader Southeasterly Branch from mileage 9 to 31.37, Sask.

28,837. Oct 3.—Authorizing Quebec, Montreal & Southern Ry. to increase its standard maximum passenger fare from 3.45, as shown in its standard passenger tariff C.R.C. 262, effective Mar. 15, 1918, to 4c a mile, not to become effective until requirements of Sec. 334 of the Railway Act, 1919, have been complied with.

28,838 Oct. 1.—Authorizing C.P.R. to build spur for Northern Electric Co., Regina, Sask.

28,839. Oct. 3.—Authorizing C.P.R. to build combination truss 3 track ferry slip, with moving leaf, on south shore of Burrard Inlet, Vancouver, B.C.

28,840. Oct. 4.—Extending to July 31, 1920, time within which gates may be erected at crossing of the C.P.R. and Canadian National Rys. at Bay Bridge Road, Belleville, Ont., as required by order 25,932, Mar. 10, 1917.

28,841. Oct. 3.—Exempting Grand Trunk Pacific Branch Lines Co. from erecting fences, gates and cattle guards or its Cutknife Branch, Sask., between mile 33.83 and 46.71, at 7 points.

28,842. Oct. 3.—Authorizing Canadian National Rys. to rebuild bridge over Talbot River, in Mara and Thorah Tps., Ont., at mileage 67 from Toronto.

28,843. Oct. 3.—Authorizing C.P.R. to extend spur for University of Saskatchewan, Saskatoon, Sask.

28,844. Oct. 4.—Authorizing G.T.R. to operate over sidings or spurs serving Gunns Ltd., West Toronto, Ont., as built by C.P.R. under order 28,423, June 11.

28,845, 28,846. Oct. 2.—Authorizing G.T.R. to operate over spurs to be built by Toronto Harbor Commissioners for E. Fielding & Son, and J. E. Russell, Toronto.

28,847. Oct. 4.—Authorizing Canadian National Rys. to rebuild bridge over east channel of Moira River, Stoco Lake, Hungerford Tp., Ont., at mileage 31.75 from Yarker.

28,848, 28,849. Oct. 3.—Authorizing C.P.R. to build spurs for loading ties at mileage 44.36 and 46.41, White River Subdivision, Algoma District, Ont.

28,850. Oct. 3.—Approving proposed location of Brantford Municipal Ry.'s Terrace Hill extension, Brantford, Ont.

28,851. Oct. 4.—Approving location and details of G.T.R. station at Palgrave, Ont.

28,852. Oct. 2.—Authorizing G.T.R. to operate over siding to be built by Toronto Harbor Commissioners for Canadian Ice Machine Co. Toronto.

28,853. Oct. 3. Dismissing application of City of Vancouver, B.C., for order to open up Commercial Drive for a crossing over C.P.R. to the government dock on Burrard Inlet, and authorizing city to make crossing at intersection of Stewart St., and Salisbury Drive.

28,854. Oct. 3.—Defining rates per car which carriers west of Lake Superior may charge for operations they may be called upon to perform on long sidings, or spurs, additional terminal service of switching by locomotive, or freight which in the same cars, has been or is to be line hauled by the switching carrier or a connecting carrier.

28,855. Oct. 7.—Approving Quebec, Montreal and South Ry. standard maximum passenger tariff C.R.C. 274, effective Oct. 19.

28,856. Oct. 6.—Approving work, plan and specifications of Keogh discharge drain to be built under G.T.R., near Whites Station, Que.

28,857. Oct. 7.—Approving agreement, Sept. 27, between Bell Telephone Co. and Brompton Pulp & Paper Co., operating in Beauce, Compton and Wolfe Counties, Que.

28,858. Oct. 6.—Approving Canadian National Rys., proposed timetable, effective Oct. 5, re train service at Fallowfield, Ont.

28,859. Oct. 6.—Authorizing G.T.R. to rebuild overhead bridge, carrying John St. over its tracks at Paris, Ont.

28,860, 28,861. Oct. 4.—Authorizing G.T.R. to remove station agents at Glen Huron and Wyebridge, Ont., the former to be a flag station.

28,862. Oct. 6.—Authorizing G.T.R. to build spur for Salts and Potash Co., of Canada, at mileage 42.5, Prince Albert Branch, Sask.

28,863. Oct. 3.—Authorizing C.P.R. to bridge two spurs for loading ties at mileage 18.51, Heron Bay Subdivision, Thunder Bay District, Ont.

28,864 Oct. 7.—Authorizing C.P.R. to build siding for Imperial Oil, Ltd., Claresholm, Alta.

28,865. Oct. 6.—Approving general plan 632-20-1 of location of sidings for Quaker Oats Co., Peterborough, Ont.

28,866. Oct. 6.—Approving G.T.R. standard station plan 6, showing details of station to be built at Prince George, B.C.

28,867. Oct. 7.—Authorizing Canadian National Rys. to rebuild bridge over Pike Creek, at Weir, Que.

28,868. Oct. 7—Authorizing Halifax and South Western Ry. to build spur for Town of Bridgewater, N.S., at Brookfield Mines.

28,879. Oct. 10.—Authorizing Canadian National Rys. to rebuild bridge over Cedar Lake Outlet, Rhodes Parish, Que., at mile 134, from Quebec.

28,880. Oct. 10.—Approving C.P.R. clearances of permanent train shed for Lake of the Woods Milling Co., at Elevator A, Keewatin, Ont.

28,881. Oct. 9.—Authorizing C.P.R. to build two sidings for Fraser Co., Edmundston, N.B.

28,882. Oct. 9.—Approving location of Edmonton, Dunvegan & British Columbia Ry., at Alcomdale, Alta.

General order 273. Oct. 8.—Extending to Sept. 30, 1920, time within which railway companies may equip their freight cars with safety appliances as required by general order 128, July 20, 1914.

Greater Winnipeg Water District Ry.—A press report states that the Greater Winnipeg Water District Commission is endeavoring to obtain a subsidy from the Dominion Parliament in aid of the railway. The line extends from St. Boniface to Shoal Lake, an area of the Lake of the Woods, 97 miles, and serves a section of the province which offers considerable inducements to settlers.

Special Provisions for Railway Employes Voting in Ontario.

The Ontario Legislature in 1918 amended the Municipal Act by providing that railway employes likely to be absent from their headquarters on the days of municipal elections, might vote at specially appointed polling places at railway centers on other days than the actual election days. At its last session, the Ontario Legislature amended the Ontario Elections Act so that special polls may be provided by order of the Lieutenant Governor in council, "at any election to the Assembly, or the voting upon any question submitted to the electors of Ontario, for receiving the votes of railway employes whose employment is such as to necessitate their absence from time to time from their ordinary place of residence and who have reason to believe that they will be so absent upon the day fixed for polling at such election or upon such question." The various subsections deal with the opening and closing of such polls, the number of polls, and the appointment of deputy returning officers and poll clerks, the notice to be given, and other details. One subsection provides that each person offering himself as a voter, has to sign a declaration that he is employed by a railway company and that he expects to be absent from home on the day of the poll. A penalty of not less than $25 and not more than $100 is provided for making a false declaration.

In connection with the recent general election, polls were opened on Oct. 17, 18 and 19, at the following railway centers throughout the province: Brockville, Cochrane, Hearst, St. Thomas, Fort William, Belleville, Trenton, East Hamilton, West Hamilton, Sioux Harbor, Kenora, Sarnia, Sarnia Tunnel, Smith's Falls, London, Carleton Place, Fort Erie, Niagara Falls, Madawaska, North Bay, Ottawa East, Ottawa West, Depot Harbor, Havelock, Palmerston, Stratford, Schreiber, Armstrong, Port Arthur, Rainy River, Allandale, Capreol, Chapleau, Michipicoten Harbor, Sault Ste. Marie, Rosedale, Toronto union station, Toronto Jct., Riverdale station, Toronto; Parkdale station, Toronto; Englehart, Lindsay, Windsor and Mimico.

Detention of Canadian Cars in the United States.

H. E. Lavigueur, M.P. for Quebec County, asked the following questions in the House of Commons recently:—"Is the Minister of Railways aware of the fact that the lumber trade is suffering from a great scarcity of cars owing to the fact that more than 44,000 Canadian cars are withheld in the United States against 23,350 cars on the Canadian lines? Is it the intention of the government to fix at $5 a day the duty now of 70c that the railway companies are obliged to pay for every car on their lines belonging to other companies?"

The Minister of Railways replied as follows:—"According to a statement issued by the Canadian Railway War Board on Oct. 2, there was a total of 59,671 Canadian owned freight cars in the United States, and a total of 38,069 U.S. owned freight cars in Canada, the excess of cars in the U.S. being 21,602. Included in the above there were 44,019 Canadian owned box cars in the U.S. and 20,650 U.S. owned box cars in Canada, the difference in this case being 23,369. We have received very few complaints about shortage of cars for lumber shipments to points within the Dominion, or for export over-seas, but it has been found impossible to secure an adequate supply of U.S. owned cars to take care of shipments of lumber, pulp and paper from Canadian to U.S. points. It is impracticable to furnish Canadian owned cars freely for such traffic, inasmuch as the cars are not promptly returned to Canada, and such action would immediately result in producing a shortage of cars for Canadian internal traffic. The Minister of Railways has taken the matter up with the authorities at Washington and every effort possible has been made to secure a balance of equipment. The standard per diem or car rental charged by one railway to another for the use of freight cars, is at present 60c per day, per car, this rate being established by the American Railway Association, and we are not aware of any proposal to change the rate, neither would a change in rate materially affect the question referred to."

Subsidies Paid to Railways.

Senator Casgrain enquired in the Senate, Oct. 21, as to the amount paid in subsidies to the G.T.R. during the last 65 years, to the C.P.R. during the last 37 years, to the Canadian Northern Railway during the last 25 years, and to the Grand Trunk Pacific Ry., from Winnipeg to Wolfe Creek, or 120 miles west of Edmonton. Sir James Lougheed replies as follows: "The following information is as far as the Railways Department is concerned:—

G.T.R. System, $15,142,633.34; G.T.R., Victoria bridge, $500,000; total, $15,642,633.34. C.P.R. Co., original construction, $25,000,000; Canadian Pacific extension (North Shore), $1,500,000; branch lines, $5,369,374.70; Canadian Northern Ry. Co., C.N.R. Co., $1,090,132; C.N. Quebec Ry. Co. (formerly Great Northern Ry., Quebec), $1,265,357.14; C.N. Quebec Ry. Co. (formerly Chateauguay & Northern Ry.), $391,819.75; C.N. Alberta Ry. Co., $3,120,000; C.N. Ontario Ry. Co., $14,485,635.20; C.N. Pacific Ry. Co., $5,987,520; total, $27,159,464.09.

Grand Trunk Pacific Ry. Co., no subsidy paid on line between Winnipeg and Wolfe Creek, in so far as the Railways and Canals Department is concerned.

The Sir Robert Reid Estate—The action brought by Miss Harriet D. Reid, only daughter of the late Sir Robert G. Reid, against Sir William D. Reid, H. J. Reid, R. G. Reid, Lord Shaughnessy, the Royal Trust Co., Montreal, and the Reid Newfoundland Co., for the appointment of a sequestrator in connection with the management of Reid Newfoundland Co.'s shares, owned by her late father, came before a court at Montreal, Sept. 27, and judgment was given by Justice Coderre, Oct. 9. In the course of the hearing it transpired that Sir Robert Reid's will directed the sale of his interests in the Reid Newfoundland Co., and the investment of the proceeds in safe and conservative investments; that Sir William Reid in 1917, while on a sick bed in New York, signed a document providing for a division of the shares, and that the Royal Trust Co., Montreal, was appointed trustee and executor in place of the three Reid brothers and Lord Shaughnessy. The judgment directs the appointment of a sequestrator in respect of [illegible] shares in the company, pending the trial of the main action. The judgment is being appealed.

Railway Ditching and Drainage.

The following report was presented at the Roadmasters and Maintenance of Way Association's annual meeting in Chicago recently by a committee of which J. P. Corcoran, Roadmaster, Chicago and Alton Rd., was Chairman, and of which H. Ferguson, Superintendent of Track, Ontario Lines, G.T.R., Toronto, was a member:

The subject assigned to us, drainage, is one of the most essential in railway maintenance.

1. If tracks have not the proper drainage, no matter how good the rail, ballast and ties, the tracks will become out of line and surface. Drainage on many roads in the last few years has been neglected on account of the scarcity of labor. At present with the high cost of labor, we must seek other devices for proper ditching and draining.

2. In the past hand work of labor and work train was thought to be the essential way of cleaning ditches. Today we have ditching machinery that will clear out ditches, shape and slope them. One ditching machine will do as much as 50 men.

3. Where water lies on the surface or in ditches in the autumn and during the winter, we find the track heaving. It is just as expensive to shim our tracks and keep constant watch over the shimmed track as it would be to do the proper ditching to carry away the water so the roadbed would be dry and track would not heave. Frequently there are places where this cannot be done without going to considerable expense to put in drain tile, this tile to be laid below frost line and the movement of the roadbed. Generally this distance should not be below less than 4 or 5 ft. below the bottom of the tie. The ditch should be filled with sufficient suitable porous material to draw the water to the tile. Even in such cases it is economical to put in tile to draw the water away, thus keeping the track dry and keep it from heaving.

4. Where there are wet cuts, frequently causing trouble, there should be a tile through the cut, suitably laid below frost line and any movement of the roadbed. Generally this depth should not be less than 4 or 5 ft. below the bottom of the tie.

5. Through cuts where there is silica sand, quicksand, or alkali clay, that slides in quickly, the time to put in drainage is in very dry weather and sheet piling should be used in opening the ditch to lay in the tile. When the length of ditch for the day has been dug and the tile laid, it should be filled in, in the evening, with coarse, suitable material to draw the water to the tile. Great care should be taken to get the tile laid the proper fall from the beginning to the mouth of the tile. At the mouth of the tile a mattress of either good heavy riprap, or a bottom of old ties, should be used to prevent the dirt washing from under tile.

6. Where there are soft spots in the track, either in cuts or on a fill where track slides on account of improper drainage or softening of track, French drains placed either between tracks or in ditches are a great help to the track; a ditch opened 4 or 5 ft. deep and 3 or 4 ft. wide and filled in with rip-rap or stone and laterals cut in under the track to drain into the French ditch, will be found to be very beneficial and will prevent the track from going out of line and surface. Laterals should be placed wherever found necessary to draw the water from under the tracks. Embankments extended along existing tracks on earth or clay and having sufficient bond of existing fill, during rainy seasons, will slide on account of leakage of water between the old and new grades. In many cases an auger can be used to bore into the side of the bank and a pipe be placed in to give the drainage and draw the water.

7. Where practical, ditching should be done by machinery.

8. Below are figures of ditching by different methods for 1917 and 1918:

American Steam Ditcher—Ditch labor, $18.90; W. T. labor, $28.36; Rental of equipment, $31; Cost of maintenance, $1.45; Cost of supplies, $12.80; total cost, $92.51; Cu. yards handled, 224; Cost per yard	$0.4130
Mahoney Ditcher—Ditch labor, $31.75; W. T. labor, $28.36; Rental of equipment, $30; Cost of supplies, $10.62; Cost of maintenance, $0.93; Total cost, $101.66; Cu. yards handled, 252; Cost per yard	0.4034
Push cars (two)—1 foreman at $83, $2.77; 11 laborers at $2.25, $19.80, total $22.57. Cost per yard	0.5862
Car Barrows—1 foreman at $83, $2.77; 4 laborers at $2.25, $7.20; total $9.97. Cost per yard	0.7670
Wheelbarrows—1 foreman at $83, $2.77; 6 laborers at $2.25; $10.80; total, $13.57. Handled 19 cu. yds. Cost per yard	0.7142
Casting—1 foreman at $83, $2.77; 6 laborers at 2.25, $10.80; Total $13.57. Handled 38½ cu. yds. Cost per yard	0.3525

This cost data is arrived at from work actuallv performed on a single track, having an average of six tonnage trains during working hours; of soft clay roadbed where the standard ditches are such as are ordinarily known or described as shoulder ditches—that is where there is a shoulder of 7 ft. maintained outside of the rail, with ditch 3 ft. wide by 2 ft. deep, maintained outside of that, which is analogous to the dipper or bucket on the drag ditcher as above referred to, this type of ditcher being preferable on this particular line to the American, Marion or Erie, except in case of small slides or very heavy ditching.

9. On two or more tracks, suitable drainage should be provided to carry away the surface water.

10. Particular attention should be paid to the drainage of frogs, switches and railway crossings, the remedy depending upon local conditions. This resolves in the matter of providing sufficient rapid drainage, which can be accomplished by providing good surface drainage. Railway crossings, wherever possible, should be drained by using a good depth of cobble stone, say 3 to 4 ft. deep and covering same with ordinary ballast of stone or slag and putting in a drain to carry out the water from the bottom of the cobble stones. This will keep the crossing up from pounding and keep it in line and surface.

11. Through yards where drainage is hard to get, there should be drains laid with catch basins wherever necessary to catch the water and carry it away, and in this manner tracks will not lie under water or the water will not soak in the ground and cause tracks to become uneven, which we frequently find in the autumn and winter where there are not the proper facilities for draining tracks. All yards should have a drainage system.

12. Poor drainage at station platforms, street and highway crossings, on account of ballast becoming foul, or proper drainage not being given to crossings. Those are always the last to receive attention. At such places there should be suitable drain leading to the outside of the ties 5 or 6 in. below the tie to draw the water away. Ballast in the crossing should be kept clean, so water will reach the drain and be drawn away quickly and not allow the subgrade to become soft. There should be a proper outlet for this drain so that the water could be disposed of.

13. Section forces should keep ditches clean at all times and have a working system of keeping them clean.

Canadian National Railways Earnings.

	1919	1918
January	$ 6,744,018	$ 4,696,567
February	6,000,342	4,421,504
March	6,827,491	5,710,660
April	6,909,632	7,165,890

Uniforms for Canadian National Railways Employes—C. G. Power, M.P. for Quebec South, asked several questions in the House of Commons recently, as to the manner in which contracts for uniforms for Canadian National Rys. employs are given. The Minister of Railways replied as follows: "On the Canadian Government Rys. section, uniforms were formerly obtained on the basis of competitive bids, but the results were so unsatisfactory that for the past five years the work of making uniforms on that section has been entirely entrusted to W. J. Inglis & Co. of Montreal. They have contract for uniforms for Quebec divisions of Canadian Northern Ry. system, and for Ontario and western lines competitive offers are obtained."

Canadian Pacific Railway Steel Underframe Refrigerator Cars.

These 41 ft. cars are designed for satisfactory service when handling any of the several different commodities which require to be transported in insulated cars, because of the need of protection from heat or frost, also for other miscellaneous freight which may properly be loaded in refrigerator cars when they are not required for the transportation of perishables. As packing house products are regularly handled in Canada by railway owned refrigerators, the cars are equipped with galvanized iron tank bunkers, which permit the use of salt, as required to obtain the proper degree of temperature. Regulation meat racks are installed as part of the roof end ceiling construction.

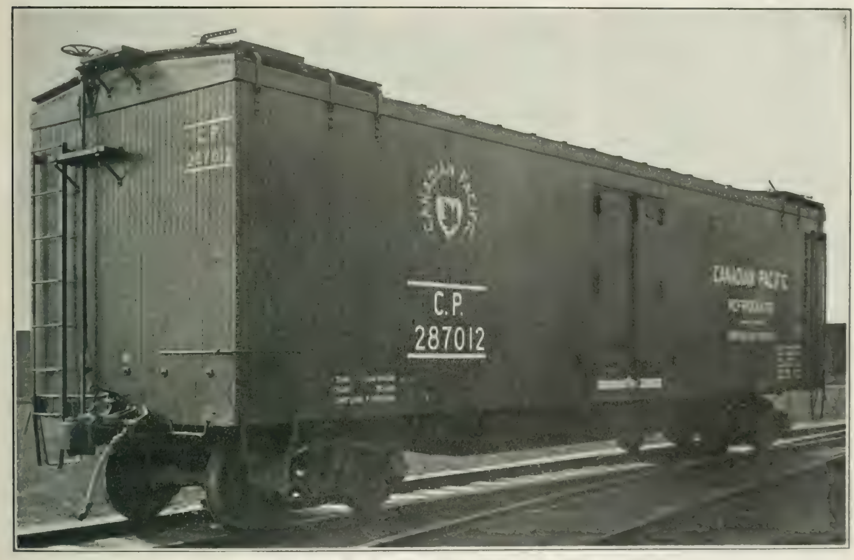
Ventilation—To prevent the exchange of air through the hatch openings at any time, and especially when the hatches are opened for reicing, the tanks fit well around the ceiling, and the ventilator openings are fitted with malleable iron frames, with a close fitting plate slide, which is secured in a closed position at all times except when the cars are operating under ventilation. For berry and fruit traffic it is necessary to provide a means of ventilation. This has been taken care of by providing openings in the fronts of the ice tanks near the top, so that when the hatch covers and plugs are opened, air will circulate freely into and through the car. When operating under ventilation, the use of ice, or ice and salt, is optional, thus providing a wide range of regulation which may be varied to suit the seasons, condition of the load, and the distance to be moved. Fruit fresh from the field is a very difficult commodity to transport, as the field heat, and the heat generated by the ripening process, produce a condition that is difficult to handle. However, the brine tank ventilator car, when equipped with suitable floor racks, arranged so that free circulation will take place around the ice and out under the racks, is particularly suited to this traffic, as the use of salt on the initial icing lowers the temperature of the car rapidly, absorbing the field heat and checking the process of ripening. For fruit shipments it is well to apply temporary slats along the sides of the car to provide space for circulation at the sides as well as underneath. All other perishables may easily be transported safely in these cars, provided reasonable care is used in loading so that the air within the car may circulate freely.

Winter Service—Whenever lading requires protection from frost, charcoal heaters are placed in the corner ice tanks, two or more per car as required.

Floor Racks—Permanent racks of 1¾ x 3¾ in. B.C. fir are installed in sections, 5 sections per side. They are secured with hinges, similar to those used on side doors, to the lining base plank, and when propped up against the car sides, the racks are entirely clear of the floor, and permit it to be thoroughly and easily cleaned and swept out through the side door openings. The racks are made of relatively heavy material to insure durability, especially when car is loaded with miscellaneous merchandise freight.

Ice Bunkers—There are 4 rectangular galvanized iron tanks at each end of the car; tank bottoms ⅛ in. pressed steel, galvanized after pressing, sides 16 gauge galvanized iron. Near the top substantial lugs are rivetted, which bear against the underside of hatch frame and prevent tanks from jumping when cars are being shunted. The tank supports, consisting of angle irons, are arranged so that the front supporting angle may be removed without disturbing any tank. After the removal of this angle, one or more tanks may be removed and re-applied without disturbing the others.

The drip pan under the tank is sloped from the car end towards the front of the tank, so as to be as nearly self-clearing as possible. The front edge of the drip pan is made of ⅛ in. pressed steel plate, galvanized. This arrangement avoids, to a considerable degree, the obstruction of free circulation of air down around the tanks and out under the floor racks.



Canadian Pacific Railway, 41 ft. Steel Underframe Refrigerator Cars.

Tank Drains—The center tanks, at the ladder corners only, are equipped with a drain valve, and the remaining 3 tanks at each end of the car are coupled to this tank, by a hose connection located [illegible] ft. above tank bottom. The drain valve is connected to a pipe extending directly through car floor.

Insulated bulkheads are provided in front of the ice bunkers. These bulkheads are arranged at one side of the car, so that they may easily be swung opened for inspection, cleaning, or repairing tanks. The bulkheads have an extension at the bottom, with horizontal slat, to prevent small crates or boxes from sliding under the bulkhead.

The ice hatches are of U. S. R. A. design, modified only as absolutely necessary to suit conditions.

Roofs are of galvanized iron, type XLA, flexible, applied over single course of boards and one layer of 2 ply asphaltum roof paper. The spacing of the carlines is governed by the spacing of meat rack supports, and on account of roof insulation the roof mullions and running board saddles are spaced to coincide with the carline centers; this provides substantial solid construction for nailing the mullions. The roof sheet pivot saddles are secured by carriage bolts, applied through a special washer nailed on the underside of the ridge pole; this washer when applied is L shaped, secured by 2 nails. After the carriage bolt has been applied, the projecting end of the washer is bent back under the bolt head, so as to prevent the bolt from dropping down. The hole in the washer is square, to suit the shank in the bolt head.

Insulation—The floor insulation consists of a layer of 90 lb. water proof insulation paper, applied in one piece from side to side, and end to end, of car, thereby covering the entire underframe and subfloor. On top of this are placed the floor stringers, the center stringers resting on and bolted to the edge of center sill cover plate; the intermediate stringers rest on and are bolted to the bolsters, cross bars and floor beams. Between the stringers 4 layers of ½ in. insulation are applied in strips, continuous from end to end of car. Each layer consists of hair and fibre felt stitched between 2 courses of 90 lb. water proof insulation paper. The 4 layers are applied in 2 courses of double layers, with nailing strips, and ⅜ in. t.&g. boards between.

The floor consists of 2 courses t.&g. boards, the under course ⅝ in. thick, over which is spread a heavy coating of hot water proof asphalt, and over this a layer of 2 ply asphaltum roofing paper. The top course boards are 1⅛ in. thick.

The side and end wall are insulated with 3 layers of ½ in. insulating material, each layer stitched between 2 layers of 90 lb. water proof insulation paper. Side and end wall insulation extends continuously from floor to ceiling, and from door opening to end of car, across the end, and to door post opposite starting point. One layer of the insulation is applied on the outside of the superstructure frame, over laping and fastened to the sills and plates. Two courses are applied on the inside of the framing, against the ⅜ in. t.&g. sheathing. The outside sheathing consists of standard 13-16 in. t.&g. car sheathing and the inside lining is 13-16 in. t.&g. basswood or spruce. The total thickness through side walls is 6½ in.

The roof insulation consists of 6 layers of ½ in. insulation material, each layer stitched between 2 courses of 90 lb. water proof insulation paper. The insulation is applied in one piece between carlines from side plate to side plate. It is applied in 3 double layers, each double layer supported on ⅜ in. t.&g. boards. On the top side of the ceiling boards, a layer of 90 lb. water proof insulation paper is applied in one piece, from side to side, and end to end, of car.

Superstructure Frame—The principal framing members are B.C. fir, excepting end sills, end posts and end braces, which are of oak or maple. All of the posts and braces are set in cast iron pockets, except the end post and braces, which are set in special cast steel pocket, having a high flange on the outside to prevent lower ends of posts and braces from springing over the top of the casting. Each casting is bolted directly through the steel end sill flange with 2 ⅝ in. bolts. This is to prevent the pocket from tipping out, and also to avoid trouble caused by dowels splitting on wooden end sill. Diagonal brace rods are employed at each side frame panel to reduce rocking to a minimum.

The spacing of the carlines coincide with the spacing of meat rack cross supports, and the supporting bolts pass through the carlines, thus avoiding longitudinal blocking, which is undesirable, particularly on account of interference with insulation. Three-quarter in. cross tie rods are applied at alternate carlines. The framing and insulation of the car is so arranged that the roof frame may be assembled on the shop floor, and then placed on edge, while the ceiling boards are applied. This enables the builders to work at all times to the best advantage, which results in good work being done rapidly.

The underframe is of the center carrying type; center sill 30 in. deep at the center portion, composed of web plates ¼ in. thick; top cover plate ⅜ x 26½ in. continuous in one piece from end to end of car; top flange angles are 3½ x 3½ x ⅜ in.; bottom flange angles are 3½ x 3½ x 5-16 in.

The bolsters are of box girder type composed of ¼ in. pressed steel diaphragms, top cover plate ⅜ x 18 in. bottom cover plate 9-16 in. x 15 in. The cross bearers are single web girder construction, consisting of ¼ in. pressed steel diaphragms, top cover 7-16 x 7¾ in. Floor beams are 4 4in. 8.2 lb. Z bars. Side sills are angles 6 x 4 x ⅜ in. The end sill angles are 6 x 4 x 7-16 in. The draft arms are of ⅜ in. pressed steel. The center sill bottom cover is of ⅝ x 21¼ in. plate. The rear draft lugs are secured to the draft arm and center sill splice, and are also rivetted to the center sill bottom cover. The front draft lugs are designed to receive cast steel coupler striking plate, and cast steel carry iron, the latter is secured by 1⅜ in. bolt passing through the lower front corners of the draft lugs. The cast steel striking plate has an extension arm for angle cock bracket, so arranged that the bracket may be located correctly for either 9¼ or 12 in. coupler heads.

The cars are equipped with friction draft gear, cast steel yokes and 5 x 1⅛ in. coupler yoke keys.

The Trucks are C.P.R. standard, 40 ton arch bar type, having simplex bolsters designed to support center pin in the truck bolster. The truck columns are of the Harragin pinless brake beam hanger bracket type. Side bearings are roller type located 2¼ ft. from the center of the car. The tare weights average between 59,000 and 60,000 lb., resulting in a limit load capacity, including ice, of 72,000 to 73,000 lb.

The brake mast is 1¼ in. square, fitted with snow and ice proof ratchet and dog.

Adjustment of brake piston travel is provided on the floating lever fulcrum, making it unnecessary to change adjustment on trucks, after they have been correctly adjusted when car is built, except that variations in dimensions of brake beams and rods applied in renewals, may require the truck levers to be re-adjusted.

The Side Doors are equipped with W. H. Miner fasteners. The threshold plates are of pressed steel, with a shallow shoulder at the inside edge for the stripping on the lower inside edge of door to close against. The open door fastener consists of a link and bolt arrangement, that cannot become unfastened accidentally. Side door thresholds and all metal work on the interior of the cars are heavily galvanized, by the most reliable known process.

We are indebted to W. J. Robider, General Master Car Builder, C.P.R., for the foregoing article.

A Station Mistaken for a Fowl House.

It was out in the wild west, and the railway station was not much to boast about. A farmer, new to the place, was expecting a fowl house to reach the local Charing Cross, and he got his dray and trundled off to the station to fetch it.

Arrived there he saw what he took to be his purchase, loaded it on his wagon, and started for home. On the way back he met the stationmaster.

"What the dickens have you got on that dray?" he asked.

"My fowl house, of course," was the reply.

"Fowl house be hanged," was the indignant reply; "that's the station!"

United States Railway Equipment for Europe—It is stated that a foreign equipment finance corporation has been organized in the United States, with a capitalization of $100,000,000, to provide means whereby credits can be arranged for countries in need of equipment. Among those said to be interested are American Locomotive Co., Baldwin Locomotive Works, American Car & Foundry Co. and Standard Steel Car Co.

Toronto Union Station Privileges—The Toronto Terminals Ry. Co. invited tenders to Oct. 31 for the restaurant, lunch counter and self-serve rooms, news stands, shoe shine and pay toilet privileges collectively; also separately for barber shop, cigar store, candy store, drug store, haberdashery and soda fountain. Lessees to furnish all special and portable equipment. Tenders to be submitted in two forms; one as an annual rental and the other a percentage of gross receipts.

Purchases of Timber and Fence Posts for Government Railways—F. J. Pelletier, M.P., for Matane, Que., asked in the House of Commons recently whether the Government Purchasing Board invited tenders in May, June and July for cedar timbers and fence posts for railways, and if so, whose tenders were accepted and what were the prices, submitted for the different grades of timber? The Minister of Justice replied that purchases for the government railways do not come within the War Purchasing Commission's duties.

Hudson Bay Ry. Operating—As stated in Canadian Railway and Marine World for August, the Canadian National Rys. management is operating the Hudson Bay Ry. for the Dominion Government. For operating purposes it is included in Division 2, Prairie District, C.N.R., of which A. E. Macdonald, Dauphin, Man., is Superintendent, the General Superintendent of the district being B. T. Chappell, Saskatoon, Sask. Track is laid from Pas to mile 332, and a mixed train is run bi-monthly to mile 214, leaving Pas on the second and fourth Wednesdays of each month. When business warrants, a train is run occasionally to mile 241.

Mainly About Railway People Throughout Canada.

Joseph Orville Adams, whose appointment as General Eastern Freight Agent, G.T.R., New York, was announced in our last issue, was born at London, Ont., Nov. 21, 1872, and entered railway service Nov. 14, 1887, since when he has been to Apr. 30, 1902, messenger, clerk and chief billing clerk, G.T.R., London, Ont.; May 1, 1902 to Oct. 8, 1903, chief billing clerk, and chief clerk, Import Freight Department, G.T.R., Portland, Me.; Oct. 9, 1903, to Mar. 31, 1904, Agent, Central Vermont Ry., Willematic, Conn.; Apr. 1, 1904, to Feb. 29, 1908, Agent, same road, Barrie, Vt.; Mar. 1, 1908 to Jan. 1, 1915, General Agent, same road, Burlington, Vt.; Feb. 1, 1915, to June 14, 1917, Travelling Freight Agent, same road, Boston, Mass.; June 15, 1917, to Sept. 14, 1919, Commercial Agent, same road, New York.

R. B. Angus, one of the C.P.R. directrs, has closed his summer house at Senneville, Que., and returned to Montreal.

W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Montreal, visited the Pacific coast recently.

E. W. Beatty, K.C., President, C.P.R., was installed as Chancellor of Queen's University, Kingston, Ont., Oct. 16, which was his 42nd birthday.

Ralph Budd, who has been appointed President, Great Northern Ry., St. Paul, Minn., was born at Waterloo, Ia., Aug. 20, 1877, and entered railway service in 1899, since when he has been, to 1902, consecutively draftsman, rodman, levelman, instrument man and Assistant Engineer, Chicago Great Western Ry.; 1902 to 1905, successively Roadmaster, General Superintendent of Construction, and Division Engineer, St. Louis Division, same road; 1905, Division Engineer, same road, Chicago, Ill.; 1906 to 1909, Chief Engineer, Panama Rd., Colon, Panama; 1909 to 1910, Chief Engineer, Oregon Trunk Ry.; 1910 to May 1, 1914, also Chief Engineer, Spokane, Portland & Seattle Ry.; 1911 to Jan. 1, 1913, also Chief Engineer, Spokane & Inland Empire Ry., and Spokane Traction Co.; Jan. 1, to Feb. 15, 1913, Assistant to President, Great Northern Ry., St. Paul, Minn.; Feb. 15, 1913, to May 1, 1914, Chief Engineer, same road; May 1, 1914, to Feb., 1918, Assistant to President, same road; Feb., 1918, to Oct., 1919, Executive Vice President, same road.

Fred J. Buller, who has resigned the position of Local Treasurer, Eastern Lines, Canadian Northern Ry., Toronto, and has been appointed Vice President, Canadian Steel Tire and Wheel Co., Montreal, was born at Lindsay, Ont., Jan. 30, 1875, and entered transportation service in Sept., 1893, since when he has been, to Oct., 1896, messenger, Canadian Express Co.; Nov., 1896, to June, 1899, clerk, same company, Toronto; June, 1899, to July, 1901, clerk and relieving cashier, Dominion Express Co., Winnipeg; July, 1901, to Dec., 1902, clerk and timekeeper, General Superintendent's office, Canadian Northern Ry., Winnipeg; Dec., 1902, to Nov., 1906, cashier, same road, Toronto; Nov., 1906, to Jan., 1919, Cashier and Paymaster, same road, Toronto; Jan., to Oct., 1919, Local Treasurer, Eastern Lines, Canadian Northern Ry., Toronto. On Oct. 7, the Canadian National Rys. general office officials gave him a solid silver tea service, the presentation being made on their behalf by D. B. Hanna, President.

E. J. Chamberlin, formerly President G.T.R., and G.T.P.R., and Mrs. Chamberlin, have left Ottawa for California to spend the winter.

Captain Michael Chapman, of the 4th Grenadier Guards, formerly of Chapman and Walker Ltd., electrical supplies, etc., Toronto, who was killed in France, Apr. 12, 1918, left an estate valued at $41,969.

Mrs. Cochrane, widow of the late Hon. Frank Cochrane, M.P., ex-Minister of Railways, and Miss Edith Cochrane, have returned to Ottawa, and are at the Roxborough for the winter.

Hon. F. B. Carvell, K.C.
Chief Commissioner, Board of Railway Commissioners for Canada.

D. C. Coleman, Vice President, Western Lines, C.P.R., and Mrs. Coleman, entertained at dinner, at their house in Winnipeg, Oct. 13, the British newspaper correspondents accompanying the Prince of Wales.

D. C. Coleman, Vice President, Western Lines, C.P.R., who was mentioned in Canadian Railway and Marine World for October, as confined to his house in Winnipeg, as the result of an accident, was able to visit headquarters at Montreal towards the end of October. The accident occurred on the Edmonton, Dunvegan & British Columbia Ry., 3 miles east of Spirit River, Alta., on Sept. 23. Accompanied by Sir Augustus Nanton, one of the C.P.R. directors, and W. R. MacInnes, Vice President, Traffic, C.P.R., he was riding on a gasoline motor driven section car, at about 12 or 13 miles an hour, when, probably owing to the condition of the track, it left the rails, and he was thrown off, sustaining a bruised and sprained leg, some cuts about the head, arm and leg, and some of the bones in his right hand were crushed. He was confined to his house for some 10 days, but has now practically recovered, except that his right hand is still hardly up to its normal service. Sir Augustus Nanton and Mr. MacInnes were not injured.

W. J. Cowan, who died suddenly, Oct. 21, at Cannington, Ont., where he was conducting his election campaign as Unionist candidate for North Ontario, for the House of Commons, spent much of his time in the west, where he was concerned with numerous contracts on the C.P.R., Canadian Northern Ry., and Grand Trunk Pacific. He was 69 years of age, and was born in Brock Tp., Ont. He retired from the contracting business a short while ago, and took a farm in Northern Ontario.

Granville C. Cunningham, M.Inst.C.E., who has recently written a book, "Wake up England," was born in Edinburgh, April 27, 1847, his professional and business record being as follows: 1870-71, railway service in Honduras; 1871-1874, various railway works in Ontario; 1874-1875, preliminary surveys for Canadian Pacific Ry.; 1875-79, Engineer in Charge, Prince Edward Island Ry. and of harbors in the island; 1879-1881, on Canada Southern Ry.; 1881-83, Chief Engineer, Canada Southern Ry.; 1884-86, General Assistant to Manager of Construction, Rocky Mountain Division, Canadian Pacific Ry. (Jas. Ross), 1886-89, railway construction in Lower Canada; 1889-1892, Assistant City Engineer and City Engineer, Toronto; 1892-1897, General Manager and Chief Engineer, Montreal St. Ry.; 1897-99, Managing Director, City of Birmingham Tramways. In 1899 he was appointed General Manager, Central London Ry. In 1895 he published "Imperial Federation," and in 1911, "'Bacon's Secret Disclosed."

Sir Henry Drayton, Minister of Finance, and formerly Chief Railway Commissioner for Canada, has been elected by acclamation as M.P. for Kingston, Ont.

G. Herrick Duggan, C.E., President, Dominion Bridge Co., Montreal, has been given an honorary degree by Queen's University, Kingston, Ont.

F. P. Gutelius, Federal Manager, Delaware and Hudson Rd. (U.S.R.A.), and formerly General Manager, Canadian Government Rys., visited Quebec in October and went over the Quebec and Saguenay Ry., the Louise docks and railway properties along the St. Lawrence River.

Mrs. D. B. Hanna, wife of the President, Canadian National Rys., and her two daughters, visited Winnipeg and Portage La Prairie, Man., in October.

W. D. Harris, who died at Ottawa, Sept. 28, aged 72, was born in England, and came to this continent in early childhood. He graduated at Boston, Mass., in 1872, with the degree of B.Sc., and devoted himself to railway engineering work. He was associated with the Intercolonial Ry., C.P.R., Quebec, Montreal, Ottawa and Occidental Ry., and was subsequently Managing Director and Chief Engineer, Ottawa and Gatineau Valley Ry., and Pontiac Pacific Jct. Ry., and resigned those positions in 1896 on his appointment as President, Montreal Terminals Ry., retaining that position until 1901.

William Smith Harrison, who has been appointed Auditor of Revenue, G.T.R., Montreal, was born at Gresley, Eng., Apr. [illegible], 1880, and entered G.T.R. service in [illegible], since when he has been, to 1900, junior clerk, Mimico, Ont.; 1900 to 1904, operator and relieving agent, Middle and Northern Division; 1904 to 1908, agent, Campbellford, Ont.; 1908 to 1910, Travelling Auditor, Montreal; 1910 to 1913, in office of Auditor of Revenue, Montreal; 1913 to 1918, chief clerk, same office; 1918 to Sept. 25, 1919, Assistant to Auditor of Revenue, Montreal.

Lady Hickson, widow of Sir Jos. Hickson, formerly General Manager G.T.R., has returned to Montreal, after spending some time at Woodstock, Vermont.

W. A. James, Assistant Chief Engineer, C.P.R., Western Lines, Winnipeg, visited Montreal, towards the end of October, with D. C. Coleman, Vice President, Western Lines.

G. C. Jones, Assistant to President, G.T.R., Toronto, has removed his office from 53 King St. West to Royal Bank Building, corner King and Yonge Sts.

Miss Evelyn MacInnes, second daughter of W. R. MacInnes, Vice President, Traffic, C.P.R., is announced as engaged to Capt. R. Bruce Reford, M.C., Irish Guards, A.D.C. to the Lord Lieutenant of Ireland, and elder son of R. Wilson Reford, of the Robert Reford Co., ship owners, etc., Montreal.

T. A. Magee, Contracting Freight Agent, Great Northern Ry., Vancouver, has resigned and entered real estate business with his father at Tacoma, Wash.

James Bower McLaren, who has been appointed General Auditor, G.T.R., Montreal, was born at Perth, Ont., Mar. 5, 1878, and entered transportation service Dec. 26, 1892, since when he has been to May, 1898, clerk, Freight Department, G.T.R., Brockville, Ont.; May to Nov., 1898, accountant, Canada Atlantic Transit Co., Canadian Atlantic Ry.; Nov., 1898 to Sept., 1901, accountant, cashier, chief clerk, agent, and General Yardmaster, consecutively, G.T.R., Durand, Mich.; Sept., 1901 to Aug., 1913, clerk, travelling auditor, assistant chief clerk, consecutively, Audit Department, G.T.R., Montreal; Aug., 1913, to Jan., 1916, Auditor of Freight Accounts, G.T.R., Montreal; Jan., 1916, to Sept. 25, 1919, Auditor of Revenue, G.T.R., Montreal. In 1916 he was elected a member for 3 years of standing committee on passenger accounts, Railway Accounting Officers' Association.

Jas. Murdock, of Toronto, who has been appointed a member of the Dominion Board of Commerce, was born at Brighton, Eng., Aug. 15, 1871, of Scottish parentage. He came to Canada in 1875 and was brought up on a farm in Kent County, Ont., until the spring of 1890, after which his record was as follows: April 18, 1890 to Sept. 1, 1890, ballast pit laborer, C.P.R., London, Ont.; Sept. [illegible], 1890 to June 12, 1902, freight brakeman, C.P.R., London, Ont.; June 12, 1902 to July 31, 1905, freight conductor, C.P.R. His labor union record is as follows: 1895 to July 31, 1905, local and general chairman for C.P.R. employes, represented by Brotherhood of Railroad Trainmen; Aug. 1, 1901 to July [illegible] member board of trustees for Brotherhood of Railroad Trainmen (international organization); Aug. 1, 1905, to date, Vice President, Brotherhood of Railroad Trainmen. On Aug. 7, 1918, he was appointed a member of Canadian Board of Adjustment No. 1, which deals with disputes between railways and their employes, in regard to wages, working conditions, etc.

J. M. Rosevear, who has been appointed Comptroller, G.T.R., Montreal, was born at St. Lambert, Que., Aug. 9, 1869, and entered G.T.R. service in 1897, since when he has been, to 1905, clerk in Accounting Department; 1905 to 1907, travelling accountant; 1907 to Sept. 1, 1908, chief clerk to Auditor of Disbursements; Sept. 1, 1908 to Oct., 1918, Auditor of Disbursements; Oct., 1918 to Sept. 25, 1919, General Auditor, and, also General Auditor, Grand Trunk Pacific Ry.

J. M. Rosevear,
Comptroller, Grand Trunk Railway.

J. B. McLaren,
General Auditor, Grand Trunk Railway.

J. K. Savage, who has been appointed acting General Superintendent, Quebec District, C.P.R., during the absence on leave of J. M. Woodman, General Superintendent, was born at Forreston, Ill., Oct. 5, 1876, and entered C.P.R. service, Mar. 1, 1890, since when he has been, to May 1, 1894, station agent at various points in Quebec; May 1, 1894, to May 24, 1897, dispatcher, Farnham, Que.; Jan. to Sept., 1904, Night Chief Dispatcher, Toronto; Sept., 1904, to Sept., 1906, Inspector Train Dispatching, Western Lines, Winnipeg; Sept., 1906, to Mar. 1, 1907, Chief Dispatcher, District 1, Central Division, Kenora, Ont.; Mar. 1, 1907, to Dec., 1908, Trainmaster, District 3, Central Division, Brandon, Man.; Dec., 1908, to Jan. 1, 1912, Chief Dispatcher, District 3, Central Division, Brandon, Man.; Jan. 1, 1912, to Jan. 1, 1917, Superintendent, Regina Division, Saskatchewan District, Regina; Jan. 1, 1917, to Oct. 15, 1918, Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont.; Oct. 15, 1918, to Oct. 3, 1919, Assistant General Superintendent, Ontario District, Toronto.

Edmund James Semmens, whose appointment as Travelling Agent, Colonization and Development Department, C.P.R., Calgary, Alta., was announced in our last issue, was born at Liverpool, Eng., Dec. 2, 1877, and entered C.P.R. service in June, 1912, since when he has been, to Dec., 1912, clerk, Tie and Timber Branch; Jan., 1913 to July, 1917, stenographer and clerk, Industrial Branch; Aug., 1917 to Aug. 31, 1919, chief clerk to Industrial Agent, all at Calgary, Alta.

Hope Erskine Scott, son of J. G. Scott, formerly General Manager, Quebec & Lake St. John Railway, and Great Northern Ry. of Canada, who was married in Hamilton, Ont., Oct. 11, to Miss Pauline L. Grant, daughter of W. J. Grant, District Freight Agent, C.P.R., there, was formerly Assistant Auditor, Quebec & Lake St. John Ry., Quebec, Que. He went overseas as lieutenant in the 12th Mounted Rifles of Hamilton, and is now a railway supply broker in Montreal.

The Hon. W. J. Shaughnessy will entertain the Prince of Wales at dinner, at Lord Shaughnessy's house in Montreal, Nov. 1, and Lady Shaughnessy will give a ball afterwards.

Harry Gilmour Smith, B.Sc.,A.M.E.I.C., Engineer and Superintendent of Concrete Construction, Dominion Construction Co., Toronto, who had charge of work being done by the company on the Canadian National Rys., from Parry Sound north for some 40 miles, was burned to death near Bolger, Ont., Oct. 9, in a collision between a construction train and a freight train. He was in the construction train conductor's van, which was wrecked, and destroyed by fire. He was born at St. Martins, N.B., May 4, 1884, was educated at St. Martins Superior School, and graduated at the New Brunswick University, his professional record being as follows: May, 1911-Mar., 1912, transitman on location, Eastern Lines, Canadian Northern Ry.; 1912-1913, in charge of location party, Toronto Suburban Ry.; 1913-1916, Resident Engineer on construction, Toronto Suburban Ry.; during winter and spring of 1915-1916, in charge of construction of Humber River bridge, Toronto Suburban Ry. Subsequently he was engaged on the construction of the Rosedale Ravine viaducts, Toronto, C.P.R.

Lady and Miss Van Horne have returned to Montreal, after spending the summer at Covenhoven, St. Andrews, N.B.

F. L. Wanklyn, General Executive Assistant C.P.R., and Mrs. Wanklyn, closed their summer house, Birchfield, at Senneville, Que., early in October, and returned to Montreal for the winter.

J. B. Way, who, having been released from military duty, has resumed his former position as freight and ticket agent, C.P.R., Union Station, Sault Ste. Marie, Ont., which position has been filled during his absence by W. H. Pomeroy, was born at Port Hope, Ont., Dec. 10, 1865. He entered C.P.R. service as operator, at Ottawa, Feb. 18, 1884, since when his record with that company has been as follows: Feb. 27, 1884 to Nov. 14, 1889, agent and operator, Thorncliff, Ont.; Nov. 14, 1889 to April 14, 1890, agent and operator, Thessalon, Ont.; April 14, 1890 to Oct. 14, 1890, train dispatcher, Algoma, Ont.; Oct. 14, 1890 to Nov. 21, 1891, train dispatcher, Webbwood, Ont.; Nov. 21, 1891, to Nov. 14, 1892, train dispatcher, North Bay, Ont.; Nov. 14, 1892 to June 7, 1893, agent, Sudbury Jct., Ont.; June 7, 1893 to Nov. 14, 1893, train dispatcher, North Bay, Ont.; Nov. 14, 1893 to Mar. 15, 1915, freight and ticket agent, Sault Ste. Marie, Ont. His military record is as follows: Nov. 15, 1913, gazetted honorary lieutenant 51st Regiment; Jan. to Mar., 1914, attended P.S.I. at Sault Ste. Marie, and qualified for rank of captain; Aug. 4, 1914, called out for service with details of regiment to protect ship canal, International Bridge wireless station and government buildings at Sault Ste. Marie; Dec. 15, 1914, promoted to honorary captain; July 17, 1918, transferred to Machine Gun Corps, Camp Niagara; Oct. 15, 1918, transferred to C.A.P.C., with rank of captain; Jan. 9, 1919, appointed Paymaster, Parade Section, no. 2 District Depot, Exhibition Camp, Toronto; Apr. 10, 1919, appointed Paymaster no. 2 Recruiting Depot, Permanent Force, Toronto; July 11, 1919, struck offi strength on demobilization. His eldest son, Lieut. J. H. Way, of the 58th Battalion, was killed in action in France.

Freight and Passenger Traffic Notes.

The Canadian Railway War Board directed the abandonment of daylight saving by Canadian Railways Oct. 26, at 2 a.m., when the hands of the clocks were put back to 1 a.m., standard time.

The Grand Trunk Pacific Ry. will, it is reported, start early in November a through sleeping car service between Regina, Sask., and Prince Rupert, B.C., eliminating the present change of cars at Melville, Sask.

The Quebec, Montreal and Southern Ry's standard maximum passenger tariff C.R.C. 274, effective Oct. 19, increasing its passenger rates from 3.45c to 4c a mile has been approved by the Board of Railway Commissioners.

Grand Trunk Pacific Ry. freight and passenger officers met at Edmonton, Alta., Oct. 6 and 7, under the chairmanship of A. E. Rosevear, General Freight Agent, Winnipeg, to discuss traffic conditions and prospects on the line.

The G.T.R. has been ordered by the Board of Railway Commissioners, on the complaint of the Eastern Townships Associated Boards of Trade, to restore its passenger train known as the "Scoot," between Richmond and Sherbrooke, Que., from Oct. 20, 1919 to May 1, 1920.

The Greater Winnipeg Water District Ry. station and general offices were moved Oct. 1, to the St. Boniface water works yard, corner of Rue Plinquet and Dawson Road. A mixed passenger and freight train is run from St. Boniface at 10.30 a.m. Tuesdays and Fridays, returning from Shoal Bay at 2.30 p.m., Wednesdays and Fridays.

The Canadian National Rys. started on Oct. 5 a daily transcontinental train from Toronto to Vancouver, and Victoria, B.C. The train leaves Toronto at 9.15 p.m., and consists of sleeping, dining, first class day, tourist, and colonist cars. Between Toronto and Winnipeg a compartment observation library car is run, and a parlor car is attached for the run through the Rocky Mountains.

The car ferry steamship's winter schedule between Tormentine, N.B., and Borden, P.E.I., went into effect Oct. 5. The s.s. Prince Edward Island makes one trip a day in either direction, leaving Borden at 9.15 a.m. and Tormentine at 3 p.m., daily except Sundays. Passengers travelling by the Ocean Limited, in either direction, connect with the ferry service.

The Edmonton, Dunvegan and British Columbia Ry. is reported to have handled 141 cars of freight outgoing, and 42 cars of freight incoming at Edmonton, Alta., during the week ended Sept. 27. During the same week it is reported to have carried 675 passengers from Edmonton into the north country. Under the government plan for carrying cattle free from the drought area to the north the company is stated to have hauled over 100 cars of live stock.

W. R. MacInnes, Vice President Traffic, C.P.R.; Major W. M. Kirkpatrick, M.C., Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, and H. W. Brodie, General Passenger Agent, C.P.R., Vancouver, arrived in Victoria, B.C., Oct. 3, to make a tour of the section of Vancouver Island, served by the Esquimalt and Nanaimo Ry., which is owned by the C.P.R. It is reported that the company is planning to develop tourist traffic to the island, and that with that object in view, ferry connection between Victoria and Port Angeles, Wash., will be provided.

The Dominion Atlantic Ry. put into operation, Oct. 15, a triweekly express passenger train between Halifax and Yarmouth, N.S. The trains leave Yarmouth at 9 p.m. Mondays, Wednesdays and Saturdays, reaching Halifax at 8.30 a.m. on the following mornings, and leave Halifax at 9 p.m., Sundays, Tuesdays and Fridays, reaching Yarmouth at 8.30 a.m. on the following mornings. The westbound train stops at Windsor, Wolfville, Kentville, Middleton and Digby, and the eastbound train in addition to the above stops at Weymouth.

The Canadian National Rys. on Oct. 1, opened for traffic the recently completed section of the St. John and Quebec Ry. from Gagetown, N.B., to junction with the C.P.R. at Westfield, N.B., by putting on a through passenger train service between Quebec and St. John. One train a day is operated in each direction. The train leaves Palais Station, Que., at 3.45 p.m., Tuesdays, Thursdays and Saturdays, and runs on the National Transcontinental Ry. to McGivney Jct., then on the old Canada Eastern Ry. section of the Intercolonial Ry. to Fredericton, then on the St. John and Quebec Ry. to Westfield, and over the C.P.R. into St. John, reaching there at 3.05 p.m. on the following days. The equipment consists of buffet, sleeping, parlor and first and second class cars. The train from St. John leaves the C.P.R. station at 1.55 p.m. Tuesdays, Thursdays and Saturdays, and reaches Quebec at 11 a.m. on the following days. An additional train is run in either direction on Mondays, Wednesdays and Friday between St. John and McGivney Jct., connecting there with the regular National Transcontinental Ry. trains.

Movements of Troops, Etc., by Canadian Railways and Steamships During the War.

Major-General J. Lyons Biggar, Quartermaster General, has addressed the following memorandum to the Minister of Militia: Now that demobilization is virtually completed, I would like to call your attention to the admirable services which have been rendered by the railway and steamship companies, during the war. All have given their best attention to make a success of the various movements. During the entire period of the war we had only 3 casualties. The following is the number of troops which have been carried by the various railways:

Canadian Pacific Railway.

	Mobilization	Demobilization
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	
Chinese coolies for overseas	[illegible]	
French battalion, Serbian, Montenegrin and Polish reservists	16,103	
Imperial troops		[illegible]
Total	[illegible]	[illegible]

Grand Trunk Railway.

	Mobilization	Demobilization
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	
Total	[illegible]	[illegible]

Canadian National Railways.

	Mobilization	Demobilization
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	
Total	[illegible]	[illegible]

We certainly owe a debt of gratitude to the merchant marines for the attention and care that the officers of the ships have taken to safeguard our men. The numbers carried by the various steamship companies are as follows:

Canadian Pacific Ocean Services.

	Eastbound	Westbound
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	[illegible]
Chinese coolies	[illegible]	[illegible]
Prisoners of war	[illegible]	
Total	[illegible]	[illegible]

Cunard Anchor Donaldson Line.

	Eastbound	Westbound
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	
Imperial troops, Belgian, Montenegrin and Serbian reservists	[illegible]	
Newfoundland	[illegible]	
Total	[illegible]	[illegible]

White Star Dominion Line.

	Eastbound	Westbound
Canadian troops	[illegible]	[illegible]
United States troops	[illegible]	
Chinese coolies		[illegible]
Total	[illegible]	[illegible]

Canadian National Railways Construction, Betterments, Etc.

Organization of Company—Sir James Lougheed, replying to a question in the Senate, Oct. 9, said the organization of the Canadian National Rys. Co., had not been completed under the provisions of the act passed last session of parliament. The operation, further extension, and construction of its competent railways is being carried on under the powers of the act, as to some of the lines authorized in so far as the act extended the time for construction.

Halifax-Moncton Line—A press report states that among the projects in contemplation is the electrification of a line between Halifax, N.S., and Moncton, N.B., the work to include the erection of a large power house at Maccan, Cumberland County, N.S. A similar report was current some time ago, but was denied.

New Glasgow Station—The extension to be built to the New Glasgow, N.S., station, for which tenders were invited recently, is to consist of a 2 story brick building, 41 x 30 ft., with slate roof. The interior of the present building is to be remodelled.

Levis Station—Replying to a question in the House of Commons, recently, the Minister of Railways said the government had decided to expend $125,000 on repairs and improvements in connection with Levis, Que., station. There had been expended to Sept. 25, about $10,000 and it was anticipated that, if no further delays occurred on account of lack of material, the building would be completed by Dec. 15.

Cedar Lake Outlet Bridge—The Board of Railway Commissioners has authorized the rebuilding of the bridge at Cedar Lake Outlet, Que., mile 134, from Quebec.

Jacques Cartier River Bridge—Tenders were received recently for boring for the foundations for the projected bridge over the Jacques Cartier River, at Donnacona, Que., mile 31.4, from Quebec, on the Canadian Northern Quebec Ry. The contractor will be required to bore one hole at each of the 5 piers.

Pike Creek Bridge, Weir, Que.—The Board of Railway Commissioners has authorized the rebuilding of the bridge over Pike Creek at Weir, Que., mile 40.20 from Rinfret Jct.

Bridges Near Montreal. H. Deslauriers, M.P., for St. Marys, Montreal, asked in the House of Commons recently, if the government was aware that the two C.N.R. bridges, which unite Montreal to Charlemagne, are very dangerous, and that every day automobiles and other vehicles were breaking through the pavement. The Minister of Railways replied that the roadways of the bridges had been inspected, and temporary repairs made, and that sufficient materials had been ordered to redeck the bridges.

Moira River Bridge, Stoco Lake, Ont.—The Board of Railway Commissioners has authorized the rebuilding of the bridge over the east channel of the Moira River, Stoco Lake, Hungerford Tp., mile 31.75 miles from Yarker, Ont., on the Kingston-Bannockburn line.

Toronto-Capreol Line—The Board of Railway Commissioners has authorized the rebuilding of the bridge across Talbot River, in Mara and Thorah Tps., Ont., 67 from Toronto, near Gamebridge, Ont., on the Toronto-Capreol Line.

The Board of Railway Commissioners has authorized the rebuilding of the bridge across Bolger Creek, Burton Tp., Parry Sound district, mile 26.8.

Western Lines Under Construction—Sir Jas. Lougheed stated in the Senate, Oct. 22, in reply to questions by Senator Bostock that the following lines of railway, the building of which was authorized by the statute 9-10 George V, chap. 13, schedule 2, are being built. Manitoba —Winnipegosis, southerly, contractors, J. W. Stewart & Co. Saskatchewan—Lampman-Peebles, between Brandon, Regina and Maryfield lines; contractor, Canadian Construction Co.; Swift Current-Gravelbourg, contractors, Gibbs Bros.; Humboldt-Melfort, contractors, J. W. Stewart & Co.; Melfort, northeasterly, contractors, J. W. Stewart & Co., Luck Lake (Dumblane southwesterly), contractors, Western Construction Co.; Acadia Valley (Eston westerly and Alsask southerly), contractors, Grant Smith & Co., Eston southeasterly; contractors, J. W. Stewart & Co.; Turtleford northwesterly, contractors, Western Construction Co.; Thunderhill branch, contractors, Western Construction Co., Thunderhill branch, contractors, Canadian National Rys., Alberta; Oliver northeasterly, St. Paul de Metis, contractors, J. W. Stewart & Co.; Hanna-Medicine Hat, contractors, Canadian Construction Co.; Onoway (Peace River), contractors, Canadian National Rys., British Columbia; Kamloops-Kelowna and Lumby, contractors, J. W. Stewart & Co. Land which has to be acquired in connection with any of these lines is being acquired under the clauses of the general Railway Act.

Maryfield Branch—Tenders have been received for grading and building culverts on the Maryfield Branch, from Bengough, Sask., westerly for 17 miles.

Prince Albert Locomotive House—Tenders have been received for the erection and completion of a 3-stall addition to the locomotive house at Prince Albert, Sask.

Moose Jaw Subway and Freight Shed—Tenders have been received for the excavation for the projected subway at Athabasca St., Moose Jaw, Sask. The permission for the building of a temporary subway was granted by the city council, Oct. 2, the railway to have the permanent subway completed in the autumn of 1920.

Tenders have been received for the erection of a freight shed with offices at Moose Jaw, Sask.

Switching Track at Tripp Station, B.C.—The Board of Railway Commissioners has authorized the building of an interswitching track to connect the Canadian Northern Pacific Ry. tracks at Tripp station, Vancouver Island, B.C., with the British Columbia Electric Ry.'s Saanich, Peninsula line. Plans for the track, which is to be built by the C.N.P.R., by arrangement between the two companies, have been filed with the B.C. Railways Department. (Oct., pg. 545).

The Canadian National Rys. put in operation on Oct. 23 a through sleeping car service between Sydney, N.S. and Montreal. The sleeping car is attached to no. 8 express from Sydney, and is transferred to the Ocean Limited at Truro. It returns by the Ocean Limited to Truro, where it is transferred to no. 7 express for Sydney.

Canadian National Railways Receipts and Disbursements.

Sir James Lougheed gave the following information in the House of Commons, Sept. 30, in answer to an enquiry by Senator McSweeney, Moncton, N.B., the figures being for the year ended March 31, 1919:

Total receipts from Intercolonial Ry., so called, $26,435,343.68; disbursements, $28,239,506.89.

Receipts from National Transcontinental Ry., from Quebec to Winnipeg, $7,283,488.19; disbursements, $8,549,803.06.

Receipts from Prince Edward Island Ry., $741,514.58; disbursements, $1,596,049.91.

Receipts and disbursements of the car ferry steamship Prince Edward Island, are not kept separately, but are included in the Prince Edward Island Ry. receipts and disbursements.

The Minister of Railways gave the following information in the house of Commons, Oct. 9, in answer to an enquiry by J. A. Robb, M.P. for Chateauguay, Huntingdon, Que. From Jan. 1 to Aug. 1, 1919, the Canadian National Rys. gross earnings were $50,730,974.94, the deficit being $9,041,464.62.

The Canadian National Rys. total interest paying debt is $460,225,148.93. The amount of interest payable on the debt annually is $19,073,387.08.

Canadian Ticket Agents' Association's Annual Meeting and Excursion.

The C.T.A.A. annual meeting in Toronto, Sept. 23, was attended by 140 members. The following officers were elected: President, J. Ransford, G.T.R., Clinton, Ont.; 1st Vice President, J. A. McDonald, Valleyfield, Que.; 2nd Vice Vice President, A. C. Rorabeck, G.T.R., North Bay, Ont.; 3rd Vice President, C. G. Millard, C.P.R., Coldwater, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Executive Committee, W. Jackson, C.P.R., Clinton, Ont.; A. M. Hare, G.T.R., Tillsonburg, Ont.; C. B. Jones, C.P.R., Orillia, Ont.; W. H. C. Mackay, C.P.R., St. John, N.B.; W. J. Moffatt, G.T.R., Toronto.

On Sept. 24, a considerable number of the members, many of them accompanied by their wives, the party numbering 115, left Toronto at 10 am. by G.T.R. special train for Muskoka Wharf, where they embarked on a Muskoka Navigation & Hotel Co.'s steamboat, and went through Lakes Muskoka and Rosseau to the Monteith House, where they dined, had a ball, and stayed the night. Sept. 25 was spent on Lakes Rosseau and Joseph, and on Sept. 26, they arrived back in Toronto in the afternoon.

Far Eastern Markets for Railway Materials, Equipment and Supplies—The Bureau of Foreign and Domestic Commerce, U.S. Department of Commerce, has issued a 339 page book under this title, by Frank Rhea, Trade Commissioner, containing a report on the markets for railway materials, equipment and supplies, in China, Japan, Korea, Manchuria and the Phillipine Islands, which contains a large amount of important information about the railways in those countries, and the possibilities for selling to them. It can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C., price 35c.

Quebec, Montreal and Southern Railway Authorized to Advance Passenger Rates to Four Cents a Mile.

S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, gave the following judgment Sept. 17: Application is made for increase in the Quebec, Montreal & Southern Ry.'s standard passenger fares. The present standard is 3.45c. It is desired to increase it to 4c. A large amount of statistical detail has been submitted bearing on the condition of revenues and expenses of the railway. At the hearing, information was submitted covering the situation until the end of Nov., 1918. It seemed proper to let the matter stand until further information showing the conditions existing during the present year could be adequately presented. During 1918, there was, as indicated below, a very considerable increase in freight revenues. This was due to war conditions,the item of coal tonnage being a matter of importance. The traffic was not a regular one and it was, therefore, justifiable to have before the board a situation in which the traffic was more normal, and to consider costs in connection with the handling of such more normal traffic.

The railway has 191 miles of main line. The application being one relating to passenger fares and concerned with the costs of the passenger traffic, this phase of the situation must have special attention directed to it. At the same time, an analysis of general revenues and expenses is of value as showing the condition of the road. The railway has not during the last five years or more, given any return upon the capital invested in it. The whole question has been one of whether operating revenues would meet operating expenses. It was stated at the hearing that the railway had not at any time made any return upon the capital invested. This being so, in the analysis which is made all reference is omitted to return on capital invested. That is not to say that the latter is not a legitimate factor to consider in connection with rate matters. It manifestly is. At the same time, it should be pointed out that the contention of the railway did not direct itself to the matter of returns upon capital; it concerned itself with the allegation that there should be a closer approximation between operating revenues and operating expenses. A statement of the investment in the road and equipment submitted by the railway as of Sept. 30, 1918, gives a total of $7,554,656, being made up of investment in road, $5,634,602, investment in equipment $1,920,003. Fractional amounts are omitted. In order to understand the general situation of this line, the period from 1913 is taken. At the hearing, returns were submitted showing the condition by fiscal years down to 1917, and showing an average annual deficit during this period of $70,000. Figures have also been submitted for the calendar years down to 1918, and detail has been supplied for the first seven months of 1919. In order to have the detail comparable, the following comparisons as based on the calendar year, are made:

	1913	1914	1915	1916	1917	1918
Operating revenues	$406,467	$397,632	$349,669	$429,928	$561,990	$786,129
Operating expense	409,372	473,416	460,540	474,464	597,919	787,264
Taxes	8,316	7,874	8,513	7,996	9,024	8,263
Deficit	$ 92,221	$ 83,658	$119,383	$ 52,532	$ 44,953	$ 9,398

The result is a deficit of $402,145 on operating revenue for the period in question, an average annual deficit of $37,000. But comparatively it cost from 101c to earn $1 in 1918, to 134c in 1915. On an average, it cost 113c to earn $1 during the whole period in question. While in 1918 there was an increase of $224,139 in operating revenues, this was due to increase in freight revenues, the increase in this item being $249,474. There was a decrease in passenger revenues. The passenger revenue in 1918 was $133,015 for tickets and excess baggage. If all services giving a revenue on passenger trains are included, it gives a total of $154,296. If the first of these headings is taken, 1918 was $33,696 less than 1917; while if the second is taken it was $29,525 less. If 1917, which showed the highest passenger revenues in the period in question, is omitted, the following averages are available:

Average ticket and excess baggage revenue, 1913-16	$145,720
Actual ditto for 1918	133,015
Average all passenger train service revenue, 1913-16	161,026
Actual ditto for 1918	154,296

As already indicated, a material factor to be considered in the analysis is the question whether with any change in the volume of freight traffic, due to a falling off in a commodity movement diverted to this railway because of war conditions, there thereafter continues increased or increasing costs attributable to conditions arising during the war. The test of this is to be found in the conditions shown during 1919. An analysis by months from Jan. to July, 1919, the amounts giving being exclusive of taxes, shows that the operating expenses were $447,272.47, and the operating revenue $325,038.17, a deficit of $152,234.30. This computation is exclusive of taxes. This being a necessary cost, there should be considered the proportionate amount of taxes chargeable against the seven month period in question. The taxes during the period 1913-1918 averaged $8,331 a year. Allocating seven-twelfths of this to the period in question would give $4,851. Adding this, operating expense exceeded operating revenue by $157,0885 during the seven month period in question. Exclusive of allocated taxes, it took in Jan. 107c to earn $1 of revenue, while in March it took 197c to earn $1. The average operating ratio for the period in question was 147%, that is, it cost 147c to earn $1. Including allocated taxes for the seven months period, it cost 148c to earn $1.

A large amount of detail was submitted bearing on the increases in labor cost. The Q, M. & S.R. has been subject to the same general increases in this respect as other railways in Canada, and it is not, therefore, necessary to pursue this phase of the analysis further. It is further pointed out that the railway involved was, in common with other smaller railways, on a lower scale of wages than the standard lines, prior to the McAdoo award; and that the application of this award, and the additional wage increases which have since accrued, subject the railway to a higher percentage increase than falls on the larger roads. To understand the significance of the wage and salary cost, the following summary is illustrative: the years 1913 to 1918 as quoted are for years ending June 30, the figures for 1919 being for the seven month period, Jan.-July. The amounts out of every $1 earned that went to wages and salaries were as follows: 1919, 87c; 1918, 50c; 1917, 49c; 1916, 52c; 1915, 53c; 1914, 55c; 1913, 50c.

In a computation submitted at the hearing, the returns for the year ended Dec. 31, 1917, which is one of the best traffic years the railway has had, are analyzed with a view to arriving at the expense per passenger train mile. In substance, the division was made by allocating such items of cost as were directly allocatable to the individual services, the balance being divided on the basis of train mileage. The computation submitted showed that during the period in question, equating mixed train mileage to the basis of passenger, by charging one-third of the mixed train mileage to passenger mileage, the result was that while passenger business produced 32% of the earnings, it required 53% of the train mileage; and on this basis a computation was made that the average earnings per passenger train mile were $1.19, as against average expenses per train mile of $2.11. A similar computation made for the 11 months ended Nov. 30, 1918, gave earnings per passenger train mile as $1.63, and the average cost per passenger train mile $2.70.

In the period from Jan. to July, 1919, which for the reasons already set out affords a reasonable criterion of the present condition as to costs, the passenger revenue amounted to 28.23% of the railway's total receipts. As a rough working measure, it may be expected that the passenger business should meet the same proportion of operating costs as it raises in revenue. This is subject to the criticism that the passenger business may be proportionately more expensive than the freight business. As already pointed out above, the passenger train mileage for 1917 is taken at 53% of the whole, as compared with 32% of total earnings being derived from passenger business.

If figures submitted to the board in connection with the recent investigation into the conditions of railway mail pay, the C.P.R. made an elaboration of cost factors and subdivisions as being freight and passenger business. It was pointed out that the method of subdivision followed was in substantial accordance with the method sanctioned by the United States Postoffice Department in regard to an adjudication upon the rates of railway mail pay which was then pending before the Interstate Commerce Commission, and in which application the P.O. Department was a party. This allocation of costs for a six month period in the C.P.R. gave 32.17% of the total costs of the business as being allocated to passenger traffic. As a working measure, however, it will serve if the 28.23% above referred to is applied in the present instance. On other facts concerned with an attempt to measure costs so as to apportion these as bearing on the underlying factors in a general scheme of freight and passenger rates, it might be that a more refined measure, involving different factors, would be necessary in the present instance, what is involved is a test of the justifiability, if allowed, of the specific rates increase asked for.

The railway earned from passenger business in the period Jan. to July, 1919, $41,7[illegible]; 28% of the operating expenses of $477,272, for the period in question, would give a total of $133,636 as the proportion of operating expenses allocatable to passenger business, as compared with $41,7[illegible] earned in the same time. Assuming that the percentage increase of 4c, as asked for, over 3.45c as at present in force, would measure the increase in revenue obtainable therefrom, and applying this to the passenger revenues of the seven months period under review, the result would be approximately $14,000. This is to be compared with the figures given in the preceding paragraph. For the year ended June 30th, 1918, the average receipts per passenger mile on this railway were 2.669c. Reducing the increase asked for on the standard fare to a percentage and applying this to the average receipts per passenger per mile, the result would be 3.096c per passenger per mile.

As bearing on the situation and earnings of the road in respect of passenger traffic, details may be given from the returns to the Dominion Government. The passenger density is relatively low and the average journey short. Comparative details as to the averages for the railways of Canada in general are also added.

Following are the numbers of passengers carried earning revenue: 1918, 243,371; 1917, 273,127; 1916, 244,659; 1915, 245,315; 1914, 249,423; 1913, 268,142. The above items are of value as indicating the general nature of the business. The comparisons given with general averages for Canada are simply illustrative, not conclusive.

Number of passengers carried one mile of line (passenger density):—

	Q.M.&S.R.	All Canadian railways.
1918	29,837	82,090
1917	33,759	79,829
1916	27,890	72,611
1915	27,469	69,802
1914	28,395	100,309
1913	31,255	111,353

Average passenger journey (miles):

	Q.M.&S.R.	All Canadian railways.
1918	23.04	63
1917	23.75	59
1916	21.91	55
1915	21.52	54
1914	21.97	66
1913	22.62	71

Total amount received from each passenger:

	Q.M.&S.R.	All Canadian railways.
1918	$0.61	$1.32
1917	0.58	1.14
1916	0.56	1.31
1915	0.56	1.22
1914	0.58	1.32
1913	0.55	1.39

It is abundantly evident that there have been large increases in cost.

The grounds of objection to the proposed increases as summarized in the answers filed prior to the hearing by the municipalities fall under five headings: 1, The railway does not supply sufficient freight cars; 2, it does not issue second-class tickets; 3, the increase would give higher rates than are charged on other railways; 4, the passenger service should be improved without an increase in passenger rates; 5, there is a poor passenger service. The objections raised to the inadequacy of the freight service are entirely distinct from, and should not be [illegible]ed with, the question of adequacy of passenger rates. As to the issuance of second-class tickets, there was nothing developed at the hearing to show under what section, if any, of the Railway Act or of the special act, there is a statutory obligation on the part of the railway to issue such tickets. As to the objections raised in reference to the proposed increase giving higher rates than are charged on other railways, this is a matter which must be looked at entirely from the standpoint of particular facts, and general comparisons for or against do not advance the matter.

At the hearing, the figures of earnings and operating expenses were criticized by the municipalities' representatives. At the same time, it was pointed out that their criticisms were general, as they had not the specific information necessary to pass finally upon the matter. The figures have been checked. Criticism was made on the ground that a considerable part of the deficit to which the railway was subjected might be eliminated by cutting down the item of free transportation. The board asked for a return of the number of annual passes issued for 1918. The total as returned is 901. Under the Railway Act, the railway is permitted to issue free transportation to its employes and employes of other railways. It is also permitted to issue free transportation to governmental bodies and their agencies, and there are also certain statutory requirements as to obligatory issuance of free transportation. An analysis on a percentage basis shows the following distribution:

Railways and railway organizations	57.04%
Government officers	21.1 %
Regulative bodies	4.8 %
Members of parliament	11.9 %
	94.84%

The above accounts for 94.84% of the total. It is stated that only 15 to 20 of these passes are used frequently; the balance are rarely, if ever, used. As to the item of transportation exchanged between this railway and other railways, which represents the bulk of free transportation given, it would seem to be a fair conclusion that not much traffic of this kind would pass over the short mileage of this railway. On what is before the board, a conclusion is not justified that any considerable addition to the company's revenues is available from this source.

Another factor to which attention was directed was the expense of management. It was alleged that the general expenses were unnecessarily large. There are only two general officers whose salaries are in any way a charge against the railway. The board has had before it the exact figures and is satisfied that the portion of the salary charged in each case against this railway is not exorbitant. The balance of the salary in each case is charged against other railways under the same general management.

The following information is from a communication on file with the board in reply to a specific query: "A request was made for some specific authority or order necessitating the increase in the charge to the Q., M & S.R. on account of the taking over of the railways in the United States by the U.S. Railroad Administration, which led to a complete accounting separation of the properties. A statement was filed with the board under date of Jan. 29, 1919, giving the charges to general expenses for the three years ended Dec. 31, 1918, and under the column of remarks on this statement the following information was given 'Much of the accounting of the Q., M. & S.R. is handled in the general offices at Albany, N.Y. The taking over of the railways in the U.S. by the government led to a complete accounting separation of the properties and brought about an increase in these charges to the Q., M. & S.R. This with the great increases in wages granted to clerical organizations, explains the increase in general expenses in 1918 compared with previous years and this enquiry apparently relates to this information. The Q., M. & S.R. was not taken over by the U.S. Railroad Administration. This made it necessary to establish a complete accounting organization, and to keep down the cost this organization was created in Albany, N.Y., where the employes could also do the work of one or two other small companies, each company being charged a portion of the expense, thus reducing the cost. It also made it necessary to create a car service department with a car accountant, and this organization was created in Montreal. Naturally, the separate organizations were more expensive than were the charges of the Delaware & Hudson Co. for doing the work in previous years, where it was only a trivial part of the total. It should also be remembered that the average wages of the railway clerical organizations were enormously increased under the McAdoo wage schedule, the minimum wage under supplement 7 to general order 27 (McAdoo award) was made, $87.50 while this minimum had previously been $35 or $40.'"

Comparison may be made of the percentage section of general expenses to total operating expenses in the case of the railway, with the relationship for the same items in the case of the railways of Canada in general. The general expenses (% of expense), were as follows:

	Q.M.&S.R.	All Canadian railways.
1918	3.44	2.77
1917	2.99	3.4
1916	3.75	3.74
1915	3.56	4.72
1914	3.45	3.74
1913	5.3	3.39

The average percentage for all Canadian railways in this period was 3.62% as against 3.74% for the Q., M. & S.R. If the figures of 1917 and 1918 are taken as more characteristic, the averages are 3.1% for the Q., M. & S.R., and 3.19% for Canadian railways in general. The difference by which the Q., M. & S. R.'s percentage for 1917 is lower than that for 1918, viz.: 0.45 of 1%, if applied to the operating expense of 1918, would have meant a reduction of approximately $3,000. As against this, it may be noted that the salaries of clerks and attendants were approximately the same amount greater in 1918 than in 1917.

As has been explained, the subdivision necessitated by the U.S. Railroad Administration, between the railway in Canada and the controlling railway in the U.S., has necessitated as a matter of strict accounting a large charge against the Q., M. & S.R. This is a matter over which the railway has no control. Details are available for the calendar year 1916, in which this subdivision was not in force in the same manner, and for 1918 when it was fully in force. For the year 1916, the general expenses were 3.63% of the total operating expense; in 1918, it was 4.60%. If the 1916 percentage had applied in 1918, it would have meant a reduction of approximately $7,700.

In the computations above regarding the relation of passenger earnings and their relation to general expenses, the figure of $447,272, as given, was taken as the deficit for the seven months ended July, 1919, and a computation based thereon. If it is assumed that the general expense item for 1918 is excessive to the extent that it exceeds the 1916 ratio, then, applying a similar reduction, the figures current for 1919 would be similarly reduced, giving an approximate reduction of $2,700. Making this deduction, there would be for the period in question a computed passenger cost of $130,916 as against earnings of $91,763. The figures for the 8 months period, Jan. to Aug., 1919, have just been received. They show a total railway operating revenue for that period of $378,771.39 with a total railway operating expense of $550,100.90, a deficit of $171,329.51. The operating ratio for August was 135%; for the 8 months period it was 145%. The passenger train earnings for the period were $105,713.68. A computation allocating to the passenger business such proportion of cost as passenger train earnings bear to total railway operating revenue, the same method as already used above, would show approximately $154,000 of costs to be checked against the passenger receipts. The total pay rolls for the period in question took up 84c out of every $1 of railway operating revenue. In general the conditions shown in the analysis for the 7 months period ended July, have continued during August. The figures thus available for two-thirds of the year may be taken as giving a characteristic condition as to cost, at a time when diverted traffic, due to the war, has fallen off.

On due consideration of the various factors concerned, the conclusion is unavoidable that the burden of proving that the increase in rate as requested is justifiable has been successfully borne by the railway; and an order should, therefore, go authorizing, subject to compliance with the terms of the Railway Act, the increase in the standard rate.

The board passed order 28,837, Oct. 3, authorizing the company to increase its standard maximum passenger fare from 3.45c a mile to 4c, on complying with the Railway Act, section 334.

The Proposed Acquisition of the Grand Trunk Railway System by the Dominion Government.

The proceedings in the Dominion Parliament in connection with the proposed acquisition of the G.T.R. System by the Dominion Government to incorporate it with the Canadian National Railways, have been so fully dealt with in daily papers, that it is not necessary for Canadian Railway and Marine World to devote much space to them, but it will doubtless be of interest to our readers to have before them in full the bill which was introduced in the House of Commons in this connection.

On Oct. 15 the Minister of Railways moved that the house go into committee on a resolution providing for the acquisition by the government of the G.T.R. System, which was carried by 58 to 38. On Oct. 16 the resolution was adopted, on a division, and the Minister then introduced a bill to the same effect as follows:—

Whereas the present capital stock of the Grand Trunk Railway Co., of Canada, consists of the following:—

Four per cent guaranteed stock	£12,500,000
First preference 5% stock	3,420,000
Second preference 5% stock	2,530,000
Third preference 4% stock	7,168,055
Common stock	23,955,437
	£49,573,492

And whereas the present outstanding debenture stocks of the G.T.R. Co. of Canada consisting of:—

Five per cent G.T. debenture stock	£ 4,270,375
Five per cent Great Western debenture stock	2,723,080
Four per cent G.T. debenture stock	24,624,455
Four per cent Northern debenture stock	308,215
	£31,926,125

(hereinafter called the "present debenture stock"), are entitled to certain voting powers at meetings of shareholders of the G.T.R. of Canada; and whereas it is expedient that His Majesty should acquire the whole of the capital stock of the G.T.R. Co. of Canada except the 4% guaranteed stock above referred to: Therefore, His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as The Grand Trunk Railway Acquisition Act, 1919.

2. Subject to the provisions of this Act, His Majesty the King, represented by the Minister of Railways and Canals of Canada, acting under the authority of the Governor in Council (hereinafter called the "government") may enter into an agreement (hereinafter called the "said agreement" with the G.T.R. Co. of Canada (hereinafter called the "Grand Trunk") and with such other companies and interests as the government may think necessary, for the acquisition by the government of the entire capital stock of the Grand Trunk, except the 4% guaranteed stock of the Grand Trunk, amounting to £12,500,000, the latter being hereinafter called the "present guaranteed stock."

3. The said agreement shall contain provisions for the defining of the companies, properties and interests, comprised in the G.T. System, and, including the terms and provisions hereinafter set forth, may contain such other terms and conditions as the parties may agree upon.

4. As part of the consideration for such acquisition, the government may agree to guarantee the payment of:—

(a) Dividends payable half yearly, at 4% annum, upon the present guaranteed stock;

(b) The interest upon the present debenture stocks as and when payable, in accordance with the terms thereof.

These guarantees to take effect upon the date of the appointment of the committee of management hereinafter mentioned.

(c) Dividends payable half yearly at 4% per annum from the date of the appointment of the committee of management hereinafter provided for, upon an issue which is hereby authorized, by the Grand Trunk under the terms of the said agreement of non voting capital stock (hereinafter called the "new guaranteed stock") not exceeding the amount determined by the board of arbitrators, as hereinafter set forth.

Provided that concurrently with such guarantee of dividends and interest upon the present guaranteed stock and the present debenture stocks, respectively, the voting powers at meetings of shareholders of the Grand Trunk now vested in or exercisable by the holders of the said stocks respectively shall cease and determine absolutely.

5. The present guaranteed stock and the new guaranteed stock, or any part thereof, may be called in or redeemed by the government, at par, at any time after 30 years from the date of the appointment of the said committee of management, on six months notice, by advertisement, to the holders thereof.

6. The value, if any, of the first, second and third preference stocks and the common or ordinary stock of the Grand Trunk now issued and outstanding to the face values above mentioned (hereinafter together called the "preference and common stock") shall be determined by a board of three arbitrators, one to be appointed by the government, one by the Grand Trunk, and the third by the two so appointed, or, failing agreement, by judges to be designated in the said agreement. New guaranteed stock, to an amount not exceeding the value, if any, so determined, carrying a dividend as hereinbefore authorized, shall be distributed among the holders of the preference and common stock, upon the transfer to or vesting in the government of such stock, in proportions which shall be determined by the arbitrators.

7. As soon as said agreement has been ratified by a majority of the holders of the stocks enumerated in the preamble to this act, present in person or by proxy and voting at a special general meeting of such stockholders duly called for the purpose of considering such agreement;

(a) A committee of management shall be formed consisting of five persons, two to be appointed by the Grand Trunk, two by the government, and the fifth by the four so appointed, to insure the operation of the Grand Trunk System (in so far as it is possible so to do) in harmony with the Canadian National Railways, the two systems being treated in the public interest as nearly as possible as one system. The committee shall continue to act until the preference and common stocks are transferred to or vested in the government, when it shall be discharged;

(b) The books, minutes, reports, documents, and other records, and all the railways and properties of the companies comprised in the Grand Trunk System, shall at all times be accessible and open to inspection and examination by any person or persons named by the Minister of Railways and Canals of Canada, or by the board of arbitrators; and all proper aid and assistance shall, on request, be rendered to such person or persons by the committee of management and by the officers and employes of the Grand Trunk and its allied companies, including the making and giving of extracts, copies and statements.

8. The government may lend to the said committee of management, upon the notes or other obligations of the Grand Trunk, such sums as the government may from time to time deem necessary for the carrying on of the operation or improvement of the Grand Trunk System.

9. The said agreement shall provide, among other necessary and usual provisions for:

(a) The appointment of the arbitrators, the control of the arbitration proceedings, the administration of oaths, the procuring and admission of evidence, and the making of the award;

(b) The transfer to or vesting in the

government or its nominees of the preference and common stock upon the issue of new guaranteed stock in exchange therefor;

(c) The resignation or vacating the offices of the board of directors of the Grand Trunk and of each company comprised in the Grand Trunk System upon the preference and common stock being transferred to or vested in the government;

(d) The entrusting to the said committee of management by the Minister of Railways and Canals as receiver of the G.T.P.R. System, on terms to be approved by the Governor in council, of the exercise of such of his powers as receiver as the Governor in council may deem requisite in order that the operation and management of the said G.T.P.R. System may be conducted in harmony with the operation of other railways and properties under the control of the said committee;

(e) The continuation and administration of the G.T.R. of Canada Superannuation and Provident Fund Association, the G.T. Pension Fund, and the G.T. Railway Insurance and Provident Society, in accordance with the terms to be set forth in said agreement.

10. The government and the Grand Trunk, and each company comprised in the Grand Trunk System, and all persons interested therein, are hereby respectively authorized and empowered to enter into the said agreement upon and subject to the terms herein set forth, and to do and perform all such acts and things as may be deemed necessary to observe, perform and comply fully with the terms and conditions of said agreement.

11. Any orders of the Governor in council which the government may deem requisite to vest in the government any of the preference or common stocks not transferred to the government or its nominees under the terms of this act, or requisite to vacate any office of director, or otherwise to carry into effect the terms and provisions of the said agreement may be made and passed with the effect specified in any such order in council.

12. Upon the transfer to or vesting in the government of the preference and common stock as herein provided for, the government may, by order in council, provide for the discharge of the receivership of the G.T.P.R. System and the termination and withdrawal of the proceedings in the Exchequer Court of Canada relating thereto.

On Oct. 16, the bill was read a first time. On Oct. 17, the Minister moved that the bill be read a second time, and the debate continuing, D. D. McKenzie, the Liberal floor leader, on Oct. 21, moved the following amendment, which was seconded by Hon. W. S. Fielding:—

"That the bill be not read a second time, but that the house do come to the following resolution: That the bill proposes an uncertain but very large addition to the debt of the Dominion at a time when existing obligations, arising out of the war and from other causes, are so vastly in excess of all previous obligations as to give much cause for anxiety on the part of all who are concerned in the financial position of Canada and the maintenance of the public credit. That a measure of such wide reaching character and large importance requires a study by the house and the people that cannot possibly be given in the closing days of the session. That the present session of parliament was called for a special purpose which has already been accomplished. That on Oct. 8 the Minister of Trade and Commerce, acting as leader of the house in the absence of the Prime Minister, stated that the government's expectation was that the session would close within the then current week. That under such circumstances the introduction by the government of a measure of such great importance as the acquisition of the railway and property of the Grand Trunk Ry. Co. of Canada, is improvident and inexpedient. That for these reasons the further consideration of the bill be deferred until a future session of this parliament."

On Oct. 23, Mr. McKenzie's amendment was defeated by 91 to 61, and the bill was read a second time, on the same division reversed, and the house then went into committee on it, and the discussion was continued from day to day. At the time of writing (Oct. 30) the bill is still in the committee stage.

Curve Chart for Railway Resurvey.

A graph or chart for quickly determining the degree of a curve when the intersection angle and the external are given was devised last winter by the writer for use in the resurvey of the Dubuque Division, Chicago, Milwaukee & St. Paul Rd. This chart, shown in the accompanying drawing, is plotted on standard cross section paper. The externals are plotted vertically to a scale of 2 in. = 1 ft., making each small division represent 0.05 ft. The intersection angles are plotted horizontally to a scale of 3 in. = 1 degree, making each small division represent 2 minutes.

Curves were plotted as shown, extending to 7 ft. for the externals and to 9° for the angles. As a rule, this range covered the requirements, as curves with intersection angles of over 9° could seldom be intersected.

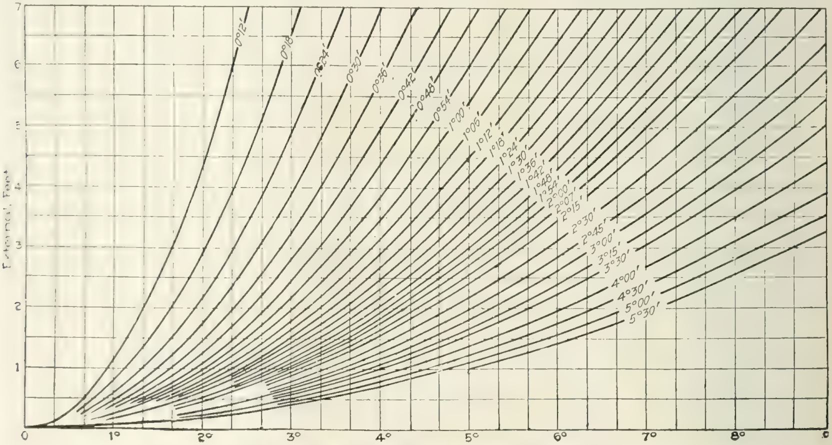


Chart showing degree of curve having given angle and external.

For any angle and external within these limits it is very easy to pick off the corresponding degree, interpolating if necessary between the plotted curves. Charts can be made considerably larger if larger sizes are desired.

On this resurvey work the alignment party consisted of an instrument man, a rodman and two chainmen, all of whom were fast workers. The best day's work in the field was 27 curves, 19 of which were intersected and eight traversed. The Dubuque Division follows the west bank of the Mississippi River for 150 miles and is very crooked, on account of the steep bluffs and the course of the river. Most of the curves, however, are sufficiently flat to allow their tangents to be intersected and their externals measured. J. G. Wetherell, Assistant Engineer, Chicago, Milwaukee & St. Paul Rd., Chicago, in Engineering News Record.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys—W. E. G. BISHOP has been appointed Division Freight Agent and District Passenger Agent, Transcontinental Division, O'Brien, Que., to Armstrong, Ont., vice E. B. Robb, transferred. Office, Cochrane, Ont.

F. J. BULLER, Local Treasurer, Lines East of Port Arthur, Ont., Canadian Northern Ry., has resigned, on being appointed Vice President, Canadian Steel Tire & Wheel Co., Montreal.

A. R. CURRAN has been appointed Paymaster, Lines East of Port Arthur, Ont., Canadian Northern Ry., vice S. J. Potter, promoted. Office, Toronto.

F. P. JONES, General Manager, Canada Cement Co., who was appointed one of the board, has resigned that position, giving as a reason, insufficient time to devote to the duties.

J. H. NORTON, heretofore Division Freight Agent, Halifax, N.S., has been appointed Assistant General Freight Agent. Office, Moncton, N.B.

S. J. POTTER, heretofore Paymaster, has been appointed Local Treasurer, Lines East of Port Arthur, Ont., Canadian Northern Ry., vice F. J. Buller, resigned. Office, Toronto.

E. B. ROBB, heretofore Division Freight Agent, and District Passenger Agent, Cochrane, Ont., has been appointed Division Freight Agent, Halifax, N.S., vice J. H. Norton, promoted.

Canadian Pacific Ocean Services Ltd.—T. R. PERCY, heretofore, chief clerk, General Passenger Department, Montreal, has been appointed General Agent, Passenger Department, Yokohama, Japan, vice E. Stone, appointed General Publicity Agent at Montreal.

A. W. SNELL has been appointed acting European Freight Agent, Montreal, vice G. D. Robinson, resigned to enter private business.

EDWARD STONE, heretofore General Agent, Passenger Department, Yokohama, Japan, has been appointed General Advertising Agent, Montreal.

Canadian Pacific Ry.—F. BAIRD, heretofore at Fort William, Ont., has been appointed Back Shop Foreman, Vancouver, B.C., vice R. Quinn, promoted.

A. E. BENNETT, heretofore Locomotive Foreman, Grand Forks, B.C., has been appointed Shop Foreman, Revelstoke, B.C., vice W. H. Mole, transferred.

E. R. BRUCE, heretofore Director of Exhibits, Colonization and Development Department, Calgary, Alta., has been transferred to Montreal, to take charge of the newly organization Exhibits Branch, Colonization and Development Department.

W. E. CLINE, heretofore Train Master, Medicine Hat, Alta., has been appointed Chief Dispatcher, Kenora, Ont.

JAAS. COLLEY, heretofore Assistant Publicity Agent, Colonization and Development Department, Calgary, Alta., has been appointed Publicity Agent, vice N. S. Rankin, transferred. Office, Calgary, Alta.

R. B. GIROUARD, heretofore Assistant Superintendent, Trenton Division, Ontario District, Havelock, Ont., has been appointed Assistant Superintendent, Sudbury, Division, Algoma District, vice F. S. Rosseter, transferred. Office, Sudbury, Ont.

C. J. McGREGOR, whose appointment as Assistant Superintendent, Smiths Falls, Ont., was announced in our last issue, is, we are advised, acting temporarily while the Assistant Superintendent is relieving other assistant superintendents on vacation.

J. K. Savage,
Assistant General Superintendent, Ontario District, C.P.R., and acting General Superintendent, Quebec District, C.P.R.

W. S. Harrison,
Auditor of Revenue, Grand Trunk Railway

E. C. McKAY, heretofore, dispatcher, has been appointed Chief Dispatcher, Smiths Falls, Ont., vice C. L. Leggatty, whose appointment as Assistant Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., was announced in our last issue.

W. H. MOLE, heretofore Shop Foreman, Revelstoke, B.C., has been appointed Shop Foreman, Vancouver, B.C.

J. NEILL, heretofore Division Master Mechanic, Kenora, Ont., has been appointed Trainmaster, Medicine Hat, Alta., vice W. E. Cline, transferred.

R. QUINN, heretofore Back Shop Foreman, Vancouver, B.C., has been appointed General Foreman, Revelstoke, B.C., vice A. McArthur, on leave of absence.

COL. C. W. P. RAMSEY, C.M.G., has been appointed acting Superintendent, Brownville Division, New Brunswick District, Brownville Jct., Me., during absence on leave of J. H. Boyle, Superintendent.

N. S. RANKIN, heretofore Publicity Agent, Colonization and Development Department, Calgary, Alta., has been appointed Special Publicity Agent, same department, to have charge of special publicity work in connection with the establishment of a Canadian Information Bureau. Office, Montreal.

F. S. ROSSETER, heretofore Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Assistant Superintendent, Toronto Terminals Division, Ontario District, vice W. J. Stinson, transferred. Office, Toronto.

J. K. SAVAGE, Assistant General Superintendent, Ontario District, Toronto, has been appointed acting General Superintendent, Quebec District, during absence on holiday leave of J. M. Woodman. Office, Montreal.

W. J. STINSON, heretofore Assistant Superintendent, Toronto Terminals Division, Ontario District, Toronto, has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice R. B. Girouard, transferred. Office, Havelock, Ont.

C. C. A. WARN, chief steward, s.s. Princess Charlotte, B.C., coast service, C.P.R., is reported to have been appointed Manager, C.P.R., Hotel Incola, Penticton, B.C.

Grand Trunk Ry.—J. B. DUNLOP has been appointed Travelling Airbrake and Lubrication Inspector. Headquarters, Montreal.

W. S. HARRISON, heretofore chief clerk and Assistant to Auditor of Revenues, has been appointed Auditor of Revenue, vice J. B. McLaren, promoted. Office, Montreal.

A. McDONALD, heretofore Assistant to Superintendent of Motive Power, Montreal Shops, has been appointed acting Superintendent of Motive Power, Montreal Shops, vice E. R. Battley, temporarily assigned to other duties. Office, Montreal.

J. B. McLAREN, heretofore Auditor of Revenue, has been appointed General Auditor, vice J. M. Rosevear, promoted. Office, Montreal.

J. M. ROSEVEAR, heretofore General Auditor, has been appointed Comptroller, vice W. H. Ardley, retired. Office, Montreal.

Grand Trunk Pacific Ry.—P. W. BALDWIN has been appointed Local Auditor, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C., vice A. [illegible], transferred to other duties.

MAJOR M. A. BURBANK, formerly of the Canadian Railway Troops, returned recently from service in France, has been appointed Assistant Engineer of line diversion at Urling and Shere, B.C.

COL. W. S. FETHERSTONHAUGH, formerly of the Canadian Forestry Corps, returned recently from France, has been appointed Division Engineer, Prince Rupert, B.C.

Timiskaming and Northern Ontario Ry.—J. L. ENGLEHART, Chairman of the Commission, has resigned owing to ill health.

C.P.R. Stations Named After Men Decorated for War Service.

Stations on C.P.R. lines under construction in Saskatchewan and Alberta have been named as follows:—

Hesketh — On the Acme-Drumheller line, for Col. J. A. Hesketh, D.S.O., D.C.M., Companion of the Order of St. Michael and St. George, Assistant Engineer, Winnipeg.

Kirkpatrick—On the Acme-Drumheller line, for Major W. M. Kirkpatrick, M.C., Assistant Freight Traffic Manager, Winnipeg.

Gascoigne—On the Leader-Southwesterly branch, for Lieut.-Col. F. A. Gascoigne, D.S.O., Secretary-Treasurer, Canadian Pacific Ocean Services, Montreal.

Thrasher—On the Milden-Southwesterly branch, for Capt. J. M. Thrasher, M.C., M.M., fireman, Kenora.

Neighbour—On the Rosetown-South branch, for Lieut. H. Neighbour, M.C., D.C.M., storeman, Winnipeg.

Unwin—On the Lanigan-Northwesterly branch, for Major L. B. Unwin, M.C., accountant, Schreiber.

Aerial Transportation Notes.

A Quebec press report says that an enterprise is being organized to utilize aeroplanes and dirigibles, to carry supplies, etc., to northern Canadian regions not yet developed because of the difficulty of reaching them.

N. A. Yarrows, of Yarrows Ltd., shipbuilders, etc., Victoria, B.C., and associates, have offered $50,000 as a prize for the first non-stop flight across the Pacific Ocean from Vancouver, B.C., to Japan, by a Canadian built aircraft. The prize will be known as the Prince of Wales prize, and the trip is to be made prior to Dec. 31, 1921.

Lieut.-Col. Robert Leckie, D.S.O., M.C., D.F.C., has been appointed to the Air Board's staff at Ottawa, as Superintendent of Flying Operations, at an initial salary of $4,500 a year. He was born in Scotland, and resided in Toronto for some 12 years before the war. He entered the Royal Naval Air Service in June, 1915. After the formation of the Royal Air Force he was in command of the 228th Squadron, and on the formation of the Canadian Air Force, was given command of No. 1 Canadian Wing.

The Aero Club of Canada, Toronto, has elected the following officers: President, Lieut.-Col. W. G. Barker, V.C., D.S.O.; Vice-President, Major Shook, D.S.O., D.F.C.; Honorary Secretary, A. F. Fen[illegible]; Honorary Treasurer, Capt. Evans [illegible], M.C., D.F.C.; Secretary, Major [illegible]; directors, Major Paul Meredith, Major M. [illegible], Capt. J. W. G. Clark, and Major Bert Wemp, D.F.C.

Major-General Sykes, Controller-General of Civil Aviation, in an article in the London, Eng., Observer on the colonies and aviation, dwells on the great opportunities in Canada. He says aircraft can be employed to extend the influence of the railways, and will give an impetus to every branch of Canadian commerce. As an instance of their usefulness in developing virgin land he suggests an air route linking up Quebec with the C.P.R., Lake Superior terminus, from where the services might radiate toward Winnipeg, and thence to Vancouver and many parts of the northwestern provinces. Aerodromes can be planned in every center of new towns springing up in Canada, instead of outside as in older countries. Aircraft might be used for discovering prairie fires, herding, patrols, timber location and survey work. Map making by aerial photography should supersede the present costly and slow method of trigonometrical survey. He concludes by expressing confidence in Canada's very great future in the air.

Werner Horn, who claims to be an officer of the German army, domiciled in the United States, after having served a sentence in the U.S. for illegally conveying explosives on trains in contravention of the Interstate Commerce Act, was ordered to be extradited to Canada to answer a charge of blowing up the international bridge on the C.P.R., between McAdam Jct., and Vanceboro, Me., Feb. 2, 1915. He was brought before the deputy police magistrate at Fredericton, N.B., Oct. 16, and remanded to Oct. 24 for further hearing. He was later committed for trial, and found guilty, Oct. 29.

National Steel Car Co., Hamilton, Ont., press dispatch, Oct. 27.—At a meeting of the directors of the National Steel Car Co., on Oct. 25, it was decided to recommend to the shareholders that a proposal made by a syndicate of New York capitalists, headed by R. J. Magor, for the reorganization of the corporation be accepted. The details of the proposal will be given in a circular letter to be sent to the shareholders at once, and a general meeting of the company will be held on Nov. 12 to deal with the matter. The syndicate proposes to put up ample capital to operate the plant to capacity, and to introduce more aggressive management. R. J. Magor is a brother of Basil Magor, who was at one time General Manager of the National Steel Car Co., and who is interested in the Magor Car Corporation, which make railway cars in the United States.

Passenger Train Resistance—Tests to determine the resistance of passenger trains at all speeds up to 70 miles an hour, and for average car weights, have been completed by the Railway Department, Engineering Experiment Station, University, Illinois. Of the 240 cars composing the 28 trains tested, 178 had 6 wheel trucks, and 62 had 4 wheel trucks. These tests were made on the Illinois Central Rd. by Prof. E. C. Schmidt and H. H. Dunn, upon well constructed and well maintained main line track, laid almost entirely with 85 or 90 lb. rail and ballasted with broken stone. From the results, which are given in Bulletin 110 of the Engineering Experiment Station, a table has been prepared showing the probable average value of resistance for passenger trains composed of cars weighing from 30 to 70 tons and operating at speeds ranging from 5 to 75 miles an hour. Copies of the bulletin may be had without charge by addressing Engineering Experiment Station, Urbana, Ill.

Conditions of Hudson Bay Railway Roadbed and Terminals.

In the House of Commons on Sept. 30, J. A. Maharg, M.P. for Maple Creek, Sask., called the government's attention to a press dispatch from Pas, Man., reading as follows:—"The elements and neglect are slowly crumbling the terminals of hte Hudson Bay Ry. at Port Nelson, according to Capt. R. H. Taylor, of the mounted police patrol boat, who has just arrived here from the bay. He declared that the roadbed of the railway from mile 214 is rapidly going to pieces and all along telegraph poles are lying on the ground. The terminal shops he said are lying in a state of rust and decay. He thought that the heavy storms last summer had considerably weakened the terminal works and without immediate repair and additional strengthening the entire works would be crushed to pieces by the winter ice."

The Minister of Railways, Hon. J. D. Reid, replied on Oct. 1, that he had asked the Chief Engineer for information and had been furnished with the following:—"The Chief Engineer of the Terminals, D. W. McLachlan, who is at present engaged in other engineering work with the department at Ottawa, informs me that the statement with regard to the condition of the terminals and the probability of the works being crushed to pieces by the coming winter's ice, has no foundation. He further states that the works have successfully withstood the storms and ice of the past three years without material impairment or injury, and he has every confidence that they will continue to do so during the coming winter. We have at Port Nelson a capable superintendent, with six men, whose duty is to look after minor repairs and immediately communicate with the department in the event of any serious damage. His monthly reports show that everything is in first class condition.

"With regard to the roadbed. It is to be expected in a country of the nature through which this railway passes, that frost will affect and dislodge numerous temporary trestles and telegraph poles which will have to be set up again, but not to any greater extent than would take place if the road was under operation—the only difference being that they will all be replaced at one time when the work is again gone on with, rather than from time to time as the damage occurred, as would be done if the road was in operation."

Grand Trunk Pacific Ry. Receivership.—An act has been passed by the Dominion Parliament to correct a clerical error in the order in council, respecting the appointment of the Minister of Railways as receiver of the Grand Trunk Pacific Ry. and its subsidiary companies, printed as a schedule to chap. 22 of the statutes of 1919. The act directs the insertion of the word "terminal," to make the words "Grand Trunk Pacific Elevator Co.," read "Grand Trunk Pacific Terminal Elevator Co."

C.P.R. Employes Fined—E.W.Downey, conductor, and A. H. Ruddock, a sleeping car porter, were fined $500 each by a Winnipeg police magistrate, Oct. 6, for having accepted secret commissioners. The porter, being unable to pay, was sentenced to jail for 6 months. Similar charges are pending against two other conductors.

The Prince of Wales' Canadian Tour by Rail and Water.

The itinerary of the Prince of Wales' tour from Quebec to the Pacific coast and back to Montreal, as detailed in Canadian Railway and Marine World for September and October, was pretty closely adhered to, except that the visits to Cobalt and Timmins in Northern Ontario, originally scheduled for Sept. 2 and 3, were postponed until the return trip. After visiting Winnipeg on Oct. 10 and 11, the Prince spent a week end at Lake Manitoba, during part of which he had some shooting and left Winnipeg again on Oct. 14, instead of Oct. 11, as planned originally, for the east. The four days stop at Biscotasing, to visit the woods, lakes and rivers of Northern Ontario, scheduled for Oct. 12-17, was abandoned and instead the Prince went right through to North Bay, Ont., and visited Cobalt and Timmins, Oct. 16. Under the original schedule he was, after leaving Biscotasing, to proceed by C.P.R., via Sudbury and West Toronto, to Hamilton, but this was changed and his train was run over the G.T.R. from North Bay, via Allandale and Georgetown, to Hamilton. After leaving Brockville, Ont., Oct. 27, he went to Vaudreuil by G.T.R., and thence by C.P.R., to Montreal. The trip from Montreal to Ottawa, via C.P.R., scheduled for Oct. 31, was abandoned and instead he visited the Eastern Townships of Quebec, going via C.P.R. to St. Johns and Lennoxville, and thence by G.T.R. to Montreal. From Nov. 2 to 5 will pay a return visit to Toronto, and then visit Ottawa.

The G.T.R. prepared for the use of the Prince of Wales and his staff on the portion of the tour over the company's lines, a specially designed descriptive itinerary. The book is beautifully illustrated, and a notable production in every way. On the olive green leather cover is die-stamped in gold, the Prince's arms with crest, badges and supporters, and in the corners are the emblems of England, Ireland, Scotland, Wales and Canada. The frontispiece is a copper etching of Niagara Falls, signed by the artist. The other illustrations are printed in sepia on heavy suede finished coated stock, and show the features of the territory which the Prince visited during his tour over the company's lines in Ontario and Quebec, also the striking developments in motive power and bridge building. The letterpress is printed on the finest of hand made loft dried stock, and is descriptive of the points of interest between North Bay and Hamilton, Niagara Falls and Brantford, Guelph, Stratford and Woodstock, Chatham, London and Windsor and Toronto, Kingston, Brockville and Montreal. Maps of the G.T.R. are mounted in silk in specially provided pockets. The editin de luxe was limited to 100 copies, all numbered, and these were enclosed in handsome boxes with the Prince's arms stamped on them. In the foreword to the book, reference is made to the important part played by the G.T.R. in the development of Canada.

Equipment of Freight Cars With Safety Appliances.

The Board of Railway Commissioners passed general order 27[illegible], Oct. 8, as follows:— Re application of Grand Trunk and the Canadian Pacific Railways, for an order extending the time for one year from Sept. 30, 1919, within which they may equip their freight cars with safety appliances as required by general order 128, July 20, 1914: Upon hearing the matter at Ottawa, Oct. 7, 1919, the applicants, the Canadian National Rys., Brotherhood of Locomotive Engineers, and Brotherhood of Locomotive Firemen and Enginemen being represented, it is ordered that railway companies subject to the board's jurisdiction, be granted an extension of time until Sept. 30, 1920, within which to make the changes required under general order 128, the railway companies to continue their present practice of filing with the board monthly reports of the progress made in complying with the requirements of the said order.

Canadian National Rys. and the Victory Loan—The C.P.R. has set an objective of $5,000,000 for subscription by the workers on its lines in the victory loan campaign. President D. B. Hanna is confidently calling upon every employe on the system to invest to the limit, and is impressing upon all the fact that the general prosperity of the country, including the railways, depends upon the success of this appeal for funds. Mr. Hanna has been in conference with the heads of all the principal C.P.R. departments, and a complete organization has been worked out for the canvas of every employe. Every day each canvassing unit on the 14,000 miles of line between Sydney, N.S., and Victoria, B.C., also upon the telegraph and express and other subbsidiary systems, will report results to the head offices in Toronto. The company, as in other years, is offering both the Minister of Finance and the company's extended payment plan for the consideration of those in the service. The company's plan provides for payments monthly extended over ten months. This work is being carried on by the railway without expense to the victory loan organization.

Alien Owned Shares in Transportation Companies—Proceedings have been instituted in a Quebec court by the Secretary of State for Canada for the transfer to the Minister of Finance, from the United States Custodian of Canadian shares owned by enemy subjects and administered by the U.S. custodian until the signing of the treaty of peace when the status of the shares was localized to such places of business as the shares were entitled. The total amount involved is over $1,000,000, and there are included shares in the Canadian Pacific Ry., Grand Trunk Ry., Montreal Tramways Co., Marconi Wireless Telegraph Co., and Canadian Car and Foundry Co.

Superannuation of Canadian Government Rys. Employes—Sir James Lougheed stated in the Senate, Oct. 14, in answer to questions, that 1,2[illegible] Intercolonial & Prince Edward Island Railways employes had been granted superannuation under the Intercolonial & Prince Edward Island Rys'. Employes' Provident Fund Act, 1907, and amending acts, that [illegible] employes were participating in the fund on that date, and that the average pension paid employes was $[illegible] a month.

Railway Lands Patented—Letters patent were issued during August for Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia as follows:

	Acres
Alberta & Great Waterways Ry	[illegible]
Calgary & Edmonton Ry	[illegible]
Canadian Northern Ry	[illegible]
Canadian Pacific Ry	[illegible]

Inverness Railway & Coal Co's Financial Position, Disposition, Etc.

The Minister of Railways, early in July, reported to the Privy Council, that the Inverness Ry. & Coal Co.'s bondholders committee had advised him that, owing to financial difficulties, it would be impossible for them to continue the operation of the company's railway after July 17. The Minister observed that the railway runs through an important locality in Nova Scotia, serving as an outlet for coal mines along the line, and is the only means of transportation for agricultural projects, and supplies for the inhabitants in the district. The bondholders committee urged that the government take over the line as a feeder for the Canadian National Rys., the transfer to be made on a basis similar to that on which certain lines in New Brunswick were taken over. On this basis the committee set a price of $150,000 for the 60.91 miles of railway and 4.6 miles of sidings, exclusive of the pier at Port Hastings, the rolling stock and equipment to be paid for on a basis to be agreed on between the committee and the Canadian National Rys. directors, but such price not to exceed the valuation placed on the rolling stock and equipment by the committee: viz.: $175,000, the government to pay for such supplies on hand as D. B. Hanna, Presi- paid for them, and the prices to be fixed dent, C.N.R., might consider should be by him. The Minister recommended that authority be given under the Branch Lines Act, statutes 1915, chap. 16, for the purchase of the railway, rolling stock and supplies at the prices mentioned above, interest on the aggregate principal amount to be paid at the rate of 5% a year, from the date of taking over the railway until date of payment of principal, the agreement for purchase to be submitted to the Dominion Parliament, at its then next session, and in order to avoid the closing down of the line that it be taken over immediately upon the execution of the agreement for purchase. The Privy Council concurred in the Minister's recommendation and an order was passed accordingly on July 14.

It is said that arrangements are being made to lease or sell the coal mines to a Halifax coal merchant.

The National Trust Co., Toronto, trustee for the bondholders, gave notice on Aug. 2, that a meeting of holders of the Inverness Ry. & Coal Co.'s 5% first mortgage gold bonds would be held in Toronto, Aug. 29, to receive a report on the present situation from the committee appointed by the bondholders on June 30, 1915. The notice stated that the report would indicate that the cost of winning coal had risen to such a point that the receiver could not make profits from the railway or coal undertakings. The meeting was also called to consider what action, if any, should be taken by the bondholders, and, if thought fit, to pass, with or without modification, the following resolutions:

1. That the existing bondholders committee, consisting of Z. A. Lash, J. H. Plummer and R. Home Smith, continue to represent and act for the bondholders [illegible] the remaining members of the committee from time to time to fill [illegible] ancy which may occur.

2. That the action of the trustee in applying for a receiver in Nova Scotia be approved.

3. That the committee be empowered in its discretion from time to time: to instruct the trustee to proceed forthwith to obtain judgment for foreclosure and sale in the action now pending in the Nova Scotia courts and thereupon to have the assets covered by the trust deed and by any supplemental instruments sold, either en bloc or in parcels, and for that purpose to authorize the trustee in the event of an auction sale or sales to approve of any reserve bid or bids fixed by the court or any change thereof, or, to instruct the trustee to concur in a private sale, or sales, lease or leases or other disposition of the assets, if it should consider it advisable so to do by reason of a public sale under the court proving absortive or for any other reason or, to instruct the trustee to do whatever may be necessary for the sale of the property by private sale en bloc or in parcels and that the trustee be authorized to do all or any of the above things.

4. That the committee be empowered to instruct the trustee in the event of the property being disposed of as provided by paragraph 3 above to apply and distribute the proceeds in due course in accordance with the law and the terms of the trust deed above referred to and the trustee be authorized to make such distribution.

5. That the committee be empowered in the event of the mortgaged premises being disposed of as provided in paragraph 3 above to authorize the trustee to accept payment on the terms named by the committee and to accept in whole or part satisfaction of the purchase price, rent or other consideration, shares, bonds, debentures or other securities of any company or corporation formed or to be formed and that the trustee be authorized to make any such arrangements.

6. That the provisions of clause 22 of the trust deed and, if necessary, the provisions of any other clause of the trust deed, be altered to provide that moneys applicable to the payment of the interest and principal on the bonds be applied first in payment of the principal on the bonds and the balance (if any) in payment of the interest owing upon the bonds pari passu.

7. That the trustee be authorized to act on requests or instructions signed by a majority of the members of the bondholders committee.

8. That the trustee be authorized to execute and do all such transfers, reconveyances, leases, assurances, acts, deeds and things as it may in its discretion consider necessary or desirable for carrying out, giving effect or completing resolutions passed at the meeting hereby called and any such deeds or documents may include such provisions for the protection, indemnity and convenience of the trustee as it may require.

We have been unable to ascertain what action was taken at the bondholders meeting, the trustee stating on Sept. 11 that as certain negotiations were pending, no information could be furnished until they were ended.

Other information in regard to this company's affairs was published in Canadian Railway and Marine World as follows: June, pg. 299; August, pg. 437; September, pg. 488.

Proposed Extension of Intercolonial Ry. Into Non-Railway Sections.

D. D. McKenzie, M.P., moved in the House of Commons, Oct. 6, that whereas the house on Mar. 16, 1914 adopted a resolution which he moved, stating the time had arrived for the extension of the Intercolonial Ry. into the non railway sections of the Maritime Provinces within reasonable range of the said railway, therefore, be it resolved that, in the opinion of the house, the proposals of the said resolution should be carried forward to completion at the earliest possible date.

In supporting his motion, Mr. McKenzie said that anyone acquainted with the geography of Cape Breton Island would readily understand that no one line of railway can possibly give proper accommodation, for the reason that that large and important island is divided into two sections by the Bras d'Or Lake. For that reason there should be a further development of railways on the island. The proposition he would put forward was that the government should at once, for the benefit, not only of Cape Breton Island, but of the whole country, extend a line of railway along both sides of the island, in order that fishing centers might be reached and important mining and lumbering areas given an opportunity for development. Since 1911 a line had been built on the mainland from Dartmouth to Dean Settlement, but there was a necessity for the extension of lines in Victoria County, and in the Guysboro area, in addition to those necessary in Cape Breton Island.

J. H. Sinclair, M.P., in seconding the motion, referred to the endeavors which had been made in the way of getting extensions of railways in Guysboro and Victoria Counties, towards which in 1910 Parliament voted $1,000,000 and acquired a short piece of line from Ferrona to Sunny Brae, from the Nova Scotia Steel and Coal Co., at a cost of $100,000. The present government did not renew the provision for building lines in Victoria and Guysboro Counties.

A. T. Leger, M.P., is supporting the motion, referred to the necessity for branch line extensions in New Brunswick, making mention particularly of a line from Buctouche, to some point in Northumberland County, surveyed in 1914.

The debate was adjourned on the motion of Sir George Foster, and on Oct. 8, was allowed to continue on the order paper.

Ottawa Central Station Operation—The Minister of Railways in replying to a question in the House of Commons recently, said the Canadian Pacific Ry., as well as the Canadian National Rys., run some of their trains into the Ottawa Central Station backwards. This practice is in vogue on United States railways as well as Canadian. The usual precautions taken by railways under similar conditions are followed at Ottawa. It was impossible to state definitely when changes to render this practice unnecessary will be undertaken.

Railway Lands Patented—Letters patent were issued during September for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	5.006
Canadian Pacific Ry. grants	17.31
Canadian Pacific Ry. roadbed and station grounds	76.42

Speeches at Dinner to President Beatty, of the Canadian Pacific Railway, at Quebec.

The Quebec Board of Trade entertained E. W. Beatty, K.C., President, C.P.R., at dinner, at the Chateau Frontenac on Oct. 1, some 250 being present, including Lord Shaughnessy, Chairman, C.P.R. Co.; A. D. MacTier, Vice President, Eastern Lines, C.P.R., and J. G. Scott, ex-President, Quebec & Lake St. John Ry., and Great Northern Ry. of Canada. In proposing Mr. Beatty's health, J. T. Ross, President of the Board of Trade, said in part:

We all know how extremely valuable this wonderful hotel, the Chateau Frontenac, has been to the City of Quebec. It has attracted thousands of tourists every year from the United States, from Europe, from Asia, Australia, and indeed, the whole world. Its reputation is as world wide as its situation is famous. But, large as it is, its accommodation is unequal to the great flow of travel which directs itself to Quebec, and during the tourist season, the management has, I am told, been reluctantly compelled to refuse hundreds of guests. Before the war broke out, the company purchased a large piece of property adjoining the hotel, with the intention of building an extension to the Chateau Frontenac, which would make it one of the largest hotels in America. We all earnestly hope that Mr. Beatty will be able to assure us that this very necessary work will be carried out, without delay, now that the war is over.

Before the war, the C.P.R. had established a line of large, fast, passenger steamships, running between Liverpool and Quebec which, on account of their draft of water, were compelled to make Quebec their terminal port. These ships, with a speed of 18 knots, were so punctual and so well equipped, that they attracted a class of travel, originating in the United States and the Orient, such as had never before used the St. Lawrence route. We are pleased to learn that this splendid weekly service is about to be resumed, and that the line will be inaugurated by the Empress of France in October.

But we, in Quebec, have larger ambitions than that, and we feel sure that the C.P.R. shares those ambitions. We think that the sacrifices that Canada has made during the war entitle us to at least as great favors from the Imperial Government as are extended to our neighbors in the United States. Now, the British Government grants the necessary capital and a subsidy of £150,000, for two ships, to the Cunard Steamship Co. for running a line of 25-knot steamships from Liverpool to New York. Would it not be possible to arrange with the Imperial Government and the Dominion Government that the C.P.R. should run a similar line of steamers to Quebec in summer, and Halifax in winter? The distance from Quebec to Liverpool is 500 miles shorter than from New York, so that the Canadian route would be a day faster, and should get the preference. The Quebec Board of Trade makes this suggestion and we hope that the C.P.R. will follow it up. Three boats would be sufficient for a weekly service.

We ask Mr. Beatty's attention to an innovation commenced this year, in connection with the other steamers of the company's Atlantic service by which these boats when outward bound do not stop at Quebec, as heretofore, and Quebec passengers are compelled to go to Montreal to take passage. This means an unnecessary travel of 340 miles which is ridiculous. Instead of this the Quebec Board of Trade has always contended not only that these steamers should make a stop here, both inward and outward, but that they should charge rates of passage and freight to and from Quebec cheaper than Montreal, in proportion to the distance saved. We are entitled to this, not only on account of our geographical position, but because these ships, or many of them, are subsidized with public money, of which we have to pay our share. Moreover, it is an injustice to the railway and steamboat lines between Montreal and Quebec, and to the Quebec hotels, all of which would benefit as in the past, were passengers allowed to take a day here en route, and join the ship at Quebec.

We think that Quebec has not been justly treated in the matter of ocean freight rates by the steamship companies, and as the C.P.R. is the largest steamship company the redress of this grievance is largely in their hands. Not only do the steamship companies charge Montreal rates for ocean freight to and from Quebec, but in some cases extra rates have been charged on our imports, although we are 170 miles closer to the ocean than Montreal, and in many cases the absurdity is witnessed of sawn lumber, our great staple trade, being sent to Montreal for ocean shipment, at great expense, to come back again past our doors, on its way to Europe.

The great pulp and paper trade of this province which has become so great an article of Canadian export, is principally carried on in the valleys and at the water powers of the Saguenay and the St. Maurice. The development of these two river valleys has created industries estimated to have cost $80,000,000 and giving employment to 20,000 men, and is due entirely to the enterprise of a number of Quebec merchants who built two railways: the Quebec & Lake St. John and the Great Northern. The railway freight from the mills on the St. Maurice is the same to Montreal as to Quebec, and as ocean freight from Montreal is easy to obtain, and from Quebec, for the reasons I have given, very difficult, the products of these mills and of the Saguenay mills for ocean shipment, goes almost entirely to Montreal. This is most unjust to Quebec, which may be said to have originated this traffic, and we ask that the C.P.R. ocean service should set the example of remedying this injustice by making the ocean freight on pulp and paper from Quebec cheaper than from Montreal, in proportion to the distance saved.

The alarming diversion of the grain trade of the Canadian Northwest to U.S. ports, for shipment, is a bitter disappointment. We understand that two-thirds of the export grain of the prairie provinces, a speaker in the Senate recently said four-fifths of it, has been going to New York, instead of to Canadian seaports. We cannot blame the C.P.R. for this. They have always been thoroughly loyal to Canada, and have sent their grain traffic to Montreal in summer and to St. John in winter. The only remedy would seem to be to make use of the new National Transcontinental Ry. for the purpose for which it was intended, and to carry the grain all rail, instead of relying upon the lake navigation, which switches it off at Buffalo. This new road shortens the distance between Quebec and Winnipeg by 214 miles, and its gradients are so level that, we are told, it is able to carry wheat to Quebec, with profit, for 3c a bushel cheaper than the lake and rail rate, via Fort William, either to New York or to Montreal. If the government cannot be made to understand the advantages to national interests of this new route, let them hand it over to the C.P.R. and we will soon have a revelation, not only as to the grain trade, but in the shortening by nearly half a day of the time of ocean mails and passengers between Quebec and Winnipeg. And the public would be relieved of that much of the burden of deficits, caused by the operation of railways by the government, against the extension of which the Montreal and Quebec Boards of Trade have so vigorously protested, in common with all the influential newspapers of this province.

Sir Lomer Gouin, Premier of Quebec, followed and said, among other things, that while they in Quebec felt an admiration for the C.P.R., they have also had the highest esteem and respect for the great men who had built that railway. They admired their palatial hotels, great railways and powerful fleet, but the people of Quebec cannot forget the first great man of that company, Sir William Van Horne. And we are fortunate in Canada in having these brilliant and talented men, of whom Sir William Van Horne was the first great man of the greatest railway in the world. It was because Mr. Beatty was a great lawyer and business man that he was found worthy to succeed his eminent predecessors. He offered his congratulations and compliments to Mr. Beatty for his success and prosperity. The people of Quebec felt it was a great honor to have the privilege of welcoming the President of the C.P.R. in "the mother city of Canada," of which we were all so proud and all loved so much, and which he thought Mr. Beatty would also learn to love himself, when he became more acquainted with its charms and beauties. Sir Lomer then spoke of the splendid resources of the C.P.R., and of the vast possibilities there are for future railway enterprise for which every facility is offered through its immense natural resources as well as the great industrial development, for which the intelligence of its employes was in no small degree responsible.

President Beatty's Speech.

The C.P.R. operates within the limits of your province slightly less than [illegible] miles of railway, being, I think, equal in mileage to any other system within the province. The possession of this extent of mileage alone is itself a reason why the company's interests and those of the province are closely merged and interdependent. From a railway standpoint, Quebec offers a great variety of railway traffic possibilities. You will appreciate this when you recall the extent of the productions of the province, which contribute to the support of the railway systems operating within it. In manufactured products the production is [illegible] of that of the whole of Canada, in wood pulp and paper, [illegible] and [illegible], [illegible]-

tively, in dairy products, 57%, and in live stock varying from 11 to 35%. The products of the farm are extensive and increasing, having now reached 13% of the total agricultural production of Canada. The future holds still more in the way of traffic and railway possibilities. The total railway mileage in Quebec is slightly less than 5,000 miles, or about two-fifths of that of the State of Pennsylvania, while its area is fifteen times as great. Quebec is likewise fifteen times as large as Ohio and its railway mileage about half that of the latter state. With increasing population and commercial expansion, more mileage must be constructed and existing facilities increased. The C.P.R. has not reached the limit of its development within the province, nor has any other railway company, if the future possibilities are as we have every ground for believing them to be. I believe that in the next few years a considerable extension of colonization railway construction will take place and while I am not unmindful of the hazard and the difficulty in building lines into undeveloped territories, if the work is undertaken prudently and gradually, there is no doubt that the railway extensions will not only keep pace with settlement and production, but will accelerate both.

The time was when railway presidents were in the habit of delivering speeches and giving interviews on all subjects from the raising of pigs to the style of women's clothes, I absolve my distinguished predecessor from the charge of following this practice, but it seemed to be an accepted theory that with such an office went the right of publicly discussing matters on which they were at least only partially informed. It is difficult for me to vary such time honored practices, but it is equally difficult to overlook that maxim of public speaking adopted in the earlier days, namely, that one should speak only on a subject he understood to those who had not the same amount of information about it. That was supposed to make it safe for the speaker and informing to his audience. So far as I am concerned this rather circumscribes my speech making, because it forces me to say something pertaining to the railway situation. Some phases of it are not yet, I think, adequately appreciated by many of the communities who depend so much for their development and prosperity upon the character of the railway service given to them, nor by the people as a whole upon whom the burden of their support must fall. I do not propose to trace for you the history of our Canadian railway situation, or of that in the United States. Both have elements in common and other phases in which they are entirely dissimilar. Neither do I propose to criticize at this time the policies which have given rise to our unfortunate position, but rather to make a few remarks upon the conditions which we must expect to face if these policies are extended.

This is a prosperous country, whose future, if the commercial affairs of the nation are administered prudently and economically for the next few years, is probably as bright as any country on earth. The danger is that our development may be retarded by burdens imposed upon us before we are able to carry them. We have many miles of railway that represent a useless expenditure, but the money has been spent and the securities are in the hands, in most cases, of investors in foreign countries, who staked their money in good faith upon the development and future of Canada. Many of them were, we now know, misconceived and constructed at extravagant cost, and in default of any other available parents have been quietly laid on the door step of the government of the country, or it would, perhaps, be more accurate to say, had been placed on that door step which had a large "welcome" on the mat. They must be taken care of because they cannot be abandoned. It must be seen that they grow into healthy arteries of commerce and play their full share in the country's progression. The problem that confronts us now is how this can best be done, and if it is possible under any system yet evolved for their administration. The possession of a tremendous mileage by the Dominion, with these periodical additions of unprofitable mileage, makes the prospect a disheartening one, even though the most far-sighted and efficient men are placed in charge of the properties, and even if they were permitted to operate them to the best advantage in the interest first of the shippers and, secondly, of their owners.

I am convinced that no administration which does not retain individual initiative and enterprise, pride in their work and adequate rewards for work well done, can possibly reduce the heavy annual deficits which are confronting the operators of most of Canada's railways. The question is one of such great magnitude and will have such far reaching results that it should be determined without regard to the opinions of politicians, shareholders, or any one set of men, but must be determined upon one ground only—what is best for the people of this country, and what will give them the most efficient railway service at the cheapest possible rates, and at the same time impose as little burden of taxation as is possible. These millions which have been unwisely and unprofitably spent have been spent, but the millions which may be wasted by the adoption of an improper system of operation can be saved, or partially saved, and this is the problem the working out of which will determine the future methods of operation which will prevail throughout Canada. There are advocates of both systems of administration, and while their views and the facts upon which they base them, are worthy of the greatest consideration, I am convinced that the people will only come to a realization of how serious the situation is and will themselves provide the remedy only when they see and weigh the tangible results.

There are two important aids to the solution. The first is, that the problem should be discussed and agitated in order that the merits and demerits of the systems, which are suggested should be appreciated by the people as a whole. I do not know of any problem so vital to the interests of Canada, in which there has been so much acquiescence and so little public discussion and education, as the subject of the future of the country's transportation systems. As a corrollary to this and second only in importance is the necessity for accurate information as to administration and results of it, in order that the people may be in a position to judge whether they desire to adhere to the methods of administration from which these results flow. I do not mean financial results alone, but results in service, a most important factor from the standpoint of the public. To my mind the determination of the question will rest upon two factors, the extent of the burden cast upon the people and the character of the service given. The difference between a proper and an improper system represents the millions of additional burden to the taxpayer, which he may be called upon to bear and the high rates and poor service which are due to the inefficiency which any improper system must inevitably provoke.

I have no doubt as to the transportation future of the principal lines in the Province of Quebec, nor have I any doubt as to the future development of the province, rich as it is in natural resources and only requiring sufficient investigation to warrant the beginning of new enterprises and the extension of old, in order that its commercial prosperity may be assured. Hand in hand with enterprise and prosperity must go a greater realization of the duties of citizenship and an appreciation of the obligations of communities towards those who are sick or in want. Theoretically this duty devolves upon the municipality whose citizens are affected and practically, it depends, as other questions, upon the direction and support given by the government to any such movement. A conspicuous example in this province has been the burden cast upon hospitals and other eleemosynary institutions, which have increased enormously by the increasing costs and the difficulty in having these costs met from ordinary revenues and the support of charitably, minded citizens. We will, perhaps, never reach the day when appeals will not be made in the interest of institutions to tend the sick and the needy, nor is this desirable, but it has now got to the limit of reason that this whole burden should be borne by the few who appreciate the situation and whose financial resources permit support to be given. I know that the eminent, able and resourceful Prime Minister of the province needs no inspiration from me, but I have been associated with several of its larger institutions and I know how vital it is that additional government support, by special tax if necessary, must be given to these institutions if they are to perform their full duty to the communities they are designed to serve. There is no unfairness in the suggestion that the people, as a whole, should be taxed to meet these conditions which enlightened citizenship demand must be met, because the burden of it falls most heavily in the congested districts in which the need of such service is most apparent. It is, indeed, an alarming condition that public institutions of this kind, well managed, generously supported by citizens and in some cases by municipalities, should face enormous deficits or greatly decreased activities and usefulness, simply because the cost of service to the poor and needy cannot be met, and should not be wholly met, by appeals to the charitable instincts of the people of the community.

I presume that you will not want me to sit down without making more than a passing reference to the City of Quebec, and its relations to the C.P.R.—relations which I am happy to say have been long standing and mutually satisfactory. In fact, your President, Mr. Ross, has rather demanded that these local and, therefore, more intimate subjects should not be overlooked. It is true that here, as elsewhere, there must be periodical conflicts of opinion, due to confliction of interests, but I am happy to say they have been reduced to a minimum. Your position is unique, a spot whose historical attractiveness appeals so strongly to the people of Canada and the United States; Quebec occupies a situation without parallel, I think, on the American continent. This is a commercial value to your city and the surrounding country and the value has not been and will not be lost sight of by yourselves or the transportation companies which serve your city. In addition, though some of us would hate to see the destruction of the rare and peculiarly attractive characteristics of your city, there is your position as a port with a sufficient harbor; the end of navigation for the largest trans-Atlantic ship and the industrial development which must take place, which gives to Quebec a future to which you will look with confidence. This situation was appreciated by the sagacious men who presided over the destiny of the company many years ago, and more than 25 years have elapsed since the Chateau Frontenac was built, and it has been since noted as a hostelry unique in itself, generally adequate to the needs of transients and in all respects a credit to your city. It has been altered and enlarged on occasions, but still the greatness of traffic due to the attractiveness of the place has outgrown the capacity of the hotel in the summer season and still further enlargement and changes will be necessitated. I am happy to be able to say that the C.P.R. directors appreciate the necessity of this and plans are in preparation which involve an enlargement of the hotel by over 200 rooms, and the provision of facilities not hitherto possible through lack of space. The cost of these changes will be in excess of $2,000,000 but the future of Quebec, we think, amply warrants the expenditure and the work will, I hope, be commenced in the early part of next year and continued until the plans are completely carried out. If you are proud of the old Chateau I am convinced that you will be still more proud of the new one, which will be more adequate to the needs of your city.

Your President, with characteristic foresight, mentioned to me in advance some of the points which he desired to emphasize from the standpoint of the interests of Quebec City, and I will refer to them very briefly because, obviously, they are questions of great importance, the consideration of which cannot be ended in a moment. He had drawn my attention to the desirability of a subsidy to a 25 knot service from Quebec, similar to that granted by the British Government to the Cunard Line to New York and has suggested that a subsidy of £150,000, or some similar amount, might be granted by the British or Canadian Governments, or both, if such a service were established from your port. You will appreciate, I think, as I do, the tremendous cost of such a service under conditions now prevailing and likely to prevail for some time to come. You know, for example, what it means for a company, even the size of the C.P.R., to put in such service a vessel like the Empress of France, valued at $6,000,000; you know something, too, of the cost of operating such a steamship. Coal today in Liverpool is £5 a ton—a 25 knot steamer consumes 1,000 tons a day. On this basis, a subsidy of £150,000 would pay the coal for such a ship for exactly 30 days running. If, on the other hand, coal for the round voyage were purchased in Canada, it would mean a tremendous cargo displacement and reduce the earning powers of the ship enormously.

In the matter of freight rates, and the suggestion that there are some discriminatory features against the City of Quebec, I would like to point out to you that the ocean rates are practically the same from all Atlantic ports, and that if the suggestion that the rates from Quebec should be lower than those from Montreal was given effect to, logically the difference in the rail haul would have to be considered and the additional rate from Montreal to Quebec would be far in excess of any difference in rate which could be granted on the ocean. Under the system now prevailing, the steamship companies absorb this difference, which is certainly more to the advantage of Quebec than if a difference were made in the ocean rates. In case there should be any misapprehension, permit me to say too that the Canadian lines—certainly the C.P.R.—get no government subsidy for their ocean services. It is true we are paid for carrying the mails, but we are only paid on the basis of the lowest freight rate, and there is no form of gratuity in it nor any support to the service, except that of payment at very low rates for traffic actually carried.

If it has happened, and I do not think it has in the case of the company's steamships, that products have been moved to Montreal for loading, it is, I presume, because it is easier to load at one port than to begin at one port and complete loading at another, especially when the full cargoes for such exports have always been available and ships to carry them have been few.

I recently took a trip through the United States and there had the opportunity of conferring with some railway presidents, who explained to me the difficulties of the situation in the U.S. One man, who had grown gray in the service of his company, having had almost 50 years' continuous railway experience, made a remark to me which I think is worth repeating. He said: "I often tell my directors that I am almost ashamed to take the salary I am paid, because it is the easiest thing in the world to be a railway president." "All you have to do," he added, "is to satisfy the public." Now, I have told that instance in other places, and in each place the story was greeted with laughter, because the irony of it being easy to satisfy the public seemed to strike the public themselves. What this railway executive meant by his semi-humorous statement was that the good will and support of the public was essential to the success of any railway enterprise, and that once secured and maintained the burdens of his office were appreciably lightened. It is true, I think, that never before has the value of public good will and support been appreciated to the extent it is now appreciated by all railway officers. The realization of it is not exactly forced upon them, but the value of it from the standpoint of results has been so apparent that every man now knows that he cannot be a successful railway operator unless he is mindful of this fact. It is not a case of cosening the public, but of doing your best for the public, which in the long run brings the best results. You may rest assured that the value of your support and good will will not be lost sight of in mutual relations between the C.P.R. and the City and Province of Quebec.

Lord Shaughnessy paid a warm tribute to Mr. Beatty. He said that the work of the new President required an exceptional degree of attention that from the very nature of it, had to be ever constant. He was in a large territory extending half throughout the world, and he had to give thoughtful consideration to the operation of all the railways under his control as well as other subsidiary interests. Any mistake of his might be disastrous to the C.P.R. as well as to the interests of Canada. He felt that Mr. Beatty would prove equal to the great task. Mr. Beatty was well disposed towards Quebec. Lord Shaughnessy expressed the belief that apart from the addition of 200 rooms to the Chateau Frontenac shortly, it would not be long before an additional 200 would be added to that. He pointed out that at the last session of parliament, Mr. Beatty had succeeded in putting through a bill that would enable the C.P.R. to inaugurate an aerial service, and he asked the Quebec Board of Trade to insist upon these airships landing at Quebec.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—There has been filed with the Secretary of State at Ottawa a duplicate original second mortgage debenture of A.,Q. & W.R., for such sum or sums as the registered holder may be entitled to, not exceeding in the aggregate $2,050,000 bearing interest at 5% a year, dated June 30, 1919, and maturing Jan. 1, 1940.

Lake Superior Corporation—Following are the officers and directors for the current year elected at Camden, N.J., Oct. 2: President, W. H. Cunningham; Vice Presidents, W. C. Franz and H. Coppell; Secretary, Alex. Taylor; other directors: Sidney Mason, J. F. Taylor, J. S. Dale, F. McOwen, H. I. Underhill, H. C. Coleman, R. Home Smith, T. D. Wood, T. Gibson, James Hawson. The company owns the Algoma Central and Hudson Bay Ry., the Algoma Eastern Ry., and the International Transit Co. (electric).

Canadian Northern Ry.—Referring to the trust deed securing the 5% C.N.R. income charge convertible debenture stock, the directors announced Oct. 9, that the earnings for the half year ended June 30, were insufficient to enable them to declare any interest to be payable on the stock Nov. 2.

Timiskaming & Northern Ontario Ry.

	July, 1919	July 1918
Passenger earnings	$88,268.61	$60,778.42
Freight earnings	173,193.23	150,697.38
Total earnings	261,461.84	211,475.80

Canadian Steel Tire & Wheel Co. Ltd. has been incorporated under the Dominion Companies Act, with an authorized capital of $1,000,000 and office at Montreal, to manufacture steel tires, cast steel wheels, several of the persons principally interested being connected with the Railway Steel Spring Co., New York. The President is F. F. Fitzpatrick, President, Railway Steel Spring Co.; the Vice Presidents are A. S. Henry, Vice President, Railway Steel Spring Co., and F. J. Buller, heretofore Local Treasurer, Eastern Lines, Canadian Northern Ry., Toronto; K. W. Blackwell, one of Canadian Car & Foundry Co.'s Vice Presidents, is also a director. The company has bought a plant on Marion Ave., Montreal East, that was used for manufacturing munitions and will start operations at an early date.

The C.P.R.'s Social and Athletic Club, Regina, Sask., branch, has been organized with the following officers: President, A. Pentland; Vice President, Mrs. D. M. Raddell; Social Secretary, Miss D. Davis; Athletic Secretary, E. J. T. Blanche; Treasurer, A. A. Dunphy. The first social gathering was held Oct. 9.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Railway.—The United States Senate on Oct. 2 passed the vote of $17,000,000, passed previously by the House of Representatives for the completion of the government railway in Alaska. (Oct., pg. 536).

Dolly Varden Mines Ry.—We are officially advised that this railway is still under construction, although traffic is being operated over some portion of it. The line at present extends from the Dolly Varden Mine, Alice Arm, B.C., to tidewater, 16 miles. It is 36 in. gauge and is operated by a 30 ton Climax locomotive, an 18 ton Porter locomotive and sixteen 15 ton gondola cars. It is the company's intention to extend the present railway from the Dolly Varden Mine to the Wolfe Mine, about three miles. Surveys for this extension have been made and plans are now being prepared, but it has not yet been decided when construction will be gone on with.

The line is being operated by the Taylor Engineering Co. Ltd., Vancouver, of which A. J. T. Taylor is President. E. G. Taylor, the company's Mechanical Superintendent, is in charge of the construction and operation of the line. (Oct., pg. 536).

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, was in Ottawa recently, discussing with the Dominion Government, the position of the E.D.&B.C.R., and its associated lines, the Alberta and Great Waterways Ry., and the Central Canada Ry. The system comprises the line from Edmonton to Spirit River and Grande Prairie, 402 miles, the line from Carbondale to McMurray, 290 miles, and the line from McLennan to Peace River, 48 miles, a total of 740 miles. An area of 16,000,000 acres of arable land is at present served and if the lines as projected were completed, an area of 100,000,000 acres would be opened up for development.

Replying to a question in the House of Commons, Oct. 8, the Minister of Railways stated that no arrangements had been made by the government for taking over the lines. It was reported in Ottawa on the same day, that at a caucus of government supporters, an opinion adverse to taking over the lines was expressed.

D. C. Coleman, Vice President, Western Lines, C.P.R., Sir Augustus Nanton, a director of the C.P.R., and W. R. MacInnes, Vice President, Traffic, C.P.R., went over the line to Spirit River recently.

The Board of Railway Commissioners, Oct. 9, approved of location plans for the railway at Alcomdale, Alta.

A press report states that the company is being asked to build a branch line to Vanrena, Alta. (Oct., pg. 536).

Esquimalt and Nanaimo Ry.—A press report states that a contract has been let to the Foundation Co., for building a 10 mile extension of the E.&N.R. to Great Central Lake. The branch starts from the present line between Bainbridge and the Alberni terminus, and the route has been located to the Great Central Lake. The location is along the Sproat River Valley, north to its confluence with the Stamp River, where it branches west, and runs along the south shore of the Great Central Lake for some miles. Some clearing is reported to have been done on the right of way. R. Marpole, Vice President, E.&N.R., and General Executive Assistant, C.P.R., Vancouver, B.C., was in Victoria, Oct. 6, in connection with the letting of the contract, and is reported to have said that the work will be pushed through to completion as fast as possible. It is expected that the extension will be ready for operation in July, 1920. J. S. Connell, of the Foundation Co.'s Vancouver office, and E. E. Jenkins, its Victoria representative, are reported to have gone over the located route, Oct. 6. (Oct., pg. 536).

Grand Trunk Pacific Ry.—The Board of Railway Commissioners has ordered the company to file plans for a station at Prince George, B.C., and to have the building completed by Dec. 31. The board made an order for the erection of a station at Prince George, in Nov., 1914, but owing to war conditions did not enforce it. (Sept., pg. 491).

Hudson Bay Ry.—The special committee of which Senator Fowler is chairman, appointed by the Senate to enquire into the navigability of Hudson Bay and Strait, reported Oct. 8, that it had not had time to consider the evidence collected, and recommended that it be empowered to sit during the parliamentary recess and to present a report at the next session. The report was adopted.

The Minister of Railways in replying to questions in the House of Commons, Oct. 9, said approximately 425,000 ties were taken from the Hudson Bay Ry. during 1917 and 1918, and turned over to the Canadian National Rys., for use on C.N.R. lines in Western Canada. During 1917 and 1918 and this year, 825 gross tons of steel rails and part of J. D. McArthur's equipment were taken over, the rails being bought by the Grand Trunk Pacific Ry., and the equipment by the C.N.R. No part of the rails, etc.,were sent to France. A small amount of ballasting only has been done on the Hudson Bay Ry., during this year. The contract for ties let in May to be delivered on the H.B.R. were for renewals on that line. The work of completing the railway from mileage 332 to mileage 424 at Port Nelson, will be gone on with as soon as the financial condition of the country will permit. The reason why no work has been done this year is the urgent need for the completion and building of branch lines in other parts of the west. The government bought 35,999.3 gross tons of rails in the United States, which were rolled for the Russian Government, and these rails were used for branch lines and betterments to existing railways throughout Canada, owing to Canadian rails not being obtainable, due to Canadian rail mills being utilized for the production of munition steel. (Sept., pg. 491).

Kettle Valley Ry.—A press report states it is generally assumed that the company will build a branch line southerly from Penticton, B.C., to Dog Lake, that a barge service will be operated on the lake from the terminus of the branch to Okanagan Falls, and that a line will be built thence to Oroville, B.C.

We are officially advised that the bridge will be 1,163.8 ft., between parapet walls, and will be composed of 6 towers, 2 of 70 ft. span, and 4 of 80 ft. span, with seven 100 ft. deck plate connecting girders. The maximum height from bottom of foundation to base of rail will be 290 ft. The substructure will be composed of 2 reinforced concrete abutments and 24 pedestals, all of 1, 2, 4 concrete.

Lacombe and Northwestern Ry.—A press report states that laying rails on the extension from the present terminus near Bentley, towards Rimbey, Alta., will be started at an early date. The bridge near Bentley, which was holding up the work, was reported to have been completed Oct. 6. This is a timber structure 700 ft. long. (Aug., pg. 431).

Pacific Great Eastern Ry.—Tenders were received to Oct. 15 by A. F. Proctor, Chief Engineer, British Columbia Railways Department, for the supply, fabrication and erection of steel for the superstructure of the viaduct over Deep Creek, in the Cariboo District, at mile 294 from Squamish.

Pas, Man., to Flin Flon Mine—A press report states that the Flin Flon Mine, about 70 miles from Pas, Man., has been sold to Hayden, Stone and Co., of Boston, Mass., which controls a number of low grade copper mining concerns in Utah, Nevada and elsewhere in the United States. It is reported that the sale was only concluded on the definite assurance having been made that a railway would be built to the property. The new owners, it is stated, propose to spend from $12,000,000 to $15,000,000 to fully develop the property, erect smelters, etc. It is estimated that the property contains 20,000,000 tons of copper bearing ore. Hayden, Stone & Co., advised Canadian Railway and Marine World, Oct 20, that they had not bought the mine, but it is said they have an option on it.

A railway from the Hudson Bay Ry., near Pas, to the mine, would be about 70 miles long. The Canadian National Ry. officials gave the matter some consideration in March, and F. Gordon, of its engineering staff, is reported to have surveyed a line of 72 miles, the estimated cost of which is $2,000,000. Negotiations for the building of this line are reported to have been in progress, and the Premier of Manitoba is reported to have said that of the Dominion Government does not build the line the Manitoba Government will. (Oct., pg. 536).

Reid Newfoundland Co.—In an address to the electors of Newfoundland, where a general election is to take place Nov. 3, the Premier, Sir M. P. Cashin, referring to the railway contract existing between the government and the Reid Newfoundland Co., says: "It is provided by contract that the railway system of the colony shall be operated 'efficiently and continuously, and that it shall be maintained in a safe, efficient, and satisfactory manner.' It is undeniable that for years the contracts have not been kept in either particular. The difficulties naturally incident to the operation of new railways explained and excused this to a certain extent, for a few years, and surrounding conditions during the great war prolonged the period, but it is manifest that radical improvements are now essential, and earnest, vigorous efforts shall be made to bring these about. Measures for re-railing, and for providing adequate equipment, are in contemplation, and when these have been negotiated and enacted, great improvement in operation will follow. A change in the location of the main line, so as to swing it more towards Hall's Bay, and branches to Hall's Bay and around the north side of Bonavista Bay, to a port in Fogo Dis-

Stewart to Big Missouri, B.C.—A press report states that Sir Donald Mann paid a visit recently to the Big Missouri mining district of British Columbia, where he met mining and engineering experts in consultation respecting the development of the district. The report adds that it is not improbable that a railway may be built from Big Missouri to Stewart, and that construction may be started in 1920.

trict, will be undertaken. Partially constructed branch lines will be completed and extended as rapidly as financial conditions permit."

We are officially advised in connection with the press report that a railway is to be built from Port aux Basques to Curling, that it is a highway for motor traffic which is projected, not, a railway. The Reid Newfoundland Co. is in no way interested in the work. (See Newfoundland Railway Extension, Oct., pg. 536).

Timiskaming and Northern Ontario Ry.—We are officially advised that the engineering party under W. R. Maher, which left Cochrane, Ont., at the end of May, for the collection of additional information with reference to the general physical features and economic resources of the country between Cochrane and James Bay, has returned recently to Cochrane. The data, that has been obtained, is being compiled and a report will be presented to the T.&N.O.R. Commission in due course. (Sept., pg. 491).

Railway Rolling Stock Orders and Deliveries.

The Canadian Locomotive Co. has resumed operations, after a long strike of its employes.

The Anglo - Newfoundland Development Co. has ordered 16 box cars, 12 flat cars, and 1 caboose from Canadian Car & Foundry Co. Delivery of the box cars is to commence Dec. 1, and of the other cars during December.

The Cordoba Central Ry., Argentine, South America, has rdered 6 Mikado locomotives from Montreal Locomotive works. They will be 165,000 lb. total weight, 123,000 lb. on drivers, with 48 in. diar. driving wheels and 21½ x 24 in. cylinders.

The C.P.R., between Sept. 18 and Oct. 13, received the following rolling stock from its Angus shop, Montreal—11 steel baggage and express cars, 70 ft. long; 5 steel tourist cars; 97 freight refrigerator cars; 51 steel flat cars, 41 ft. long, and 3 Pacific type locomotives.

The Dorado Extension Ry., for which the Canadian Car & Foundry Co., is building, 15 car underframes, and trucks, as mentioned in our last issue, is located in Columbia, South America, with headquarters at Handa and Maraquita. The head offices are in London, Eng., and the order was placed through Bliss Dallett and Co., New York.

Canadian Car & Foundry Co., between Sept. 3 and Oct. 15, delivered 179 repaired box cars, and 136 repaired hopper cars, to the G.T.R., out of a total order for 2,500; 615 repaired cars to the Grand Trunk Pacific Ry., out of an order for 1,5500; and 1 tourist car and 185 stock cars to Canadian National Rys. It received an order from Canadian National Rys. for repairing 1 damaged baggage car.

The U.S. Commerce Department reports 69 locomotives expected from the U.S. in August, valued at $1,530,540. Of these, 7 were exported to Canada, value, $57,205; 2 to India, valued at $17,205, and 2 to South Africa, valued at $28,800. The exports also included one passenger car, and 2,888 freight cars, valued at $4,723,239; among them being 61 freight cars to Canada, $42,040; and 289 freight cars to India, $594,388.

The G.T.R. was stated in Canadian Railway and Marine World for October as having received between July 11 and Sept. 11, among other rolling stock, 44 steel frame box cars, 2 steel frame stock cars and 9 all steel mail cars from Canadian Car & Foundry Co. This information was obtained from an official source, but we are now officially advised that this equipment has not been received and was still on order on Oct. 8.

The Canadian National Rys. 9 steel mail cars, being built by Canadian Car & Foundry Co., details of which were given in Canadian Railway and Marine World for October, pg. 538, will be identical with the specifications for steel full mail cars, approved by the Board of Railway Commissioners, as published in Canadian Railway and Marine World for September, page 473. Those specifications provide that the roof may be either clerestory or turtle back type. The C.N.R. has adopted the clerestory type, with pressed steel carlines. The floor plan given in our September issue was of a 60 ft. car. The C.N.R. ones will be 73½ ft. over end sills.

The Canadian Car & Foundry Co. is reported to have orders on hand totaling $8,000,000, and is expecting to receive a considerable amount of foreign business during the next few months. It is stated that enquiries are being made for freight cars for Roumania, Bulgaria, Russia and Poland, the conclusion of such contracts being merely a matter of credits. Senator Beaubien, one of the directors, and D. P. Lamoreaux, Vice President in charge of sales, are in France, where it is hoped some large orders will be obtained, and it is also stated that orders may be placed by the Ukranian Government. A statement is reported by a leading Canadian railway man that Canadian railways will require 50,000 freight cars in the near future.

Grain Inspected at Western Points

The following figures compiled by the Dominion Bureau of Statistics shows the number of cars of grain inspected on railways at Winnipeg and other points in the western division for Sept., 1919- and 1918, respectively.

	Sept., 1919	Sept., 1918
C.P.R.	10,878	5,260
C.N.R.	7,100	4,122
G.T.P.R.	2,829	811
G.N.R. (Duluth)	130	196
Total	20,937	10,389

Railway Crossing Gates—The coroner's jury, at an inquest in Montreal on the body of Norah Ryan, who was killed by being struck by a G.T.R. train at a level crossing at Dorval, Que., Oct. 14, recommended that the Board of Railway Commissioners be asked to order railways to build crossing gates in such a way that people cannot crawl under them. The evidence showed that Miss Ryan had passed under the gates after they had been lowered to stop traffic for an oncoming train.

An English railway is painting the hand rails of its freight cars white, so that trainmen can see them more easily at night.

Canadian Pacific Railway Construction, Betterments, Etc.

Quebec Station—A press report states that in connection with some improvements about to be made in connection with the lighting of, and the sidewalks leading to the C. P. R. Palais station, the umbrella covering on the platforms will be extended for 100 ft.

Edwardsburg, Ont., Spur Line.—A press report states that the company is preparing plans for the constructioon of a spur line of about a mile from its Ottawa-Prescott line, to serve the Crowder's Hill district of Edwardsburg Tp., Grenville County, Ont.

Guelph, Ont., Freight Sheds—An intimation is reported to have been received by the Secretary of the Guelph, Ont., Chamber of Commerce, that it is the company's intention to demolish the present freight sheds on Woolwich St., and erect new and modern freight sheds on the same side and that the work will be gone on with next spring.

Galt-Woodstock Automatic Block Signals.—Work is reported to be in progress on an extension of the installation of automatic block signals on the main line between Toronto and Detroit. This system of signals has already been installed between Toronto and Galt, 57 miles, and the section on which work is now in progress extends from Galt to Woodstock, 30.6 miles. The work on the 11 miles from Galt to Ayr, is reported to have been completed. The system is described as the normal clear automatic electric signals of the General Railway Signal Co's absolute permissive block type.

Rossburn Subdivision.— The Board of Railway Commissioners has authorized the company to carry its line across the Canadian Northern Ry. at mileage 0.02 Rossburn Subdivision, Man., in sec. 10, Tp. 21, Range 28, west 1st. principal meridian.

Leader to Cantaur, Sask.—We are officially advised, in connection with the reported construction of a line from Leader to Cantaur, Sask., that a contract has been let to the John Stewart Construction Co., for grading 25 miles southerly from Leader, and that the work is in progress.

The extension of this line to connect with the Empress Subdivision, we are advised, is not at present under consideration, but may be taken into account when the 1920 construction programme is being arranged.

Vancouver Ferry Slip—The Board of Railway Commissioners on Oct. 3, authorized the building of a construction truss 3 track ferry slip, with moving leaf on the south shore of Burrard Inlet, Vancouver, B.C. As stated in Canadian Railway and Marine World for March, we were officially advised that the company had decided to proceed with the erection of a new ferry slip at Vancouver, being the first part of a complete plan for the development of the company's marine interests, recommended by a special committee of officials which had had the whole matter under consideration. In July work was reported to be in progress in the way of making test borings for foundation work. (Oct., pg. [illegible])

The National Association of Railway & Utilities Commissioners, in annual convention at Indianapolis recently, passed a resolution urging the return of United States railways to private ownership not later than Dec. 31.

Traffic Orders by Board of Railway Commissioners.

Quebec, Montreal and Southern Ry. Passenger Fares.

28,857, Oct. 3. Re application of Quebec, Montreal & Southern Ry. for permission to increase, from 3.45c to 4c a mile, the rate shown in its tariff C.R.C. 262, as its standard passenger fare between all stations on its railway in Canada, upon hearing the application at Montreal, Jan. 16, 1919, the City of Sorel, the applicant company, and certain parishes along the railway being represented, it is ordered that the company be authorized to increase its standard maximum passenger fare from 3.45c, as shown in its standard passenger tariff, C.R.C. 262, effective Mar. 15, 1918, to 4c a mile; the increased fare herein authorized not to become effective until the company has complied with the requirements of sec. 334 of the Railway Act, 1919.

28,855, Oct. 7. Re application of Quebec, Montreal & Southern Ry., under sec. 334 of the Railway Act, 1919, for approval of its standard maximum passenger tariff, C.R.C. 274, effective Oct. 19, 1919; the said tariff having been filed on the basis permitted by the board in its order 28,837, it is ordered that it be approved, subject to compliance with the requirements of sec. 334 of the Railway Act, 1919.

Interswitching Charges West of Lake Superior.

28,854, Oct. 3. Re order 26,671, Oct. 22, 1917, made upon complaint of Premier Coal Co., Alberta Block Coal Co., and Midland Collieries, disallowing tolls published and filed by the Canadian Northern, Canadian Pacific, and Grand Trunk Pacific Railways, for switching, west of Lake Superior, freight traffic on which the said companies, respectively, had received, or were to receive, a line haul, the said tolls having been charged because the switch movement exceeded in distance 1,000 ft, and re application of C.P.R. for an order rescinding order 26,671, upon reading the submissions filed, and the report and recommendation of the board's Chief Traffic Officer, it is ordered that carriers operating west of Lake Superior, which may be called upon to perform, on long sidings, or spurs, the additional terminal service of switching, by locomotive power, freight which, in the same cars, has been, or is to be, line-hauled by the switching carrier, or a connecting carrier, may, on lawful publication thereof, charge and collect for the said switch movement from or to the entrance to the said siding, or spur, not more than the following tolls in addition to other tolls lawfully chargeable, viz.:

If the distance is over 1,000 ft. and not over 2,000 ft.	$1.00 a car
If the distance is over 2,000 ft. and not over 4,000 ft.	1.50 a car
If the distance is over 4,000 ft. and not over 2 miles	2.00 a car
And for each additional mile or fraction of a mile	.50 a car

The judgment on which the above order was based was given by Commissioner Goodeve as follows: As pointed out in the memorandum of the Chief Commissioner, dated Dec. 17, 1917, order 26,671 was issued in accordance with the judgment of myself, concurred in by him, based on the evidence as submitted at the hearing in July, 1916, at Calgary. The C.P.R. asked for a hearing in Ottawa in the last week of Nov., 1917. The board, at the time, declined to list the case for hearing, the company having been given an opportunity to file a statement showing the practices which in fact apply in connection with other private sidings, and at the coal mines. The company filed its memorandum covering these points, dated at Winnipeg, Nov. 23, 1917. On receipt of this memorandum the whole matter was referred to the board's Chief Traffic Officer, J. Hardwell, to make a careful study of the whole situation and submit his report to the board in light of the above information, as well as previous evidence in the case. Following this direction, Mr. Hardwell made a carefully considered report on Dec. 5, 1917, in which he recommended for adoption a revised basing scale. Copies of this report, together with copies of the memorandum submitted by the C.P.R., were sent to the different industries affected for their consideration, and they were directed to make any submissions they might desire in writing to the board. After these submissions had been received, the Chief Traffic Officer made another report on July 31, 1919, dealing with the various points raised in the several submissions, and confirming the recommendations made in his original report of Dec. 5, 1917.

In the tariffs disallowed by order 26,671, the rate provided for switching cars on private sidings, or spurs, was as follows: For distances up to 1,000 ft., no charge was made; for distances over 1,000 ft., and not exceeding 2 miles, an additional charge of $2 a car was made; and for distances for over 2 miles, 50c a mile or fraction of a mile was added to the 2 mile charge of $2. Distances were reckoned from the head block, where the spur leaves the yard lead within the radius of customary switching operations.

Mr. Hardwell's recommendation was as follows: "From the entrance to the spur, 1,000 ft., free, as now; over 1,000 ft. and not over 2,000 ft., $1 a car; over 2,000 ft. and not over 4,000 ft, $1.50 a car; over 4,000 ft. and not over 2 miles, $2 a car. This would break up the present first chargeable block into three parts. Each mile, or fraction of a mile, over 2 miles, 50c a car in addition to the charge of $2 as at present. If the spur begins outside of the customary switching area, or beyond the yard limit, I propose the assumption that the connection was a voluntary one on the railway company's part in the interest of traffic, and that no further charge ought therefore to be made; in other words, that the reckoning should be from the head-block of the spur in all existing cases, and that for the present purpose all existing connections be assumed to be voluntary. Further, that should the board require a main line to be cut in the future for private spur construction against the railway company's objections, it should, at the same time, prescribe the extra switching toll, if any, to be charged. There are instances where the locomotive's work ceases at the entrance to the spur, the car proceeding thence by gravity to the plant, where it is blocked, and again from the plant to the main line or lead at the other end. In such instances, of course, no charge should be assessed for unperformed service."

A consideration of the data that has been submitted since the hearing in Calgary upon which my judgment was based, and the board's order issued, has led me to the conclusion that the board would now be justified in fixing a limit for free switching and providing a rate basis for switching beyond that limit. I think the rates and conditions as set forth in Mr. Hardwell's report are fair and reasonable, and should be adopted by the board. Order to go accordingly.

Commissioner Boyce gave the following judgment: "I agree that Mr. Hardwell's original report as confirmed by the judgment of the ex-Chief Commissioner of Dec. 17, 1917, should, with his subsequent memorandum of July 31, 1919, be accepted as the board's judgment and be communicated to the parties accordingly."

Commissioner Rutherford concurred.

Express Classification of Ice Cream.

28,883, Oct. 9. Re application of Canadian Association of Ice Cream Manufacturers, for a reduction in the express classification of ice cream from the 1st class to the 2nd class. Upon hearing the matter at Toronto, Feb. 5, 1919, and in Ottawa, Mar. 19, 1919, the applicants, the Express Traffic Association of Canada, the Canadian Manufacturers' Association, and the Montreal and Toronto Boards of Trade being represented and what was alleged, and upon reading the written submissions filed, it is ordered that the application be dismissed.

Commodity Rates on Canned Goods in Carloads.

28,894, Oct. 14. Re complaints of the Dominion Canners, Ltd., Hamilton; Canadian Canners, Ltd., Toronto; Quality Canners of Canada, Ltd., Windsor; Frankford Canning Co., Trenton; Oshawa Canning Co., Oshawa; Northport Canning Factory, Northport; John W. Hyatt & Sons, Picton; Ingersoll Canning & Preserving Company, Ingersoll; E. D. Smith & Sons, Winona; Canadian Wholesale Grocers' Association, Toronto; Montreal Wholesale Grocers' Guild, Montreal, and Quebec Wholesale Grocers' Guild, Quebec, against proposed cancellation by railway companies of special commodity rates on canned goods in carloads. Upon reading what has been filed on behalf of the complainants and the railway companies, it is ordered that the following schedules be suspended, pending a hearing of the matter on a date to be fixed by the board, namely: C.P.R. Supplement 5 to tariff C.R.C., no. E-3391; G.T.R Supplement 2 to tariff C.R.C., no. E-4012; Canadian National Rys. Supplement 6 to C.N.R. tariff C.R.C., no. E-1119; Michigan Central Rd. Supplement 4 to tariff C.R.C. no. 2890; Toronto, Hamilton & Buffalo Ry. Supplement 5 to tariff C.R.C., no. 1202; Pere Marquette Rd., item 55-A, Supplement 8, to tariff C.R.C., no. 2260.

Rates on Agricultural Lime or Stone Dust.

28,906, Oct. 11. Re application of the Henderson Farmers' Lime Ltd., of Woodstock, Ont., for suspension of proposed increase in rates on agricultural lime or stone dust from Kirkfield, Ont., and re order 28,073, Feb. 5, 1919, suspending G.T.R., Supplement 16, to Tariff C.R.C. no. E-4024, and the cancellation of item 195 in C.P.R. Supplement 14 to Tariff C.R.C. no. E-3551; upon hearing the matter at Toronto, June 5, 1919, and in Ottawa, July 8, 1919, the complainant company, Crushed Stone, Ltd., Ontario Agricultural College, Canadian Manufacturers' Association, Grand Trunk and Canadian Pacific Railways, and Toronto Board of Trade, being represented, and what was alleged; and upon reading the written submissions filed, it is ordered that the G.T.R. Supplement 16 to Tariff C.R.C., no. E-4024, and the cancellation of item 195 in C.P.R. Supplement 14 to Tariff C.R.C., no. E-3551, be disallowed.

Chatham, Wallaceburg and Lake Erie Ry. Freight Tariff.

28,915, Oct. 18. Re application of Chatham, Wallaceburg & Lake Erie Ry., under section 330 of the Railway Act, 1919, for approval of its standard freight tariff C.R.C. 576, effective Nov. 8, 1919; upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff be approved, together with a copy of this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Grand Trunk Railway Construction, Betterments, Etc.

Prescott Coal Dock—We are officially advised in connection with the reported laying out of a coal terminal dock at Prescott, Ont., with car ferry connection to Ogdensburg, Ont., that the matter has been under consideration, that is being held in abeyance.

London Reclamation Yard—A press report states that the company will establish a reclamation yard at London, Ont., just each of Egerton St., between the main line and the Stratford line. From the latter line a spur will be run into the site. Scrap of all kinds will be taken to this yard from all parts of the Western Ontario lines, sorted, broken up and otherwise dealt with. The nearest reclamation yard at present on the company's lines is at Montreal.

Windsor Tracks—A Windsor, Ont., press report states that the question of the removal of the G.T.R. tracks from the river front to the other side of the city will be pressed upon the consideration of the management as soon as possible after the company's property has been transferred to the Dominion Government.

Palgrave Station—The Board of Railway Commissioners has approved of location and detail plans for a new station at Palgrave, Ont., on the Hamilton-Allandale line.

Gravenhurst Station—We are officially advised that the company is building an improved passenger station at Gravenhurst, Ont. The entire work, with the exception of the terrazzo floor, is being done by the company's own staff, the interior finish and seating being prepared in the company's shops at London, Ont. The building is 68 ft. long by 25 ft. deep for the main structure, and 15 ft. for the baggage room addition. The roof has an overhang f 7 ft. all round, and there is a covered shelter 16 x 15 ft. at the end of the baggage room. A paved sidewalk leads to the main entrance porch at the roadway front of the building. This opens into the main waiting room 46 ft. 8 in. x 20 ft., of which are in women's waiting and retiring rooms, men's waiting room and lavatory, and station agent's office. A section of the latter office is set apart for the conductors, entrance being obtained from the platform. The baggage room is 15 ft. x 14 ft. 4 in., the entrance to it being under the covered shelter.

The foundations are of concrete, with a brick wall to the sill line, and the superstructure is of frame, with lap siding above that point. The roof is covered with green asphalt fireproof shingles. The floors of the main waiting room, men's room and lavatries, are of terrazzo flooring, and of the baggage room is of ⅞ in. maple. The interior walls and ceilings are finished with 2 coals of plaster with stucco finish, the ceiling angles being coved. There is a 5 ft. wainscot around the interior walls, panelled with flat wood strips and cap above the baseboard. The interior walls and ceiling of the baggage room are sheeted with 2-8 in. grooved, tongued and varnished lumber. A basement has been provided under the center section of the main waiting room, office and ladies' waiting room, to which access is gained by a stair from the agent's office. The building is to be heated with hot air, and space has been reserved in the basement under the office for the storage of fuel, which will be placed in the basement by means of a coal chute and manhole on the platform. The ashes will be removed from the heating plant at the rear of the basement. The plumbing is connected to a septic tank at the rear of the building. (Oct., pg. 536).

Electric Railway Fare Increases in United States.

The New York State Second District Public Service Commission has authorized the International Ry., Buffalo, to increase fares on Nov. 1. The order will permit the company to sell through conductors on the cars 4 tickets for 25c, or to charge 7c for a single cash fare. The present rate in Buffalo is 5c.

Up to date of writing, 389 cities in the United States, having 55% of the urban population, are paying increased rates. Of this total 29 cities are paying a 10c fare; 19 an 8c fare; 100 a 7c fare; 17 of which pay an additional cent for each transfer, and 164 are paying a 6c fare. Fares in the majority of the other cities have been increased, either by a reduction in the length of zones, the adoption of a zone system, the abolition of reduced rate tickets, or a charge for transfers.

Under the service at cost street railway franchise settlement agreed upon recently in Minneapolis, Minn. (subject to referendum vote in December), the city has the option of buying the Twin City Rapid Transit Co.'s property at stated intervals. The valuation fixed for purchase and rate purposes is $24,000,000 as of Jan. 1, 1919, against nearly $26,000,000 as of Jan. 1, 1916, estimated by the city engineer, and nearly $[illegible],000,000 claimed by the company formerly. The company is to be allowed a 7% return on the valuation. The initial fare will be 5c, with variations of 1c, up or down, with rises or declines in earnings. The city council will have control over capital increases and purchases. A reserve fund must be created for repairs, maintenance, renewals and depreciation. A street railway supervisor will be appointed by the city council.

Electric Railway Department

Quebec Public Utilities Commission's Judgment on Increased Fares for Montreal Tramways Co.

The Quebec Public Utilities Commission gave judgment, Oct. 14, on the appeals of the Montreal Tramways Co., and of the city and other municipalities interested against the Montreal Tramways Commission's decision of Aug. 29, fixing the fares to be charged by the company for the current year. The judgment follows:—Under the contract between the City of Montreal and the Montreal Tramways Co., dated June 28, 1918, provision is made for the operation of the tramways system serving the City of Montreal and neighboring municipalities upon the basis or principle which may be fairly described as service at cost. To control the operations of the company and adjust all matters between the company and the public, the contract provides for the appointment of the Tramways Commission. Roughly speaking, it is the duty of this commission to make each year an allowance to cover all expense connected with the operation and upkeep of the system, the expense to be allowed at a fixed rate per car mile for motor cars operating under their own power and a separate allowance for trailers; the allowance being divided into the two items roughly described as operating cost and cost of maintenance and renewals. It is further provided that in practically all matters of importance an appeal will lie from the decision of the Tramways Commission to the Public Utilities Commission.

Approximately a year ago the Tramways Commission prepared an estimate of revenue and expenditure for the year and based upon that estimate an increase of the tariff in force at the time the contract came into effect. Its decision was appealed to this commission, and on Sept. 20, 1918, we revised its findings in some respects and made certain allowances in regard to fares which appreciably reduced those fixed by the Tramways Commission.

The year having expired the Tramways Commission has undertaken a further revision of the tariff in view of the fact that for 15 months, from Feb. 10, 1918, to June 30, 1919, during which the contract had been in force, there had accumulated a deficit of $1,364,111.74.

In order to determine upon what basis the Tramways Commission proceeded we have to examine the contract. It requires that all revenue which may be earned shall be distributed among six different funds, having preference in the order of their enumeration in the contract. The first of these is described as operating costs and taxes, the second, cost of maintenance and renewals, the third, return upon capital value invested at the rate of 6% per annum, the fourth, city rentals, the fifth, contingent reserve fund, and the sixth provides for division, of any surplus there may be. The contract is exacting in requiring that all first five of these funds shall be provided for from the rate of tolls to be fixed, and it is the business of the Tramways Commission to see that the income arising from the operation of the tramways system is sufficient to cover the requirements. The sinking fund is simply there to take care of any casual surplus that may occur, providing that such surplus shall belong to the company to the extent of 20%, to the city 30%, and to the fund for the reduction of fares, 50%.

In estimating what may be required to be allowed for each car mile, as above stated, the commission must first fix the average density of traffic per car mile, and then base its calculations accordingly. The Tramways Commission has made its estimates and allowances for the various funds according to the experience gained in the operation, as it is bound to do, fixed the density of traffic at an average of 8.4, and made an operating allowance for motor cars and similar allowance of 24.7c a revenue car mile, and of 17.4c for trailers used for the transportation of passengers, for the year ending June 30, 1920. It has also granted the company a maintenance allowance of respectively 8.54 and 7.05c a revenue car mile.

Based upon the estimates required according to this allowance, the Tramways Commission on Aug. 29, 1919, regulated the fares to be charged as follows:—

(a) Day Tariff: From 5 a.m. to midnight, 7c cash, or a ticket to be sold in series of 4 for 25c.

(b) Special Day Tariff: A ticket to be sold in series of 5 for 25c to be good only between 6 and 8 a.m. and 5 and 7 p.m. on week days only.

(c) The present night tariff and school children tariff to remain in force.

There is also a modification in regard to the tariff affecting the City of Lachine, but otherwise there is no change in the tariff in the various places comprised in the territory known as that outside the uniform tariff area which is fixed by the contract. Apart from this slight modification, therefore, any change that has been made affects the uniform tariff territory alone.

From this decision of the Tramways Commission an appeal has been taken to this commission by the cities of Montreal, Verdun and Westmount. The City of Lachine has also appealed, and, apart from joining the other municipalities in the matters affecting the appeal of the City of Montreal, makes a special complaint of its own. Apart from these appeals the company also appeals to us, upon several grounds, some of them concern questions of the interpretation of the contract, which the company submits are purely questions of law and yet remain to be argued. It is agreed that the appeals upon these minor questions cannot sufficiently affect the result to have any appreciable influence upon the fares to be charged. They may therefore be ignored for the present. The main appeal of the company is taken upon the ground that the Tramways Commission has not made a sufficient allowance for operating and taxes, nor a sufficient allowance for maintenance and renewals, and has not taken care, in fixing the tolls or fares, of the accumulated deficit which has been already referred to.

We may deal, first of all, with the appeal filed by the City of Montreal, and which has been joined in by the other municipalities which have appealed. At the outset of the hearing upon the appeals which was fixed for Sept. 23, the city made application for the appointment of an expert to go into the various questions involved, with the view of giving evidence and otherwise assisting the city in prosecuting its appeal. After some objection as to the matter of delay involved had been disposed of, the order then granted the city's application for the appointment of this expert and provided that he be given all possible information and facilities to prepare a report and give evidence upon the matters in issue.

The expert engaged was J. R. Bibbins, of Chicago, who appeared before us Oct. 2, and gave very interesting evidence. The sum total of his evidence was to the effect that he could not find any reasonable ground upon which to challenge the estimates prepared by the Tramways Commission. After this evidence had been presented the Chief City Attorney frankly asked that the Tramways Commission's decision be upheld. It is well here not to overlook the fact that Mr. Bibbins took the ground that in adopting various reforms in respect of the operating of the cars and the supply of power the operating expenses might be considerably reduced, but that there was no prospect of this being done in time to produce such results as would materially affect the operating expenses for the current year. This may be said to effectually dispose of the appeal filed by the City of Montreal so far as its demand for an order lowering the tariff fixed by the Tramways Commission was concerned.

We come now to deal with the appeal of the company, itself, having regard only to what may be called the major portion of its appeal, as distinct from the several questions as to interpretation of different items of the contract which have practically no bearing on the actual result as to the matter of fares. There has been produced before us a statement upon which the Tramways Commission based its finding, and which provides for all of the items included in the five different funds contained in the contract above referred to. It will be quite unnecessary to go into this statement in detail as the greater number of items therein are not challenged at all. We will deal only with those items in which there is substantial difference between the Tramways Commission and the company. The company has prepared a comparative statement of its estimate and that of the Tramways Commission so far as operating expenses and taxes are concerned. The respective totals are $5,805,773.09 for the company, and $5,684,000 for the commission; the main difference being an amount of approximately $103,500 over and above the commission's estimate for the cost of motive power. It will be pertinent here to deal, as interesting the question of this appeal, with the situation in a very general way, in regard to the supply of power. In this respect the company's installation would appear to be defective. There is no central station, and the various outlying stations are supplied from five different sources, without the means of supplementing a deficient supply in one by a surplus from another. This matter is being dealt with in what would appear to us to be a thorough and comprehensive way. Both Mr. Bibbins and ourselves give due credit to the Tramways Commission for its efforts in bringing about this reform. It is quite possible and even probable that when the work now under way has been completed there will be a substantial reduction, it may mean as much as 25% in the total cost of power which is now annually entailed.

The figures under the head of operating allowance and taxes, taking all present features into account, do not appeal to us to afford such variance between those of the company and the estimate of the Tramways Commission in what will be the likely result, as to justify us in disturbing the allowance per car mile which the Tramways Commission has made as above noted.

The next item we have to consider is that of maintenance and renewals. Here there is a very substantial challenge by the company of the estimate arrived at by the Tramways Commission in respect of renewals. The company submits a detailed statement of what it claims to have either expended or contracted for up to date with the authority of the Tramways Commission. This shows a total of $479,277.41 as against the Commission's estimate of $400,000. In addition to this difference there are other items covering discarded property, less credits, which brings the actual total, according to the company's sworn detailed statement to $648,126.11. This is not the sole difference between the company and the commission in respect of its item of maintenance and renewals, but it is the main one and the only one which is substantiated by such detail that in the absence of any proof to the contrary, makes it unquestionably acceptable.

In respect of this matter of maintenance and renewals, Mr. Bibbins was very clear and emphatic. He dwelt upon it with a good deal of insistence, comparing the respective quantities that had been done in various years from 1913 on. He took 1913 as a basic or par quantity and showed that in succeeding years considerably less had been done in varying proportions. He states, and his statement in this respect is simply an affirmation of the elementary truth, that any misplaced economy now in this respect is likely to bring serious reckoning either in the increased cost of maintenance or renewals in time to come. Under these circumstances we feel that we are not justified in allowing anything less in this matter of renewals than the total of $646,326.11, which the company has submitted and proved to us. We therefore require that the extra amount, over and above the estimate of the Tramways Commission, viz.: $248,326.11, shall be taken into account as part of the maintenance and renewals allowance and the rate per car mile altered accordingly.

The other items of difference between the Tramways Commission and the company in respect of this allowance for maintenance and renewals are not to be lightly passed over; but on the other hand we think that any actual difference that may be found to have worked out in results in the course of the year can be taken care of out of the probable revenue to be provided.

We have now to consider what has to be done in respect of the deficit of $1,364,111.74. At first view this deficit appears to be quite startling, but an examination as to how it is composed is not without some consolation. We find that of the total amount no less than $692,694.05 is made up of accrued and unpaid rental to the City of Montreal, provided for in the contract, and $115,722.01 represents the amount which should have gone into the reserve fund since the contract came into operation, and did not. We do not wish it to be inferred for one moment that these two sums are to be regarded as other than a deficit under the contract, but there is a vast difference between the total amount of the deficit and the sum in which the cost of operation and of maintenance and renewals, also the return upon the fixed capital invested has fallen short, viz.: $555,595,59 by which these three items have been exceeded. In other words, if the city was able to and did forego what is called its rental, and there were no reserve fund, the actual deficit would be approximately $500,000. There is no clear and precise provision in the contract to guide us as to what shall be done in the case of a deficit, and we have, therefore, to use our judgment and discretion in regard thereto, bearing in mind all the requirements of the contract, and the existing conditions to which it must be applied. One thing is perfectly clear from the contract, and that is it is the duty of the Tramways Commission, and subsidiarily ourselves, to see that the tolls are such as to cover at least all the first five items of section 92 of the contract, viz.: from operating expenses and taxes to reserve fund, inclusive. This duty is to be done in such a way that no undue burden will be laid upon the public, and, upon the other hand, the system will be maintained in an efficient operating condition, in other words, an efficient and reliable service at cost, as early as this can be installed.

Coming now to the matter of fares we have had to bear several considerations in mind, and it will serve better to state these briefly than at length.

That there is a total present annual expenditure, according to the Tramways Commission's estimates of $10,757,303.13, which covers all of the obligatory five items required by the contract and stated above.

That to this we have added $248,326.11 for maintenance and renewals, according to the reasons already given, making a total of $11,005,629.24.

That there is at present an outstanding deficit of $1,364,111.74, made up as above stated, of which about $550,000 is due to the company, and is a preferred charge to the city's rental or the amount payable to the reserve fund.

That while the present is a time of much uncertainty in regard to market conditions, in view of the termination of the war, and that normal industrial activity is in a fair way of being resumed, it is at least as just to suppose there will be a reduction in most commodities entering into the cost of service and upkeep of the company's system as a further increase.

That in fixing tolls, the contract only indirectly and in a contingent way provides for their reduction, while an increase can be decided upon at least each year.

That certain economies in operation are possible according to the best opinion we have been able to secure, and to a certain extent at least are now being undertaken by the Tramways Commission and the company, the result of which should commence to be effective at an early date and be increasingly appreciable as time to develop them occurs.

That fares should be so adjusted as to facilitate such economies as much as possible. In regard to this matter it was a striking point in Mr. Bibbin's evidence that the speeding up of the cars should be brought about by cutting down stops, and educating the public to board and leave the cars with as little delay as possible. It is quite obvious that the faster the circulation the less the number of cars required, and consequent economy in service. We are aware that steps in this direction have already been taken by the Tramways Commission and we would strongly urge upon its attention Mr. Bibbins' suggestions as to what may be further done in this regard, and the means of doing it.

In regard to delay in the boarding and leaving the cars it is a matter of easy observation that no little time is lost through passengers purchasing tickets, making payment, receiving change, etc. This we hope to do away with as much as possible. If we are to accept Mr. Bibbin's evidence in respect of the matter, and his reasoning in favor of lessening the peak load of traffic in the morning and evening as much as possible is clear and convincing, an elimination of anything tending to increase that load is a right and proper objective.

That fares should be so fixed and adjusted as to yield the revenue required through the public being convinced as much as possible that no more is being charged than is necessary, and avoiding hostility and economies which would diminish the traffic and nullify any increases in fares. In this connection we have been supplied with a long list of cities in which fare increases have occurred, most of them in 1918. Comparing rates in places of similar size and importance to Montreal the tariff we have adopted can by no means be considered burdensome. Also when one takes into account the capital cost involved and operating condition of the system, and the outlay in operation and maintenance are far from excessive. Having regard to all of these matters, we believe we will be consistent with the terms of the contract and do justice to the public and the company in fixing the following schedule of fares, basing our decision upon that of the Tramways Commission, which is approved or modified as in each case specified, viz.:

(a) Day Tariff: From 5 a.m. to midnight, 7c cash, or a ticket to be sold in series of 4 for 25c.

(b) Special Day Tariff: A ticket to be sold in series of 5 for 25c, to be good only between 6 and 8 a.m. and 5 and 7 p.m. on week days only.

Modified to read as follows:

"Day Tariff: From 5 a.m. to midnight, 7c cash, or a ticket to be sold in a series of 5 for 30c, or a ticket to be sold in a series of 44 for $2.50, the former series to be purchasable either at the company's offices or such other places as it or the Tramways Commission may fix, or on the cars, the latter to be purchasable only at the company's offices or such places as it or the Tramways Commission may fix and alter from time to time."

(c) The present night tariff and school children's tariff shall remain in force.

Approved, as well as the remaining provisions of the decision of the Tramways Commission relating to the tariff.

As no mention is made of transfers in the decision before us, we think it better, in view of article 77 of the contract, to affirm that transfers shall be issued free upon the payment of any fare, and as at present. However, should there be a grave abuse in the use of transfers we desire to reserve to the Tramways Commission all possible authority under the contract to deal therewith. This portion of our judgment is, therefore, not to be considered binding upon the Tramways Commission to the extent indicated, subject, of course, to the right of appeal as to any regulations that commission may authorize.

The new schedule of fares became operative Oct. 26.

British Columbia Electric Railway and its Fares Claimed to Be Under Dominion, Not Provincial, Jurisdiction.

The enquiry by the British Columbia Public Utilities Commissioner, J. L. Retallack, into the question of whether fares on the B.C.E.R. lines in Vancouver should remain at 6c, as authorized by the B.C. Legislature last session, until such time as the Commissioner should fix a rate, was suspended Oct. 14, when the commissioner adjourned further hearing on the ground of possible lack of jurisdiction, making the following statement:

"The last hearing of this case was held on Oct. 1, and was adjourned to Oct. 6. On Oct. 4 I postponed the hearing which was to have been held Oct. 6, until today without giving a reason. As this enquiry is being held in the interest of the public in its broadest sense, including both the B.C.E.R. and such of the people of the province as are directly affected, and as these hearings are public, thus affording a means whereby this commission can properly make a public announcement, I considered it necessary to postpone the hearing, which was to have been held Oct. 6, until today, and thus to describe for the public information, what makes at least a further indefinite postponement advisable and what may nullify certain proceedings of this commission in this particular case which have taken place.

"On Oct. 4, Geo. Kidd, General Manager, B.C.E.R., called on me and asked if I was informed as to certain amendments of the Dominion Railway Act this year, and particularly directing my attention to the sub-section 21 of section 2, which defines 'railway,' and sec. 6, which is as follows:

"'The provisions of this act shall, without limiting the effect of the last preceding section, extend and apply to

"'(a) Every railway company incorporated elsewhere than in Canada, and owning, controlling, operating or running trains or rolling stock upon or over any line or lines of railway in Canada either owned, controlled, leased or operated by such company or companies whether in either case such ownership, control or operation is acquired by purchase, lease, agreement or by any other means whatsoever;

"'(b) Every railway company operating or running trains from any point in the United States to any point in Canada;

"'(c) Every railway or portion thereof, whether constructed under the authority of the Parliament of Canada or not, now or hereafter owned, controlled, leased or operated by a company, wholly, or partly within the legislative authority of the Parliament of Canada, or by a company operating a railway wholly or partly within the legislative authority of the Parliament of Canada, whether such ownership, control, or first mentioned operation is acquired or exercised by purchase, lease, agreement or other means whatsoever, and whether acquired or exercised under authority of the Parliament of Canada, or of the legislature of any province, or otherwise, howsoever; and every railway or portion thereof, now or hereafter so owned, controlled, leased or operated shall be deemed and is hereby declared to be a work for the general advantage of Canada.'

"For the benefit of the public, I will say that the last sentence of the section, viz., 'declared to be a work for the general advantage of Canada,' has a special significance, because under the British North America Act works which before or after their execution are declared by the Parliament of Canada to be for the general advantage of Canada are removed from the provincial jurisdiction. Reading this section with such knowledge as having before me evidence that the B.C.E.R. Co. was not incorporated in Canada and that certain portions of its lines are under Dominion jurisdiction, I at once decided to postpone further proceedings pending being able to obtain the opinion of the law officers of the crown."

Hydro Electric Railway Projects in Ontario.

Progress is reported as being made in connection with the various electric railway projects to be built under the Hydro Electric Power Commission of Ontario's auspices. The first construction will, it is said, be first on the western lines out of Toronto, viz.: to Hamilton and Niagara peninsula, and to Guelph and London, for both of which the line from Toronto to Port Credit will be common. The Toronto City Council has passed a resolution assuming its share of the cost of these lines, in the four municipalities where the bylaws were defeated—the estimated additional cost to Toronto being approximately $400,000. It was also decided to ask the commission to proceed with the Toronto-Guelph-London line forthwith. The route running into the city from the west is reported to be roughly as follows:—From the Humber easterly along an elevated way just south of the G.T.R. elevated tracks; from Sunnyside easterly on a right of way paralleling the G.T.R., but perhaps on a different level as far as the western boundary of Exhibition Park; likely under that park via a subway; emerging near Strachan Ave., and thence on harbor commission property to near Bathurst St.; thereafter on an elevated structure along the harbor commission's marginal way to the terminal near the foot of Yonge St.

The Hamilton City Council on Oct. 7, passed a resolution asking the commission to proceed with the St. Catharines portion of the line concurrently with the building of the Toronto-Port Credit section of the line to London. The chairman of the Hamilton Hydro Commission is reported to have said Oct. 10, that the preliminaries for construction were proceeding satisfactorily, and that a start will be made this year.

A press report states that the Hydro Electric Power Commission is considering the proposal to acquire the Dominion Power and Transmission Co.'s electric lines in and around Hamilton, in connection with the project for connecting up Hamilton with the Toronto-London line at Guelph. Another press report stated that a valuation was being made of the company's property with this object in view. Surveys are reported to have been completed for the new lines proposed in this connection, and bylaws have been prepared to be sent on for consideration of city, town and other municipalities interested, the object being to have them voted on at the municipal elections in January. No details have been made public up to the time of writing, as to the route, or the estimated cost to the several municipalities. The line, it is stated, will serve Dundas, Galt, Preston, Guelph, Kitchener and Elmira.

In connection with the project for a line from Toronto easterly, it is reported that the entrance into Toronto will be by a north and south line in the vicinity of Morley Ave., and that the traffic will be taken down to the water front in the vicinity of the union station. Sir Adam Beck has addressed meetings at Whitby, Oshawa, and other points in support of the project, which involves the purchase from the Canadian National Rys. of the unfinished Toronto Eastern Ry. A bylaw favoring this purchase was passed by Pickering Tp. ratepayers, Oct. 12, by 473 to 34. Scarboro Tp. ratepayers will vote on the question Nov. 22, and it is expected that the bylaw as to the whole project, will be voted upon by Toronto and other municipalities at the municipal elections in January, 1920.

It was announced Oct. 15 that application had been made by the Hydro Electric Power Commission to the Ontario Government for the passage of two orders in council, one to authorize the submission of estimates and agreements covering the construction and operation of an electric railway to link up Hamilton, Galt, Preston, Hespeler, Guelph, Kitchener, Waterloo and Elmira; the other to authorize the submitting of an agreement covering the purchase of the Sandwich, Windsor and Amherstburg Ry., and the Windsor & Tecumseh Electric Ry., including the acquiring and operating of the electric distribution systems of Windsor and Sandwich.

The British Columbia Electric Ry. has experienced some trouble recently on its high tension wires from Lake Buntzen power plant. On Sept. 30, the power was off for 25 minutes and shortly afterwards for half an hour before the steam plant could be got into working order. It is said that during the many weeks of dry weather, the insulators on the poles carrying the 34,000 volt lines become covered with a coating of soot, ash and fine dust, presumably from the mills along False Creek. Then when rain fell, this moist accumulation caused short circuits in the lines, in many cases setting fire to the poles. This occurred on Sept. 30, at various points on the lines. Linemen were immediately sent out to locate the trouble, but the physical work of setting up the lines again required time, and there was no assurance that other short circuits might not occur.

The Regina, Sask., City Council, on Oct. 7, refused to carry or reject a bylaw to permit the operation of one-man cars on the Regina Municipal Ry., but adopted an amendment to allow the bylaw to remain on the agenda paper for future meetings.

Winnipeg Electric Railway Authorized to Increase Fares Temporarily.

P. A. Macdonald, Manitoba Public Utilities Commissioner, issued an order, Oct. 3, authorizing the Winnipeg Electric Ry. to charge a 6c fare temporarily, pending the conclusion of the hearing of its application for a permanent increase in fares. The order was as follows:

"This application asked for an increase in fares to provide revenue to meet $302,000, being the amount required to meet one year's increase in wages recommended by the finding of the conciliation board, known as the Mathers award $66,000 of this sum required was to meet a situation created by the fact that the award referred to recommends that the increase should date back to June 26 last, while $107,600 is the sum claimed to be in excess of operating costs and overhead charges over revenue, in the company's operations during the nine months beginning Nov. 1, 1918.

"The application is a special one made during the pendency of a major application by the company for a permanent increase in fares to meet conditions which, it is claimed, have so changed since the date of the contract between the city and the company that the company is not now able to secure a fair return on its investment. This major application involves an elaborate investigation into the company's affairs, and will not be determined probably until the end of the year. Meantime expenditures in wages over and above what have to be provided under the existing scales will have to be met and the company claims it has no means to meet these increases without additional revenue.

"Now considering the three items in the claim, there is a difference in principle between the first and remaining two items. The item $107,000 is for a deficit over nine months, and will be fully examined in the major application, and until it is the commission cannot accept it as proven. In that application it will be fully investigated, as will also the question whether the loss already incurred can be made good by fares to be collected in the future. The item $66,000 for back pay is one that is impossible to fully provide for in this application. This sum is overdue and the company must find means of furnishing it. When its general deficit is increased to that extent, all benefit that the company is entitled to will be provided in the major application. The Mathers award affects the payroll of the company approximately $287,650, and this sum will be the total amount that is in issue in this emergency application. Counsel for the city strongly opposed the application, the usual objection being taken to the appointment of the Utilities Commission, and that the commission has no power to act to vary the contract. These questions are not new and with this application the commission will follow the course adopted of overruling the objections.

"Counsel claimed that other means to overcome the situation should be adopted. It was suggested that more capital should be obtained, that the shareholders should reorganize by surrendering portion of their holdings, that the bondholders should be treated as shareholders and their interest made use of. These questions, together with the question of excessive capitalization, watered stock and large dividends paid in the past, the prices charged for power, and non paying sections, are all more or less interested in the major application, and this commission is not passing judgment on them now.

"This application is analagous to the special application made by the company for an emergency increase for the price of gas to meet the increase in the price of coal in 1918. The application asked for an increase in order that the company might give its shareholders a fair return upon their investment in the gas industry. It was just such an application as is before me at present for an increase in rates on street cars, to provide a fair return on the investment in the street railway department of the company's business, which application is referred to herein as the major application.

"To arrive in a judgment in the gas matter, time was required to investigate the whole of the activities of the company, but there was a sudden jump in the price of coal of 50%, and it was evident that gas could not be supplied under the new conditions at the price then current. Without considering any other question other than what the increase in the price of coal would mean in additional operating costs, an order was made raising the rate to a figure that would make provision for that increase. So in this matter the commission leaves all other questions to be dealt with on the major application and deals only with the amount that will be required to provide for the increase of wages, the additional fare that will be required to meet it and the necessity for an emergent order.

"As justifying it in making a special request at this time, the company submits all its receipts and disbursements for the last nine months. These statements show that without providing any interest on capital investment there has been a deficit of $107,000. This commission does not accept these figures as proven, but considering, with the knowledge that the commission has, of the financial condition of the company for the last three years, during which no dividends have been paid, while different applications for increased mileage have been denied because of the company's financial inability, and while it is common knowledge that similar conditions prevail in street railway enterprises all over the continent, this commission accepts, as a fact, for the purpose of this application only, the statement that the company is not in a position to meet from its earnings the increased amount required to meet the demands of the Mathers award.

"The commission is of the opinion that the company's financial position justifies it in making this application, and that relief is necessary to protect the investment from serious loss. The amount to be provided for is in the neighborhood of $290,000 and I make the following order: Car fares, 6c; 55 tickets for 30c; 9 tickets for 50c; workmen's tickets—conditions as at present—5 for 25c; school children's tickets remain as at present. This to remain until an order upon the major application is made."

The order was also made applicable to the City of St. Boniface, and all other municipalities affected by the fares charged in Winnipeg.

The company proceeded to put the order into effect on Oct. 4, but was not enabled to continue to collect the increased fares throughout the day, as acting on the city council's instruction, the city solicitor made an application to the courts for an injunction prohibiting the company from acting on the order. An interim injunction was granted by Justice Macdonald, who before granting it asked if the city would undertake to make good any loss that might be occasioned to the company by its not being able to charge the extra fare, if the Public Commissioner's decision was upheld by the courts. The required promise was given, and was incorporated in the order of temporary injunction. In obedience to this temporary injunction the company at once reverted to the fares in effect prior to Oct. 4.

On Oct. 8, Justice Galt dissolved the temporary injunction. He held that the agreement between the city and the company was very old and had been confirmed on two occasions by the Manitoba Legislature. Under the Public Utilities Act, the Commissioner was authorized to entertain questions arising out of the operation of tramway companies and the Commissioner appeared to have been given the jurisdiction to adjust all rates, either by decreasing or increasing them, as he found reasonable and fair. Dealing with the question of the validity of the act, he said that he was bound to consider the Court of Appeal's decision which was peculiar, as two judges had held one view and the other two the opposite. The appeal against the act on that occasion, had been dismissed. For this reason, he must assume that the act had been recognized as being valid. He was bound by that decision, and the only question left for him to decide was whether the Public Utilities Commissioner was or was not acting within the jurisdiction of the act when he made his award. Under these circumstances, it having been shown by the defence that the Commissioner was within his jurisdiction under the act in making the award, the present injunction could not be considered.

A. W. McLimont, Vice President and General Manager, then issued the following statement: "In view of the decision dissolving the injunction against our continuing in effect the rates of fare provided by interim order of the Public Utilities Commission, which went into effect Oct. 4, and it having been held by Justice Galt that the Commissioner had jurisdiction to make the order increasing fares, we will re-establish the new rates forthwith. I regret the inconvenience caused the public by the recent charges in fares, but they will realize that these changes were caused by conditions over which we had no control."

The city then carried the case to the Court of Appeals, and on Oct. 17, Chief Justice Perdue reserved judgment on the appeal.

The Winnipeg Electric Ry. is stated by a press report to have entered suit against the city for unstated damages, due to the opposition of the city council to its putting a 6c fare into operation. As stated above, the city obtained an injunction, which was dissolved after five days, preventing the company collecting a 6c fare authorized by a temporary order of the Public Utilities Commissioner. The loss sustained during these five days will probably be the extent of the damages claimed.

The Public Utilities Commissioner is proceeding with his investigation into the company's affairs in connection with its application to a permanent increase of fares. The most important part of these proceedings is the making of a valuation of the company's property and assets.

Sherbrooke Railway & Power Co.'s New Agreement With City.

Some time ago a committee of citizens, consisting of the mayor, two ex-mayors, an alderman, an ex-alderman, the City Attorney and the Vice President of the Board of Trade, was appointed in Sherbrooke, Que., to investigate conditions arising under the contract between the city and the Sherbrooke Ry. & Power Co., the company having stated that, unless concessions were made by the city, the operation of the line would have to be discontinued. As a result of the committee's report a bylaw was submitted to the ratepayers on Sept. 15 and was carried by 852 to 339, every ward giving a majority for it. Its principal provisions are as follows:

The following changes were made in fares:

	New	Old
From 6 a.m. to midnight cash	8c	5c
Tickets	4 for 25c	6 for 25c
Children under 14, cash..........	4c	....
Children under 14, tickets ...	8 for 25c	10 for 25c
From midnight to 6 a.m. cash	15c	10c

The limited tickets good from 6 to 7 a.m., 12 noon to 1.15 p.m., and 6 to 7 p.m., which were sold 8 for 25c, have been abolished. Transfers continue to be given free. The new fares are to remain in effect for a year, from the passing of the bylaw, and thereafter to be subject to revision at the request of either the company or the city. In case of disagreement the fares are to be fixed by the Quebec Public Utilities Commission.

The company is to extend its lines on the following streets. Starting from Aberdeen St., along Alexander, Galt, Belvedere, Short, and Drummond Sts. to Pacific St. This extension to be commenced immediately, and put in operation within six months; the company to make such additional extensions as may be agreed on from time to time between it and the city. The company to double track its line from Strathcona Square, along Wellington St. to King St., and for at least 200 ft. east on King St.

The company to raise its rails to the grade required by the city and to do all work necessary to make the lines correspond to the proposed pavement; the cost of the pavement to be paid by the city and the company to reimburse it in 5 equal annual payments with interest for the amount by which the cost of paving any street may have been under the street, between the rails and for 1½ ft. on the outside of each rail, to be done by the city, from specifications and plans to be furnished by the company. Under the previous bylaw the company had to pay the cost of this work. The company is relieved from any part of the expense of bridge planking, or other surfacing if used, for 5 years. The company is relieved of the cost of snow removal for 5 years.

The Sydney Mines, N.S., Trades and Labor Council recently criticized the p.a.y.e. cars, introduced by the Cape Breton Electric Co. Manager Curtis, in reply pointed out that the new system of collecting fares has the most advantages and the fewest disadvantages of any the company could work out.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies:—

Hull Electric Co.—The following are the directors and officers elected recently for the current year: President, A. D. MacTier, Vice President, Eastern Lines, C.P.R.; Vice President and General Manager, G. Gordon Gale; Grant Hall, Vice President, C.P.R.; I. G. Ogden, Vice President, Finance, C.P.R.; W. R. MacInnes, Vice President, Traffic, C.P.R.; F. L. Wanklyn, General Executive Assistant, C.P.R.; E. Hanson, Montreal.

Levis County Railway—The annual meeting was held in Montreal, Oct. 18. The following are the directors for the current year: President, S. H. Ewing; Vice President, J. C. Blouin; Secretary-Treasurer, E. A. MacNutt; other directors: A. B. Colville, Hon. R. Dandurand, J. A. Ewing, John Foreman. H. E. Weyman has been reappointed Manager, and J. W. Brown is Assistant Secretary-Treasurer. The company is in a receiver's hands, and is expected to be reorganized shortly.

London St. Ry.—At a meeting of the London, Ont., City Council, Oct. 6, the mayor stated that he had received an offer from the company for the sale of the railway and other property. The price quoted was too high, and he had so informed the company. No other price had since been mentioned. The price asked by the company is reported to have been on the basis of $50 for each $40 share.

The Montreal & Southern Counties Ry. Co.'s annual meeting was held at Montreal, Sept. 25. Following are the directors for the current year: President, H. G. Kelley, President, G.T.R.; Vice President & Treasurer, Frank Scott, Vice President and Treasurer, G.T.R.; Vice President, J. E. Dalrymple, Vice President, Traffic, G.T.R.; General Council, W. H. Biggar, K.C., Vice President and General Counsel, G.T.R.; W. D. Robb, Vice President, Transportation and Maintenance, G.T.R.; Secretary, J. A. Yates. The other officers are: General Manager, W. B. Powell; General Auditor, J. M. Rosevear, Comptroller, G.T.R.

Montreal Tramways Co.—At the recent annual meeting the directors were all re-elected. Following are the officers for the current year: President, E. A. Robert; Vice Presidents, Hon. G. G. Foster, K.C., and J. W. McConnell; Secretary-Treasurer, Patrick Dubee; General Manager, J. E. Hutcheson; Assistant Secretary Treasurer, A. E. Shaw.

Port Arthur Civic Ry.—Fort William Municipal Ry.—At a joint meeting of the Port Arthur Public Utilities Commission and Fort William City Council's Utilities Committee, in Port Arthur, Ont., Oct. 2, it was decided to telegraph Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, asking him to send an expert to make a report on these electric railways.

Sandwich, Windsor and Amherstburg Ry.—A press report of Oct. 15 states that the Mayor of Windsor, Ont., has been advised by Sir Adam Beck, that he has made application for an order in council permitting the Hydro Electric Power Commission of Ontario to submit to the ratepayers of the border municipalities the question of whether they are in favor of the commission purchasing the S.W.& A.R. An agreement is reported to have been reached between Sir Adam and the company Oct. 13, the amount involved being $2,000,000.

Toronto Railway:

The surplus in August, after allowing for fixed charges, was $2,547.64.

Mainly About Electric Railway People.

Henry Davis, who dropped dead at his house in Thorold, Ont., Oct. 14, and who was born in England in 1843, was G.T.R. Agent at Merriton, Ont., for 28 years, until Sept., 1898, when he was appointed Travelling Auditor, Niagara, St. Catharines & Toronto Ry., continuing in that position until Sept., 1919.

R. J. Fleming, General Manager, Toronto Ry. Co., is suggested, by the Toronto Globe, to continue to manage the railway when it is taken over by the city in 1921.

P. A. Freeman, heretofore Chief Engineer and Superintendent of Tramways, Nova Scotia Tramways & Power Co., Halifax, has been appointed Chief Engineer.

A. Gaboury, Superintendent, Montreal Tramways Co., and Vice President, Canadian Electric Railway Association, has been elected a member of American Electric Railway Transportation and Traffic Associations' executive committee.

Ira P. Macnab, heretofore Shop Superintendent, Nova Scotia Tramways & Power Co., Halifax, has been appointed Superintendent of Tramways.

D. M. McIntyre, K.C., Chairman, Ontario Railway and Municipal Board, and ex-Registrar, of Queen's University, Kingston, Ont., took part in the installation of E. W. Beatty, K.C., President, C.P.R., as Chancellor of the university on Oct. 16.

Lorne C. Webster, President, Quebec Railway, Light, Heat and Power Co., and one of the Montreal Tramways Co.'s directors, has been elected a director of the Bankers Trust Co., Montreal.

The Saskatoon, Sask., City Council, which invited tenders a short time ago, for 5 one-man safety cars, did not accept any tender, stating that the figures were considered too high.

Increases in Electric Railway, Freight and Passenger Rates.

British Columbia Electric Ry.—See "B.C.E.R. and Its Fares Claimed to Be Under Dominion, Not Provincial, Jurisdiction," on another page of this issue.

Guelph Radial Ry.—The board of conciliation appointed to investigate wages and working conditions recommended in its report, that a straight 5c fare be charged, stating that it was only by charging such a fare that the line could be made to pay. Children under 10 to be charged half fare. This report was adopted by the city council, Oct. 7. In the course of the discussion, Alderman Westoby, chairman of the railways committee, is reported to have that the loss on the railway for this current year is estimated at over $33,000. A committee consisting of three representatives of the council was appointed to meet a similar number each from the chamber of commerce, the retail merchants' association and the trades and labor council, to discuss the whole situation as regards the railway's future.

London St. Ry.—In connection with the bylaw passed recently authorizing the company to charge increased fares on its lines in the city, two actions have been instituted to prevent the company acting on the bylaw's authority. One is an action to quash the bylaw, and the second takes the form of an injunction restraining the company from collecting the increased fares authorized. The city council on Oct. 6, decided to allow the company to defend the actions; both of which were set down for hearing at the sittings of the Ontario High Court in London on Oct. 11, but were adjourned for two weeks. On Oct. 27 Chief Justice Falconbridge gave judgment quashing the bylaw.

Montreal Tramways Co.—See under "Quebec Public Utilities Commission's Judgment on Increased Fares for Montreal Tramways Co.," on another page of this issue.

Moose Jaw Electric Ry.—The bylaws providing for amendments to the company's franchise, and covering the charging of a 6c fare, the operation of one-man cars, etc., were submitted to the vote of the ratepayers, Oct. 18, the 6c fare bylaw being carried by 695 to 245, and the latter by a majority of 628. The new rate of fare was put into effect on Oct. 19.

Nova Scotia Tramways & Power Co.—A Halifax press report, referring to the large amount of betterments and extensions being made by the company on its street railway property in Halifax, says the company will probably apply to the Nova Scotia Legislature next session, for power to charge higher fares, and adds: "This outlay can have but one result, and the citizens know it—that for the better service to follow the completion of the improvements, a higher rate for the use of the tramway must be charged."

Quebec Ry., Light and Power Co.—Quebec City Council on Oct. 3, authorized the company to continue to charge the present rates for its gas service, which were fixed in 1918, for another year, and referred the company's application for power to charge increased fares on its city electric railway to the finance committee. At the Finance Committee's meeting, held prior to the council meeting, W. J. Lynch, General Manager of the company, gave considerable information in elaboration of the reasons for the application for increased fares set out in the company's letter to the council quoted in Canadian Railway and Marine World for October. He stated that the company has 875 employes, representing a population of about 5,000 persons; that the pay roll for 1918 was $649,000; that an increase of 2c an hour had been given in July, that an increase of 3c an hour was promised as soon as increased fares were authorized, and a further increase of 2c an hour was promised for December. Five large double truck cars were due for delivery during October, and five more by the end of November. The extension which the company undertook to make in Belvedere Road was estimated to cost $60,000 at the time it was projected, but with the advanced cost of material and labor, it would now cost $110,000.

The finance committee recommended to the city council, Oct. 17, that the company be authorized to charge increased fares on its lines on condition that its obligations to the city, including the building of the Beauport line and some improvements in Belvedere be carried out. The recommendations were that ordinary tickets be sold 4 for 25c or 17 for $1; and working men's tickets 6 for 25c; children's tickets to be unchanged, and that no charge be made for transfers. The council referred the report back to the committee for further consideration.

Saskatoon Municipal Ry.—The Saskatoon, Sask., City Council decided Oct. 14 to increase the cash fare on the municipal railway from 5c to 6c. Tickets will be sold on the cars at 6 for 35c, and in stores at 5 for 25c. It is stated that the object sought to be obtained by selling the tickets in stores at the latter price is to relieve conductors, as far as possible, of selling tickets and making change.

The Sherbrooke Ry. & Power Co.—Full particulars of the advances in fares are given under "Sherbrooke Ry. and Power Co.'s New Agreement With City," on another page of this issue. The cash fare has been advanced from 5c to 8c.

Toronto & York Radial Ry.—A delegation from Mimico, New Toronto, and Etobicoke, waited on the Ontario Railway & Municipal Board, Sept. 27, and asked for a reduction in the fares charged on the company's Mimico Division, between Sunnyside and Port Credit, and that a reversion be made to the former schedule. he board stated that it could take no action, as the fares charged are under the maximum allowed by the Ontario Railway Act.

The Winnipeg Electric Ry. has been authorized by the Public Utilities Commission to charge increased fares temporarily pending complete investigation of its affairs. The following table shows the rates at Oct. 31, 1918, the rates authorized by the commissioner, effective Nov. 1, 1918, the latest scale authorized by the commissioner, effective Oct. 4, 1919:

	[illegible] Oct. 31	Nov. 1, 1918	Oct. 4, 1919
Cash fare	[illegible]	[illegible]	[illegible]
White tickets, unlimited	[illegible]	[illegible]	[illegible]
Red tickets, [illegible]	[illegible]	Eliminated	[illegible]
Red tickets good from 6 to 8 a.m. and from 5 to 6.30 p.m. All day Sundays and holidays, transfers at all times	8 for 25c	6 for 25c	5 for 25c
Children's tickets	10 for 25c	7 for 25c	7 for 25c [illegible]

Full particulars of the Public Utilities Commissioner's judgment and of the subsequent injunction proceedings, are given under "Winnipeg Electric Railway Authorized to Increase Rates Temporarily," on another page of this issue.

Electric Railway Notes.

The Toronto Railway has placed p.a.y.e. cars on its Yonge St. route.

The Kitchener & Waterloo St. Ry. is reported to have bought three p.a.y.e. cars from Cleveland St. Ry.

The Winnipeg Electric Ry. during October received 2 semi steel cars from Ottawa Car Manufacturing Co.

The Chatham, Wallaceburg and Lake Erie Ry.'s Standard Freight Tariff C.R.C. 576, effective Nov. 8, has been approved by the Board of Railway Commissioners.

The Windsor, Essex and Lake Shore Rapid Ry.'s operating rules have been recommended to the Governor General in council for sanction, by the Board of Railway Commissioners.

The Edmonton, Alta., city commissioners received tenders up to Oct. 4, for the privilege of advertising on the back of 5,000,000 red street car tickets, of which approximately 25,000 are used daily.

The Winnipeg City Council is reported to have formulated plans to eliminate within six years street car transportation in Winnipeg, and to replace it with a municipal motor bus service. The Winnipeg Electric Ry. franchise expires in 1927.

The Hull, Que., City Council on Oct. 6, instructed the City Solicitor to write to the Hull Electric Co., and impress on it its obligations to fulfil one of the conditions of its franchise which calls for a satisfactory car service within the city limits.

The Glace Bay, N.S., town council held a special meeting, Oct. 15 to discuss the electric railway service given in the town by the Sydney and Glace Bay Ry., operated by the Cape Breton Electric Co., with which dissatisfaction was expressed.

The Niagara, St. Catharines & Toronto Ry. has had one of its local cars converted into a p.a.y.e. car by Preston Car & Coach Co., the work including the addition of a longer rear vestibule. It is probable that 10 or 11 more cars will be converted similarly.

The Sudbury-Copper Cliff Suburban Electric Ry. has ordered a double truck combination snow sweeper and snow plough of wood from Ottawa Car Manufacturing Co. The dimensions will be: length of flat car, 32 ft.; width of flat car, 9½ ft.; length of cab, 9 ft.; width of cab, 7 ft.; approximate length over all, 42 ft.

London, Ont., City Council has appointed a special assessment committee to take up with the assessment commissioner the question of the assessment of the assessable property in the city. One of the properties which will be affected is the London St. Ry., which this year is assessed at [illegible], of which $101,[illegible] is for rails, poles, wires, etc., on the streets, assessed on a basis of [illegible] a mile fixed in [illegible]. It is reported that the new assessment on the company's lines and other property will be put at approximately [illegible] as the valuation for 1920.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Board of Railway Commissioners has approved the proposed location of the Terrace Hill extension at Brantford, Ont. The bylaw authorizing the building of this extension was approved by the ratepayers at the municipal elections on Jan. 1. The route as outlined in the bylaw was from the junction of Market and Marlboro Sts., extending to St. Paul and Brant Ave., but the exact location was not defined. The matter was under discussion by the council in May, but it is only recently that the route has been definitely laid down. Construction will probably be started at an early date. (June, pg. 324).

British Columbia Electric Ry.—At a recent meeting of the Point Grey, B.C., municipal council, the reeve is reported to have stated that the B.C.E.R. was completing arrangements for extending its tracks on Grenville St., from the present terminus at Twenty-fifth Ave., as far as Forty-first Ave. (Oct., pg. 553).

Calgary Municipal Ry.—A delegation representing the North Hill district, waited on the Calgary, Alta., city commissioners, Sept. 21, in connection with the Center St. extension of the Calgary Municipal Ry., now under construction. After discussing the propositions made the commissioners decided to recommend to council that the line run up Center St., crossing the double tracks on Sixteenth Ave. to Twentieth Ave., turn west as far as Fourth St. W., turn south on this street and run back to Twelfth Ave., then turn west to rejoin the line on Center St. This recommendation was adopted Sept. 29 by the city council which also decided to build a single track extension from Twentieth Ave. and Center St. to join with the Tuxedo line, and for the extension of that line north to Thirty-second St. The city council's decision was not considered satisfactory by the ratepayers of the North Hill district, who called a meeting to discuss the matter. These ratepayers are desirous of having the present Tuxedo line, which was laid under an agreement with the Canadian Estates, taken up, and relaid along Center Ave. (Oct., pg. 553).

Edmonton Radial Ry.—The Edmonton, Alta., City Council's utilities committee on Sept. 25, authorized the extension of the Edmonton Radial Ry. on Brandon St., for not less than five, nor more than nine blocks, the distance to be governed by the material on hand; the work to be done during this year. This proposal was discussed by the city council Oct. 7, when delegates from the localities interested were present and presented alternative propositions. After discussion the council referred the whole matter back to the utilities committee. (Aug., 1918, pg. 348).

Fort William Municipal Ry.—A press report states that the utilities committee has recommended the Fort William, Ont., City Council to purchase interlocking and derail switches for use on the electric railway lines at an estimated cost of $1,900. (Aug., pg. 449).

Levis County Ry. A press report states that the Levis, Que., City Council has asked the company to place its tracks in the center of Begin Ave. (June, [illegible]).

London St. Ry.—The City Engineer reported to the London, Ont., City Council, Sept. 30, that the company had not done any paving work on its track during this year, notwithstanding that it undertook to do $15,000 worth on specifically named streets this year, in consideration of being given the right to charge increased fares. In reference to paving on Richmond and Oxford Sts., the company asked the city to do the work and charge it against the company. It is said that the city will ask the company to do the paving on Rectory St. immediately. (Feb., pg. 88).

Niagara Falls Park and River Ry.—We are officially advised in connection with the readjustment and relocation of tracks at Chippawa and Queenston, Ont., respectively, that these changes have and will be made to facilitate the operation of the Hydro Electric Power Commission of Ontario's water power development. The change at Chippawa was made to facilitate dredging by the commission in that locality, and the relocation of the tracks at Queenston to be made provides for tracks to the commission's new hydraulic plant. A construction railway will be built, 2¼ miles long, connecting the Michigan Central Rd., through Queenston, with the power house site. Running rights have been granted to the commission over a portion of the company's line, and a section of the line will be relocated. The tracks will be used jointly by the company and the commission. The work at Chippawa consists merely of shifting the double track line a little further back from the creek than at present, in fact the plan shows that the new outside track will run for the greater part of the distance to be shifted on the line of the present inside track. The change at Queenstown is a much larger piece of work. It includes the abandonment of the present track from the corner of Queen and Dumfries Sts., along Dumfries St., across Princess and Front Sts., and round the curve to plot F., and the replacing of the same by a line along Queen St. from the corner of Dumfries St., to the River Road, thence curving round to plot F. This piece of line is to be built by the commission for the company and the commission will build for its own purposes a line to connect with the company's track near plot F., and another line starting from the company's tracks, just below River Road.

The Nova Scotia Tramways and Power Co., is, we are officially advised, undertaking a rather large rebuilding programme in Halifax, N.S., to prepare for extensive street paving. The work is being started this year and will be completed during 1920. The company's work consists of relaying 26,100 ft. of track of which 16,600 ft. is double track, and 9,500 ft. single track. The track to be relaid is all on unpaved streets, and is at present laid on a thin layer of gravel ballast. The new track will consist of a 60 lb. 6 in. rail, laid on a 6 in. concrete base with scoria block paving.

Only one piece of new line is contemplated, viz.: 3,000 ft. of double track on Cogswell St., between Gothingen St. and Windsor St., to provide a short route from the west end of the city into the business district.

Ottawa Electric Ry.—A press report states that the Ottawa City Council proposes to have plans prepared for making a number of extensions to the electric railway lines in the city, in preparation for the taking over of the lines when the company's franchise expires in 1923.

Regina Municipal Ry.—At a meeting of the special railway committee of the Regina, Sask., City Council, Oct. 13, the question of future extensions of the municipal railway was discussed. Commissioner Thornton is reported to have stated that a line, as originally planned, along Victoria Ave., east of Broad St., will ultimately be built, but that it may be two or three years before any construction will be done on it. He is also reported to have said that the project of constructing a line along the Boulevard has been abandoned; that the rails for this extension are in stock, but that it will be some time before any construction work will be done. (Nov., 1918, pg. 505).

Sherbrooke Ry. & Power Co., under a new agreement, entered into between the company and the City of Sherbrooke, Que., the company is to extend its railway on the following streets: starting from Aberdeen St., along Alexander, Galt, Belvedere, Short and Drummond Sts., to Pacific St. This extension of 4,800 ft. to be commenced immediately, and put into operation within six months. The company is also making such additional extensions as may be agreed upon from time to time between it and the city. The company is to double track its line from Strathcona Square along Wellington St. to King St., and for a distance of, at least, 200 ft. east on King St., a total of 1,700 ft.

Toronto Civic Ry.—The Toronto City Council has passed a bylaw providing for the extension of its Bloor St. line to Runnymeade Rd., in Ward 7, at an estimated cost of $160,000.

It was reported Oct. 2, that plans for the construction of the Mount Pleasant car line had been approved by the Ontario Railway and Municipal Board. It subsequently transpired that the plans had been sent on by the Board of Control without having been approved by the city council, and that the approval of the O.R. and M. Board had been withdrawn owing to objections having been raised by the Metropolitan Ry. The hearing of the application for the approval of the plans, which show a crossing of the Metropolitan Ry. at Yonge St., and St. Clair Ave., was fixed for Oct. 27.

Toronto Ry.—The Ontario Railway and Municipal Board is reported to have ordered the Toronto Ry. to start building the Pape Ave. line by April 15, 1920, and to complete it by July 15.

What Is Reasonable Air Space for Passengers—Holding the ordinance requiring 30 cu. ft. of air space for each passenger in a closed street car "not legally unreasonable," a Detroit judge has fined the Detroit United Ry. $250 in a test case. Passed as a public health measure in 1916, the ordinance has never been enforced. D.U.R. attorneys contended that the ordinance was "legally unreasonable," and in support of this contention summoned witnesses from Cleveland to testify that a plan to enforce a similar measure there was halted by an angry public before its enforcement was a day old.

The Hull Electric Co. is, we are officially advised, going to add two 800 k.v.a. transformers, and switching equipment to its substation in Hull, Que.

Recommendations for Taking Over the Toronto Railway by the City.

The Toronto Transportation Commission reported to the city council recently the following recommendations prepared by a subcommittee, consisting of Thos. Bradshaw, Finance Commissioner; R. C. Harris, Works Commissioner, and E. L. Cousins, General Manager and Chief Engineer, Toronto Harbor Commission:—

1. That a commission of six members be appointed and constituted for and on behalf of the City of Toronto, for the following purposes, viz.:—(a) To take over the Toronto St. Ry. system, in accordance with the terms and conditions of the agreement between the city and the Toronto Ry. Co. in that behalf. (b) To take over the civic car lines and such properties as have been acquired in connection therewith. (c) To deal generally with all matters relating to local transportation within the city. (d) To locate and construct such street railway lines prior to and after Sept. 1, 1921, as will, in conjunction with the existing street railway lines, provide an adequate system of street railway transportation. (e) To provide adequate modern plant, equipment and other facilities, and to acquire all necessary property therefor. (f) To take charge of, administer and operate transportation facilities now owned or operated, or which may be acquired, by the municipality; to regulate and control all matters relating thereto; to make rules and regulations and enforce same, concerning matters within its powers, and to generally do and perform everything whatsoever necessary to fully and effectively accomplish the purposes for which it is created.

2. That the underlying principle in the administration and operation of the transportation system, shall be the provision of an adequate and efficient service, and that only such rates of fares shall be charged as will secure this, and will, at the same time, make the system self-sustaining, including the maintenance of the property in good condition, and due provision for renewals, depreciation, and debt charges.

3. (a) That such commission be known as the Toronto Transportation Commission, the members thereof to act without salary, or other emoluments.

(b) The commission to be composed of six representatives, as follows:—1. One from the Toronto Board of Trade. 2. One from labor. 3. One from the Canadian Manufacturers' Association, Toronto Branch. 4. One from the Toronto Electric Commissioners. 5. The mayor of the city. 6. The Commissioner of Finance for the city. Representatives numbered 1 to 4 to be severally nominated by the respective bodies named, and appointed only by a two-thirds vote of the city council; the mayor and the Commissioner of Finance to act by virtue of their offices.

(c) The first four commissioners appointed shall hold office as follows: In the first instance, all for a continuous period of three years, at the expiration of which time the first named representative shall retire, and at the expiration of each year thereafter, the other representatives shall retire, in the order named in sub-section 3 (b) hereof. The mayor and the Commissioner of Finance for the city to act during tenure of office.

(d) Upon the retirement of a member as set out in sub-sec. 3 (c), the city council to appoint upon nomination for four years, a representative from the body or organization from which the retiring member had been selected, and in the manner set out in sub-sec. 3 (b).

(e) Any retiring member, upon renomination, to be eligible for reappointment by council.

(f) Any member resigning, dying, or failing or being unable to attend to his duties as commissioner, to be succeeded for the balance of his term, by another member nominated and appointed in the same manner as was the outgoing member.

4. That the city be empowered, upon the requisition of the commission, and the passing of the necessary bylaw, to obtain loans for and on behalf of the commission, through the issue of consolidated loan debentures to the extent necessary to give effect to the commission's requirements and that such loans shall not operate in reduction of the city's borrowing powers.

5. That immediately after the close of each calendar year, the commission shall prepare, report to council, and publish, a complete audited and certified financial statement of its affairs, including revenue and expense account, balance sheet and surplus statement, to be accompanied by a general report of its operation during the year.

All the books, documents, transactions, etc., of the commission shall be at all times open for inspection by the city's Audit Department.

6. That the Corporation Counsel, Major G. R. Geary, K.C., in association with W. N. Tilley, K.C., and A. C. McMaster, K.C., who have been retained by the city in connection with all matters relating to the acquisition of the Toronto Ry., be directed to forthwith prepare the requisite application for legislation to effect the intent of this report, including any provisions they jointly deem necessary, and to submit same for the approval of the city council at the earliest date possible.

7. That the city make application to the Ontario Legislature for the repeal of Sec. 4 of chap. 98, 4 Geo. V., which authorizes the corporation to pass bylaws appointing a body to be known as the Toronto Transportation Commission, and that anything in any act of the Ontario Legislature, inconsistent with the provisions or intent of the application for legislation provided for in this report, shall not apply to the City of Toronto.

8. That the draft legislation, as approved by council, be placed before the qualified ratepayers on Jan. 1, 1920, and that they be requested to vote upon the question: "Are you in favor of a Toronto Transportation Commission, substantially as set forth in the application for legislation to the Ontario Legislature as passed by the city council on the .... day of .... 1919?"

9. That upon the passage of the required legislation, the commission be forthwith appointed and constituted.

10. That so soon as the commission deems wise, the city council serve the Toronto Ry. Co. with notice of its intent to take over the railway according to the terms of the agreement between the city and company. That in any event the council serve such notice before Sept. 1, 1920, in order to preserve its rights.

Electric Railway Employes' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—A board of Conciliation, consisting of H. A. Stone, Chairman, T. W. Fletcher, representing the company, and T. J. Coughlan, representing the men, was appointed recently to investigate wages and working conditions of B.C.E.R. employes, following a demand by the men for increased wages. The agreement under which the men were working was signed July 10, 1918, and the rates of wages and conditions of employment named therein were to continue in force until changed by the parties thereto.

Guelph Radial Ry.—The report of the Board of Conciliation, composed of Judge C. G. Snider, Hamilton, Ont., Chairman; H. Mahoney, Guelph, representing the company, and T. Hall, Guelph, representing the men, which considered the employes' application for increased wages and changes in improved working conditions, was made public Sept. 30. The board recommended that the line be operated in future on the no-turn system, 9 hours to constitute a days work, to be served within 12 consecutive hours, thus giving a 54 4hour week, instead of the present 67 to 70 hour week. The wage scale recommended was as follows: First year, 38c; second year, 39c; third year and after, 41c. The old rates are reported to have averaged 32c. Time and a half to be paid for overtime, but not when replacing a sick man. The award was accepted by the city council, Oct. 7, and also by the men. It is estimated that in order to carry the new agreement into effect the number of employes will have to be increased from 18 to 22. The Conciliation Board also recommended that in order to provide funds to meet increased wages, a straight 5c fare be charged for all persons except children under 10, and that they be given half fare.

Dominion Power & Transmission Co.—Although the Hamilton St. Ry.'s wages agreement with conductors and motormen does not expire until April 1, 1920, the men asked recently for an advance in wages, and subsequently applied for a board of conciliation. The company then agreed to give an advance of 4c an hour, which was accepted. The following are the new rates, per hour, also those on the company's interurban lines:

	City	Interurban
1st 6 months	[illegible]	[illegible]
2nd 6 months	[illegible]	[illegible]
1st year	[illegible]	
2nd year	38c	39c
3rd year and after	[illegible]	[illegible]

Winnipeg Electric Ry.—The board of conciliation, which submitted recently, with Chief Justice Mathers as Chairman, the following wages per hour, for conductors and motormen: 1st 6 months, 46c; 2nd 6 months, 49c; 2nd year, 52c; 3rd year and after, 55c. The award was accepted by the men, but the company stated it could not accept it until an increase in passenger fares was permanently settled.

The Winnipeg Electric Ry. is contemplating changing the routing of several of its important street car lines, to give improved service, by eliminating much of the traffic congestion which exists during the rush hour period, particularly at the corner of Main St. and Portage Ave., which has always been a congested location, not only for pedestrians, but also for street cars and other vehicles.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships—As stated in Canadian Railway and Marine World for October, the Marine Department was in negotiation with Canadian Vickers Ltd., Montreal, for 4 more steel cargo steamships of approximately 8,100 tons each, and with the Midland Shipbuilding Co., Midland, Ont., for one steel cargo steamship, but up to the time of writing, Oct. 22, no official announcement had been made as to the closing of any additional contracts. There appears, however, to be no doubt that 4 more steamships of approximately 8,100 d.w. tons each are being ordered from Canadian Vickers Ltd., and that the Midland Shipbuilding Co. will be given an order for one ship, the type and tonnage of which do not appear to have been decided. Negotiations are said to be in progress with the Nova Scotia Steel & Coal Co., New Glasgow, N.S., and with Wallace Shipyards Ltd., North Vancouver, B.C., for additional ships.

Keels Laid—Since Canadian Railway and Marine World for October was published, we have been advised of the laying of the following keels for steel cargo steamships for Canadian Government Merchant Marine Ltd.:

S.s. Canadian Reaper; Marine Department contract 42; builder's yard no. 1; approximately 8,100 d.w. tons; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.; Sept. 27.

S.s. Canadian Cruiser, Marine Department contract 38; builder's yard no. 3; approximately 10,500 d.w. tons; Halifax Shipyards Limited, Halifax, N.S., Oct. 2, 1919.

S.s. Canadian Constructor, Marine Department contract 39; builder's yard no. 4; approximately 10,500 d.w. tons; Halifax Shipyards Ltd., Halifax, N.S., Oct. 6, 1919.

Names of Steamships—Since the last list of names chosen by the Marine Department for steel cargo steamships for Canadian Government Merchant Marine Ltd., was published in Canadian Railway and Marine World, we have been advised of the following additional ones:

Canadian Armourer; Marine Department contract 29; builder's yard no. 1; Harbour Marine Co., Victoria, B.C.; approximately 8,100 d.w. tons.

Canadian Composer; Marine Department contract 30; builder's yard no. 2; Harbour Marine Co., Victoria, B.C.; approximately 8,100 d.w. tons.

Canadian Runner; Marine Department contract 32; builder's yard no. 43; Port Arthur Shipbuilding Co.; Port Arthur, Ont.; approximately 4,300 d.w. tons.

Canadian Carrier; Marine Department contract 33; builder's yard no. 44; Port Arthur Shipbuilding Co., Port Arthur, Ont.; approximately 4,300 d.w. tons.

Canadian Cruiser; Marine Department contract 38; builder's yard no. 3; Halifax Shipyards Ltd., Halifax, N.S.; approximately 10,500 d.w. tons.

Canadian Constructor; Marine Department contract 39; builder's yard no. 4; Halifax Shipyards Ltd., Halifax, N.S.; approximately 10,500 d.w. tons.

Canadian Reaper; Marine Department contract 42; builder's yard no. 1; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.; approximately 8,100 d.w. tons.

Canadian Thrasher; Marine Department contract 43; builder's yard no. 2; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.; approximately 8,100 d.w. tons.

Canadian Farmer; Marine Department contract 46; builder's yard no. 65; Collingwood Shipbuilding Co., Collingwood, Ont.; approximately 3,750 d.w. tons.

Canadian Observer; Marine Department contract 47; builder's yard no. 66; Collingwood Shipbuilding Co., Collingwood, Ont.; approximately 3,750 d.w. tons.

Canadian Government Merchant Marine Ltd., Steel Cargo Steamship, Canadian Seigneur, approximately 8,100 d.w. tons, proceeding down the St. Lawrence River at Montreal, loaded.

Launchings of Steamships—Since Canadian Railway and Marine World for October was published, we have been advised of the following launchings:—

S.s. Canadian Sealer; Marine Department contract 40; builder's yard no. 5; approximately 2,800 d.w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S.; Oct. 8.

S.s. Canadian Trapper; Marine Department contract 17; builder's yard no. 459; approximately 4,100 d.w. tons; Davie Shipbuilding & Repairing Co., Lauzon, Que.; Oct. 9.

S.s. Canadian Sower, Marine Department contract 20a; builder's yard no. 210, approximately 3,400 d.w. tons, Port Arthur Shipbuilding Co., Port Arthur, Ont., Oct. 9.

S.s. Canadian Aviator; Marine Department contract 6; builder's yard no. 101; approximately 5,100 d.w. tons; Wallace Shipyards Ltd., North Vancouver, B.C.; Oct. 9.

S.s. Canadian Navigator, Marine Department contract 23; builder's yard no. 73; approximately 4,300 d.w. tons; Canadian Vickers Ltd., Montreal, Oct. 18.

Delivery of steamships—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following has been delivered to the Marine Department, and was transferred to Canadian Government Merchant Marine Ltd., for operation, on the date mentioned.

Sept. 24; s.s. Canadian Miller; Marine Department contract 26; builder's yard no. 70; approximately 8,100 d.w. tons; Canadian Vickers Ltd., Montreal, builders. She was loaded at Montreal, with a general cargo, and sailed Sept. 29 for Liverpool.

Deadweights of Steamships—Canadian Railway and Marine World for September contained a table showing the approximate d.w. tons provided for in contracts for 8 steel cargo steamships, ordered by the Marine Department for Canadian Government Merchant Marine Ltd., and the finally determined weights for which the builders are paid at the price per long d.w. ton stated in the contract. The following additional information has been received:

	Approximate.	Determined.
Canadian Seigneur...............	8,100	8,391

Insurance on Steamships—The Minister of Railways, in answer to questions, stated in the House of Commons, Oct. 9, that 11 steel cargo steamships were being operated by Canadian Government Merchant Marine Ltd., and gave their names, d.w. tonnages and cost, full particulars of which appear in the table on page 616 of this issue. The insurance carried on the ships is $9,115,907, as follows: Canadian companies, $139,091; British companies, $6,348,691; United States companies, $2,628,125.

Canadian Vickers Ltd., Montreal, launched the s.s. Canadian Navigator; Marine Department contract 23; builder's yard no. 73; approximately 4,300 d.w. tons; Oct. 18. The christening ceremony was performed by Mrs. C. F. M. Duguid, wife of the Naval Constructor, Marine Department. The company expects to launch two more steel cargo steamships as follows:

S.s. Canadian Spinner, Marine Department contract 27; builder's yard no. 71; approximately 8,100 d.w. tons, in November.

S.s. Canadian Planter; Marine Department contract 28; builder's yard no. 72; approximately 8,100 d.w. tons in November.

Davie Shipbuilding & Repairing Co., Lauzon, Que., which has contracts from the Marine Department for 2 steel cargo steamships, approximately 5,100 d.w. tons each, for Canadian Government Merchant Marine Ltd., the keels for which were laid Mar. 11 and 28, respectively, launched the s.s. Canadian Trapper, Marine Department contract 17; builder's yard no. 459; Oct. 9. The christening was performed by Mrs. Chas.

Duguid, wife of the Naval Constructor, Marine Department. The ship is of the single deck type with poop bridge and forecastle, her dimensions being: length, overall, 344 ft.; length, b.p., 331 ft.; breadth, moulded, 40½ ft.; depth, moulded, 25½ ft.; draft, loaded, 21 ft. 8 in. She will be equipped with triple expansion engines with cylinders 25, 41 and 68 in. diar. by 45 in. stroke, supplied with steam by 3 single ended boilers, each 14 x 11½ ft. at 180 lb. for a speed of 11 knots an hour. It is announced that the interior work and the placing of the propelling and other machinery is to be done by Tidewater Shipbuilders Ltd., Three Rivers, Que. It is expected that the Canadian Trapper will be completed and ready for sea by the end of November. A full description of this type of ship was published in Canadian Railway and Marine World for Oct., 1918.

Halifax Shipyards Ltd., Halifax, N.S., has contracts from the Marine Department for 2 steel cargo steamships, approximately 8,100 d.w. tons each, and for 2 approximately 10,500 d.w. tons each, for Canadian Government Merchant Marine Ltd. The keels for the 2 of 8,100 tons each were laid Feb. 24, and Mar. 15, respectively, and the keels for the 2 of 10,500 tons each were laid as follows: s.s. Canadian Cruiser; Marine Department contract 38; builder's yard no. 3; Oct. 2; s.s. Canadian Constructor; Marine Department contract 39; builder's yard no. 3; Oct. 6.

Harbour Marine Co., Victoria, B.C.—Steady progress is reported on the 2 approximately 8,100 d.w. ton steel cargo steamships under construction for Canadian Government Merchant Marine Ltd. Nearly all the floor plates are in place and a start has been made in the erection of the frames. Work is proceeding simultaneously on both ships.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.; which has contracts from the Marine Department for 2 steel cargo steamships, approximately 2,800 d.w. tons each, for Canadian Government Merchant Marine Ltd., the keels for which were laid Mar. 27 and 31, respectively, launched the s.s. Canadian Sealer, Marine Department contract 40; builder's yard no. 5, Oct. 8.

Port Arthur Shipbuilding Co., Port Arthur, Ont., launched the s.s. Canadian Sower, Marine Department contract 20a; builder's yard no. 42; approximately 3,400 d.w. tons; Oct. 9; Mrs. Wodehouse, wife of Lieut.-Col. Wodehouse, C.A.M.C., and daughter of F. H. Keefer, M.P., for Port Arthur and Kenora, officiating at the christening. The Canadian Sower is the fourth ship built by the company for Canadian Government Merchant Marine Ltd. this year, and will be delivered before the close of navigation.

The s.s. Canadian Adventurer, Marine Department contract 19a, builder's yard no. 41, approximately 3,400 d.w. tons, launched Sept. 8, was completed and delivered Oct.

During the winter the company will proceed with the building of the s.s. Canadian Runner, and the s.s. Canadian Carrier; Marine Department contracts 32 and 33; builder's yard nos. 43 and 44; each approximately 4,300 d.w. tons; the keels for which were laid Aug. 29. They will be launched early next spring.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., laid the keel for steel cargo steamship, Canadian Reaper, Marine Department contract 42; builder's yard no. 1; approximately 8,100 d.w. tons on Sept. 27, and expected to lay the keel for Marine Department contract 43; builder's yard no. 2; also approximately 8,100 d.w. tons, towards the end of October.

Wallace Shipyards Ltd., North Vancouver, B.C., received from the Marine Department contracts for 4 steel cargo steamships, two of approximately 4,300 d.w. tons each, and 2 of approximately 5,100 d.w. tons each. The 2 of 4,300 tons each, s.s. Canadian Volunteer and s.s. Canadian Trooper, were launched Apr. 5 and May 31, respectively. The first of the 5,100 ton ones, s.s. Canadian Aviator; Marine Department contract 6; builder's yard no. 101; was launched Oct. 9. The second 5,100 ton one, s.s. Canadian Raider, is expected to be launched about Nov. 15.

The s.s. Canadian Aviator was sent into the water practically fully equipped with machinery and fittings. The main engines were built by Wallace Shipyards Ltd., the boilers by Vulcan Iron Works, and the winches and smoke stacks by North Shore Iron Works. The christening ceremony was performed by Mrs. Stevens, wife of H. H. Stevens, M.P. for Vancouver Center. This ship is the third launched by the company for Canadian Government Merchant Marine, and the first of two having an approximate d.w. tonnage f 5,100. The s.s. Canadian Aviator has the following dimensions: length, overall, 344 ft.; length, b.p., 331 ft.; breadth, moulded, 46½ ft.; depth, moulded, 25½ ft.; draft, loaded, 21 ft. 8 in. Cargo will be handled by 11 steam winches, operated by steam derricks of 5 tons capacity, supported from steel posts instead of from the masts. The propelling machinery consists of triple expansion engines with cylinders 25, 41 and 68 in. diar. by 45 in. stroke, 2,500 i.h.p., supplied with steam by 3 single ended boilers, each 14 x 11½ ft. at 180 lb. for sea speed of 11 knots an hour loaded. A full description of the 5,100 type of ships was given in Canadian Railway and Marine World for Oct., 1918.

The Kingsley Navigation Co.'s s.s. E. D. Kingsley, which has been built at Fort William, Ont., by Canadian Car and Foundry Co., was expected to be ready for delivery to her owners by the end of October. She will load grain at Fort William for Montreal, and there take on a cargo of flour for St. John, N.B., where she will take on a general cargo for New York. No definite arrangements had, at the time of our advice, been made as to a cargo from New York, but it was hoped to obtain a direct cargo for Vancouver, B.C. The head office of the owning company is at Vancouver, J. F. Tener being Managing Director, and P. J. Maw, Secretary-Treasurer. The s.s. E. D. Kingsley will be operated in the coast trade between Puget Sound and northern ports, which occasional trips to California and South American ports. Capt. M. Uldall has been appointed master, and J. F. Price, chief engineer. The company also owns and operates the s.s. Queen City between Puget Sound and northern ports.

Esquimalt Drydocks—A Victoria, B.C., press dispatch of Oct. 16 says that, following negotiations which have been in progress for several weeks, Skinner Cove, Esquimalt, has been selected as the site of a drydock to be built by the Dominion Government. As stated previously in Canadian Railway and Marine World, the government in 1914 acquired a site at Lang's Cove, Esquimalt, for the purpose of erecting a drydock of the first class. The existing government drydock at Esquimalt has the following dimensions: Length on blocks, 430 ft.; length, over all, 450 ft.; width of gate, 65 ft.; width at top, 90 ft.; depth over sill, 26½ ft.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the seven different types of steamships being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton
Length overall	250 ft	260 ft.	260½ ft.	333 ft. 7 ins.	344 ft.	413 ft. 1 in.	445 ft.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in that column not preceded by an asterisk show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contractions are used in the column giving the type of the vessels to be built:—s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Contract	Contract date	Name	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Keel laid	Launched	Delivered.
1	Mar. 4, 1918	Canadian Voyageur	Canadian Vickers Ltd., Montreal	66	*4,575	$207.	$ 947,025	S.d., p., b. and f'c's'le	Lloyd's	11	June 11, 1918	Nov. 23, 1918	Feb. 22, 1919

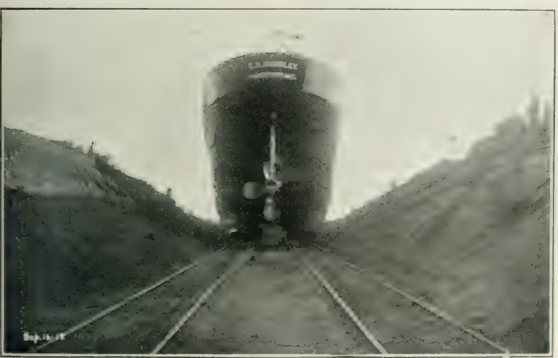
General Shipbuilding Matters Throughout Canada.

B. Belliveau & Co., Belliveau's Cove, N.S., launched the three-masted schooner Rosanne Belliveau, completely rigged and ready for sea, early in October. Her dimensions are: length, overall, 135 ft.; length, over keel, 105 ft.; breadth, 30 ft.; depth, 11 ft.; 281 tons net. She is classed A1 for 12 years in Bureau Veritas and loaded lumber at Belliveau's Cove for the West Indies.

Canadian Car and Foundry Co., Fort William, Ont., launched the 1,500 ton s.s. E. D. Kingsley, for Kingsley Navigation Co., Vancouver, B.C., at its Fort William yards, adjacent to the Kaministikwia River, Sept. 16. This ship is of the single deck type, with long poop and forecastle, and steel deckhouse on poop, with wheel house and chart room above. It is built on the transverse system, with the propelling machinery located aft of amidships. There are two cargo hatches in the forward hold, and one in the aft hold, no. 1 extending from the collision bulkhead to the boiler room bulkhead, and no. 2 from the engine room bulkhead to the after peak bulkhead. There is a double bottom, 3 ft. deep, extending from the collision bulkhead to the after peak bulkhead, divided by transverse oil and water tight floors into a number of compartments. Following are the chief dimensions:

Length overall	209 ft.
Length b.p.	200 ft
Breadth moulded	32 ft.
Depth moulded	17 ft.

The system adopted in launching vessels built at this yard, is unique. The main erecting shop is approximately 1,000 ft. from the Kaministikwia River, and there is a difference in elevation between the water level and the grade at the plant, of approximately 40 ft. Vessels are built adjacent to the plant, rather than close to the water, and are then conveyed to the water's edge by special means. A special building was erected for the building of hulls, and there are 6 building berths. This building is of steel and concrete construction, and is served with overhead travelling cranes to facilitate the application of steel. After a hull is completed, it is supported on cradles, which are carried on specially constructed trucks, which are shown in the accompanying illustration. The hull is then pulled out of the building by a locomotive, on to a transfer table, allowing the hull to move sideways in either direction to line it up with the double line of tracks running from the transfer table to the river. The hull is then moved toward the river by a locomotive, crossing, on the way, Montreal St., the Grand Trunk Pacific Ry., and the Fort William Municipal Ry. Immediately after crossing these tracks, the incline to the water commences, being about an 8% grade. At this point another locomotive is attached, and the hull then descends to the river by its own weight, and is held in check by a cable attached to the bow. The river bank was excavated to obtain this grade and also deep enough to form a slip in from the river, the railway tracks being laid practically to the river bed to allow the trucks to go right into the water. Immediately the trucks go deep enough into the water, the hull floats off and the cradles are hauled in for future use.



Launching of Steel Cargo Steamship E. D. Kingsley, by Canadian Car & Foundry Co., at Fort William, Ont.

Canadian Vickers, Ltd., Montreal—The s.s. Alsace, which was launched at this yard, Sept. 27, for French interests, is being fitted out at the company's works and will be completed, and ready for sea before the close of navigation.

Cholberg Shipbuilding Co., Victoria, B.C., which was organized some little time ago to build wooden vessels with auxiliary power, chiefly for Norwegian interests, has issued a prospectus for the re-arrangement of the company on a co-operative basis to cover both shipbuilding and operating, under the name of British Columbia Ship Owners, Ltd. The proposed capital is stated to be $600,000 in shares of $100 each, and sailing vessels only, are to be built. The prospectus states that it costs $240,000 to build and equip each vessel, and that on a cargo of lumber from Victoria to England, at present freight rates, there would be gross earnings of $82,[illegible]

Doucett Shipbuilding Co., Meteghan River N.S., launched the tern schooner Celeste D., early in October. Her dimensions are: length, overall, 164 ft.; length, over keel, 145½ ft.; breadth, 37½ ft.; depth, 13 ft.; tonnage, [illegible] gross, 594 net. She is equipped with a 15 h.p. Fairbanks-Morse engine for hoisting purposes, and, if necessary, power can be attached to the ship's pumps. She is classed A-1 for 12 years in Bureau Veritas.

Fauquier & Porter, Hantsport, N.S., have discontinued building wooden ships. The yard has been dismantled and the plant disposed of.

Halifax Shipyards Ltd., Halifax, N.S., has on hand for repairs 4 steamships, one being the s.s. Troja, which was salvaged recently in the Bay of Fundy, and the second one is the Dominion Government car ferry Scotia. The latter is being fitted with a new bow.

Halifax, N.S., press dispatch, Oct. 21.—About 1,200 men are now employed at the Halifax Shipyards, and there is much activity about the entire plant. None of the employes are foreigners, and [illegible] of them are service men, 359 having returned from overseas and 62 being on home service. The payroll for September was $144,684. The company's shipbuilding operations are now entering an interesting stage. Four keels have been laid, two of them within the last few weeks, and the work is being pushed ahead rapidly.

J. F. Paige, General Manager Port Arthur Shipbuilding Co., Port Arthur, Ont., is reported to have resigned to enter the Halifax Shipyards' service.

National Shipbuilding Co., Levis, Que.—The s.s. Pomone has been completed by this company and was dispatched to New York recently, to load cargo for Algiers, Tunis and Marseilles. This ship was formerly the Dominion Government dredge Galveston, and was purchased by Hutchison and Dussault, for conversion by the National Shipbuilding Co., into an ocean freight steamship, and eventually sold to Affreteurs. Reunis, Paris, France, which operates the Three Star Line, chiefly in the Mediterranean trade. The reconstruction was done during the winter of 1918-19, and the rebuilt ship was launched 95% completed, and fitted out May 31. The work consisted of the removal of all superstructure, dredging equipment and hoppers, and the construction of a new double bottom with ballast tanks, cargo holds, with 2 new water tight bulkheads, raising of the forecastle and poop decks by 8 ft., new steel decks, a bridge, deck and deckhouse amidships, with chart room and navigating bridge above, crew's quarters in the forecastle and petty officers' quarters in main deck house, new masts with cargo booms and all standing and running rigging complete, 3 cargo hatches, deck winches, capstan and other deck accessories, new rudder, rudder stock and quadrant, rearrangement of engine room and boilers with steam and water piping and complete electric lighting installation. The ship was put under a series of trials June 21, under the supervision of Bureau Veritas officials. She has the following dimensions: length b.p., [illegible] ft.; beam, [illegible] ft.; depth, moulded, [illegible] ft.; tonnage, 3,110 d.w.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—J. F. Paige, General Manager, is reported to have resigned and to have received an appointment from Halifax Shipyards Ltd., Halifax, N.S.

Sorel Shipbuilding and Dry Dock Co.

Ltd., Sorel, Que., creditors have petitioned for a winding up order.

Yarrows Ltd., Victoria, B.C., is reported to have received an order for the construction of a steel ferry steamship of the shallow draft type for operation across the Fraser River, at Mission, B.C. It is stated that the ship will be double ended 90 ft. long, 30 ft. beam, and that on completion the hull will be towed to New Westminster, where two engines with a total of 180 h.p. will be installed.

Shipbuilding in Canada for British Government.

The s.s. War Fury was launched by the Midland Shipbuilding Co., at Midland, Ont., Oct. 16, the christening ceremony being performed by Mrs. W. I. Gear, wife of the Director of Steel Shipbuilding, Imperial Munitions Board. This vessel is of the same type as those built by various companies throughout Canada, for the British Government, under orders from the Imperial Munitions Board. She is of steel throughout, with single deck, poop, bridge and forecastle, and built on the transverse system with inner bottom throughout. Her dimensions are: length, overall, 261 ft.; length, between perpendiculars, 251 ft.; breadth, moulded, 43½ ft.; depth, moulded, 23 ft.; tonnage, 2,240 gross; 3,450 d.w. Cargo will be handled by 4 steel derrick posts, fitted with 8 booms, each boom being served by a 7 x 12 in reversible double drum steam winch. The propelling machinery consists of a triple expansion surface condensing engine, with cylinders 20½, 33 and 54 in. diar. by 40 in. stroke, by John Inglis Co., Toronto, supplied with steam by 2 Scotch boilers, 11 ft. long by 15½ diar. at 185 lbs. The deck winches and windlasses are supplied by Clarke Chapman & Co., and the steering engine by John Hastie and Co., both of England. The vessel is expected to leave Midland, for the seaboard, about Nov. 1.

With the launching of this vessel, the last of the orders placed for the British Government in Canada, for war purposes, is completed. During 1917 and 1918, orders were placed in Canada for 43 steel vessels, at an approximate cost of $40,000,000, and for 46 wooden vessels, costing approximately $24,500,000. The approximate d.w. tonnage of the steel steamships is 211,300, and of the wooden steamships 128,000, an aggregate of 339,300 d.w. tons. The first of the steel steamships was launched May 18, 1917, by Wallace Shipyards Ltd., North Vancouver, B.C., and the first wooden steamship, Dec. 28, 1917, by the Foundation Co., Victoria, B.C.

Prior to the war, shipbuilding had been carried on in Canada in a more or less desultory fashion, chiefly on account of the much lower cost of building in other countries, and, it is claimed, owing to the lack of aid by the Dominion Government, in the form of cash subsidies, or tariff restrictions and alleviations. The placing of these orders by the British Government, gave the necessary impetus to the industry, and the labor conditions consequent on the war, aided in making the cost of shipbuilding in the Dominion more nearly approximate that prevailing in other countries, and in some cases there was a distinct advantage with the Dominion. Several new shipbuilding companies were formed and most of these are still in operation, building vessels for the Dominion Government, and for other allied and neutral countries. A few of these yards, which built wooden steamships on the completion of their contracts have closed their yards, but in the circumstances as they existed at the time, this can only be regarded as inevitable. It remains that the distribution of these orders gave shipbuilders a direct incentive to expand the shipbuilding industry, and an opportunity to place it on a sound and lasting basis.

Canada Steamship Lines' Expansion Plans.

Montreal press dispatch, Oct. 24.—Following on the success that has attended the operations of Canada Steamship Lines on the Atlantic, the report is heard in local shipping circles that important extensions to the ocean service are under consideration. At present the Canada Steamship Lines, through its subsidiary, La Campagnie Canadienne Transatlantique, is operating a passenger and freight service from Canadian to French ports. The amount of traffic that has been booked from Canada and the demand for shipments to other European countries will now, it is said, result in additional arrangements being made. According to present plans, these arrangements will all be completed well before the opening of the next season of navigation on the St. Lawrence. E. Dal Paize, who is a director of La Compagnie Canadienne Transatlantique and Managing Director of La Compagnie General Transatlantique of Paris, France, is expected to reach the city within the next few days to confer with J. W. Norcross, President, Canada Steamship Lines, regarding the extensions now under consideration.

Icebreaking Steamship J. D. Hazen—The Solicitor General stated in the House of Commons recently, in answer to an enquiry, that the British Government was advised, Feb. 26, 1916, that the Dominion Government would agree to transfer this ship to the Russian Government. The ship, in its then unfinished condition, was, on the British Government's request, transferred to the Russian Government, the consideration being that the total amount expended by the Dominion Government on construction, should be refunded. As far as the government is aware, the further disposition of the ship rests with the Russian authorities. The Dominion Government having received payment in full for the ship, the delegates to the peace conference did not insist on the ship's return. The government has under consideration the building of another icebreaking steamship to facilitate winter navigation in the lower St. Lawrence.

Toronto Harbor Life Saving Stations—The operation of the life saving stations in Toronto Harbor, controlled formerly by the Naval Service Department, has been transferred to the Toronto Harbor Commissioners, and new stations are to be equipped at the eastern and western channels, and at Scarboro Beach and the Humber River. J. M. Allin, who was appointed Inspector of Dredging in 1901, and Deputy Harbor Master in 1907, has been given charge of the life saving stations and police patrol.

St. Lawrence River Channel Dredges—It was officially stated in the House of Commons recently that the following number of dredges were in service between Quebec and Montreal during the navigation seasons of 1911 to 1918, both inclusive: 1911, 11; 1912, 12; 1913, 13; 1914, 1915 and 1916, 16; 1917, 11; 1918, 5.

Dominion Government Terminal Elevator at Vancouver, and Grain Shipments to England.

In answer to questions in the House of Commons, Oct. 8, the Minister of Railways gave the following information:

Construction on the government terminal grain elevator at Vancouver commenced in 1915. Power was first laid May 10, 1916. The building was erected by contract, by Barnett McQueen Co., Fort William, Ont., the total cost of construction at commencement of operation, including machinery and equipment, being $760,671.39. Its total storage capacity is 1,500,000 bush. The cost of the per bushel capacity was $50^{711/1000}$ cents. The superintendent of construction was C. D. Howe.

The following grain has passed through the elevator: 1916-1917, 216,284 bush.; 1917-1918, 671,205 bush.; 1918-1919, 889,234 bush.

The financial results for the fiscal years ended July 31, were: 1916-1917, earnings, $4,731.24, net loss $11,506.98; 1917-1918, earnings, $9,422.81, net loss, $4,641.59; 1918-1919, earnings, $22,043.65, net income, $13,514.54. There are six employes.

No overage has existed at Vancouver elevator in commercial grades. We have, however, disposed of grain sweepings as follows: 1916-17, nil; 1917-18, $4^{1820/2000}$ tons at $51.30 a ton, $251; 1918-1919, $124^{1370/2000}$ tons at $72.40 a ton, $8,995.44. Total, $129^{1190/2000}$ tons. Value, $9,146.44.

The following wheat and other grain passed through the elevator en route to European markets via Panama Canal: Wheat—1 hard, 15,165.50 bush.; 1°, 151,296.20 bush.; 2°, 94,107.00 bush.; 3°, 59,340.20 bush.; No. 1, 40,154.10 bush.; No. 2, 9,845.50 bush.; No. 4, 23,459.30 bush.; No. 5, 13,232.40 bush.; Australian, 173,979.10 bush. Total, 580,580.50 bush.

The moisture content of the wheat when landed in Liverpool, after passing through the Panama Canal, compared with moisture test made before being loaded from elevator in Vancouver, was as follows:

Parcel.	Sampled at loading. %	Sampled at discharging. %
B	14.0	14.1
E	13.8	13.7
Y	15.0	14.7
C	13.2	13.1
D	13.6	13.5

Stevedores Limited has been incorporated under the Dominion Companies Act, with a capital of $10,000 and office at Montreal, to carry on a general stevedore, wharfinger and warehouse business, and in connection therewith to own and operate grain elevators, steam and other vessels, etc., and to act as common carriers by water. The provisional directors are Hon. W. J. Shaughnessy and employes of his legal firm.

Engineering Service Ltd., has been incorporated under the Dominion Companies Act, with $20,000 authorized capital, and office at Montreal, to carry on a general engineering business, and to design and build railways, bridges, piers, docks and other works. G. Crutchlow and R. L. D. Mackie, engineers, Montreal, are chiefly interested.

The Lord Strathcona Steamship Co. Ltd., has been under the Dominion Companies Act, with $1,500,000 authorized capital and office at Montreal, to own and operate steam and other vessels and carry on a general navigation business.

Atlantic and Pacific Ocean.

A London, Eng., press report states that of 43 German line steamships, all upwards of 10,000 gross tonnage each, the United States has 25, Great Britain 6, Italy 2, and Brazil 1, with 9 unallotted.

The United States House of Representatives, on Oct. 2, passed a bill changing the system of measurement of vessels passing through the Panama Canal, which provides an increase of approximately 15% in canal revenues.

A steamship service between U.S. ports and Ireland is stated to have been arranged for, in order to meet the demands of a number of U.S. industrial concerns having branches in Ireland. It is stated that Henry Ford, the automobile manufacturer, is to provide the service.

It is reported that communications are taking place between the Canadian Trade Commission in London, Eng., and the Governor of the Gold Coast, West Africa, for the establishment of a direct steamship line between Canada and ports on the west and southwest coast of Africa.

British Government passenger returns to the end of June, in and out of Great Britain, show to British North America outward 31,000, inward 23,000; Australia, outward 6,000, inward 2,500; South Africa, outward 1,500, inward 5,000; United States, outward 11,000, inward 24,000.

The Overseas Shipping Co. is reported to have arranged to start a steamship service in November, between Vancouver and the west coast of South America. The steamships Joan of Arc, Sinaola, and Regulus, are mentioned for the service which will carry chiefly sugar for British Columbia refineries.

A London, Eng., press report of Oct. 2, stated that plans were being discussed there, among a number of independent shipping men, for a steamship service between Canada, the U.S. and the Levant, that some well known Montreal shipping men are interested and that developments may be expected shortly.

A Franco-Belgian shipping combine is reported as being formed, with a capital of 25,000,000 francs, that the preponderance of influence in the company will be Belgian, and that its steamships will sail under the Belgian flag, from Antwerp, to Canada, the United States, the South Antilles and other points in the Pacific.

The Bishop Navigation Co.'s s.s. Iver Heath, formerly the Canadian Pacific Ocean Services' s.s. Lak e Manitoba, which has been completely rebuilt by Halifax Shipyards, Ltd., underwent her trial trips, Oct. 12. She developed a speed of 14 knots an hour, and prceeded subsequently to Philadelphia, Pa., where she took on a cargo of coal for Genoa, Italy.

The Canadian Trade Commission has announced that a direct steamship service between Canada and Norway has been arranged. The s.s. Ranenfjord sailed from Norway Sept. 26, for Montreal and left Montreal for Norway, Oct. 15, to call at Bergen, Stavanger and Christiania. The service is under the management in Canada of Canadian Pacific Ocean Services, Ltd.

W. Grant Morden, M.P., of the Canada Steamship Lines, Ltd., London, Eng. advisory board, is reported to have stated that the company intends to increase its ocean service in the near future, and that in addition to the services already given jointly by Canada Steamship Lines, and Canadian Trans-Atlantic Co., to France, similar services are to be inaugurated between Canada, Belgium and Holland.

The Marine Navigation Co. of Canada, is reported to have completed arrangements for the establishment of a direct steamship service between Canada and Brazil. For this purpose, it is stated, 5 steamships of approximately 5,000 d.w. tons each are nearing completion in Holland, which, when finished, will be registered in Canada. It is said that the first sailing from Montreal will take place this year and that during the winter, sailings will be made from St. John, N.B.

The Canadian Pacific Ocean Services' s.s. Empress of France, formerly s.s. Calgarian, which arrived at Quebec early in October, has been thoroughly overhauled and refitted, subsequent to her service as an auxiliary steamship during the war. Lieut. R. N. Stuart, V.C., D.S.O., is her first officer. The auxiliary steamship on which he was engaged during the war did considerable service and two V.C.'s were awarded, one for officers and one for the crew, each party having to elect the individual to whom it was to be given, the officers unanimously electing Lieut. Stuart.

Elder Dempster & Co. are extending their steamship service out of Montreal, chiefly with South African ports. Two new ships, New Brunswick and New Texas, were in Montreal recently taking cargo for Cape Town. These ships were built at Belfast, Ireland, and have approximately 4,044 d.w. tons capacity. The s.s. New Texas carried 5 locomotives for the South African Government Rys., which were built by Montreal Locomotive Works. Another steamship of similar type is expected in Montreal shortly, named New Toronto, and these three will be followed by another three, all intended for the Canadian-South African trade.

Maritime Provinces and Newfoundland.

The Dominion Coal Co.'s s.s. Corunna, is under going boiler repairs at Halifax, N.S.

The Harbor Grace, Nfld., shipbuilding plant was partly destroyed by fire, Oct. 2.

The British s.s. Chelston, which ran ashore at St. Paul's Island, several weeks ago, broke up and became a total loss during heavy weather Oct. 1. Attempts to salve her met with no success and the greater part of her cargo was also lost. She was owned in Glasgow, Scotland.

The Red Cross Line's s.s. Rosalind, ran aground on Crow's Reef, while en route from St. John's, Nfld., to New York, towards the end of September. The freight, which consisted chiefly of fish, was lightered, and a large hole in the bottom of the vessel was stopped to enable her to be taken to port for complete examination and repairs.

The Minister of Public Works stated in the House of Commons, Oct. 6, that a petition had been received from residents of Park Corner and Sea View, P.E.I. asking the department to dredge out Graham's River, to make it suitable for a boat harbor, but that it was not proposed to take any action, as the estimated cost of the harbor petitioned for is approximately $40,000, and there are harbors within five miles on either side.

Province of Quebec Marine.

The Minister of Marine stated in the House of Commons recently that the government had received a petition from Isle Aux Coudres, Charlevoix County, asking the construction of a breakwater on the southwest side of the island, and that the matter was under consideration.

The wrecked s.s. Montmagny, which has been lying under water near the Isle of Orleans for several years, and which was purchased by Dussault Bros., Levis, Que., with a view to raising her, is reported to have been abandoned after a fourth unsuccessful attempt at salvage.

Judgment was given in the Exchequer Court, at Montreal, at the end of September, allowing the appeal with all costs, of Canadian Vickers, Ltd., from a judgment of the Admiralty Court in 1918, which reduced the company's claim of $52,983.34 to $35,000, for work done on the s.s. Susquehanna. Judgment was entered for $40,484.95 and costs.

The Minister of Public Works stated in the House of Commons recently, in answer to questions, that five tenders were received for building a wharf at

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August, 1919.

ARTICLES.		Can. Canal	U.S. Canal	Total

Notre-Dame-des-Sept-Douleurs, Isle-Verte, Que., the lowest being from N. Letourneau and J. A. Fortier, which was accepted. The department intends to proceed with the work immediately, so that Isle Verte people may be in a position to use the wharf next spring in shipping sea products.

Ontario and the Great Lakes.

The Naval Service Department's Hydrographic Branch, has issued a new chart of Lake Erie, eastern portion.

The Department of Railways and Canals received tenders, Oct. 20, for the reconstruction of the east pier at Port Maitland.

The s.s. Magnolia, registered at Midland, as owned by Canada Steamship Lines, Ltd., has had her name changed to Luckport.

The Webster Steamship Co.'s s.s. Richard W., ran aground in Lake St. Louis, early in October, when proceeding from Kingston to Ogdensburg for cargo.

The Railways & Canals Department invited tenders recently for placing stone protection on the summit level of the Welland Canal between Thorold and Port Colborne, but no tenders were submitted.

Canada Steamship Lines' s.s. W. Grant Morden, arrived at Port McNicoll early in October, with 503,156 bush. of wheat from Fort William. This is claimed to be a record cargo, the previous record having been 493,000 bush. by the s.s. William P. Snider, Jr.

The Montreal Transportation Co.'s barge Hilda, broke from her tug during a gale, near the Gallop Islands, Lake Ontario, towards the end of September, and ran ashore at Stony Point near Henderson Harbor. She carried 35,000 bush. of wheat and was bound from Buffalo, N.Y., to Montreal. She was released early in October.

The Hydro Electric Power Commission of Ontario is operating a drill scow in the neighborhood of Morrisburg, and Cat Island, and navigators are asked to assist in the operation by causing as little disturbance as possible when passing. The scow exhibits the usual signals for a vessel not under command, as prescribed in the rules of the road for the Great Lakes.

The schooner Bertie Calkins, while taking coal from Oswego, N.Y., to Belleville, sprang a leak during heavy weather, Oct. 12, and sank. There was no loss of life, the crew reaching land in the boats. The schooner was owned by R. G. K. Hepburn, and T. L. Vandusen, of Picton, and was built at Two Rivers, Wis., in 1874. It is expected that she will be raised and taken to Belleville.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for September as follows: Superior, 602.55; Michigan and Huron, 580.81; St. Clair, 575.61; Erie, 572.75; Ontario, 246.86. Compared with the average September levels for the past 10 years, Superior was 0.08 ft. below; Michigan and Huron, 0.14 ft. above; Erie, 0.38 ft. above; Ontario, 0.73 ft. above.

The s.s. T. J. Waffle, owned by Swift & Co., Kingston, is believed to have foundered in Lake Ontario, Sept. 22. She sailed from Fairhaven, N.Y., that day with coal for ingston, and during Sept. 24, wreckage and life preservers bearing the name of the vessel were found on the beach near Oswego. There were known to be on board, in addition to the master, Capt. C. Beaupre, a crew of 6 men and one woman. The vessel was built at Westport, Ont., in 1914, and had an oak hull, and was equipped with high pressure engine with cylinder 12 in. diar. by 14 in. stroke, supplied with steam by a single firebox boiler, 4 ft. 8 in. diar. by 8 ft. long, at 150 lbs. Her dimensions were: length, 105 ft.; breadth, 22 ft. 5 in.; depth, 8 ft.; tonnage, 202 gross, 104 net.

British Columbia and Pacific Coast.

The Union Steamship Co.'s s.s. Camosun, which arrived at Vancouver, Oct. 17, with a broken rudder post, is being repaired by Wallace Shipyards, Ltd.

The C.P.R. s.s. Princess Alice, was laid up early in October, for her annual overhaul. As soon as this is completed she will replace the s.s. Princess Charlotte, which will also be overhauled.

A test action had been entered against the C.P.R., for unstated damages, for the loss of A. R. McLean, when the s.s. Princess Sophia ran ashore on the rocks, and eventually sank, in the Lynn canal about a year ago.

An uncharted rock, marked by kelp, is reported 300 ft. northwest of the island situated north of Safa Island in the Pearse Canal. There is a depth of 17 fathoms inside the rock, and over 30 fathoms in the channel north of the rock.

The acting Minister of Marine stated in the House of Commons, Oct. 22, that the operation of Bamfield life saving station had been temporarily suspended on Aug. 15, and that applications had been invited to fill the positions of crew at the stations, with a view to put it into operation for the coming winter.

The acting Minister of Marine and Fisheries has, according to an Ottawa press dispatch of Oct. 21, given notice of an amendment to the Shipping Act, to provide that ships registered in Canada, employed in voyages between ports in British Columbia and San Francisco, or any United States port north of San Francisco, shall be exempt from the payment of pilotage dues.

The Dominion Government lighthouse steamship Leebro left Victoria, Oct. 8, to place four new aids to navigation in northern waters, viz., a new gas light at Camp Point, Grenville Channel, an oil light at David Point, near Ocean Falls; a gas light on Kinnahar Island, new Prince Rupert, and a gas light on Gin Rock. The light house steamship Newington has left Victoria for the west coast of Vancouver Island, to examine and overhaul aids to navigation there.

The British Admiralty is reported to have raised 440 sunken ships during the last four years, which, with cargoes, are valued at $225,000,000.

Welland Canal Lock Gate Accident—The U.S. s.s. Lake Elon, in passing through the Welland Canal, en route from Conneaut, Ohio, to Montreal, Sept. 30, struck the foot gates of lock 23 and severely damaged them, but did not carry them out. It was necessary to place two spare gates in position, and navigation was resumed early Oct. 1, having been interrupted for 16 hours. The master of the vessel stated that he gave the engineer the signal to reverse, but that the vessel went ahead, instead of backing up. The damage is estimated at $5,000.

Contracts Let for Marine Public Works.

The Dominion Public Works Department has let the following contracts:

Port Elgin, Ont., repairs to town wharf and reconstruction of breakwater; Max Clairmont, Goderich, Ont.; Sept. 2; schedule of prices.

Half Moon Bay, B.C., construction of pile bent and timber decking wharf; Fraser River Pile Driving Co., New Westminster, B.C.; Sept. 2; $5,775.

Fraser River, B.C., from entrance of North Arm to New Westminster; dredging; Pacific Construction Co., Vancouver; Sept. 2; class B., $0.15½ a cu. yd., place meas.

St. Maurice River, Three Rivers, Que.; dredging; Simpson Bros. Co., Montreal; Sept. 3; class B, $0.24 a cu. yd., scow meas.

Sidney, B.C., repairs to wharf; McDonald, Watson & Wither; Victoria; Sept. 3; schedule of prices.

Roberts Bay, B.C., repairs to float and approach; McDonald, Watson & Wither; Sept. 3; schedule of prices.

Saanichton, B.C., repairs to wharf; McDonald, Watson and Wither; Victoria; Sept. 3; schedule of prices.

Toronto harbor, eastern entrance; reconstruction of portion of superstructure of east pier; C. S. Boone Dredging & Construction Co., Toronto; Sept. 9; schedule of prices.

La Prairie, Que.; Improvements to protection dike; A. Lacroix, and H. Gravel, St. Lambert; Sept. 15; schedule of prices.

Grosse Isle, quarantine station, Que.; construction of operating house in connection with radiotelegraph station; Delphi Maranda, Que.; Sept. 13; $2,340.

North Lake, P.E.I.; boat harbor; J. Hughes, J. Quinn and L. B. MacMillan, Charlottetown; Sept. 23; schedule of prices.

Berthier en bas, repairs to wharf; Nazaire Letourneau, Montmagny; Sept. 20; unit prices.

Okanagan Center, B.C.; construction of public wharf; S. Mills, New Westminster; Sept. 26; schedule of prices.

Shippigan Gully, N.B.; repairs to breakwater; A. Landry and S. G. Robichaud, Shippigan; Sept. 27; schedule of prices.

Depot Harbor, Ont.; renewal of wharf; R. Brewder, Ottawa; Oct. 3; schedule of prices.

Ste. Anne de Beaupre, Que.; wharf repairs and reconstruction; Onesime Poliquin, Portneuf, Que.; Oct. 10; schedule of prices.

Demountable Wooden Ships.—A Pacific coast press report says:—The demountable ship is not yet a reality. The scheme suggested by John Arbuthnot of Victoria, B.C., has not yet been tried. It is announced that construction will be started in Seattle by a shipbuilding man formerly resident in Victoria. The builder is said to have gone to New York to arrange for the building of the demountable craft. Canadian banking interests are said to be behind the venture, and their support was not given until thorough investigation had been made by marine experts, and approval given. The two ships that are to be built in Seattle will contain between 5,000,000 and 6,000,000 ft. of lumber, and will be fitted with auxiliary power that will give them a speed of 5 to 6 knots. It is estimated that the market value of each ship will be $250,000 in Puget Sound, while the price it will bring in Great Britain is $500,000.

Control of Canadian Ships by British Ministry of Shipping.

London, Eng., Oct. 1.—Many shipowners and heads of industries in Canada have complained of the attitude of the British Ministry of Shipping in its refusal to release tonnage chartered for use in the Canadian trade and commandeered by the Ministry of Shipping during the war. They have summed up this as a discrimination against Canadian interests Senator Nicholls, made the same statement in the Senate at Ottawa recently. People in Canada are not in a position to judge of the enormous difficulties under which the Ministry of Shipping has worked and the Canadian mission in London secured the following statement from Sir Norman Leslie, who was Director of Requisitioning in the Ministry of Shipping during the war. Sir Norman has also presented the case to the satisfaction of some prominent Canadian shipping men who were recently in England. In his criticism of Senator Nicholls' speech he says it appears to him to be a statement of the hardships inflicted on the Dominion Coal Co., supported by a general accusation of discrimination by the British Government against the Canadians during the war and since the armistice. The statements about the coal company, he says, are of relatively small importance. The attempt to strengthen the prejudice against the mother country by suggesting that people in England were favored at the expense of friends and allies is a serious matter, but needs only fuller information to be dispelled. Sir Norman continues:

"In 1916 shipping was the most vital problem which faced Britain. Britain had to bear not only her own burdens but those of the allies. Italy's ammunition factories were calling for coal. Similarly Britain had to supply France with 2,000,000 tons of coal a month, carry wheat to her shores, and assist in the importation of war materials. After 1916 the immense extension of the British fronts required the requisitioning of vessels in batches from 20 to 150 at a time. Charter parties were ruthlessly broken, contracts waived on one side, cargo left in warehouses, and ships thus obtained to carry stores to the army and allies and coal to the fleet. All day long the transport department was thronged with ship owners, merchant charters, manufacturers, members of parliament, foreign attaches, high commissioners, and even bishops, each with a moving tale to tell of the loss inflicted, factories closed, and the welfare of the whole districts imperilled by the ruthless requisitioning of chartered tonnage required for contract. The coasting trade was reduced to a skeleton. Engagements which seemed inviolable in April were doubtful in July and ruthlessly upset in September, and by the end of autumn 1916, there were practically no more tramp steamers available. The only way to get further tonnage was to curtail the voyages of liners and see that they brought cargoes from the nearest possible spot, instead of along the usual routes. Supplies from places like India, Australia, New Zealand and the far east were cut down to the barest possible figures. The Chinese coasting trade, which had been built up by British shipowners during half a century, was entirely broken up and the ships put into the Persian Gulf for the Mesopotamian expedition and the trade handed over temporarily to the Japanese. The services between North America and Argentine were discontinued and taken up by neutrals. Steamers trading on the Indian coast were transferred to the Atlantic, and meat steamers which were built for Australian and New Zealand trade were concentrated on the Atlantic.

'We bought millions of tons of wheat in Australia, and left it there to be eaten by mice and weevils because we had not ships to bring it home—and people talk of discrimination. Any Canadian who may think that in circumstances of such stress, it was possible to discriminate, has only to look at the quantities exported from Canada in 1916, 1917 and 1918, and at the names of the ships which visited the St. Lawrence, the Corinthic from New Zealand, Dunvegan Castle, from the Cape, Themistocles, for Australia, Khiva from India, Jason from Japan, and the Darro from Plate, to realize that if there was any discrimination it was certainly not against Canada. That the Dominion Coal Co. suffered hardships by the temporary losses of some cheap-time chartered steamers is true, but so did hundreds of firms in Britain. That coal as a consequence was scarcer and dearer in Canada is also true, but it was never so scarce nor so dear as in Italy or France, nor the consequences of the scarcity fraught with such terrible possibility."

London, Eng., Oct. 6.—Shipping conditions on the Atlantic route are now easier than they have been at any time in the past six months. The Ministry of Shipping is taking only 40% of Canadian cargo space for October, leaving 60% for commercial cargo. It is not believed here that the movement of the wheat crop will result in a shipping scarcity again. The British Government will supply ships for the transport of its purchases of grain from Canada, and it is expected there will be a slackening of the Ministry of Food's requirements on account of the congestion at the British docks, which has led to vigorous protests against further large importations of bacon, timber, etc., until conditions improve. The recent announcement of the transfer of Canadian vessels from British to Canadian registry does not mean the automatic transfer of all such ships. In most cases the Ministry of Shipping will continue its control while it remains in office, which it is expected to do for six or seven months longer.

London, Eng., Oct. 13.—The Shipping Controller has informed the Canadian Trade Mission that the British Government, which now requisitions 50% of cargo space to Canada, expects to requisition less gradually every month henceforth, although some months must elapse before a reduction in freights and the tendency of increased exports to stabilize exchange can be expected.

The foregoing cable dispatches were sent by the Montreal Gazette's London correspondent.

London, Eng., cable to Toronto Globe, Oct. 24: The North Atlantic Traffic position is now very much clearer, especially as regards passengers, and the waiting list has been nearly run off altogether. The repatriation programme has been carried out so vigorously that the government now requires only one-fifth of the total passenger space. At the request of Capt. Fisher of the Canadian Pacific Ocean Services, the British Government has allotted the ex-German Prinz Friedrich Wilhelm, 17,600 tons, about the size of the Empress of France, to replace the Melita, which the government borrowed to ease the congested traffic to the far east. Consequently the Montreal service will not suffer.

Regard to future reconditioning is still impeded by the idiosyncrasies of the British workman, who when working for the government feels it a point of honor not to work too hard. It is wonderful to what trouble and inconvenience he will put himself to achieve this end. At a recent inspection workmen were found standing in a pitch dark place smoking. Others were locked up in the cabin asleep. This is the reason why, in the case of the Empress of Britain, the company has decided to accept a lump sum in compensation and do the work itself. The vessel will be completely gutted and reconstructed in the most modern manner. It is hoped, by substituting oil for coal, to gain another knot in speed and work up to 19 knots. This is quite in the fashion, for, while the transatlantic line still prefers a mixture of coal and oil, the P. & O. has just decided to build seven or eight ships for oil alone.

Proposed Dry Docks at Vancouver, B.C.

Applications have been made to the Dominion Government for aid under the Dry Docks Subsidies Act, for the construction of dry docks at Vancouver, as follows:

J. Coughlan and Sons—For concrete graving dock, 700 ft. long, 100 ft. wide at entrance, 32 ft. depth of water over sill at ordinary spring tide, to be built about 1,000 ft. west of the Dominion Government wharf and grain elevator, at an estimated cost of $3,658,000.

Davidson and Cameron—For a concrete graving dock, 1,150 ft. long, 125 ft. wide at the entrance, 38 ft. depth of water over sill at ordinary spring tide, to be built at Deadman's Island, at an estimated cost of $6,600,000.

Wallace Shipyards Ltd.—For a floating dry dock of 15,000 tons capacity, to be built just east of the ferry landing at North Vancouver, at an estimated cost of $3,500,000.

The applications are being examined by the Public Works Department's Engineering Branch. The estimated costs of all dry docks are subject to revision by the department.

The s.s. Cabotia, which was wrecked recently, was offered for sale early in October. She was built at Gibraltar, Mich., of oak, in 1880, and named Hiawatha, and has diagonal strapping on the frames and steel boiler house. She underwent large repairs to hull in 1917-18, and extensive repairs were made to her engine during 1919. Her dimensions are: length, b.p., 234 ft., breadth, moulded, 36 ft., depth, moulded, 30 ft., tonnage, 1,630 gross, 932 net. She is equipped with fore and aft compound engine, having cylinders 21 and 50 in. diar., by 46 in. stroke, 700 i.h.p. at 85 r.p.m., and supplied with steam by a single Scotch boiler 12 x 12½ ft. at 125 lb. The wreck was purchased by the Donnelly Salvage and Wrecking Co., which raised the ship and took her to Kingston, Ont.

The Tonnage of Ships Explained.

With the very large extension of the shipbuilding industry in Canada, during the war, considerable attention has been directed to a number of the technical details of ship construction, by those whose business and interest are connected with shipbuilding, but who are not intimately concerned with the technical side of the industry. Among these, is the matter of tonnage calculation, about which there is undoubtedly a great deal of misconception. Frequent reference is made in the daily press, and very often wrongly made, to gross tonnage, net tonnage, displacement tonnage and deadweight tonnage, with little idea as to how these are arrived at. The following information will doubtless be of interest in this connection:

Before entering upon an explanation of the various formulae used in determining the tonnage of a vessel, a brief recapitulation of the British tonnage laws may be of interest. Until 1694, no act of parliament enforced a rule for tonnage measurements on English ships, with the exception of "keels" and vessels loading coals on the Tyne and Wear. The earliest English tonnage law was passed in 1422, and applied exclusively to "keels" used in carrying coals at Newcastle-on-Tyne. Its object was to measure accurately the "portage" of each keel, and to mark that portage on the vessel so that the King's due of two pence per chaldron might be secured. In 1679 a further act was passed, extending the law to the Wear, and in 1694 deadweight was substituted for chaldron measure. An act of 1775 extended this law to vessels loading coal in any port in the United Kingdom. The act of 1694 was the first act of parliament embodying a rule for estimating tonnage for English sea-going and coasting ships. As the first English tonnage rule, it is worth reproducing, though the act was repealed in 1696. It ran as follows:—

L = length of keel (so much as she treads on the ground).
B = breadth amidships (inboard from plank to plank).
D = depth of hold (from plank below keelson to under part of plank of upper deck, up to which cargo is stowed).

$$\text{Tonnage} = \frac{L \times B \times D}{94}$$

The next English tonnage law, enacted in 1773, applied to all classes of merchant ships. It continued legally in force up to 1835, and is even now used, and known as the B.O.M., or

Builder's Old Measurement Rule.—In carrying out this rule, the length was taken on a straight line along the rabbet of the keel, from the back of the main stern post to a perpendicular line let fall from the fore part of the main stem under the bowsprit. The breadth was the extreme breadth to the outside planking, exclusive of doubling planks or strakes that might be wrought at that part.

If L = length, B = breadth, then tonnage (B.O.M.) =

$$\frac{L - 3/5B \times B \times B/2}{94}$$

Following this brief retrospect, let us now consider present day methods of computing the tonnage of our ships.

Displacement.—To the lay mind, displacement tonnage must convey the most ready and accurate idea as to the relative sizes of ships, as it gives their actual weights, or, in other words, the weights of the volumes of water they displace. It is the system used in denoting the tonnage of all warships. As Sir William White says in his classic work on Naval Architecture, it is usual to express the volume in cubic feet, and for sea water to take 64 lb. as the weight of a cubic foot; so that the weight of the ship in tons, multiplied by 35, gives the number of cubic feet in the volume of displacement when the ship floats in sea water. If our ships were simply parallelopipedons, the displacement in tons would, of course, be quickly arrived at, by simply multiplying the length in feet on the load line by the breadth, also in feet, on the load line by the mean draft in feet, and dividing the product by 35. But, as the under bodies of our ships are anything but simple rectangular forms, two processes are generally made use of in computing a vessel's displacement, as the calculations in each process are required to determine the position of the center of gravity of displacement, or center of buoyancy, and also because the two results are a check on the correctness of the calculations. One process consists in dividing the length of the ship on the load water-line by a number of equidistant vertical sections, computing their several areas by one of Simpson's rules, and then treating them as if they were the ordinates of a new curve, the base of which is the load water line. In the other process the depth of the vessel below the load water-line is divided by a number of equidistant longitudinal planes parallel to the water line. The areas of these are computed by Simpson's rules, and are treated as if they were the ordinates of a new curve, the base of which is the vertical distance between the load water line and the lowest longitudinal plane.

Gross Register Tonnage is reckoned at the rate of 100 cub. ft. of capacity, and is measured according to the Merchant Shipping Act, 1894, by taking the areas of a number of transverse sections, varying in number, from 4 ships not exceeding 50 ft. long to 12 in vessels of over 225 ft. The areas are then treated as the ordinates of a new curve of the same length as the vessel, and the area of the new curve, found by Simpson's first rule, will be the capacity of the vessel in cub. ft. which, being divided by 100, gives the gross register tonnage. Approximately, gross register tonnage may be found on the following formula:—

L = the inside length on upper deck, from plank at stem to plank at stern.
B = the inside main breadth.
D = the inside midship depth from upper deck to ceiling, at limber strake.

$$\text{Register tonnage} = \frac{L \times B \times D}{100} C.$$

C 0.65 for steamers of two decks.
0.68 for steamers of three decks.

The values thus obtained give the entire cubical capacity of the ship. The capacity of the poop, deck houses, and other permanently enclosed spaces is to be measured and included, but deductions are allowed for buildings erected for the shelter of passengers only, for crew space at the rate of 120 cub. ft. per man, and for propelling space. This third item, for screw steamships, is taken at 32%, if the cubic content of the space is 13% and under 20% of the gross tonnage; but, if the space is less than 13% or more than 20% of the gross tonnage, then either the 32%, or 1¾ times the space, may be deducted. Deductions are also allowed for (1) any space used exclusively for the accommodation of the master, (2) any space used exclusively for the working of the helm, the capstan, and the anchor gear, or for keeping charts, signals, instruments of navigation, and boatswain's stores, (3) the space occupied by the donkey engine and boiler, if connected with the main pumps of the ship and (4) any space (other than double bottom) adapted only for water ballast.

Net Register Tonnage is a very elastic term, and is arrived at by deducting the various allowances specified above from the gross register tonnage, to which it bears no ratio or proportion; in fact, it may even become a minus quantity. We have now examples of coasting steamships of 270 tons gross register carrying 220 tons deadweight and trading on a net register of 12 tons.

The foregoing is reproduced from The Shipping Directory, London, Eng.

Another Explanation of Tonnage.

The United States Shipping Board issued the following recently:—To many persons who are not experienced shipbuilders, the various uses of the term "tonnage" in relation to the size of a ship may be confusing. The following article from the Pusey & Jones Shipbuilder explains the terms well and makes a clean distinction between the various ways in which they are used:

There are four kinds of tonnage in use in shipping circles. They are gross tonnage, net registered tonnage, deadweight carrying capacity, and displacement.

Deadweight tonnage is what the vessel can actually carry in tons of heavy cargo, plus stores and bunker coal.

Gross tonnage is based on the cubic contents of the hull, with certain arbitrary spaces deducted, and has little bearing on the cargo carrying capacity of the vessel.

Net registered tonnage is gross tonnage, with certain allowances for crew space and machinery space deducted, and has little bearing on the dead-weight carrying capacity of the vessel.

Displacement is the total weight of the vessel when full of cargo—that is, the weight of her hull plus her deadweight tonnage.

In round numbers a ship of 9,000 tons deadweight would stand about as follows:

Deadweight carrying capacity	9,000 tons
Gross tonnage	5,000 tons
Net registered	3,000 tons
Displacement	12,000 tons

Pilotage Rates in Montreal District

An order in council has been passed fixing the pilotage rates in the Montreal district as follows for each foot draft upward or downward:

Inland steamships, $3.25.
Coasting steamships, $3.50.
Sea going steamships, $4.
This is an increase of 75c a foot draft.

Steamship Tonnage — The following countries are credited with increases of steamship tonnage since the war began. British Dominions, 1,863,000 tons; U.S., with seagoing vessels, totalling 9,773,000 tons, an increase of 7,746,000 tons over 1914; France, with 1,962,000 tons, and Japan, with 2,325,000 tons. A decrease of 2,547,000 tons is noted for the United Kingdom, and 1,888,000 tons for Germany.

Proposed Development of St. Lawrence River Navigation and Power.

Canadian Railway and Marine World asked A. A. Wright, of Toronto, who for many years has taken a very active part in Dominion Marine Association affairs, for his views on the matters referred to in an article under the above heading, which appeared in our last issue, and he has kindly given them as follows:

"The programme being carried out is simply in line with the repeated recommendations made by the Dominion Marine Association, in every discussion which has come up before the International Waterways Commission, where we invariably opposed the granting of rights to private corporations for the development of electrical power on the St. Lawrence River.

"There should be no question at present regarding the advisability of developing every available water power throughout Canada by the Dominion and provincial governments working in harmony, so that factories and railways could be operated by electrical power, and leave the consumption of coal to what is necessary for heating purposes only. With miners asking for 60% increases in wages, after the extraordinary advances of recent years, with a 6-hour day, coupled with the fact that some labor organizers strongly support a 3-hour working day, and still greater increases in wages, it would appear as if coal will soon be beyond the reach of the average man; and, therefore, a careful looking into the question of developing power on the St. Lawrence is worthy of commendation.

"The advantage of constructing works by the joint action of the governments of the two countries, is, that as engineers are not infallible, if it is found that any of the works impede navigation, they can be corrected without everybody hearing about the robbery of the widow and orphan. If it is feasible to develop the power, and preserve free navigation by a limited number of locks for the largest class of ships, this should be done, as no one can foresee the necessities of the future in connection with navigation beyond a very short period.

"It should also be borne in mind, that while the St. Lawrence River is the natural outlet and inlet for coarse bulk and other traffic between Duluth and Chicago and the Atlantic Ocean, as well as from Canadian and United States ports along the great lakes, and connecting rivers, the use of the waterways by large steamships will be restricted for a number of years, for the reason that canal and river navigation is entirely distinct from ocean navigation, and Montreal is likely to remain the head of navigation for the large freight and passenger liners. It is also likely to remain an unknown port to the large lake steamers of 8,000 tons and over, because at present time there is no return cargo available for ships of this class. This, however, is not a reason for holding up the St. Lawrence River improvement whenever the country is able financially to carry it out, because the smaller ships, which have been trading from Port Colborne to Montreal, could make better time when the improvements are made and thus reduce the cost of carrying freight. In addition to this, when any inland port might happen to receive a full cargo of something from the ocean without breaking bulk, the ship would then be in a position to take a cargo of grain or any other commodity which might be available at an inland port for export.

"The history of railway and steamship companies proves conclusively that trade will develop when the facilities are furnished, and, in my judgment, it is merely a question of the ability of the country to finance the electrical development, and doing this in such a way that navigation of the river would be improved at the same time, so that when required the largest ships likely to trade could be accommodated."

Canadian Notices to Mariners.

The following notices have been issued by the Marine Department:

Nova Scotia — Green Island — An explosive fog signal will be established as soon as possible.

Prince Edward Island—North Rustico harbor—Owing to the shifting of the channel at the entrance to North Rustico harbor, the outer range lights have been moved to a new position near the western breakwater.

New Brunswick — Shippigan Gully — Back range light to be re-established—On breakwater, 175 feet 357° 45′ (N 21 30′ E. mag.) from front light. Fixed white light, shown from a lens lantern, hoisted on a pole 30 feet.

Ontario — Toronto harbor — During dredging operations in the east end of the harbor, pile dolphins have been established to mark the western limits of the dredging. Mariners are advised to change to a westerly course immediately inside the east entrance piers to give the dolphins as wide a berth as possible. Each dolphin will be marked at night by four white lights. On completion of the dredging the piles will be removed.

Ontario — Port Arthur — During the summer of 1919, the Public Works Department has dredged the middle ground between the channels leading to the Richardson elevator wharf and the Saskatchewan Co-operative Co. elevator wharf, to a depth of 25 ft. to within a distance of 275 feet from the front face of the wharves. The black spar buoy formerly moored on the outer end of the dredged cut leading to the Saskatchewan Co-operative Co. elevator wharf, will be moved northward to a new position 275 feet 146° 15′ (S. 35° 45′ E. mag.) from the southeast corner of the wharf. The red spar buoy formerly moored on the outer end of the dredged cut leading to the Richardson elevator wharf will be moved northward to a new position 275 feet 135° 45′ (S. 46° 15′ E. mag.) from the southwest corner of the wharf.

British Columbia—Victoria harbor, fog bell established—On Shoal Point beacon, on extreme top of slatwork ball and immediately below the light. The bell, operated by electricity supplied by submarine cable from shore, rings continuously at short intervals, during thick or foggy weather.

Quatsino Sound—A rock, which only breaks at low water with a heavy westerly swell, is reported to exist 2.5 cables from South Danger rock.

Vancouver Island, Goletas Channel—On June 25, the master of the s.s. Redondo reported the existence of a kelp patch between Noble and Blyth islets. A recent examination of the vicinity by the Naval Service Department's Hydrographic Survey, shows that a rocky shoal, 300 ft. in length is situated 1 cable from the western extremity of Blyth Islet, and is marked by kelp. A depth of 12 fathoms was found between the shoal and the islet.

Fitz Hugh Sound, north entrance to Rivers Inlet, rock southward of Swan rock non-existent. A recent examination by the Hydrographic Survey, Naval Service Department, shows that the rock referred to in previous notice to mariners does not exist. The locality was swept and a depth of 65 fathoms was found in the position given for the rock.

New Brunswick—Bay of Fundy, Old Proprietor ledge—Owing to the ball on the top of Old Proprietor ledge spindle having been broken off, the height will be decreased about 12 ft.

Quebec — River St. Lawrence — Les Eboulements—The hand fog horn maintained by Canada Steamship Lines on outer end of pier at Cape St. Joseph is used only to answer signals from their vessels.

Newfoundland—Fortune Bay, Boxey Point—Flashing red acetylene light established on the point showing 20 flashes every minute.

Vessels Added to and Deducted From the Canadian Register During September, 1919.

	Steam			Sailing

Alliance Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with $1,000,000 capital and office at Montreal, to carry on a general navigation and steamship business.

Halifax Graving Dock Expropriation—The Senate, on Oct. 3, adopted a motion, by Senator Dennis, that an order issue for all papers, letters and telegrams, between any official or department of the government and any person, firm, or corporation between Dec. 1, 1918, and July 1, 1919, and reports thereon, in connection with the expropriation of the Halifax graving dock.

United States Shipping Notes.

The U.S. Shipping Board announces that, according to its estimate, the U.S. merchant marine, under its control, comprises 1,468 vessels, aggregating 8,109,458 d.w. tons.

The U.S. Bureau of Navigation reports 200 sailing, steam, gas and unrigged ships of 374,165 gross tons, as built in the U.S. and officially numbered, during September.

The U.S. State Department announced recently that two Swedish experts had sailed for the U.S. to investigate the conditions of the coal market and the possibility of arranging for tonnage to ship 50,000 tons of coal monthly to Sweden.

The North German Lloyd Line's resident director is reported to have stated in New York that that company will not resume its service between Germany and the U.S. as the few steamships it has left are hardly more than 1,000 tons each.

The U.S. Shipping Board's Operations Division announced, early in October, reductions in ocean freight rates averaging approximately 33%, on general and miscellaneous cargoes from Atlantic and Gulf ports to the South American east coast.

The U.S. Shipping Board's chairman has announced that there is no change in the price at which the board's vessels are being held and that none is contemplated. Wood ships are being held at $90 a d.w. ton, new steel freighters at from $210, for smaller type, to $225 per d.w. ton for larger vessels. No immediate sale of passenger steamships is contemplated.

The U.S. Shipping Board's chairman announced recently that the Emergency Fleet Corporation takes the position that following the policy announced by the President, no increase be authorized over Macey scale of wages, which is continued in effect after Oct. 1, unless a change is authorized after White House conference, and if shipbuilders put any increase into effect it must be understood they do so at their own cost, and that the Emergency Fleet Corporation will not assume or pay any part of such increase.

Government Control of Ocean Steamships.

J. A. Armstrong, M.P., for Lambton, Ont., asked the following questions in the House of Commons Oct. 8: "1. What action, if any, has this government taken with a view to carrying out the recommendations, as set forth in the final report of the royal commission on the natural resources, trade and legislation of certain portions of His Majesty's Dominions, as presented to the British Parliament in Mar., 1917, showing that it is not desirable that the operations of the steamship companies carrying passengers and freight between Canada and the United Kingdom should remain longer without some measure of government supervision?

"2. Does this government intend to take immediate steps to assist the Imperial Government in bringing about government control of the ocean carriers doing business (or, from time to time, doing business), between the United Kingdom and Canada?

"3. Has the Canadian Government called the Imperial Government's attention to the fact that serious discrimination in freight rates is being practised against products carried from Canada by British shipping interests as compared with similar products carried from other countries?"

Sir Geo. E. Foster replied as follows: "1. The report of the royal commission referred to has been presented to the British Government and the recommendation referred to is now under consideration by that government, and with others will probably form the subject matter of consideration at the next imperial conference.

"2. The Canadian Government will cooperate with the Imperial Government and the other overseas dominions in considering the question of the supervision and control of ocean tonnage between the different parts of the British Dominions.

"3. The Dominion Government has called the Imperial Government's attention to certain alleged discriminations and injustice in connection with the supervision by the British Ministry of Shipping in the employment of vessels under charter by Canadian shipping interests."

Sault Ste. Marie Canal Lock Depths

J. W. LeB. Ross, Superintending Engineer, Sault Ste. Marie Canal, Sault Ste. Marie, Ont., writes as follows: "The article in Canadian Railway and Marine World for October, on page 564, describing the fourth lock at Sault Ste. Marie, Mich., gives the dimensions of the various locks, which are correct in every respect, excepting in the depths of water. You state that the depth in the Canadian lock is 22 ft. in the Poe lock 23 ft., and in the third lock 24.5 ft. These depths do not refer to the same river level. At the river level of 580.6, the level to which all soundings are plotted, the third lock has a depth of 24.5 ft., the Poe lock 18 ft., and the Canadian lock 18.3 ft., the Canadian lock being about 4 in. deeper than the Poe lock. The water level 580.6 is, however, extremely low. The depth in the Canadian lock varies from 18 ft. to 20 ft., and during the present season has varied from 19 ft. to 20 ft."

French Merchant Marine—It is reported that France has already added to her tonnage of merchant ships and that several steamship lines have now more ships than in 1914.

Vessels Registered in Canada During September, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

STEAM.

No.	Name	Port of Registry	Where and when built		Length	Breadth	Depth	Gross Tons	Reg. Tons	Engines, Etc. N.h.p.	Owners or managing owners
141006	Busy Bee	Quebec	Lauzon, Que.	1919	78.0	20.0	9.6	115	5	42 Sc.	Davie Shipbuilding and Repairing Co., Lauzon, Que.

(b) Formerly a steamship.

Mainly About Marine People.

Lady Allan, wife of Sir Montagu Allan, formerly of the Allan Line Steamship Co., has written a boog of her experience throughout the war, in work in connection with hospitals, canteens, etc. She with her three daughters, was a passenger on the s.s. Lusitania when it was torpedoed by the Germans, and two of her daughters were drowned.

William Baird, General Agent, Canadian Pacific Ocean Services Ltd., Liverpool, Eng., was married there recently to Miss E. I. Williams.

The Hon. C. C. Ballantyne, Minister of Marine, and of the Naval Service, was able to leave the Royal Victoria Hospital, Montreal, Oct. 1, and return to his house in Montreal to convalesce.

A. S. Barber, purser, Canadian Pacific Ocean Services' s.s. Empress of Russia, died at Vancouver, B.C., Sept. 24, after a long illness. He had been in the company's service for almost 30 years and had served on all its trans-Pacific vessels.

Capt. Capper is reported to have been appointed Shore Superintendent, Montreal, for Cunard Steamship Co. He has been in the company's service for 34 years and was in command of the s.s. Ansonia when she was torpedoed by the enemy, May 30, 1918, the survivors being in five open boats for 9 days and 10 nights, and travelling 800 miles, landing at Berehaven, Ireland. Two of the boats, carrying 36 people, were lost.

Thos. A. Duff, legal adviser for the Great Lakes Transportation Co., Canadian Dredging Co., Midland Shipbuilding Co., and a number of other companies in which Jas. Playfair, of Midland, Ont., is interested, has been elected Vice President of the Georgian Bay Association.

W. I. Gear, Vice President, Robert Reford Co., and Director of Steel Shipbuilding, Imperial Munitions Board, and Mrs. Gear, closed their summer house at Longueuil, Que., early in October, and returned to Montreal for the winter.

Walter Lambert, A.M.I.N.A., who has been Naval Architect and Assistant Director of Shipbuilding to the Imperial Munitions Board, in connection with the orders for steamships placed in Canada for the British Government, has, owing to the board's shipbuilding programme being practically completed, resumed business as a naval architect, marine surveyor and vessel broker, at 700 Drummond Building, Montreal.

Jas. C. MacGregor, who died at New Glasgow, N.S., towards the end of September was Managing Director of the Eastern Car Co., and a director of the Nova Scotia Steel and Coal Co. He was also associated with the Carmichael Shipping Co., and was the managing owner of the steamships Micmac and Pontiac. As a shipbuilder he built the steel schooner James Williams, stated to be the first steel vessel built in Nova Scotia.

W. T. Payne, Manager for Japan and China, Canadian Pacific Ocean Services, Ltd., Yokohama, Japan, has been invested with the Order of the Sacred Treasure of Japan.

Colin W. Postlethwaite, Harbor Master, Toronto, is convalescing, after a severe accident and subsequent operation.

Capt. W. C. Richardson, a well known steamship owner and manager, died at Cleveland, Ohio, Oct. 3, aged 79. He was associated with Great Lakes navigation for over 50 years, and was treasurer of the Great Lakes Protective Association and a director and member of the Lake Carriers' Association's executive committee.

J. W. Le B. Ross, Superintending Engineer, Sault Ste. Marie Canal, guided the Prince of Wales, during the latter's visit to the locks, on his recent western tour.

H. G. Thorley, Ontario Passenger Agent International Mercantile Marine Co., entertained Sir Bertram Hayes, D.S.O., R.N.R., captain of the s.s. Olympic, during his visit to Toronto in October.

Lorne C. Webster, President, Webster Steamship Co., has been elected a director of the Bankers Trust Co., Montreal.

R. M. Wolvin, President, Montreal Transportation Co., and Vice President and Managing Director, Halifax Shipyards Ltd., and Mrs. Wolvin, closed their summer house at Dorval, Que., early in October, and returned to Montreal for the winter.

Exchange Rates Discriminating Against Shipments From Canadian Ports.

London, Eng., cable dispatch, Oct. 15, to Montreal Gazette: Canada is apparently being deprived of the advantage of her higher exchange rate as compared with the United States by the action of the Atlantic shipping companies in charging the New York exchange rates on shipments from Canadian ports. The Canadian shipping lines are under the jurisdiction of the North Atlantic Eastbound Freight Conference, which has inserted a new clause in the bills of lading since the war. This clause requires collect freight on Canadian shipments to be paid by the British consignee in sterling computed at New York exchange rates on day of shipment arriving at the discharge depot. Before the war the basis for collect freight was 10% premium of sterling exchange, which gave the pound sterling an equivalent of $4.89, while the lowest rate of scale so based was 8½%, or $4.80 to the pound.

There have been numerous complaints by British importers, who hold they should have to pay the Canadian rate of exchange on Canadian shipments, otherwise part of Canada's exchange advantage over the U.S. disappears. I understand the Canadian Government will take up the matter with the steamship lines interested.

Vancouver Harbor Commission.

F. Carter-Cotton, J. A. Fullerton and S. McClay, who were appointed members of the Vancouver Harbor Commission, Aug. 6, 1913, resigned in June last. On the Minister of Marine's recommendation, their resignations were accepted by order in council passed Sept. 29, and Lieut. Col. G. H. Kirkpatrick was appointed President of the Commission, the two other members being S. McClay, reappointed, and Maj. A. R. McKenzie. The salary of each is $2,500 a year. So as to keep in close touch with public opinion in Vancouver and to lessen the possibility of ideas conducive to the port's best interests being overlooked, the commissioners have invited the City Council's harbor committee, the Board of Trade, North Vancouver City Council's harbor committee, North Vancouver Board of Trade, the Shipping Federation, B.C. Manufacturers' Association, Associated Timber Exporters of B.C., deep sea shipping interests, and the Retail Merchants' Association, to each appoint a committee, of not more than three, to meet the commissioners monthly, so that the views of the committees may be welcomed and sympathetically considered, each committee to have the commissioners' attention separately.

Wireless Installations Required on Steamships Plying to Great Britain.

Ottawa press dispatch, Oct. 22.—All Canadian ships sailing for ports in the United Kingdom will be obliged in future to carry a wireless installation and wireless operators, in order to conform to the requirements of an act passed by the British Parliament. The Naval Service Department has been informed that this act requires every seagoing British ship registered in the United Kingdom, being a passenger steamship or a ship of 1,600 tons gross tonnage or upward, to equip with a wireless installation. The act comes into effect as soon as the defense of the realm regulations expire, owing to the declaration of peace. Three months after that date any ship sailing at a port in the United Kingdom will come under the conditions of this act, whether it be registered in Great Britain or not.

False Creek, Vancouver, Sea Wall Suit—A British Columbia court has given judgment in favor of A. G. Creelman & Co. in their action against the Canadian Northern Pacific Ry., and referred the assessing of damages to the Registrar. The railway company let a contract to plaintiffs to build a sea wall at Main St., on False Creek, Vancouver, as part of its terminal development works. After some progress had been made with the work, Champion and White obtained an injunction against the company and its contractors, which stopped the work. The contractors then claimed $50,996 for loss of estimated profits, owing to rise in cost of material during the stoppage of the work, and for other damages.

The Steam Wood Drifter No. 89, one of a number which were under construction at various yards in Canada at the time of the signing of the armistice, has been sold by Anderson Co., of Canada Ltd., to the Gulf Export and Transportation Co., Beaumont, Texas. It is announced that she has been converted into an oil burner, thus gaining an additional 200 tons of cargo space. She was built by the Davie Shipbuilding and Repairing Co., Lauzon, Que., and was completed during the summer.

Montreal Transportation Co. There have been some changes in officers recently, the present organization being as follows: President, R. M. Wolvin; Vice President, I. I. Henderson. Managing Director, T. R. Enderby; Secretary, F. T. Cuttle.

Canadian Pacific Ocean Services Ltd. general agents from various points in Canada and the United States, met at Montreal at the end of September, under the chairmanship of C. E. Benjamin, Passenger Traffic Manager, to discuss passenger matters generally. Afterwards they went to Quebec to meet the s.s. Empress of France.

Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held and judgments delivered in the following casualties:

War Witch—Gallia Collision.

Held at Sydney, N.S., Aug. 11, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Morrison and O. Lewis as nautical assessors. The court found that the evidence was contradictory as regards the witnesses of the War Witch, but unanimous by the survivors of the Gallia, and it found that the master of the War Witch, Capt. W. P. Bennett, was in default, first, for retiring to his room and falling asleep when the steady sounding of the fog horn was necessarily attended to, and not issuing instructions to reduce the speed under the circumstances; second, for grave lack of judgment in not bringing his vessel to a full stop instead of continuing on a starboard helm, his reason for not doing so that he feared to come in contact with the Gallia being considered worthless; third, for his failure to lower a boat at once to search for and render aid to victims, which was a flagrant violation of article 29. For these reasons the court cancelled his certificate, but recommended that he be issued a mate's certificate to permit him to earn a living.

The second mate, C. Carroll, was found in default for failing to call the master when the fog became dense, and for violating instructions, which he admitted he had received, thus primarily contributing to the collision, and his certificate as second mate was suspended for one year from Aug. 12.

The court commented on the situation which existed in the engine room, one engineer alone being on duty, without any assistants. When the order "stop" was given, the engineer was away from his post, being on the top platform oiling the machinery and necessarily some time elapsed before he could return to his place and carry out the order from the bridge. The lookout, in the smooth water which existed at the time of the casualty, it being practically calm with no sea or wind, should have been on the forecastle head or in the crowsnest, and not behind a shelter on the bridge. Regarding the Gallia, the evidence of the survivors, being without contradiction, was accepted by the court and she had the right of way, article 20 stating that a steamship is to keep clear of a sailing vessel. The court therefore did not hold the Gallia responsible, for any wrong action, and placed the blame for the casualty on the War Witch.

Sinking of the s.s. Captain Dan.

Held at Ottawa, Aug. 30, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and C. J. Stuart as nautical assessors, into the collision of the s.s. Captain Dan with a wharf at the Louise Embankment, Quebec, Aug. 25, and her subsequent sinking. The court found that the evidence was very contradictory in many respects. Pilot Langlois, knowing that an eddy existed near the breakwater, and the channel being clear of all obstacles, did not exercise proper judgment in bringing his vessel so close to the breakwater. He appeared to have shown marked indifference in issuing orders for courses, and he attempted to mislead the court by subterfuge· for all of which he was found in default and his license suspended for four months from Aug. 25, to Dec. 24. The court did not hold the master, Capt. J. B. Gamache, responsible for the collision and eventual sinking of the vessel, but it held that he failed to give the first peremptory command to clear the boats and attend to the female members of his crew, after he had been told of the seriousness of the damage, and knowing the condition of his vessel and her construction. When he had ordered the pilot to beach the vessel at the nearest convenient point, he should, in the interval between the collision and the sinking, have issued instructions for the safety of the crew. The officers on the vessel were inexperienced, no lookout was kept and in the confusion, which existed, any order the master may have given, may not have been heard. The court therefore found him in default for lack of judgment, and suspended his certificate for two months from Aug. 25 to Oct. 24. The mate was severely reprimanded, the court being lenient on account of his inexperience. It also held that the loss of life which occured was, under the circumstances, accidental, and for which no one could be held at fault.

Stranding of the s.s. Admiral Hastings.

Held at Sydney, N.S., Sept. 5, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. A. J. Morrison and O. C. Lewis as nautical assessors, into the causes of the stranding of the s.s. Admiral Hastings at Bagot's Bluff, Anticosti Island, Aug. 22. The court found that the master, Capt. F. Dudley, erred in judgment by over confidence as to his courses. His compasses were found to be affected at Fame Point and he was already aware of the uncertainty of the currents. His long and successful career, his straightforward statement, and his success in freeing the vessel, caused the court to conclude that though he erred in judgment, it was not in a culpable manner, as it is doubtful if he had cast the lead before he did that it would have indicated his approach to Anticosti, hence the court did not deal with his certificate, but cautioned him to be more careful in future, and avoid over confidence in his calculations. The court advised the chief officer, J. G. Clemens and all officers who have to keep watch, to make themselves acquainted with the conditions in the localities they are navigating, and indicate by that their desire to obtain knowledge, and to be useful to the master when an emergency arises. The evidence of the third officer, C. R. F. Milne, as to the sounding was misleading. While the sounding had not much value at the time it was taken, it would have had a more serious aspect if the vessel had been in a different situation, but as he is a young man he was advised to be more careful in executing orders he may receive in future.

Stranding of the s.s. Glenholme.

Held at St. John, N.B., Sept. 9, into the stranding of the s.s. Glenholme, Aug. 22, at Goose Tongue Rock, Spencers Island, Bay of Fundy, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. A. J. Mulcahy and H. C. Barcham, as nautical assessors. The court found that the master, Capt. H. W. Moore, erred gravely in judgment in being over confident of the position of his vessel, and in taking for granted that the bearing of the sound of the fog horn at Cape d'Or was as he anticipated, without assuring himself of his vessel's position. The passengers on board were transferred to the boats promptly, no lives being lost. In view of these facts, the court did not deal with his certificate but reprimanded him very severely for not adopting other precautionary measures to assure himself of his vessel's position. The court condemned the system which permits a man holding a certificate as master of a tug boat to act as master of a vessel carrying passengers. An examination of the customs certificate shows that the vessel was only cleared for freight, though as she was carrying passengers at the time, she is to all intents and purposes a passenger and freight vessel, and is subsidized by the Dominion Government to carry passengers. The court also commented on the fact of the master being alone to attend to navigation and that there was only one engineer to perform all the engineering operations necessary in the coasting trade.

Grounding of s.s. Huronic.

Held at Sarnia, Ont., Sept. 17, into the cause of the grounding of the Northern Navigation Co.'s s.s. Huronic at Angus Island, off Isle Royale, Lake Superior, Aug. 15, during a dense fog, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. P. McIntyre and B. Garvie as nautical assessors. The court found that the master, Capt. E. Walkinshaw, erred in judgment in altering his course after having run the distance which he had usually made under better and more satisfactory conditions. In view of the fact that the boilers had been reported as having lost their effciency for the time being, he should, with such knowledge, have run on the course a little longer, which would have brought him nearer to Thunder Cape and in close proximity to the sound of the fog horn. The court considered there were extenuating circumstances, which caused it to exercise leniency and it therefore suspended his certificate for one month, from Sept. 17.

Explosion on s.s. Cape Breton.

Held at Sydney, N.S., Sept. 25, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by C. M. Crockett and G. Symington, as engineer assessors, into cause of explosion of the s.s. Cape Breton's boiler on Apr. 5, when the chief and second engineers, donkeyman and two firemen were killed, while the vessel was off Cape Spear, near St. John's, Nfld. The s.s. Cape Breton, owned by Dominion Coal Co., is a steel vessel of 1,764 tons gross, 1,109 tons net, 258 ft. long, 37 ft. beam, and at the time was drawing 8 ft. forward and 13½ ft. aft on a full speed of 9 knots an hour. She is equipped with single screw triple expansion engines and carried a crew of 26.

The master, Capt. S. McDonald, stated that he had been four years in command of the vessel and had never had any complaint from the engineer as to the boilers. The vessel had been examined and reclassed for one year on Mar. 18, 1918. He sailed from Louisburg, N.S., Mar. 12, for St. John's, Nfld., and was delayed there through holidays and ice, being unable to return before the expiration of the yearly classification. He left St. John's, Apr. 5, and after about three hours out, the second engineer, through the chief engineer, reported a small leak in the boiler. After investigation, and consultation with the chief engineer, the vessel's head was turned towards St. John's, but the chief engineer did not agree with the master's suggestion that he should steam on one boiler alone, as there was but a little distance to cover. Shortly after, the master heard a noise, which shook the vessel and caused an escape of steam. The second officer was sent to the engine room and reported that the boiler had exploded, the first and second engineers being scalded. Orders were then issued to render the assistance needed and to signal for help and a doctor. The first tug arrived without a doctor, and the injured men were placed on board and sent to St. John's.

J. A. Campbell, third engineer, stated that he, with the second engineer, investigated the leak, after which he went to his room, it not being his watch. He had never noticed that anything was wrong and while in harbor, 140 lb. of steam was kept while the fires were banked. The working pressure for a speed of 9 knots was 150 lb.

D. J. McAlpin, Superintending Engineer, Dominion Coal Co., explained that the patch which failed was laid on in 1915, being single riveted. He produced plans of repairs which were to be made, showing that the plate which was to replace the platch which caused the mishap was to be double riveted. The company's vessels were overhauled annually, and the officers were instructed to submit their requisitions, which were always granted. He gave the dimensions and thickness of the patch and of the boiler and stated that very little diminution of thickness was seen on the old parts of the boiler.

C. Cook, assistant to Superintending Engineer, Dominion Coal Co., stated that the patch was placed in 1912, and he had no knowledge of a leak prior to or since 1915.

R. Patterson, chief engineer, Dominion Coal Co.'s s.s. Coban, stated that he had never had any requisition refused during the time he had been with the company.

D. J. Murray, Dominion Government Boiler Inspector, stated that he had inspected the s.s. Cape Breton's boilers twice, the last time in Mar., 1918. He had inspected the boiler under a pressure of 225 lb., lasting 15 minutes. This was an external inspection, and there were no signs of a leak, or weakness, prior to placing the test. He relied, to a certain extent, on the examination made by the other inspectors, and stated that single riveting as seen on the patch was safe.

The court's finding is summarized as follows: Owing to the death of the chief and second engineers, the court is deprived of most important data regarding the working of the defective boiler, prior to leaving St. John's. Explanation as to the inspection of the leak, when examined after the fires were drawn, would have helped to arrive at more tangible results and conclusions. The third engineer's evidence does not throw much light on the matter, beyond demonstrating that he was not a very observant engineer, and awaited orders, which he appears to have fulfilled without seeking the reason for his own information. It is proved that the owners have attended to requisitions by masters and engineers, and the logs show that the boilers, machinery, and hull, underwent many repairs and received much attention. No correspondence exists to show that any defect had been found in the boilers, and the engineer's log was well kept, and no erasure or interlinings are to be detected. The master's suggestion to work the vessel with one boiler was a very wise one, but he could not order it to be done, as the engineer was the one more competent to accept or refuse the suggestion. Had the engineer adopted the suggestion, it is possible, even certain, that the mishap would not have occured. No criminal intent, neglect, or indifference can be launched against the chief engineer, the over confidence, of which he was a victim, being due to the fact that the leak appeared to him to be a small matter. The court, however, is of the opinion that, upon the appearance of that defect, in view of the age of the boilers and the frequent patching, they had undergone, there was but one thing to do and that is what the master suggested. The single riveting was a weak point, and it is recognized as such, because it is planned to double rivet it. The court found the inspection by the Dominion Government inspector as insufficient, it being of the opinion that more time should have been devoted to it, and a more minute interior inspection and a test by successive taps of the hammer in patch work should be given. The court therefore found that the owning company had done all that was demanded by the respective employes, and cannot therefore be blamed for the explosion and its fatal results. It has been ascertained that the chief engineer was a painstaking and competent man and while the court attached no blame to him, he failed to realize the importance of the leak, and thought it was not obligatory of him to accept the master's suggestion, had he done so the casualty would not have occurred. No blame is attached to the masters or officers of the vessel who had done all that was expected of them in the operation of the vessel and in caring for the victims of the explosion. The Dominion Government inspector of boilers is also exonerated from blame or neglect, but the court recommends that the inspection of boilers during tests, be made more thorough, both as to interior and exterior, and that tapping be more general, especially in vicinity of patches, also that borings be made in those localities, and in places where moistened material may accumulate and cause rapid and excessive corrosion. The court expressed the opinion that the casualty was due entirely to unforeseen circumstances, therefore accidental, but preventable if the master's suggestion had been adopted.

Stranding of the s.s. Chelston.

Held at Montreal, Oct. 11, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and C. J. Stuart, as nautical assessors, into the cause of the stranding of the British s.s. Chelston, at St. Pauls Island, in the Gulf of St. Lawrence, Oct. 9. The court found that the master, Capt. A. M. Fotheringhame, erred gravely in judgment, that he hard astarboarded the helm, and also when, upon coming on deck and finding the vessel had run her distance, had failed to stop and take soundings. The court suspended his certificate for 3 months from Oct. 9, 1919, to Jan. 8, 1920. The first officer was exonerated from all blame. Since the enquiry was concluded, the ship, which was wrecked in an exposed position, and was abandoned after several attempts to salvage her, has broken up and become a total loss.

Welland Ship Canal Construction.

We were officially advised Oct. 17, that instructions had been issued for the discontinuance of work on sections 2 and 3 of the Welland Ship Canal. During October deputations waited on the Minister of Railways and Canals with a view to obtaining a cancellation of these orders, and in reply the Minister is reported to have stated that he would lay the matter before the government for final decision.

Sec. 2 covers the work from bridge 2 to bridge 5, about 4½ miles, including locks 2 and 3. This contract was awarded to Baldry, Yerburgh and Hutchinson Ltd., Dec. 31, 1913 for completion by Apr. 1, 1917.

Sec. 3 is from bridge 5 to about half way between bridges 9 and 10, and includes the heaviest portion of the whole route, the erection of twin guard gates at Thorold, the single lock 7, a short stretch of canal below lock 7, and 3 twin locks, 6, 5 and 4 in flight, one flight for downbound vessels and one for upbound vessels, overcoming a descent of 139½ ft. The contract was awarded to O'Brien and Doheny, Oct. 4, 1913, for completion by Apr. 1, 1917.

Comparatively good progress was made with the work, despite troubles due to labor disputes, etc., and the work was continued for some time after the outbreak of war. In the early part of 1917, it was decided that the entire work should be suspended until the close of the war, and after clearing up some minor details, the work ceased May 2, over the whole route. It was estimated then, that, taking the entire work, it was about 50% completed, sec. 3 not being in so forward a condition as the others. On the cessation of hostilities, the government felt, that on account of demobilization, it would be necessary to go on with the work in order to provide employment for the large number of men released from military duty. Arrangements were therefore made with the old contractors to resume work on a cost plus 8% basis, such work to go on only from month to month, and not to proceed beyond Dec. 31, 1919, so that no misunderstanding could arise. It was estimated that on sec. 2, $600,000 would be expended during that period, and on sec. 3, $700,000, and an amount to cover such expenditures, and others on other sections, was included in the estimates for the current year.

Lake Ports Navigation Co. Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Sarnia, Ont., to carry on business as common carriers, to own and operate steam and other vessels, and to build docks, wharves, warehouses and other terminal facilities. The incorporators are F. G. [illegible], E. P. Walsh, W. F. [illegible], M. [illegible], W. J. Barber, A. S. [illegible], C. [illegible] and M. F. [illegible], Sarnia.

Murray Bay-Tadousac Steamship Service.—In answer to a question in the House of Commons recently, as to whether it was the government's intention to establish a new line of steamships, in connection with the Quebec and Cap a l'Aigle, St. [illegible], [illegible] Bay, Saguenay Ry., between Murray Bay, Ste. Catherine, and Tadousac on the north shore of the River St. Lawrence, the Minister of Marine stated that it was the Marine Department's intention, if [illegible] would permit, to reinstate the C. G. S. [illegible] on that route, giving a bi-weekly service from Nov. 1.

Telegraph, Telephone and Cable Matters.

H. Hulatt, Manager, Telegraphs, G.T.R. and G.T.P.R., made an inspection trip to the Pacific coast at Prince Rupert recently.

A. B. Smith, formerly Manager, Telegraphs, G.T.R. and G.T.P.R., who retired in 1915, on account of ill health, spent part of the summer at Old Orchard, Maine.

The United States Navy Department has removed restrictions on amateur radio stations. Restrictions on stations handling commercial traffic will remain in effect until the President proclaims that a state of peace exists.

The Marconi Wireless Telegraph Co.'s station at Sable Island, which was destroyed by fire a short time ago, is to be rebuilt. Material was expected to be on the spot by the end of October. It is stated that the new station will be considerably larger than the old one, and that the telegraph equipment will be of larger power, and with a much greater radius.

A board of conciliation was appointed recently to investigate matters in dispute between the Marconi Wireless Telegraph Co. of Canada and its operators on the Great Lakes; Judge F. S. MacLennan, Montreal, being chairman; B. Rose, Montreal, representing the company, and T. Taylor, the employes. During the enquiry, the company's representatives stated that it is obliged to operate these stations under a contract entered into with the Dominion Government in 1911; that there is a deficit on the service each year, owing to large increases in cost of operation and that it was therefore unable to accede to the demands made, the justice of which, under existing conditions, was admitted.

German Mercantile Marine—It is reported that the German Government, in order to lay the foundation for a new merchant marine fleet, has decided to distribute $62,500,000 indemnity funds, to steamship lines, such as Hamburg American and North German Lloyd, which lost vessels through seizure during the war.

Dry Dock at Sydney, N.S.—We are officially advised that the application for a subsidy for the construction of a dry dock at Sydney, N.S., under the Dry Dock Subsidies Act, as mentioned in our last issue, was made by the Sydney Dry Dock and Engineering Co., which was organized for that purpose by the Sydney Foundry and Machine Works, Ltd.

The s.s. **Frontenac**, which has been bought from U. S. owners by Davie Shipbuilding Co., Lauzon, Que., has had her name changed to Vaudrueil. She was owned formerly by Cleveland Cliffs Iron Co., Cleveland, Ohio, was built at Cleveland in 1889 and fitted with a new steel upper deck in 1903. She is of steel, of the spar deck type, with double watertight bottom for ballast, 2 watertight and 2 non watertight bulkheads, steam pump wells and steel boiler house; [illegible] spaced 24 ft. centers. Her dimensions are: length, b.p., 270 ft.; breadth, moulded, 40 ft.; depth, moulded, 24 ft.; tonnage, 2,003 gross; 1,676 net. She is equipped with triple expansion engines with cylinders 20, 31 and 52 in. diar. by 40 in. stroke, 850 i.h.p., at 75 r.p.m., and supplied with steam under forced draft by 2 Scotch boilers 11½ x 11½ ft. at 180 lbs.

The Telegraph Profession.

By H. Hulatt, Manager of Telegraphs, Grand Trunk Ry. and Grand Trunk Pacific Ry., Montreal.

I trust my preceding article has convinced some, if not all, ambitious readers, and particularly those employed in railway service, of not only the desirability, but the absolute necessity of taking steps to improve, what to many of us is our only capital, their mental equipment.

The whole commercial and industrial field, and in this description is included the telegraph profession is and always has been more or less a field of battle, i.e., competition, and incidentally the fight is getting more strenuous every year. Never in history was the phrase, "the survival of the fittest," more true than it is today. We compete against others for promotion in our own organizations; we compete against other organizations in the same lines as ourselves for business. To eliminate competition, would result in the disappearance of half the joy of living, it is fighting in a straight, square way which brings joy to the red-blooded man, and incidentally assists him to develop and know himself. If we are going to fight a crowd our first thought is to secure some suitable weapon. The great war just ended was won, not only by the pluck of the men engaged, but, by the wonderful organization and system evolved.

The majority of us have only one thing in life of primary importance personally to sell; that is our services, and in order to obtain a good price for them, we have to prove that we have the necessary weapons to use in the battle of competition; in the main, good, sound judgment founded on experience and education, and loyalty which, of necessity, includes honesty. Also we must exercise what is commonly called push, or pep.

Before proceeding further to make suggestions as to how we can improve ourselves educationally, and still carry on earning our bread and butter, I would like to emphasize that I have absolutely no use for a blue stocking or mollycoddle, and am very strongly of the opinion that "all work and no play makes Jack a dull boy"; it is quite possible for a young man to spend an hour or so a day studying, and yet enjoy the outdoor and social recreations essential to the retention of good health and spirits. Without good health you cannot have pep. This matter of education is to my mind not only personal to the individual, but a responsibility on the part of all, particularly those having charge of men.

Officers of railway telegraph departments should set their men an example, by themselves studying, and encouraging their subordinates to do the same. I feel that we who are privileged to be executives, and have more or less the destinies of large numbers of men in our hands, have a very great and heavy responsibility in this connection. The more we study, the more we realize how much there is which we ought to know, which we do not know. An executive should make sure that his immediate assistants are studying, and they in turn should encourage the men farther down the line to do the same. Promotion should be dependent not only upon whether or not a man has seniority or has adequately filled the position he has occupied, but also be based on whether or not the man has, by broad study, qualified for even a higher position than the one vacant.

Executives and subordinate officers must realize that they are not the only ones in their organization blessed with grey matter. Many a pearl has come from an oyster shell of quite ordinary appearance, and it is the pearls that are needed and that count in business life. Having this in mind I would urge in organizations where it has not yet been practised, that a systematic programme of conventions or meetings of officers and employes, by means of which personal contact can be established, matters relating to business efficiency thrashed out, and the benefits of education discussed, should be organized. This plan has been carried out in my own organization, to the benefit of subordinate officials and employes; most decidedly to my own benefit, and has resulted in increased efficiency all round.

A valuable educational agency available to ourselves and our men is undoubtedly the American Telegraph and Telephone Division Railroad Association, particularly in connection with the reports of the various committees. To my mind such reports should be distributed to officers and employes of the telegraph departments for their consideration and study, and discussion at departmental meetings. The representative members of roads attending conventions of the division would then be much better equipped, on the basis that two intellects are better than one, to discuss matters coming before the convention, thereby benefitting all attending such conventions. Subordinate officials and employes who have plainly indicated an interest in developing themselves, should not only be encouraged by promotion, but also by being sent to conventions of the division, and if qualified nominated to serve on committees.

To the young man entering telegraph service I would say: look ahead, enjoy life, but at the same time equip yourself for the days to come, develop initiative, assume responsibility without question, take up elementary electricity, mathematics, etc., ask all the questions you can, have some ambition other than thumping a key all your life, as you rise in your profession, and incidentally increase your education, dive into books of philosophy, science, history, economics, and kindred subjects, all of which will tend to make you a bigger, broader man, in fact, an efficient executive, which should be your great ambition.—Nil desperandum. Telegraph and Telephone Age.

Port Colborne Elevator—We are officially advised that C. D. Howe & Co., elevator engineers, Port Arthur, Ont., have been given charge of the repairs to the Dominion Government grain elevator at Port Colborne, Ont., under the supervision of a board of engineers of which C. N. Monsarrat, Consulting Engineer to the government at Ottawa, is Chairman. The contract for the demolition of the wrecked structural steel and debris has been let to the Dominion Bridge Co., which has already made good progress with the work. It is likely that the general repair work of replacing of reinforced concrete walls, floors, etc., and the installation of new machinery will be handled on force account basis. It is expected that the elevator will be ready to handle grain by the opening of navigation next spring.

Telegraph Companies Responsibility for Failure to Transmit Messages.

Complaint of the Canadian Manufacturers' Association, per J. E. Walsh, Toronto, Ont., against the Board of Railway Commissioners' general order 162, and the matter of relieving telegraph companies from responsibility for failure to transmit messages. File 13622.4.

Commissioner Boyce of the Board of Railway Commissioners, gave the following judgment Oct. 7: Complaint is made by the Canadian Manufacturers' Association that the conditions of contract with telegraph companies impose no obligations or penalties for failure to transmit messages received by the company for transmission, and provision is sought (by amendment to the conditions of traffic sanctioned by order 162, Mar. 30, 1916), for the imposition of penalties for non delivery in such cases as are due to gross negligence of the company, even though the message is not repeated.

The whole wide question of the liabilities attaching to telegraph companies, involving the point complained of, was fully considered by the board upon the application which resulted in order 162. The question was further, incidentally, considered by the board on the application of the Great North Western Telegraph Co., the C.P.R. Co.'s Telegraph, and the Grand Trunk Pacific Telegraph Co., for an order approving conditions varying those approved by order 162, the object of such application being to vary the conditions so sanctioned in a manner which would more fully relieve the companies from liability, to sender or addressee, whether from negligence or otherwise, in respect of receipt, transmission, and delivery of messages.

The application last referred to, was heard at Ottawa April 17, 1917, and, following a considered judgment of the then Chief Commissioner, dated July 14, 1917, order 26,378 was passed July 26, 1917, dismissing the application, but reserving to the applicants leave to apply for a stated case, in writing, for the opinion of the Supreme Court of Canada, upon the questions of law involved in the application.

A stated case has never been presented to the Supreme Court—has not been settled by the board—but a draft case has been submitted to the applicants, who have not yet concurred in it, although by written memorandum they suggested that the case to be submitted for the opinion of the Supreme Court of Canada, should contain the following questions, viz.:

"1. Was the board right in holding that a condition in the contract purporting to limit the company's liability to the addressee of a telegram is, under the law of the Province of Quebec, in effectual for that purpose?

"2. Has the board power by regulation—independently of the contract to limit the liability of the company to the addressee of a telegram?

"3. Would such a regulation be effectual for such purpose under the law of the Province of Quebec?"

In the ex-Chief Commissioner's judgment, upon the application above referred to, the law is fully discussed with regard to the applicability of the Quebec Civil Code of article 1,053, as distinguishing liability affecting the transmission and delivery of telegraph messages from that settled by legal decisions of our courts, and of the English courts, referred to in the ex-Chief Commissioner's judgment. It is open to some doubt, as the ex-Chief Commissioner concludes, as to whether (at any rate with regard to the conditions discussed in the previous application), the Quebec Civil Code referred to may not operate, or intervene, in a special manner to regulate and refine liability upon these telegraph messages as between the company and the sender (possibly and addressee) in a manner different from that laid down by the courts, and, for the purpose of settling this important question and looking towards obtaining a decision which will secure uniformity, leave was reserved to state the case referred to for the opinion of the Supreme Court. Pending the submission of such a case and the answers of the Supreme Court thereupon, there must still remain the doubts expressed by the ex-Chief Commissioner with regard to the law, especially as regards the Province of Quebec. In his judgment, above referred to, the ex-Chief Commissioner said: "In so far as the contracts under which telegrams are dispatched are concerned, it was admitted at the hearing that the contract settled by Mr. Scott throws a greater liability on the telegraph company, and of course, increased the liability over that which previously existed in Canada."

My view is that, the board having settled conditions of transmission which contain, I think, reasonable and adequate provision to guard against errors and to insure correctness in the transmission and delivery of messages, and in view of the questions of law which are raised and which are standing for the opinion of the Supreme Court of Canada, and which, inferentially at least, affect the questions which we are now asked to decide, I think it would be extremely inadvisable for the board to go any further in the sanctioning of additional conditions. I would dismiss the complaint.

The judgment was concurred in by the Chief Commissioner, Assistant Chief Commissioner and Deputy Chief Commissioner.

Enquiry Re Telegraph Rate Increases.

In connection with the application by telegraph companies for increased rates of tolls, which is before the Board of Railway Commissioners, the board issued a statement Oct. 24, as follows: "The Board of Railway Commissioners has decided to hold an extended series of sittings over different portions of Canada for the purpose of obtaining the views of the public on the application of the telegraph companies for an increase of practically 20% of the present telegraph rates. The board will sit at Ottawa on Nov. 11 and 12, at which sittings representatives will be heard from the Quebec and Ontario. They will be in Winnipeg on Nov. 17 and 18; at Vancouver, Nov. 22 and 24, and at Victoria on Nov. 25. On the return trip, sittings will be held at different points in the western provinces, the exact dates of which will be made public within a very short time. It is also their intention to proceed to the Maritime Provinces after returning from the west, where sittings will be held at one or more points, of which notice will be given. As the question is of very great importance to the business interests of the whole country, it is to be hoped that the boards of trade and the people generally, will avail themselves of this opportunity of expressing their views at the time and places above mentioned."

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Ardill, Sask., and Darwell, Alta.

H. H. Carr, heretofore route agent, Dominion Express Co., Truro, N.S., has been appointed its agent there.

The Canadian National Ex. Co. has closed its offices at Cap Rouge, and Neuville, Que., Pine Orchard, Ont., and Hepburn, Sask.

Lieut.-Col. T. R. McKenzie, formerly of Richmond, Que., has been appointed route agent, Dominion Ex. Co., Truro, N.S., vice H. H. Carr, transferred.

The Central Canada Express Co.'s bylaw, authorizing C. Hope, Assistant Superintendent, to issue tariffs of tolls, has been approved by the Board of Railway Commissioners.

The Canadian Ex. Co. is reported from London, Eng., to have entered into an arrangement with the Handley-Page Air Service for the carriage of millinery between Paris and London, for quick transportation to Canada.

The Canadian Association of Ice Cream Manufacturers' application for a reduction in express classification of ice cream from 1st class to 2nd class, has been dismissed by the Board of Railway Commissioners.

The board of conciliation, appointed recently to deal with the differences between the Canadian National Express Co., and its employes at Winnipeg, consists of Mr. Justice Metcalfe, Chairman; W. T. Sweatman, representing the company, and F. Bancroft, Toronto, on behalf of the employes.

The Canadian National Ex. Co.'s employes have been awarded overtime payments dating from Sept. 1, 1918, to the date when the 8 hour day was put into effect. The board of conciliation award was unanimous except as to the reinstatement of J. H. Watson, chairman of the union at Winnipeg, who was discharged after the recent sympathetic strike there.

A Winnipeg press despatch stated recently that the Manager of the Winnipeg Board of Trade's Transportation Department had been advised by the Board of Railway Commissioners that demurrage charges on car loads of goods left standing on tracks would be reduced shortly from [illegible] a day after the first 24 hours to $15 a day and that where a refrigerator or baggage car is used the charge would be $10. The demurrage rates referred to are evidently those to be charged by express companies from Nov. 17, the companies having adopted the Board of Railway Commissioners' Chief Traffic Officer's recommendation with respect thereto, without the necessity of any order being made. The express companies' tariff in regard to this will read as follows: "Detention charges. On cars held by shipper or consignee for loading, unloading, forwarding directions or for any other purpose, 24 hours (one day) free time shall be allowed. When for any reason for which the express company or the railway company, is not responsible, cars in express service are held beyond the said free time for loading or after loading, or for unloading following notice of arrival (if necessary) or placement, the following tolls shall be charged for each day of 24 hours, or part thereof, Sundays and legal holidays to be excluded in computing time: Stable cars, when used as such, $25; other express cars (including dismantled stable cars), $15; freight cars used for express goods, $10."

The American Railway Express Co. has issued the following notice: New express packing rules, similar to those required for freight movement on railways, will go into effect on Dec. 10, and express shippers are requested to prepare themselves for the new standards. The new packing requirements, which were approved recently by the United States Railroad Administration, were formulated to provide additional safeguards for merchandise sent by express. Heretofore, shippers have been using all sorts of containers for express packages, but the new rules are expected to make the regulations uniform and thus provide business concerns with an even more reliable and speedy service. Preparations are being made at local offices of the American Railway Express Co., which is the government's agent in handling the express business of the entire country, to put the new rules into effect and to require a strict adherence to them thereafter. The express officials expect that in this way shippers will be induced to pay greater attention to their packing methods and to turn their business over to the carrier substantially packed and clearly marked, so that, with reasonable care on the part of expressmen, all traffic can be handled rapidly and with fewer chances of loss or damage in transit. The new rules will not permit the use of paper wrapping for packages over 25 lb., nor ordinary paper boxes, wrapped or unwrapped, when the weight of the package is over that limit. For shipments over 25 lb., wooden containers, or containers of fibreboard, pulpboard or corrugated strawboard material are required. The cartons must be made of materials of specified "test strengths," similar to those required for the freight service, and the containers must bear the stamp of the manufacturers, certifying that the material used is of strength required for the weight of the shipment carried in it, as called for in the rules. The express regulations, though modeled on those for freight movement, permit a wider latitude in the size of the carton used, and carry a certain number of exceptions. Shippers who wish to acquaint themselves with the new express regulations are requested to study Supplement 5 to Express Classification 26, in which these rules are embodied, and copies of which may be secured at any express office.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canada Iron Foundries Ltd.—Supplementary letters patent have been issued under the Dominion Companies Act, authorizing the company to decrease its capital stock from $4,500,000 to $4,300,000, by the cancellation of 20,000 unissued common shares; and to increase its capital stock to $6,300,000 by the issue of 200,000 preferred shares.

Canadian Westinghouse Co., Hamilton, Ont.—F. A. Merrick, Vice President and General Manager, has resigned the position of General Manager, retaining the office of Vice President, and has received an appointment from the Westinghouse Electric International Co., London, Eng. N. S. Braden, heretofore Manager of Sales, has been elected Third Vice President. H. M. Bostwick, heretofore Assistant Manager of Sales, has been appointed Manager of Sales. H. U. Hart, heretofore Chief Engineer, has been appointed General Manager and Chief Engineer. C. A. Price has been appointed Assistant Chief Engineer.

Davis-Bournonville Co., Jersey City, N.J., has issued a circular describing and illustrating decarbonizing outfit, for turning out carbon deposits in gas engine cylinders.

Edison Storage Battery Co., Orange, N.J., has started publication of a house organ, "The Grid," its stated object being "to disseminate some sense, and a little nonsense, among users of storage batteries."

Locomotive Superheater Co., 30 Church St., New York, N.Y., has issued the following bulletins: no. 5, "A dependable pyrometer for locomotive service;" no. 6, "The most from superheating;" no. 7, "U.S.R.A. standard locomotives;" no. 8, "Superheater maintenance and operation."

Lyman Tube & Supply Co., Montreal, Frank D. Lyman, Managing Director, died somewhat suddenly in Montreal, Oct. 1, aged 42. For some 10 years he managed John Millen & Sons' railway department in Montreal, and then founded the Lyman Tube & Supply Co., which is Canadian agent for the Electric Service Supplies Co., Philadelphia; Canadian distributors, National Tube Co., and also represents a number of other manufacturers specializing in railway supplies.

Railway & Power Engineering Corporation, Toronto, agents for Heywood Bros. and Wakefield Co., Wakefield, Mass., report having received an order for seats for the 20 first class cars which the Canadian National Rys. are having built by Canadian Car & Foundry Co.

Whiting Foundry Equipment Co., Harvey, Ill., has issued the following catalogues: no. 146 "Cupolas and cupola charging machine;" no. 147, "Ladles;" no. 148, "Core oven equipment;" no. 149, "Air hoists and elevators;" no. 150, "Side-blow steel converter."

J. H. Williams & Co., Brooklyn and Buffalo, N.Y., makers of superior drop-forgings and drop forged tools, have issued a catalogue of 160 pages, 4 x 6 in., illustrating and describing their standard stock specialties, including several lines of new goods, viz.: Agrippa turning tool holders, set screw pattern, Agrippa boring tool posts, Vulcan forged cutter tool holders, and several new assortments or sets of drop forged wrenches. The books contains, also, a description of the drop forging process in simple, non technical style.

The National Shipbuilding Co., Limited
Goderich, Ontario

Marine Engines and Boilers and Iron Foundry

Special attention given to all kinds of Hull and Machinery Repairs
on Ships laying up in the Port of Goderich for the winter months

December, 1919

The 13th Canadian Light Railway Operating Company's Organization and Work in the Field, With a General Description of the Entire Light Railway System in France.

By Captain R. McKillop, Officer Commanding the Company Throughout Its Services.

In October, 1916, the Militia Department at Ottawa received a request from the British Government, through the Right Hon. A. Bonar Law, to recruit all available railway operating men, and authority was at once granted to organize the first company, known as the 1st Section Skilled Railway Employes. On Feb. 15, 1917, authority was granted by the Adjutant-General for the formation of the second section, and the following article refers to the latter company's work. The authority for its formation was contained in order in Council 261, dated Jan. 27, 1917, and among other things, it provided for "working pay" being allowed all officers and men doing "skilled" railway work. In the case of officers this extra pay amounted to $1 a day and as regards the men, the officer commanding was empowered to establish the rates, which varied from 60c to $1 a day. The establishment was rather an unusual one from a military standpoint, being composed of 3 officers and 266 other ranks, the latter only having 112 privates, the remainder being non-commissioned officers. This establishment was, however, changed in England to 5 officers and 271 other ranks, the latter having 179 privates, instead of 112.

The author was given command of the company on Feb. 17, 1917, and recruiting was carried on throughout Canada, men being drawn from all the railway companies, which had previously been requested by Ottawa to assist in the prompt releasing of men. The Canadian Government Rys. took an especially keen interest in this recruiting, by arranging to choose full train crews, consisting of one locomotive man and fireman, one conductor and two brakemen, from the various districts. The assistance of the various railway companies was so generous that the entire company was recruited in one month at a cost of only $500, which was donated by the Ontario Government. Guy St. Barracks, Montreal, was chosen as the concentration center, where manual drill was carried on until April 13, 1917, on which day the unit entrained for Halifax, and embarked for England on April 16, on the R.M.S. Grampian, arriving at Liverpool on April 29, after an uneventful passage. Longmoor Camp was the base in England for operating troops, but owing to congestion, the unit was first sent to Purfleet, Essex, and then to Aldershot, where overseas leave was granted, military training continued and other arrangements made for dispatch to the front.

The company was originally intended for broad gauge operating work, as only the best main line men were chosen by the recruiting officers, but the light railway organization was developing to such an extent in France, and there was such a demand for personnel to fill it, that the unit was ordered for light railway work and re-named the 13th Canadian Light Railway Operating Co. In order to train the unit for this class of work, 39 men, with ability to operate gasoline power units, had to be [illegible] and sent to Longmoor Camp, where they underwent special training in the operation of petrol electric and simplex petrol power to fit them for their work in France.

Captain Robert McKillop

The main body were inspected by General Turner, V.C., G.O.C. Canadian troops in the British Isles, on June 8, 1917, and proceeded to France the following day, via Southhampton, and Le Havre, the Longmoor detachment following one month later. The unit rested in Le Havre for 3 days and then moved forward via Rouen and Calais to Dunkirk, where it arrived on June 17, 1917, and awaited orders to proceed up the line.

Before dealing with the unit's active work in France, it would seem advisable to explain the fundamental principles of light railways, the method of operation adopted by the British authorities, and other details, so that the reader will be in a better position to understand the whole situation.

General—The primary object of light railways was to relieve traffic on the heavily travelled roads, deliver the army supplies by rapid dispatch to destination, and with less loss from enemy action. The tracks could be advanced rapidly, following a general advance and lead to points inaccessible by roads. Also evacuation could be accomplished much faster by rail.

A very complete system of connecting transportation systems between the British Isles and the firing line was established by the spring of 1917, consisting of: 1. Steamship lines to various ports in France. 2. Standard gauge railways from the ports to forward railheads all along the front. 3 Inland water transport routes, via rivers and canals, to serve the lines of communication and the forward areas. 4. Light railways, from standard gauge railway connections and barge routes to the trench tramways systems. 5. Trench tramways to the rear defensive systems, operated by small tractors, horses or man power. Road vehicles and fatigue parties to the firing line. The light railway system was not the least of these, although as a separate system played a most important part in the feeding of men, animals and guns. When it is considered that for every [illegible] tons handled on the light railways, [illegible] three ton lorries, with full loads, were kept off the roads, the significance in this regard at any rate can easily be appreciated.

Organization.—The light railway system, with its complex activities, spread over some wide areas by a small army of officers and men, required, above all, careful organization to perform its duties with precision, to facilitate [illegible] and to ensure thoroughness and [illegible] in every detail of its work. There had to be an unbroken line of responsibility from the upper to the [illegible] possible had to be [illegible] for the building and maintenance of a track system, arrangements had to be perfected for the ordering and building of equipment in such numbers and variety as the traffic demanded and an intricate system had to be devised for maintaining and operating such vehicles under war conditions, as well as furnishing facilities, whereby such a system could be used to the best advantage of the army in general.

The chart on this page shows such an organization, which during the war worked with the perfect precision desired. It was arranged on the army division principle, viz., each army having at its head an assistant director of light railways (A.D.L.R.) reporting to general headquarters (G.H.Q.) and co-operating with the Assistant Director General of Transportation (A.D.G.T.) at army headquarters.

The A.D.L.R. was in charge of all track construction, maintenance and operation in 1917, and under him there was a light railway construction engineer (L.R.C.E.) on the track side, and a superintendent of light railways (S.L.R.) on the operating side. The latter had a complete staff of officers under him, and the officers commanding operating and work shops companies reported to him for duty. (See chart showing company organization on this page).

Lieutenant R. S. Richardson.
Traffic Officer, 13th Canadian Light Railway Operating Co.

In March, 1918, there were approximately 12 operating companies, 6 army A.D.L.R. staffs, General Headquarters staff, and thousands of men in the line of communication work shops; all skilled railway men, drawn from the British Isles, Canada, the United States, Australia, South Africa, New Zealand, India, South America, and from all corners of the earth. Adding to these attached unskilled labor and personnel employed on construction, both skilled and unskilled, the number of all ranks on the roll of the British light railway system would run well over a six figure total.

Light Railway Trackage in general commenced from a point where the standard railways ceased, and continued to their connection with the trench tramway systems. Overlapping naturally occurred where the enemy had retreated, allowing standard gauge railheads to be advanced, but this was advantageous, as it provided more than one railhead where tonnage could be transferred from the standard gauge, thus relieving the cars, which were always in great demand, much more quickly. Operating companies generally located their camps and terminals away from railheads, ammunition dumps, and hospitals, in order to avoid bunching of targets liable to attract enemy shelling and bombing. The terminals consisted of inbound and outbound working yards, storage yards, car repair tracks and power terminals. Tracks were run to the railheads, and laid along transhipping sidings, where ammunition, stone, supplies and other tonnage was transhipped direct, and hauled by yard locomotives to the classification yards. The main line generally ran forward to points where it connected by a Y to a forward lateral track running parallel with the line, and about 2 or 3 miles behind it. From the forward lateral, tracks ran at right angles again, forward to the trench tramway systems, at sufficient distances apart to suit the requirements of the army, and wherever possible they were connected together at the foremost or most easterly point, thus providing loops where traffic could be run in any direction, in case one of the forward branches was broken by shell fire. Spur tracks were run from the main line, lateral and forward branch lines, to battery positions, field dressing stations, stone dumps, R.E. yards, camps, ammunition dumps, casualty clearing stations, salvage dumps or wherever tracks were required, and passing tracks were built at all stations and intermediate points east, having branches forward of the forward lateral. The forward lateral of where necessary. A forward storage yard was also necessary, to which point steam locomotives handled cars in daylight for night delivery by tractor power.

Light Railway System Headquarters Organization.

Just previous to the launching of the great German offensive in Mar., 1918, on some parts of the front, there was a forward, intermediate and back lateral, connected by main tracks running west and same lateral of other systems to the one army system was connected with the north and south, with the result that there was a continuous track 153 miles long, behind the entire British, Belgian and Portugese fronts, connecting with the French system on the south. The purpose of this international line was to move shock troops rapidly to whatever point of the firing line the great drive was to be directed, and it proved itself of immeasurable value to the allied forces during the offensive, until it was broken through on the Somme. Even then reserves were rushed from the north along its route to near Arras, where it connected with a back lateral running as far south as Bucquoy Village, behind Achiet-le-Grand.

Telephone System. (See chart on page 633). To maintain and install a telephone system with a war on is not an easy task, but it had to be done, otherwise traffic could not be moved promptly and in volume, or communication maintained internally and externally. The light railway telephone system originated at G.H.Q., and ran to a "super control," situated at an intermediate point behind the armies. From "super control," separate lines were run to each "central control," and from there to the "district controls." By this telephone system super control handled the distribution of power and cars between armies, and central control between operating companies. Lines also ran connecting all central controls together and district controls in the same manner. Corps light railway offices were connected by separate wires to central controls and the latter to army headquarters and trunk lines.

Light Railway Company Organization.

From district controls two traffic lines were run wherever there were tracks, one known as the block to block line, connecting with all stations, and the other as the through reporting line, connecting main stations or report centers. Each station was equipped with a telephone box, having a lever which could be moved to either side when conversing with adjoining stations, or left in a through position when a through connection was desired. Stations connected with the through wire had small switch boards, by which connections could be made between the two wires. In the event of district control, wishing to converse with an intermediate station away up the line, the nearest report center was called on the through wire, it, in turn, called the station, and made the through connection by plugs on its switchboard.

Breaks in the line were so numerous, on account of shelling and concussion from our own guns, that each district control had a sufficient number of line men always on hand to be rushed to the break, in a tractor. In this manner communication was maintained in a satisfactory manner.

In addition to traffic lines there were the usual domestic telephones at each of the headquarters, connected by switchboard to the traffic lines.

Connecting all these wires together in one single line would stretch over 2,000 miles. This will give the reader some idea of the extent of the telephone system and what it meant to maintain communication throughout heavy bombardments.

Equipment—The power units and cars used on the light railway system were strong and up to date, the expenditure on which must have run into millions of pounds sterling. Steam locomotives were of four classes, viz.: Baldwin, 16 ton locomotives, of the mogul type, water capacity, 400 gall., working steam pressure 180 lb., coal capacity, half a gross ton. American, 15 ton locomotives, of the prairie type, otherwise similar to the Baldwin. Hunslets, 15 tons, of the mogul type, built in England according to English practice, and small Hudson locomotives.

Tractors were of three types, 20 h.p., open top simplex tractors, 40 h.p. simplex with armor plated sides and tops, and 6 ton petrol electric locomotives also armor plated.

The cars varied in capacity from 1 to 10 tons and were recognized by letters, as follows: A and B class cars, 1 ton capacity, with removable sides; C class, 3 ton capacity, with removable sides; D class, 10 tons capacity, with 4 drop doors on sides; E class, 10 tons capacity, with 2 drop doors on sides, equipped with well bottom; F class, 10 ton capacity flats; G class, 10 ton capacity flats with wells; H class, flat tank cars equipped with steel rectangular tanks with a capacity of 1,500 imp. gall. and large numbers of 1 ton tip cars. The above were all War Department (W.D.) cars, but mixed up among them could be found French decauville cars of 10 ton capacity, and captured German cars of 7½ ton capacity, the latter of very poor construction. The up to date W.D. cars had truck and car frames built of steel and were wonderfully strong and well built for narrow gauge work. The couplings, unfortunately, were of the pin and link type, with the result that frequent accidents occurred, through the couplings failing or in switching operations.

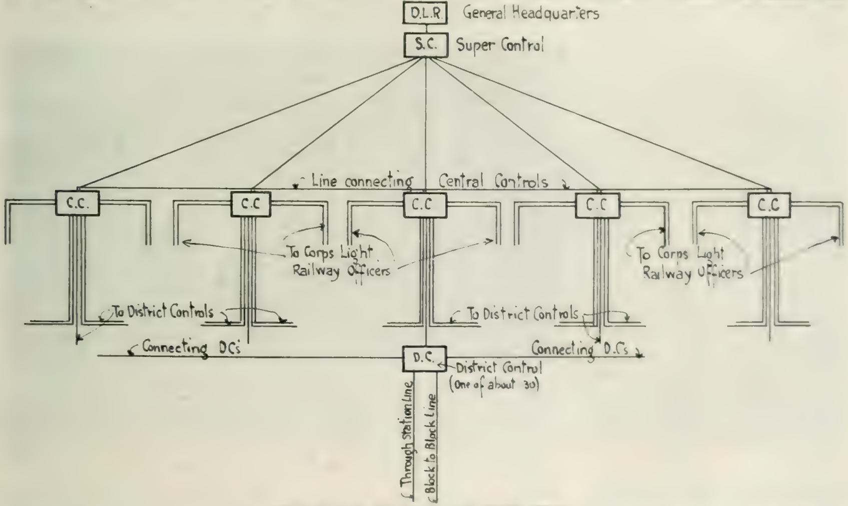
Special flat cars were also operated, equipped with ramps for loading 6 in. and 8 in. Howitzer guns, and covered box cars with sliding doors were used in 1918 for handling wounded stretcher cases, rations, mail, etc. Each company had a 6 ton all steel wrecking crane, which was very useful, although low in capacity, but a heavier crane would have been practically impossible for a 2 ft. gauge railway. Each army had a headquarters repair train, consisting of work, store, tool, power and office cars, electric lighted by dynamos and up to date in every respect, as well as an equipped train for the use of the stores officer.

Traffic—The principle traffic handled was ammunitions, rations, feed and supplies, troops, wounded, R.E. stores, ordnance, water, road stone, lumber, firewood, coal, logs, rails, ties and fastenings, ballast, salvage and guns. Certain traffic was given preference over all other traffic, depending on whether the fighting troops were on the offensive or defensive. Generally it would be the wounded, but occasionally it was ammunition, supplies or fresh troops, in which event the stretcher cases among the wounded were handled in ambulances and only walking wounded carried by railway.

Wherever possible, wounded were moved from the field dressing stations to the casualty clearing stations, and from there to the standard gauge ambulance trains, by light railways, as a journey by ambulance over the bumpy roads was a great hardship to these men who deserved the best that could be given them. Not only our own wounded were handled, but the enemy's also, our own always first.

Ammunition was handled direct from the broad gauge or from the dumps to forward dumps and battery positions. Supplies and rations were handled from the broad gauge pack trains to divisions, brigades and small arms all along the lines, road stone from stone trains to stone sidings. [illegible] by the traffic, R.E. stores and material from dumps to [illegible], water to camps, [illegible] and [illegible] by tank cars and logs or firewood from the Canadian Forestry Corps and [illegible]. Mounted guns were loaded on light railway special cars and moved to battery positions, and [illegible] construction material for the C.R.T. (Canadian Railway Troops) comprised a large portion of the tonnage. The majority of the traffic naturally was forward, but in the opposite direction salvage and troops were moved.

Traffic was not carried indiscriminately, but by direct orders from Army Light Railway Headquarters (see accompanying organization and telephone charts). A corps light railway officer was stationed with each corps headquarters.



Telephone Lines and Controls, Light Railway System.

whose duty it was to book all orders from the various branches of the corps in a traffic order book. At a certain time each night he would phone central control at army L.R.H.Q., and communicate to the officer in charge the traffic orders that had been booked for the following day. Central control would then tabulate all these orders, review the car and power situation, previously ascertained from company commanders, and decide which orders could be taken. Accepted orders, each of which was given a number, would be transmitted to the corps L.R. officers and company commanders in district controls. The former would phone all interested parties, and arrange to have fatigue parties ready at appointed times the following day to load or unload the cars, and the latter would study the orders for the following day, and in due course order cars, power, and crews to fulfil them. A sample of one such order may prove of some interest:

"Order 52.—Place 38 empty D class cars at road crossing near Station X, Mar. 10, 1917, at [illegible] o'clock, to move working party of 20 officers and [illegible] other ranks to end of steel on C13 line. Order power for 20 [illegible] K. Returning movement leave end of steel 8 a.m., Mar. 11, 1917. Repeat."

As each order was completed, central control was informed, and the order would be marked off its books. Orders of every conceivable kind were fulfilled, from supplying an inspection car and tractor for some staff officer, to moving thousands of tons of ammunition forward. The amount of traffic moved during the war by the British light railway system would run into astounding figures, my limited knowledge being that the weekly average for one company was about 10,000 tons and for an army, 40,000 to 50,000 tons.

Operation—Trains were operated on the block to block system, by telephone dispatch. Traffic passing between armies was controlled by the super control, between districts by central controls and locally by district controls, viz.: traffic originating in a district and being delivered within the same district was handled through that particular district control. Traffic originating in one district for delivery in another was handled by central control and so on.

District controls had naturally the most work, and required a competent staff of dispatchers working 8 hour tricks under a chief dispatcher. Dispatchers had the rank of sergeant, so that their orders would be carried out by train crews, etc., from a military as well as a railway standpoint, and the chief dispatcher was in charge of all traffic on the district with the rank of regimental sergeant major.

In addition to controlling the traffic, district controls kept all records, and prepared all the daily, weekly and monthly statistics required by central control. All the various movements were recorded on train boards, by the British operating companies, and on dispatchers' sheets by most of the colonial companies, according to their home practices. The yardmaster would report to district control when trains were ready for the road and their consists would be recorded on locomotive slips. District control would telephone the first station out, get the right of way from the operator and dispatch the train on its way. Stations would phone ahead to each other in the same manner, and the train would be [illegible] to its destination, [illegible] meets, or to take [illegible] control being advised by [illegible] the passing time of trains so that the sheet could be kept up to date.

Locomotive slips were kept filled up for each movement of a locomotive from the time it left the running shed until it returned to the shed to be tied up. These slips showed all the information necessary to allow the statistical clerk to keep his records, the running sheet only being used to control the traffic.

Stations were installed wherever required along the line, and consisted of dugouts, shacks dug into the ground, or any old building suitable for the purpose. They were manned by two men, one for day shift and the other for night, equipped with watches, lamps, flags and train register books. At each village or main station, there would be a larger staff, some of these having as many as 20 men, including yard staffs, telephone men, switch locomotive crews, etc. All stations were connected on the block to block telephone wire and main stations, in addition, on the through wire. Stations were called by a system of rings, viz.: intermediate stations between D.C., and the first main station, were called direct from D.C. on the block to block wire, by using 2, 3, 4 or 5 rings as required; main stations were called in a similar manner on the through wire, and intermediate stations beyond the first main station were called on the block to block line by main stations, the normal position of lever in station telephone boxes being "through"; district control in this manner could speak to any station on the district and keep in touch with the traffic.

As the traffic was intense on the single tracks, every care had to be taken to avoid congestion, tieups or accidents. No lights of any kind were allowed at night in the forward areas, and it was no easy task to keep the wheels moving in the pitch dark, sometimes through a gassed, shelled or bombed area. Locomotives were generally doubleheaded, to reduce the number of trains to the minimum and run in convoy with pusher locomotives on the grades. Destination stations were advised of the probable arrival time of trains, so that unloading parties would be on hand to unload the trains immediately on arrival, thus releasing power and cars, which had to make as many as two or three trips daily on short lines or during rush periods.

To keep the traffic moving, wrecking gangs were always on hand, housed in boarding cars, and their task was a heavy one, as derailments were frequent in some localities where the track was bad, or where it had been destroyed by shell fire. Travelling inspectors, with the rank of sergeant major, were also employed to pilot trains to their correct destinations. These men were required to know every inch of the track, and the location of every battery. They had to walk the track at night and know that it was passable, and emergency track gangs had to be called out to repair damage created by shells and bombs, as no cars could be left in the forward area during the hours of observation. Their tour of duty was over only when every train destined for their section of the track had been delivered and the empties returned before daylight, and their work was of such a nerve racking character that they were allowed one day off in every three.

Some of the Officers and Non-Commissioned Officers no. 2 Section, Skilled Railway Employes.

This illustration, from a photograph taken at Guy St. Barracks, Montreal, April 2, 1917, while the company was training there, shows the following, from left to right: Acting Lieut. J. Swaile, who went overseas as Company Sergeant Major; Lieut. W. W. Webster, formerly Foreman, Steel Car Shop, C.P.R., Winnipeg, now Night Foreman, Erecting Shop, there; Capt. Robt. McKillopp, Officer Commanding, formerly Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal; Lieut. J. S. Hall, Adjutant; Sergt. Major Oxley, who left the unit for evacuation to England about May, 1918; Sergt. Major W. R. Spencer, formerly Agent, National Transcontinental Ry., Cochrane, Ont., and son of George Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa.

Water for the locomotives was secured by pumping into overhead or underground tanks, pumps manufactured by the Merryweather Co. of England, being generally used. The source of supply was wells, streams, rivers, canals and shell holes, and each locomotive was equipped with a suction hose. Where water was scarce, tank cars were filled by pumps at any available supply and set out along the line where required. Steam engines were used in daytime up to the point of enemy observation and to any point on the line at night, tractors being used at all other times and places.

The 13th Light Railway Operating Company's Work.

To resume the record of work performed by the 13th C.L.R.O. Co. Orders were ultimately received to proceed by road from Dunkirk to Coxyde on the Belgian coast, and the unit arrived there on June 21, 1917, locating camp in the sand dunes and immediately commenced unloading equipment from the Belgian railways. At that time the French were operating the light railway and they continued to do so until June 26, 1917, on which date the 13th Company took over the system under the British Fourth Army.

A great offensive was being planned on the Nieuport front, the object of which was to cut off the German northern army, and a great number of guns and men were moved up to participate in it. This meant plenty of work for the light railway, which had to be extended to take in the full area of operations, and it was one of the most important fronts on the battle line at that time, the best of equipment was supplied to the unit. Ammunition was hauled day and night to the batteries, the average being 1,500 tons daily for two months, with the other usual traffic in addition. Enemy shelling was constant and heavy, which greatly impeded the working of this traffic. The tracks had been laid alongside the roads, and not only suffered from shelling, but were continually being blocked by road transport.

On July 10 and 11, 1917, the enemy shelling was very intense all over the districts and the light railway tracks and personnel suffered accordingly. The enemy made an attack, captured a large number of prisoners and used the deadly mustard gas for the first time, the result of which is now well known. So much damage was done to the units headquarters camp and yards that they were moved back about a mile, but this did not interfere with the handling of traffic.

Towards the end of Aug., 1917, the proposed drive was called off and the unit was ordered to draw all the ammunition and supplies back to the railheads. Shelling still continued heavy, and camp was moved twice before orders were received to go south and report to the A.D.L.R. First Army. From Sept. 11 to Nov. 6, 1917, the main body of the unit was located at Lestram, on the Portugese front, the remainder being scattered among various British companies, assisting in work of a particular nature. On the latter date, orders were received to proceed to Achiet-le-Grand in the Somme area, and report to the A.D.L.R. Third Army North. The district around Croiselles, Mory and Death Valley was taken over on Nov. 10, 1917, and a rather quiet period was spent during the winter, the usual traffic being handled with very little shelling back of the forward lines, which were within range of the enemy's field guns.

It was the calm before the storm, however, as the memorable 21st of March, 1918, proved. On that day the great and final German supreme offensive was launched, commencing about 5 a.m., and it sounded as if all the pent up rage of the ages had been let loose. The air simply rained shells, and when our own guns opened up the whole ground trembled. As the enemy advanced, stations were abandoned one by one, all papers being destroyed, and telephones removed by the men before leaving, until all the personnel were back at Achiet-le-Grand. On Mar. 22, Achiet was evacuated, as most of the batteries which the unit had been serving with ammunition had evacuated or been put out of action, and in addition Achiet was being heavily shelled and bombed. It was necessary to get all the power and equipment out before the track was too badly broken, and this was only accomplished finally by running all the trains in convoy, with a track gang ahead of the first train. A new camp was established at Rettemoy Farm, and the operation of the line continued from there, the principle work being to move ammunition from Puisieux dump to Bucquoy village where it was taken forward by motor lorry. On Mar. 26, Bucquoy was occupied by the enemy, which put a stop to the transfer work, and the unit slipped quietly away north and arrived safely at Maroeuil, behind Arras, before dawn of the same day. The roll was called, and an inventory taken of the stock, which showed that only one man had been wounded, and all the power, equipment and tools had been saved, except one tractor and two hospital cars destroyed by shell fire and one locomotive which overturned during evacuation. The equipment saved included 16 steam locomotives, 15 gasoline locomotives, and 200 cars of all classes. All other light railway companies south of us lost their equipment, which was valued at about $10,000,000.

The unit was to rest at Maroeuil for a few days, but in the early morning of Mar. 28, 1918, a shell landed in the middle of the camp, killing 24 and wounding 26 men. It was the hardest of luck to lose so many men, after coming through the offensive with only one casualty, but it was the fortune of war. It was a sad lot of men who arrived at Barlin next morning, drenched to the skin after travelling all night, as each one had lost a comrade or friend. Between Mar. 28 and April 13, the unit rested at the First Army Mine School at Houdain and then was ordered to Choques, to dig trenches, as the enemy had broken through the Portugese army.

Before the work was begun, however, orders came to proceed by rail to Vignacourt, near the River Somme. Owing to the fact that the roads suffered most through the capture of more than half of the light railway system, the roads branch of the army claimed the idle light railway personnel, with the result that the 13th Company worked on roads around the village from April 17 to May 30, 1918. On that date, a new railway system was commenced to run from Vignacourt to Poulainville, and the unit worked with a will, having been promised that it would operate the line on completion. Construction work continued until the 6th Battalion, C.R.T., arrived to take over the work, and the unit commenced to operate the construction trains.

On Aug. 8, 1918, the great allied drive was launched on the Amiens front, wounded began to arrive, and in three days 10,000 were handled through the casualty clearing station at Vignacourt by the unit. The advance was so rapid that the system then being operated, became a wash out, a move was therefore made forward to Guillaucourt, where the operation of the recaptured tracks was commenced. In the period from Aug. 13 to Sept. 8, the unit moved a number of times, always forward, and finally came to a temporary stop at Peronne. The traffic out of Peronne was very heavy, as there was only one light railway company operating in the salient created by

Track Gang on Light Railway Construction.

the [illegible], and day and night, without ceasing, the trains plied to and fro between Peronne and Nurlu. This line was only 7 miles long and 65 trains were handled over it daily, hauling a total daily tonnage of between 2,000 and 3,000 tons. The enemy fell back to the Hindenburg line and the unit moved its headquarters to Tincourt, near Roisel, on Oct. 12, 1918. From then until the armistice, traffic was very heavy and the line grew longer every day. It ran in the triangle formed by the standard gauge railways running between Roisel, Cambrai and St. Quentin, through a country devoid of any other means of transportation. An old metre gauge track was converted to a 2 ft. gauge in quick time, and traffic was daily delivered to the end of steel behind the advancing army. The unit was reinforced by three other operating companies, but had full charge of the system. All equipment was salved and repaired by gangs of repair men. Most of it was in fairly good shape as it had only been in the enemy's hands from Mar. 21.

Oct., 1918, proved to be a record month, nearly 50,000 tons being handled by the unit. All ranks put in long hours, especially the train crews, who were on 18 hour shifts, although there were 50 steam locomotives and 500 cars being operated each day. Relief came when the broad gauge operated into Bohain, the end of light railway steel, through Cambrai and St. Quentin. After the armistice, traffic still remained heavy as all ammunition and other salvage had to be brought back, but time was of no account, which allowed the crews to have a well deserved rest.

Canadian railway men undoubtedly were paid a splendid compliment in this important and final drive, as the 1st Section S.R.E. (58th Canadian Broad Gauge Operating Co.), was chosen with the 2nd Section S.R.E. (13th Canadian Light Railway Operating Co.), to handle all the railway trains from the beginning to the end of the drive. The former had, I understand, about 1,000 reinforcements from British operating companies and the latter had 800 British reinforcements.

Orders came through on Feb. 12, 1919, to proceed to Etaples, Feb. 15, for return to Canada, but owing to congestion, a hold order was waiting at the base, and the unit was held there until Feb. 28, when it moved to Le Havre and thence to Liverpool. From there leave was granted, and on the men's return they were sent to Rhyl, Wales, in drafts, for the various demobilization centers—all but the casuals arriving back in Canada by the end of May, 1919.

The original officers of the unit were:

Capt. R. McKillop, Officer Commanding, who, before enlistment, was Superintendent, Laurentian Division, C.P.R., Place Viger station, Montreal who since his return from the front, has been on extended leave of absence, spending most of the time at East Boston, Mass., in connection with the Smoke Jack Co., of which he has been General Manager, and is also a director. He returned to the C.P.R. service Nov. 1 and went to Chapleau, Ont., to relieve Superintendent W. C. Guthrie, during the latter's three weeks holidays, after which he was to report to headquarters in Montreal for further instructions.

Lieut. R. S. Richardson, Traffic Officer, who before enlistment, was Superintendent, Canadian Government Rys., Fort William, Ont., and has since returned there as Superintendent, Canadian National Rys.

Lieut. J. S. Hall, Adjutant, who before enlistment was employed by the C.P.R., occupying responsible positions in the operating and mechanical departments, as a student. He transferred to the British Tank Corps in England and was promoted to command a tank section. He is now living in Toronto.

Lieut. W. W. Webster, Locomotive Officer, who before enlistment was General Foreman, Steel Car Shops, C.P.R., Winnipeg, and is now Erecting Shop Night Foreman there.

The following officers were among the reinforcements:

T. J. Fouhy, Adjutant, who succeeded J. S. Hall. Before enlisting he was Accountant, Purchasing Agent and Secretary, Macdonnell and O'Brien, contractors, Montreal. After demobilization he was with O'Brien and Doheny, contractors, Montreal, on some work in the United States, for a short time, until, on account of ill health, he decided to take a holiday and went to the Western States for a trip.

Lieut. J. J. McDonald, who before enlistment was a conductor on the Grand Trunk Pacific Ry. at Prince Albert, Sask.

Lieut. J. W. Weeks, who before enlistment in the infantry was a fireman on the C.P.R., at Calgary, Alta., and has returned to that position.

The total casualties in the unit were 27 killed and 60 wounded, gassed, or disabled, by accidents, about 30% of the whole.

Letters of Appreciation From the Higher Command.

From Lieut.-Col. F. B. Wilson, A.D.L.R., First Army, Nov. 24, 1917.

Dear Captain McKillop:—I was glad to receive your letter of the 20th inst., and to know that your company is comfortably settled in your new quarters, and also that you have a section to operate to yourselves. I am quite sure that you will make good. I cannot speak too highly of the work done by your company while in this army area, which was always most satisfactory. Your train crews and mechanics were of the greatest assistance to us, and we feel the loss of them very much indeed. I can only hope we will see you all back with us in the near future. You and your company have the very best wishes from myself and my officers. Yours sincerely, F. B. Wilson, Lieut.-Col., A.D.L.R., First Army.

From Lieut.-Col. A. T. LeFevre, D.S.O., A.D.L.R., Third Army North, April 1, 1918.

Dear Captain McKillop:—I very much regret to hear about your losses at Marveuil. After bearing the heavy work entailed in extricating your company, and bringing the rolling stock and power units to safety, it is the worst kind of hard luck to lose men at Maroeuil through a chance shell. I should be glad if you would convey to your officers and men my appreciation of the excellent work they did in evacuation of valuable rolling stock, and my sincere regrets that the company has suffered to such a great extent and such severe losses. I am very glad to learn that Lieut. Macdonald performed such good services and shall take pleasure in drawing the attention of the D.L.R. to his excellent services. I am sending a copy of this letter to the D.L.R., and I am sure you will hear from him in reference to the all round good work of the company, and particularly in regard to the excellent work performed by all ranks during the evacuation of power and stock from the area, which I regret to say is now in the hands of the Germans. I hope later on, when we get going again, as I am sure we will, that the 13th Canadian Light Railway Operating Co., will be returned for duty to the 3rd Army North. At the present time we have got a sufficiency of operating troops, in fact at the moment some of them are doing grading and track work. Yours very sincerely, A. T. LeFevre, Lieut.-Col., A.D.L.R., 3rd Army North.

From Brig.-Gen. G. H. Harrison, C.M.G., D.S.O., Director of Light Railways, April 4, 1918.

Dear McKillop:—I want to very heartily endorse LeFevre's remarks to you, adding my sincere congratulations on the very splendid work done by you and your company. I am most awfully sorry about the extraordinary bad luck you had at Maroeuil, after completing such valuable work. Please convey my congratulations to all ranks of your company. Yours sincerely, G. H. Harrison, Brig.-General.

From Major M. P. Sells, Superintendent of Light Railways, Fourth Army, Nov. 18, 1918.

To Capt. R. McKillop, O.C., no. 13 Canadian Light Railway Operating Co.:—Now that hostilities have ceased, and we have ceased to be the important branch of the transportation service that we were, I wish to thank you, and the officers, n.c.o.'s and men under your command, for the magnificient way in which you responded to the very heavy demands made upon you during the recent operations which have brought us to the victorious end we all longed for. In spite of long hours on duty, difficult weather conditions, and shortage of power and fuel, the traffic was moved; traffic which could not have reached the forward area in any other way, on account of few and bad roads, and mined broad gauge railways, and the result was achieved only by the grit, perseverence and loyalty of all your company, who worked as one man and with one aim in view. I am grateful for your personal support on several critical and difficult occasions, and I heartily wish you and those who have so loyally worked under you all the good things that the blessing of peace will bring to the Empire. M. P. Sells, Major, R.E., Superintendent of Light Rys., 4th Army.

Editor's Note.—Robert McKillop was born at Perth, Scotland, Dec. 26, 1884. He entered C.P.R. service June 22, 1905, as draftsman in the Chief Engineer's office, and on Apr. 1, 1912, was promoted Assistant Engineer in charge of Building Department; Feb. 8 to Dec. 13, 1915, Division Engineer, Eastern Division, Montreal; Dec. 13, 1915 to June 12, 1916, Superintendent, District 2, Atlantic Division, Woodstock, N.B.; June 12, 1916 to Feb. 28, 1917, Superintendent, District 4, Eastern Division, Montreal, now Laurentian Division, Quebec District. On Feb. 28, 1917, he was granted leave of absence to take command of the 2nd Section Skilled Railway Employes, and went overseas Apr. 16, 1917, returning May 22, 1919. He was demobilized May 22, 1919, and transferred to the general list of officers, and the C.P.R. granted him an additional six months leave.

Terminal Power Plants.

By W. J. Harding, Chief Engineer, Ottawa Power Plant, G.T.R.

The very rapid development of the power generation and distribution business in the last 30 years has shown the difference between the actual life of power generating machinery and its useful life; or its life up to the time that it is superseded by larger and more economical apparatus or machines better suited to changed conditions of power generation. So much depends upon the design and the conditions of operation that no fixed values can be assigned to any equipment. Practice shows that most power plant appliances become obsolete long before the limit of their useful life is reached.

At present there is renewed agitation for the use of higher pressure steam, and a number of manufacturers are ready to supply steam at 600 lb. pressure and 200 degrees superheat. The turbine manufacturers are prepared to offer turbines to utilize this high pressure steam. Whether these changed conditions will result in a new type of station cannot be stated, but it is certain that additional operating economies may be secured, although the total economy when fixed charges are considered, may not be much better.

Probably the best illustration of compact power installation to meet the heating, ventilating, lighting, power and sanitary demands, is found in the plants of modern hotels, railway terminals and large office buildings. Data from a large number of plants show the costs of electric current, etc., to be made up of: labor, coal, handling ashes, water, oil, lamps, supplies and repairs, interest and depreciation, also, central station service, when used for periods of minimum consumption to allow shutting down of plant. Roughly the figures average 1-3 labor, 1-3 coal, 1-10 interest and depreciation, and the sum giving the cost of power as made up of the minor items. The mean load throughout the day is usually 50% of the full load. The maximum is only required an hour or two late in the afternoons during the winter months. It is customary to allow about 40% reserve over the estimated peak loads in designing the boiler plant.

Boiler Room Equipment—The type of steam generator will depend entirely upon conditions of service and space. Modern plants using high pressures invariably install water tube boilers; they are safe, more economical and will meet the varying demands better. For reasonably low pressures in small plants and for heating installations, the ordinary fire tube boiler meets the requirements, if overload capacity is not an essential factor. These boilers are cheaper and cost less for repairs than water tube boilers.

Mechanical Stokers — The difference between good and bad firing may easily amount to from 5 to 20% of the amount of fuel fired. Therefore, there is no investment around a steam plant that will pay better than the amount put out to produce good boiler appliances. Automatic stokers have been developed to a remarkable degree of perfection, and, when suited to the fuel, have an advantage over hand firing, in that under all conditions they are reliable, that they can be adjusted to either extreme and can be depended upon to operate continuously with the least amount of skilled labor. The economic saving will depend on the basis of comparison and operation. Whether a stoker will save labor in a fire hole depends upon the size of the plant; as a rule mechanical stokers are not labor saving devices in plants under 1,500 to 4,500 h.p. It should also be remembered that unless the type of stoker is suited to the kind of fuel obtainable, the maintenance of the stoker is likely to be extremely high, running in some cases to twice as high as fire room labor under hand fired conditions.

Boiler Feed Pump—It is the tendency of railway power plants to install reciprocating pumps, these are wasteful and inefficient. It is not an uncommon thing to find the steam consumption of an ordinary 6 x 4 x 6 in. duplex pump to run up to 200 lb. per h.p. The modern turbine driven centrifugal feed pump requires almost no attention, and a large saving can be made due to the absence of pump valve renewals, etc. The steam consumption of the turbine even, when running non condensing, is reasonably low, due to the high rate of rotation. Even when the pump is run as low as 1,800 r.p.m., the steam consumption of the turbine when run non condensing would not exceed 50 lb. per h.p., and the consumption will not increase with the age of the pump as is the case with reciprocating pumps.

Open Feed Water Heaters—The most profitable use to be made of exhaust steam is in heating the boiler feed water, since not only is heat conserved and fuel saved, but the boilers are protected from temperature strains, the water is purified by the driving off of the gases and the consequent precipitation of carbonates, the capacity of the boiler is increased in the ratio borne by the heat imparted to feed water from exhaust steam to the total amount of heat required to convert the cold water into steam, or from 10 to 16%. It is claimed that for every 11 degrees that the feed is heated there is a saving of 1% in fuel burned.

Refrigeration in Hotel Service—The capacity of a refrigerating plant is expressed in two ways, "ice melting effect" and "ice making." For example—A 20 ton machine will produce the same cooling effect in 24 hours as the melting of 20 tons of ice, or in other words, will extract the same amount of heat from the brine as would be required to melt 20 tons of ice into water at 32 degrees. Theoretically the extraction of this amount of heat from 20 tons of water at an initial temperature of 32 degrees should change it into ice, but in practice these are various losses not present in the simple process of cooling, so that it is customary to allow for twice the boiler power per ton for ice making as for the process of cooling or ice melting effect; the indicated h.p. required per ton refrigeration depends upon suction and condensor pressure which in turn are governed by the temperature and amount of condensing water used.

Power Plant Records—One of the most essential things in power plants is the systematic record of operations by daily logs and recording apparatus, and when the results are published on engine room bulletin boards, it creates a rivalry between the different shifts and promotes a desire among the men for higher efficiency. The importance cannot be overestimated. In this way affairs in the plant are lifted from the realms of guess work to certainty. While the systems adopted for ordinary plants may be simple, the records should be arranged for convenient reference so that comparison of results with past performance may be made. Thus it is possible to note the effects of changes in equipment or improvements in economy.

Heating With Exhaust Steam From Power Plant—Exhaust steam heating by vacuum systems has developed rapidly during the last few years. With its decided advantages over the old style methods of heating, it practically predominates the heating field. The advantages of the vacuum system over the gravity system may be summarized as follows:—1. Positive circulation by prompt removal of air and condensation through the vacuum returns. 2. Smaller return pipes. Asbestos covering on returns can be eliminated so that the condensation can be handled by the pumps without the injection of cold water. 3. Increased economy, as back pressure on engines can be reduced to practically atmospheric. 4. Air binding and water hammer trouble removed.

The Dunham vacuum system is in use at one large plant I am acquainted with. It was installed in the place of the old gravity system, in which we used high pressure steam, which was unsatisfactory, wasteful and difficult to control under quick changes of temperature. The vacuum is maintained by a Tod-Attwood 6 x 8 x 10 in. pump and controlled by a ¾ in. Fisher vacuum pump governor, which is operated by a diaphragm and actuated by the vacuum produced in the return header. The condensation is removed by the operation of a thermostatic trap connected to each radiator. This trap is comprised of a shell, consisting of a body and cover. Attached to the cover is a hollow disc or diaphragm, containing a combination of volatile fluids which vaporize at about 200°. Attached to this diaphragm is the valve of the trap, which raises and lowers on its seat as the disc or diaphragm expands or collapses. The condensation from these traps is pumped into a sump, from which an electric centrifugal pump actuated by a float delivers it to the boiler feed pump through a Cochrane heater. During the winter the hot water heater supplying the offices is heated with this condensation which passes directly through the chamber and is connected to the vacuum pump. The total square feet of radiation in station is 6,200. Low pressure condensation equals 0.25 lb. per sq. ft. per hour. High pressure condensation equals 0.4 lb. per sq. ft. per hour, showing an approximate saving of 35%.

The foregoing was read before the Canadian Railway Club, Montreal, recently.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, ex-Assistant Superintendent, Lake Superior Division, Canadian Northern Ry., Capreol, Ont., now of Toronto, born at Pittsford, N.Y., Dec. 7, 1874.

A. G. Albertsen, General Agent, Passenger Department, C.P.R., Minneapolis, Minn., born at Copenhagen, Denmark, Dec. 31, 1887.

J. H. Barber, Engineering Department, C.P.R., Montreal, born at Cobourg, Ont., Dec. 20, 1856.

H. E. Bissell, Land and Tax Agent, Grand Trunk Pacific Ry., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, ex-Engineer, Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

W. W. Butler, President, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochabar, N.S., Dec. 18, 1867.

W. C. Casey, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

A. H. Foster, Manager, Brantford Municipal Ry., Brantford, Ont., born at Guelph, Ont., Dec. 24, 1888.

G. C. Gahan, Assistant General Auditor, C.P.R., Montreal, born there, Dec. 28, 1874.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there, Dec. 6, 1859.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Rys., Quebec, now of Toronto, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, General Tie Agent, Canadian National Rys., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, Federal Manager, Delaware & Hudson Rd., U.S. Railroad Administration, Albany, N.Y., born at Mifflinburg, Pa., Dec. 21, 1864.

Jas. H. Hall, President, Westerian Transportation Co., Ltd., Ottawa, Ont., born at Hawkesbury, Ont., Dec. 20, 1863.

J. T. Hallisey, Superintendent, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, President, Canadian National Rys., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

R. W. D. Harris, ex-Trainmaster, Moose Jaw Division, Saskatchewan District, C.P.R., Moose Jaw, now of Tappen, B.C., born at Victoria, B.C., Dec. 12, 1879.

J. J. Hennigar, District Freight Agent, Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

L. S. Landers, Acting Division Engineer, Canadian National Rys., Edmundston, N.B., born at Farnham, Que., Dec. 15, 1888.

A. McCowan, Master Car Builder, Western Lines, Canadian National Rys., Winnipeg, born at Perth, Scotland, Dec. 5, 1868.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

Capt. R. McKillop, formerly Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, then Officer Commanding 13th Canadian Light Railway Operating Co., now acting as relieving Superintendent, Eastern Lines, C.P.R., born at Perth, Scotland, Dec. 26, 1884.

J. M. MacArthur, Superintendent, Medicine Hat Division, Alberta District, Medicine Hat, Alta., born at Toronto, Dec. 8, 1885.

H. M. MacCallum, General Freight Agent, Canadian Pacific Ocean Services, Ltd., Toronto, born at Huntingdon, Que., Dec. 3, 1882.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. C. O'Donnell, Superintendent, Divisions 2 and 3, Central District, Canadian National Rys., Winnipeg, born at Cobden, Ont., Dec. 17, 1879.

Alfred Price, General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant Superintendent, Toronto Suburban Ry., Toronto, born at Boldre, Hants, Eng., Dec. 23, 1870.

G. D. Robinson, ex-European Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, born at St. John, N.B., Dec. 7, 1877.

G. E. Smart, General Master Car Builder, Canadian National Rys., Toronto, born at Edinburgh, Dec. 23, 1873.

W. Tansley, Car Service Agent, New Brunswick District, C.P.R., St. John, N.B., born at Shelburne, Ont., Dec. 27, 1872.

W. H. Thompson, Chief Dispatcher, C.P.R., Edmonton, Alta., born at Bobcaygeon, Ont., Dec. 26, 1886.

M. F. Tompkins, General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, ex-Assistant to Vice President, C.P.R., Montreal, now Vice President and General Manager, Dominion Copper Products Co., and director, Armstrong Whitworth of Canada, Ltd., born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to President, Canadian National Rys., Toronto, born there, Dec. 1, 1883.

A. P. Walker, Assistant Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

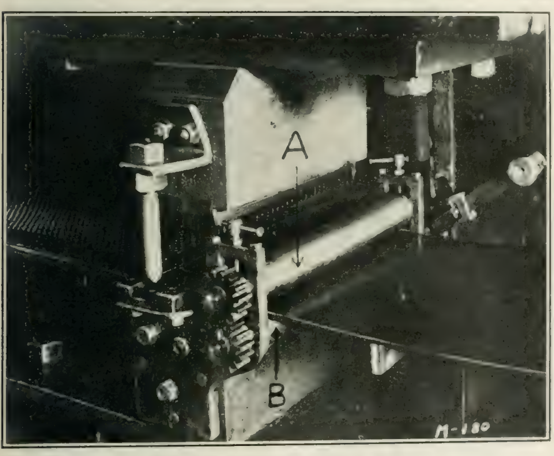
J. B. Way, Freight and Ticket Agent, C.P.R., Sault Ste. Marie, Ont., born at Operating Co., now acting temporarily as relieving Superintendent, Eastern Lines, C.P.R., born at Perth, Scotland, Dec. 26, 1884.

Railway Mechanical Methods and Devices.

Perforating Plates in Railway Shop.

The device shown in the accompanying illustration is in use for perforating plates used in connection with grease cellars in driving boxes. The largest plates perforated are 15½ in. wide, and can be made any convenient length, the standard length used being 8 ft.

For punching, the sheets are placed on a guideway and entered between the feed rolls A and B, which control the movement of the sheet into the punch at each opening stroke. After starting the operation, the sheet is automatically fed the proper amount by each successive stroke of the punch.



Punching device for making perforated plates.

There are 4 rows of ¼ in. punches, each row containing 25, so that a total of 100 holes are punched at each stroke of the machine. The punches are staggered as to length, so as to break up the force of the blow. The die is a solid steel plate, in which holes have been drilled, reamed and counterbored, for relief on the bottom side, to suit the position of the punches. With this device, one man handles the work without aid, and gets out the plates at the rate of about 10 an hour, making a cost of approximately 6c a plate. One of the plates upon which the punching has been finished is shown at the base of the punch press. From paper read at American Railway Tool Foremen's Association's meeting, by J. J. Sheehan, Roanoke shops, Norfolk & Western Rd.

The Dominion Atlantic Ry. has had prepared a series of films on agricultural operations along its lines. The films, together with projecting machines, operators and lecturers are being offered to farmers' clubs and other organized meetings throughout the country.

Standardization of Tools.

In this day and age, the individual idea should be subordinated to such an extent that we should adopt practices that would give better efficiency, reduce the cost of output and on the other hand simplify the tool situation whenever possible. It has been plainly shown that the adoption of standard practices by the Railway Master Mechanics' Association was a good move. When a standard practice was adopted by that body, it was carried out to the letter on all railroads and considered standard.

In the past eight years the members of the American Railway Tool Foremen's Association have attended meetings and returned to their respective homes and made reports to their local officers on these subjects but unfortunately they did not get the co-operation that they should have received. As all the tool foremen who attend these conventions receive instructions from their superiors to attend, they should be invested with such confidence that when they make a report to their superiors that a certain tool has met with the approval of the association and been adopted as standard, the higher officers should put forth an effort to put this into practice. If we could standardize the tool equipment on all American railways and use the same methods and practices there is no question that it would eliminate a great deal of the making of unnecessary tools. While I appreciate the fact that the tool room foremen and the superintendents of motive power have a certain amount of self-pride in the making of all tools for their respective railways, nevertheless, the progressive man of today must be able to give and take whenever necessary in order that he may develop a method that will get proper production.

In the automobile industry, where all parts must be interchangeable, the first practice is to get the tools made to the standard, before starting production, and these tools are maintained to an extremely high standard of accuracy. If this is found to be good practice from a manufacturing standpoint, why is it not a good practice in the railway shops? There is only one solution and that is co-operation and the insistence on the adoption of practical methods and standards.

On the Atchison, Topeka & Santa Fe, in order that we may get the proper results, it has been found very essential that the tools be standardized, and, whenever possible, drawings are made of the tools and then submitted to the tool room foreman, so that they will be made up in a standard way. It is further found advisable that only tools which cannot be secured from the manufacturer for a reasonable price should be made in our tool room. It is not good practice for a railway shop tool room to manufacture tools that can be secured from the manufacturers for the same price or less than it would cost to make them locally. In some shops such tools are made, but I consider it false economy, due to the fact that there is a certain amount of loss incurred by the tool room, and when standard tools are secured from the factory all the possibility of loss is overcome, due to the fact that all tools are furnished in first class condition and free from flaws and defects.

There is a vast difference of opinion between railways in regard to a standard locomotive frame reamer. The greatest difference seems to be in the length over all and in the taper. If a standard length and taper of locomotive frame reamer could be universally agreed on, it would be possible to eliminate the excess cost due to ordering reamers of special type from the manufacturer as well as eliminating the carrying of many different lengths of reamers locally in the tool rooms.

For illustration, on the Santa Fe lines a standard reamer has been adopted, with a left hand spiral flute, and of a standard length that will take care of the maximum and minimum requirements. Heretofore, there were a great number of different lengths which have been eliminated by standardization. By the adoption of the left hand spiral fluted reamer, the breakage has been reduced to about 20%. While using the straight fluted reamer, trouble was encountered due to the chipping out of portions of the flute and also chattering, while now this has all been eliminated, for the left hand spiral retards the reamer to such an extent that it does not gouge or seize, especially while reaming steel frames on locomotives. All our reamers are tapered 1-16 in. in 12 in. and I feel confident that with the proper co-operation of the mechanical heads of the various railways throughout the continent, this point could be agreed upon. This standardization not only pertains to reamers, but also to all other tools and equipment.

The foregoing paper was read before the American Railway Tool Foremen's Association recently, by E. J. McKernan, Supervisor of Tools, A.T. and S.F. Rd., Topeka, Kan. In the discussion which followed, several questions were raised regarding standard forms of reamers. There was some difference of opinion regarding the relative advantage of flutes in the form of spirals having short and long pitches. The majority favored long spirals, or reamers used with air drills, but the statement was made that the shorter spirals reduced the time, but required heavier thrust to feed them.

Welding Boiler Tubes With Gas Torch.

It may prove of interest to describe a method we have developed for welding 4 in. boiler tubes with the acetylene torch.

We cut the ends off square in a power hacksaw, clean the rust and scale off the long pieces with a file, and take short pieces to a grinding wheel and brighten the surface ¼ in. back from end.

We have a clamp made from a piece of 4 in. standard pipe, about 24 in. long, split longitudinally, with hinges on one side and slots with bolts and handled nuts on the other. The clamp has three 1½ in. holes near the center, and it is placed on the tube to be welded, the 1½ in. holes over the joint. The torch is applied to the 1½ in. holes, and the tube "tacked" in three places. The clamp is then removed and the welding performed easily; an assistant turning the tube.

We use 3-16 in. welding rods and can weld 50 tubes with 100 ft. of oxygen; time, about 10 minutes for each tube. The welder prefers the square end to the beveled end and thinks it takes less steel and less gas.

We can flatten these tubes under a power hammer where the weld is, without showing a fracture.—A. H. Halladay.

Promoting Safety in the Shop.

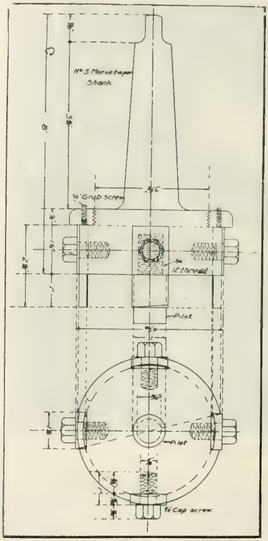
We must not forget, while manufacturing new devices and tools, that in each case we should keep in mind safety first. The prevention of injuries should be considered even more than the efficiency of the tool or device. Do you ever inspect the tools that are in daily use in your shop to see that they are in safe condition? The tool foreman should make this his business, as he is the most capable of determining the safety of tools. Our shop safety committee demands a report from the tool foreman, on tools in all departments, and this has brought about wonderful results in a decrease of injuries. The blacksmith shop, boiler shop, and even the different tool rooms are good places to find defective tools. There are numerous things in the shops and locomotive houses that are unsafe at their best, and we must see that they are at their best.—J. C. Beville.

Cutter for Tube Sheets, Canadian National Railways.

The body of the cutter, a plan of which is given herewith, is made of mild steel, and has four cutters bolted at right angles. The shank is drawn down to a Morse standard taper and is used in four spindle multiple drilling machine or radial drill. Four slots are milled in the sides for cutters, which are of high speed steel and are bolted down, then the hole is put in a lathe and the cutters turned down on the lathe to form, and ground slightly for clearance. The cutters can be slightly adjusted by slipping a filler between the cutter and the face of the tool. The cutters are ground to follow one another, and each engages at the same time, cutting more metal than the ordinary double cutter tool. With this cutter three sheets or 33 holes can be cut without regrinding the tool. We are indebted for the foregoing information and for the drawing from which the illustration was made, to W. H. Hollingshead, who, when they were furnished, was Foreman, Tool Room, Canadian Northern Ry. Shops, Winnipeg.

The Tool Room's Functions.

A tool room, to my idea, takes care of the tools which are used in the shop. The shop may be a machine shop, or it may be a locomotive erecting shop, or it may be a car repair track. The tool room cares for the tools that are used by the productive workers. I recall to mind one tool room that is under the charge of one man. It is about 10 x 10 ft. and his sole duty is to repair dies for bolt cutting machinery. I recall to mind another tool room that has more machinery than I have in my shop. Both rooms are efficient and serve their purpose.



Cutter for Tube Sheets, Canadian National Railways.

The province of the tool room is to make such tools as may be needed, to maintain them in such a condition that when they are wanted, they are ready for service, and to have them on hand, so that there will be no delay to the men who are to use them. I call to mind a hurry-up job that was not done on time; on investigating the matter, the excuse was made "We could not find our tools." On looking into the matter in detail, it was found that the excuse was correct. The practice had been for a man to pick up the particular tool that he wanted, and use it, and leave it where he got through with it. If somebody else wanted it, and remembered where it was last used, he might find it, and if he did not find it, then he kept hunting until he finally located it. The result was an enormous amount of wasted time chasing up tools. There was no tool room for this particular department, and there never had been. The men were consulted with and were asked, "If you are given a tool room, a place to put your tools, will you put them there?" A tool room was built in the end of a shed for storing tools—it was not a manufacturing department and there were no machine tools in it whatever. It was simply a place to keep the special articles that were needed at various times in a car repair yard. The majority of the men did as requested. When they took a tool out of the tool room, and used it, they put it back. A few, however, did not have time to take tools back. The majority of the men who were living up to the rule made it so unpleasant for those who were careless that they fell into line, and in a short time every tool belonging in the tool room was put in its proper place when the men were through using it.

The tool room can play a great part in the way of safety. The men who use tools, hammers, chisels, and one thing and another, have their own kit. These tools get out of order. They become dulled, their heads become burred up, and are unsafe. Every one can recall to mind some man who has had an eye injury, or who has cut himself badly from the cracking off of a part of a cold chisel. If the tool room will carry in stock a lot of cold chisels, sharpened and ready for service for the man who turns in a defective chisel, that man has saved a lot of time. The cold chisels he has received are ready to go to work. He does not have to go out to the grindstone, or to the blacksmith shop, and spend a lot of time getting his chisels dressed. He turns in his defective equipment, and gets new equipment in its place, and goes back to work without wasting time. This is the one thing that I have in mind; the importance of the tool room having things ready when wanted, and in good condition. The tool room motto should be, "A place for everything, and everything in its place." That refers to everything, from the commonest cold chisel up to the most complicated tool that you can possibly make. If the tools are in good condition, and ready for use, the tool room has absolutely performed its function.—J. A. Carney.

G.T.R. Superannuation Fund—A circular is reported to have been sent to members of the G.T.R. Superannuation and Provident Fund Association, announcing an increase of rates of from 1½ to 2½% to date from Jan. 1, 1920, and a change in the method of computing the retiring allowance. Following this an announcement is reported to have been made from the offices in Montreal, Nov. 6, that owing entirely to the large increases in the rates of pay that have been made recently involving corresponding increases in the returning allowances for which employes would be eligible, it was deemed advisable to have an investigation by an actuary. As a result a revision was made in the method of computing the retiring allowance, and the men's contribution to the fund had been restored to what it was prior to Jan. 1, 1914. The fund, it was stated, had been economically managed, and is in a strong financial position.

The Board of Railway Commissioners has dismissed the complaint of Wilberforce, Ont., residents in regard to train service on the Irondale, Bancroft and Ottawa Ry. (C.N.R.)

The Use of Bronze for Valve Snap Rings and Piston Surfaces, and Bull Rings in Large Cylinders, to Prevent Rapid Wear and Cutting of Cylinder and Valve Bushings.

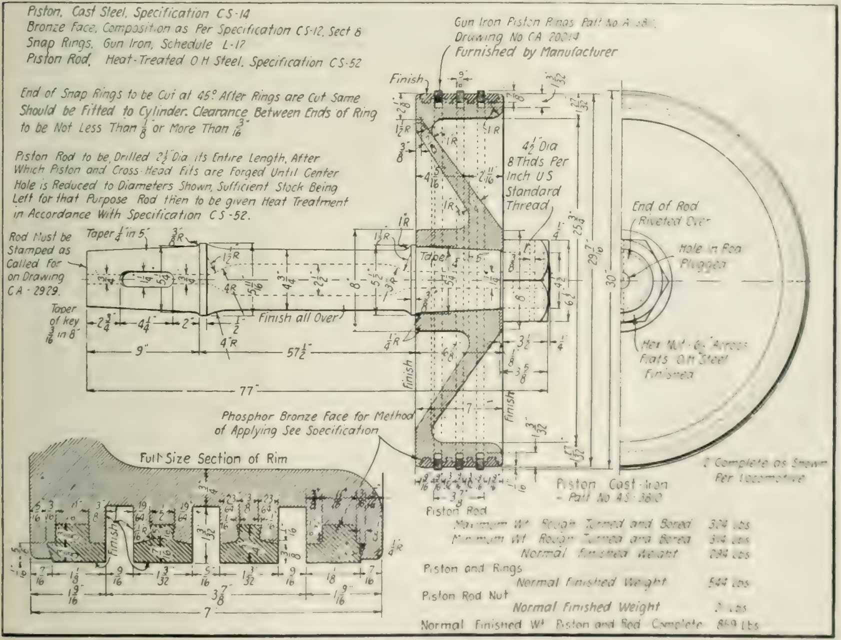
By C. E. Fuller, Superintendent Motive Power, Union Pacific Rd.

Undoubtedly one of the most difficult and perplexing problems relating to locomotive operation is the proper and economical maintenance of pistons and cylinder walls, valves and bushings—those parts which, by their proper relation of sizes, and constantly varying relative positions, assume the responsibility for the correct and economical use of the steam which the boiler has generated. In this region may all too frequently be located the greatest spendthrifts on the entire locomotive.

Since the introduction of modern outside valve gears has eliminated much of the old-time faulty and lame valve setting, our friends within the cylinder have easily taken first place. At no other point on the locomotive can the losses become so great, or so quickly aggravated, due to rapid cutting and wear; nor has the introduction of superheated steam, with increasing size cylinders, tended to ameliorate conditions.

Cylinder working temperatures, which have so direct a bearing on rate of wear, have increased tremendously in the last 10 years. The extensive adoption of cylinder bushings on modern power indicates the enormous increase in cylinder barrel wear and a desire to save cylinders, which otherwise would soon wear thin. Extended piston rods to carry the weight of pistons in large cylinders are a compromise, and there appears a trend toward their abandonment. Decrease in unit pressure between piston and cylinder walls can only be attained at the expense of increased reciprocating weight and dynamic augment. Cylinder and valve lubrication under increased superheat temperatures is surrounded by many difficulties.

With these facts in mind, the Union Pacific Rd. Mechanical Department, began experiments in 1913 with bronze valve snap rings, and in 1915 with **bronze surfaces for pistons.** No originality is claimed in this connection, as perhaps many of those present have experimented more or less along similar lines, but the results obtained are worthy of some consideration.



Piston, Cast Steel, Specification CS-14
Bronze Face, Composition as Per Specification CS-12, Sect 6
Snap Rings, Gun Iron, Schedule L-17
Piston Rod, Heat-Treated O H Steel, Specification CS-52
End of Snap Rings to be Cut at 45°. After Rings are Cut Same Should be Fitted to Cylinder. Clearance Between Ends of Ring to be Not Less Than 1/8 or More Than 3/16
Piston Rod to be Drilled 2½ Dia its Entire Length, After Which Piston and Cross-Head Fits are Forged Until Center Hole is Reduced to Diameters Shown, Sufficient Stock Being Left for that Purpose. Rod then to be given Heat Treatment in Accordance With Specification CS-52.
Gun Iron Piston Rings Patt No A-38
Drawing No CA 20014
Furnished by Manufacturer
Finish
4½ Dia 8 Thds Per Inch US Standard Thread
End of Rod Riveted Over
Hole in Rod Plugged
Hex Nut 6½ Across Flats Of Steel Finished
Rod Must be Stamped as Called For on Drawing CA-2929.
Taper of key 3/16 in 8
Taper ¼ in 5
Finish all Over

Normal Finished Weight 544 lbs
Piston Rod Nut
Normal Finished Weight
Normal Finished Wt Piston and Rod Complete 869 lbs

Common Standard Bronze-faced 29½ in. Piston and Rod, Union Pacific Rd.

Bronze Valve Snap Rings.

Two formulas have been used:

COMPOSITION "A"

Copper	82.96%
Tin	14.66
Phosphor	0.118
Lead	none
Impurities	2.26
Total	100%

COMPOSITION "B"

Copper	80.80%
Tin	5.83
Phosphor	0.10
Zinc	4.54
Lead	6.58
Impurities	2.15
Total	100%

Either composition gave good wearing qualities, but composition A has decided advantages in elasticity. We believe, however, that there is room for further improvement in the composition of the most suitable alloy for this purpose.

Valve rings are of the usual L-section for 15 in. piston valves of cast iron, working in gun iron bushings. Information collected in 1915, or previous to the recent rise in wage rates and material, relative to comparative mileage and cost of cast iron and bronze valve rings may be of interest, showing that against 117 cast iron rings, making 216,495 locomotive miles, there were 45 bronze rings, making 381,337 locomotive miles—an increased mileage in favor of the bronze ring of 358%.

The average cost per 1,000 locomotive miles was: Bronze ring, 8.73c; and cast iron ring, 20.0c, or an increase of 129% for the cast iron ring. This test covered 13½ months, during which no valve cages were removed where bronze rings were used.

A Pacific type locomotive was equipped with bronze rings—composition A, Apr. 13, 1916: Rings removed, worn out —Mar. 22, 1918, with a mileage of 145,285.

Piston Surfaces—In Aug., 1915, a consolidation type locomotive with 22 in. cylinders was equipped with 2 cast iron pistons having bronzed ring poured on while pistons were at about 1,500° F., afterwards machined to size including ring grooves which were fitted with gun metal rings. This test was in contemplation of the use of bronze for surfacing 29½ in. diam. cast steel Z-type pistons, designed for use on a proposed 2-10-2 type locomotive which was then under consideration for the 60 ft. grades between Ogden and Evanston. If possible, it was desired to escape the necessity for using an extended rod on a large diameter cylinder. It was known that at least a year would intervene before a decision was necessary.

Frequent reports from this locomotive indicated that these pistons were performing quite satisfactorily, the rate of wear on pistons and cylinder walls being much below the average with cast iron pistons. The bronze adhered to the piston head without fracture. In June, 1916, this locomotive was shopped—both pistons being reapplied to locomotive without any work being done on them—mileage 40,000. In Mar., 1918, this locomotive had a cracked cylinder, necessitating shopping. The pistons still in fair shape were reapplied to another locomotive, after having made 120,000 miles, and up to Dec. 31, last, had made an additional 19,000 miles, and, to the best of my knowledge, are still in service. The success of this experiment led us to adopt the bronze face without hesitation for the new design 29½ in. pistons for the 2-10-2 type locomotive, and drawings were accordingly prepared, and upon being forwarded to the builders we received an immediate complaint that the design was impracticable from a manufacturing standpoint, as it was considered impossible to pour a bronze ring on a cast steel head, on account of the different shrinkage coefficients. To this we replied by getting four steel castings from the same pattern, successfully pouring and machining them—sending photographs of the finished pistons to the builder as evidence, then putting the pistons in stock for the anticipated locomotives.

The builders had no difficulty in following the design, and 10 locomotives arrived, equipped with the bronze faced cast steel pistons, in the autumn of 1917, and were placed in hard mountain service, where drifting is necessary for 60 miles, with little let-up. After being in service 6 months the bronze had worn down to the cast steel lip at the edges of the piston, between 1-32 and 1-16 in. Pistons were then reversed, and gave 4 or 5 months' additional service. Since then, from time to time, this cast steel lip has been turned back slightly, exposing additional bronze surface, and at the end of 19 months, several of these pistons are still in service, not having reached the limit of wear with their original bronze surface. The piston centers, however, are all intact and apparently capable of indefinite service. These pistons have made over 60,000 miles in most difficult service, and no cylinders have been rebored; in fact, showing remarkably little wear. Incidentally, the use of bronze permitted the adoption of a very light design of piston, which though 29½ in. diam. weighs only 544 lb. complete, without rod.

The accompanying plan indicates the detail application of bronze in dovetail grooves for the purpose of preventing individual sections from leaving their place in case they become detached from the main mass of bronze. The composition of bronze on these pistons is as follows:

Copper	86 to 89%
Phosphor—Tin	4 to 6%
Tin	4 to 6%

Oxwelding Bronze Surfaces on Cast Iron Piston Heads—This practice is of more recent origin, having been in vogue about 6 months. It is purely a reclamation process, but indications to date are very favorable. Cast iron piston heads, which heretofore have been scrapped on account of wear—which usually takes place mainly on the bottom half of the head—are now treated as follows: Pistons are preheated in a brick furnace, over a charcoal fire, to a temperature of 900 to 1,000° F., without removing the rod. A small hole is then made through the sheet asbestos on top of the furnace over the piston, to permit the welding operator to work—the piston being turned from time to time by means of the rod as the work progresses. He first welds a thin layer of bronze over the worn surfaces, between and adjacent to the ring grooves, for approximately one-half of the circumference of the head; he then proceeds to build up to the desired height, including finish, after which the furnace is closed and the fire is allowed to die out and cool over night. The piston is then machined, grooves squared up—and ready for service. being applied with the bronze shoe to the bottom of the cylinder. Tobin bronze welding rods are used—about 8 lb. average, per 26 in. piston.

However, it is contemplated from our previous experience with the fully bronzed circumference, and particularly in view of the fact that most of the wear is at the bottom of the cylinder, that these reclaimed pistons will not only show a considerable increased mileage, but will also show a material saving in cylinder barrel wear, thus increasing the mileage between reborings.

A 26 in. worn cast iron piston can be treated in accordance with the above process for approximately $9.35, while replacements with a new piston of the same design would cost $27.86. This results in a saving of $18.51, besides resulting in really a better piston than the original, on account of decreasing tendency toward wearing the barrel of the cylinder. Up to date about 50 pistons have been thus reclaimed and put into service and there has not been a single failure reported.

By the use of bronze for valve snap rings and for piston surfaces, we have been able to materially reduce the rate of wear and increase the life of the cyinder and valve bushings, as well as the pistons, and keep locomotives longer in service with a maximum of power due to tight and properly fitting parts.

The foregoing was read as an individual paper at the recent railway mechanical convention at Atlantic City, N.J.

Grand Trunk Railway's Contract With Pullman Co.

The Minister of Railways, in replying, in the House of Commons, recently, to a request for information as to Pullman car operation on the G.T.R., read the following memorandum supplied by the G.T.R. management:—"Contract dated July 1, 1916, for 20 years between the Pullman Co. and the G.T.R. Co. of Canada, including subsidiary companies, except the G.T. Pacific Ry. Co. Under the terms of the agreement, the Pullman Co. is obligated to pay over to the G.T.R., 50% of its gross earnings in excess of $7,500 a year. G.T.R. proportion of such excess for the year ended June 30, 1919, was $31,000. The G.T.R. is obligated to pay the Pullman Co. three-tenths of a cent a car mile for intallation and operation of electric lighting of Pullman cars equal to about $1,000 a month. The agreement provides that should the earnings per car per annum fall below $6,000 for two years, or more, the Pullman Co. may cancel contract on 6 months notice, and the G.T.R., in such event, has the option to purchase the equipment at a price to be agreed upon. The Pullman Co. pays all cost of repairs and renewals except those caused by railway accidents; it also pays all inside cleaning of cars, all wages of conductors, porters, and generally all operating expenses except outside cleaning, furnishing water and lubricating oil. Pullman Co. must also supply all cars necessary to meet the requirements of traffic. The contract is deemed by the G.T.R. to be an advantageous one."

The Minister added that the employes on the cars are appointed by the Pullman Co., which has its head office in Chicago.

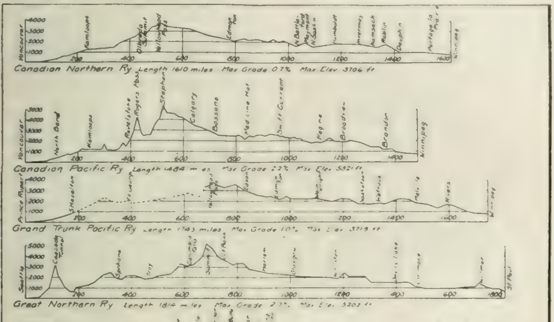
Proposed Joint Control of British Railways.

J. H. Thomas, General Secretary of the National Union of Railwaymen, is reported to have said in a speech at Bristol, Eng., Nov. 15, that the British Government proposed that the railways of Great Britain and Ireland be managed by a joint committee of executives on which the workers would have three members with powers equal to those of the general managers. The government plan, he also said, would create a joint board, composed of 5 general managers of railways and 5 delegates of the locomotive men and the National Union of Railwaymen to negotiate all matters concerning service. Any dispute arising would be referred to another board of 12, comprising 4 representatives appointed by the railways, 4 appointed by the men and 2 appointed to look after the general public's interests. A London cable of Nov. 19, stated that the National Union of Railwaymen had decided to accept the government's proposal.

The Mountain Gradients on the Canadian Northern Railway System.

By Thos. H. White, Chief Engineer, Canadian Northern Pacific Railway, Vancouver.

To anyone who is interested in any way in the capacity of the railways crossing the North American continent, the Canadian Northern Ry. gradients from the plains east of the Rocky Mountains to the Pacific Ocean, cannot be too insistently presented as an evidence of what the future of that railway must be, in competition with all other transcontinental railways, either existing now, or which are possible in the future.



Comparative Profiles of Railways crossing the Western Mountain Ranges.

Comparative profiles showing graphically a comparison of the existing lines have been prepared and distributed in a very limited way to those only in close touch with the C.N.R., and it seems desirable that this feature should be made more public so that it would be a matter of common knowledge and comment. Such an eminent authority as A. H. Smith, then President of the New York Central Rd., who examined the C.N.R. with the purpose of reporting on it, which he did very thoroughly, expressed himself as being astonished that such a railway was a possibility through such mountain ranges as exist in British Columbia. When that was his attitude of mind towards the subject, anyone, less versed in railway conditions on this continent, may well be considered in need of information.

An explanation of the physical features which made possible the low gradients from the crossing of the Rocky Mountains, via the Yellowhead Pass to the sea, may be shortly stated as follows: Behind or west of the Rocky Mountains and paralleling them throughout the whole length of British Columbia, and beyond into the United States to the south and north into Alaska, is a deep depression, which has been named the Rocky Mountain trench, west of which rise the high ridges of the mountains in central British Columbia between this trench and the Pacific coast. Everywhere this trench has to be crossed by any railway from east to west. It is drained by the Kootenay, the Columbia and the Canoe Rivers tributary to the Columbia to the south, and to the north by the Fraser River, and tributaries of the Pine River, the Parsnip and the Findlay Rivers. This drainage to the south and north heads at Cranberry Lake, about 45 miles west of the Yellowhead Pass, which is consequently the highest point behind the Rocky Mountain range on which the great trench can be crossed, and it was the taking advantage of this, in conjunction with the low elevation of the Yellowhead Pass that makes the grades of the Canadian Northern Ry. only incomparably better than any other railway across the mountains, except the Grand Trunk Pacific, and it is the indisputable fact that at no other place can a line be built that will at all compare with the C.N.R. in rates of gradient or total rise and fall. The fall from the west end of Moose Lake, to the crossing of the great trench at the Cranberry Lake flat, is 816 ft., in a distance of 25 miles, which makes possible a gradient of seven-tenths of one per cent, with the necessary compensation for curvature, and easements for passing tracks, and this is the ruling grade on one division, from the Yellowhead Pass to Blue River, a distance of 111 miles, and the only division on the 500 miles from the summit of the rockies to the sea where a gradient of more than four-tenths of one per cent is necessary.

To climb out of the great trench to the west, to the highest point between it and the sea, at Albreda summit, a grade of four-tenths only is necessary, for 12 miles, which is the only rise against west bound traffic, and the only gradient of any consequence which prevents a continuous fall from the summit of the rockies to Vancouver. As this summit is 1,615 ft. lower than that of the C.P.R., which is far lower than any other transcontinental railway except the G.T.P.R., and because the C.P.R. has long grades against west bound traffic of over 2 ft. per cent. and many grades of 1% throughout the mountains, it is obvious that the C.N.R. has an advantage over any other railway in existence for west bound haulage, which can hardly be overstated, and that advantage can never be challenged in the future, for the reason, above explained, that there is no other route possible where like conditions obtain. What these conditions make possible in the carrying of grain from the prairies to the Pacific by the C.N.R.—when freight movements from the east of the mountains to the Pacific and the reverse become adjusted, as inevitably they will be, must strike with astonishment anyone who is first acquainted with them; as was expressed by the New York Central Rd.'s President when the facts were first presented to him.

It cannot be too often insisted on in the interest of the C.N.R., that it has a grade from the sea to a summit of the Rocky Mountains over 1,600 ft. lower than that of the C.P.R. and that it attains that lower summit with a grade that is nowhere worse than four-tenths of one per cent, or 21 ft., with the exception of one grade on a distance of twenty-five miles, and that these grades are compensated for curvature, and adjusted to passing tracks, within these limits, and that the curvature never exceeds 8 degrees, and seldom amounts to as much as that, and is spiralled ac-

[illegible] to the best and most modern practice.

The more technical part of this statement will appeal to railway men, but all of it must impress everyone who learns of it as an extraordinary fact that such a railway through such a country as British Columbia should be possible. Considering that this is an outlet from that immense area east of the Rocky Mountains tributary to the C.N.R., which lies north of the C.P.R. and as far east as Manitoba, and which is beyond doubt the best adapted to the raising of grain and general farming of all the immense north western territory of Canada, and that it is also an inlet from the Pacific to the same under such favorable haulage conditions, can it be questioned that it will develop an immense business, both easterly and westerly, which it will be able to create as soon as conditions become normal for water borne freight on the Pacific. Between the great plains and the Pacific Ocean the mountains are no longer a barrier, since the C.N.R. has come into existence, for they are crossed by this railway with a line which is comparable in the matter of gradients to a like distance in the least mountainous districts on the continent and is capable of hauling as great tonnage as rapidly and cheaply as any.

The National Steel Car Co's Sale and Reorganization.

The President, Sir John M. Gibson, issued the following circular to shareholders, Oct. 27: "Enclosed is notice calling a special general geeting of shareholders for Nov. 12 to consider the question of ratifying and approving a contract which the company has entered into for the sale of its property and business. A copy of the contract is also enclosed.

"The shareholders are doubtless all familiar in general with the situation in which the company has been placed, through a contract which it entered into in 1915, for the manufacture of a large order of cars for the Paris, Lyons and Mediterranean Ry. Co. Unexpected conditions arising out of the war, which were encountered by the company in the performance of this contract, resulted in losses which amounted to more than its total capital stock. Your directors and the officers of the company have been subsequently successfully engaged in reducing the amount of these losses, and have made a material recovery upon this contract, and meanwhile have successfully carried on the company's business and realized a profit therefrom, which has been applied in further reduction of such losses. They have also had in mind the desirability of some arrangement by which the company's debts could be liquidated and as much as possible realized for the shareholders.

"During the past year several negotiations have been entered into looking to the accomplishment of these things, but none of them has been brought to the point of the making of any definite proposal which could be submitted to you. The following is a summary of the company's financial situation as of Sept. 30, 1919: Accounts payable, $3,487,740; accounts receivable and inventory, $1,884,556; deficiency, $1,603,184. To set off against this the company has payments coming in, as a result of negotiations with the P.L.& M. Ry. in France, which, at final adjustment, should amount to $450,000, as well as its real estate, plant and machinery, which have been appraised at approximately $2,600,000. The situation is complicated by the present condition of the car manufacturing business in Canada and the United States. Few orders for cars are being placed, and the completion of the work in hand, and the absence of new orders in the market, has resulted in the necessity of shutting down a considerable part of the company's plant, so that at present time such operation as is being carried on is necessarily resulting in a loss. In view of this, the company's creditors, who have carried it along during the period of financial embarrassment, are insistent that means should be taken at the earliest opportunity to liquidate the company's debts, though during the past two years the company has done a satisfactory and profitable business. As security for its indebtedness, the company made in 1916 a mortgage covering all its property, for the security of an issue of $3,000,000 of its bonds, which have been pledged for the security of its creditors. The principal of these bonds is now overdue.

"Under these circumstances the board has no hesitation in recommending to the favorable consideration of the shareholders the contract of which a copy is enclosed. This contract is to be carried out only in the event that the shareholders determine to ratify it. In substance it makes provision for the discharge of the company's entire indebtedness and for the receipt by the company of 19,000 shares of the capital stock, out of 100,000 shares to be issued, of a new company into whose treasury will be paid in cash $1,250,000. In addition to the shares of stock thus to be received, one half of the net profits realized upon liquidation of the company's claims arising out of the French contract, after deductions as outlined in contract are to be retained by it. Your directors are hopeful that the avails of this contract when finally liquidated, will amount to a substantial sum.

"The company's plant is, in general, in excellent condition. Your board believes that it possesses an efficient operating organization. Its customers have been satisfied with the class and character of its manufactured products, and with the provision of adequate working capital, it is the board's judgment that the new company may look forward to a prosperous and successful career. Unless the proposed contract is ratified the board sees before the company, in view of the insistence of its creditors, no other alternative except liquidation and winding up, and the application of the company's assets to the payment of its debts, in which event it is improbable that any balance would remain applicable to the company's capital stock."

The contract referred to in the circular was made between Donald Symington, of Baltimore, Md., and Robt. J. Magor, of New York, N.Y., as purchasers, and the National Steel Car Co., Ltd., which is referred to in Sir John Gibson's circular, the purchasers agreed to organize a new company under the Dominion Companies Act. The National agreed to ransfer to the new company, all its property, assets, and business, as a going concern, except that it would reserve out of its assets to be ransferred its claims against the French Republic, or the Paris-Lyons-Mediterranean Ry. Co., which it agreed to endeavor to collect. If, upon appraisal of the National inventory, there should exist any deficiency, the National agreed to pay the new company all monies received in connection with its French claims until such deficiency was made good to the new company. After the deficiency, if any, was made good, all receipts on account of the claims to be divided equally between the National and the new company. The National to be reimbursed for its expenses in connection with the collection of claims. On the transfer of the National's property the new company to give the National a release from the Canadian Bank of Commerce of all the National's indebtedness to the bank. The contract provided that it be closed and the transfer of property made on Nov. 14.

The company was organized in 1912 and began operation in November of that year, with a capacity of from 6,000 to 7,000 cars a year. The first year's business showed a profit of $157,153.96, but 1914 was unprofitable, and the surplus was reduced to $80,785.08. In 1915, the company's best year, there was a net surplus of $527,504.56. No report has been issued since then. The Canadian Bank of Commerce is the company's largest creditor, and is said to have advanced about $2,000,000.

Donald Symington, of Baltimore, Md., was, until early in October, Vice President and General Manager, the T. H. Symington Co., railway supply manufacturers, whose works are at Rochester, N.Y. Robt. J. Magor, is President of the Magor Car Corporation, which has its head office in New York, N.Y., and its works at Athenia, N.J. He was a director of the National Steel Car Co., but resigned in October. He is a brother of Basil Magor, who was the National Steel Car Co.'s promoter, who was its first Vice President and General Manager, and who is now Consulting Vice President, Magor Car Corporation.

The National Steel Car Co.'s shareholders, at their meeting on Nov. 12, confirmed the contract entered into between the directors and D. Symington and R. J. Magor. We were officially advised, Nov. 18, that no directors other than R. J. Magor had resigned and that no changes had taken place in the officials. It is reported that the President, Sir John Gibson, will resign, and that other changes will be made in the directorate.

National Steel Car Corporation Ltd. has been incorporated under the Dominion Companies Act, to acquire the undertakings, franchises, business, property and other assets of National Steel Car Co. Ltd., and to carry on a similar business. The company's capital is to be divided into 100,000 shares, without nominal or par value, provided that the company should carry on the business with a capital of $500,000. The company may issue and allot the shares of its capital for $5 each, subject to the increase of such capital stock under the provisions of the Companies Act. The company's head office is to be at Toronto.

C.P.R. Steel Rail Orders—The C.P.R. has ordered 140,000 tons of its standard 85 lb. section steel rails from the Algoma Steel Corporation, Sault Ste. Marie, for spread shipment during 1920.

Steel-Plate Drip Floor for Niagara Railway Arch Bridge.

Floor protection of novel character is being applied to the lower Niagara arch bridge, by which the Grand Trunk and five other railways cross the Niagara gorge. Corrosion of the floor system by salt water drippings from refrigerator cars has become serious here, as it has on many other bridges, especially near terminals, where the blowoff, from switching locomotives, of water carrying various boiler compounds seems to add to the trouble. The effect of this action was one of the elements that led to a general overhauling and detail examination of the structure a year ago, as a result of which extensive repairs and reinforcement are being carried out to bring it into condition for the heaviest modern loading. In connection with renewal of the corroded portions of the floor system it was desired to provide protection against further corrosion. To this end C. E. Fowler, consulting engineer for the work, designed a special drip-protective floor which is being installed by the Terry & Tench Co., New York, contractors for the repair and reinforcement work, under direction of Mr. Fowler and H. B. Dickinson, Superintendent of the bridge for the owners.

New Floor of Niagara Railway Arch Bridge With Drip Plate and Gutter.

At the examination of the bridge the main structure was found to be in splendid condition, but the top flanges of floor beams and stringers and the stringer laterals showed losses of 25% to over 50% in thickness from corrosion. Reinforcement of the weakened members was imperative, and as it was desired also to bring all parts of the bridge up to E 60 capacity the two pieces of work were taken in hand at the same time. The bridge was originally designed for about E37, although the principal members of the 550 ft. arch span are of much higher capacity and require no reinforcement.

The bridge is a double deck structure, 1,080 ft. long. The upper deck, at the level of the top chord of the arch, is the double track railway floor. Below this is a highway floor, framed between the trusses. The railway deck has always had a tie floor, with wooden troughs, so that the highway traffic was more or less exposed to rain and drip. Brine drip and locomotive blowoff, especially in case of standing trains, were the most troublesome features of the situation so far as the condition of highway traffic was concerned. The new drainage floor for the railway deck was designed with protection for the highway deck as one of its objects.

In carrying out the floor system repairs and reinforcement, the cover plates and in some cases the flange angles of the stringers were cut off, traffic being restricted to one track while work was going on in the width of the other track. About 65,000 rivets had to be cut out. Where injury to the metal from heating was not to be feared, rivet heads were cut off by oxyacetylene torches fitted with special tips; such a torch cut off 500 to 700 heads of ⅞ in. rivets a day, or four times as many as one hand crew could do. New and heavier flange material was then riveted in place with countersunk rivets, so as to leave a flat surface as a seat for the drainage floor. All old metal was cleaned with sandblast and then painted with tockolith, with a view to counteracting the influence of any remaining rust.

As this strengthening work was completed the drainage floor was set in place. This, as fully shown by the accompanying drawing, consists of plates of copper-steel 3-16 in. thick, resting on maple raising strips bolted to the top flanges every 3 ft. by countersunk bolts. By making the strips on the inner stringer thicker than those on the outer stringer a drainage slope outward was given to the plate; a longitudinal gutter of copper steel under its outer edge takes the drainage to downspouts. The plate floor under each track is 9 ft. wide.

The track ties, 10 x 10 in., are dapped to 9½ in. depth for a length of 14 in., to receive 10 x 14 in. raiser blocks of hardwood, in order to raise the ties clear of the drip plate. The thicknesses of the blocks over the inner and outer stringers differ by 1 in., as shown, so as to make up for the difference in thickness of the raising strips under the drip plate and thus bring the ties level. The blocks are spiked to the ties. All the timber is treated with hot carbolineum. The copper steel floor plates are flanged sections 3¾ ft. wide, their length of 9 ft. extending crosswise of the track. The ends of the sheets are left plain. The side flanges, which form the joint between abutting sections, are 2 in. high, flaring, with fillet of 1-in. radius at the junction of flange and plate. Each flanged edge is punched with four 5-16 in. holes; the two joining flanges are covered for protection by a channel of no. 16 galvanized sheet steel fastened by stove bolts, which also hold the adjoining sections together.

As the track structure rests on these plates without any bedding or through-bolting, attention had to be given to anchoring the track firmly. The ties are held down by hook bolts at the inner edge of the inner stringer only, the holes for these bolts through the drainage plate having no special significance because they are near the upper end of the slope of the plate. These bolts are spaced at every fourth tie, which is equivalent to one bolt per plate section. At the low side of the plate it was not considered advisable to have holes through the plate, on account of the opportunity this would give for the start of corrosion. However, every fourth tie was extended out to provide anchorage as well as to carry a footwalk; it is anchored back to the web of the outer stringer by a steel rod, either through the fascia girder or (on the approach spans) directly by a bolt attaching the rod to the tie. The inner ends of the long ties are fastened together at the middle of the deck by 3 x 10 in. scabs, 3 bolts in each tie.

Ties are spaced 4¾ in. in the clear, to allow room for coating the drainage plate with enamel. Borden tie spacers are used throughout. The rail joints are of the bridge type, and, although the grade of the track is only 0.1%, the track is equipped with anti-creepers, partly because it is desired to maintain tight joints at the expansion points at each end of the structure, where 5 in. of expansion must be taken care of. Expansion joints of Quebec bridge type are provided at these points.

In addition to the inner guard rails, and outer guard timbers faced with steel angles, with which the deck was equipped, an outer guard rail has been added, as extra safeguard in derailment. This was done on account of the great height of the deck above the Whirlpool Rapids, 200 ft.

While some reliance was placed on the resistance to corrosion of copper steel as compared with ordinary steel, the whole upper surface of the drainage floor is painted with a special priming paint followed by a 3-16 in. coat of hermastic enamel, applied hot. The same coating is applied to the copper steel gutter trough at the outer side of each drainage floor. The leaders from this trough are 4-in. steel pipes carried down clear of the bottom rib of the arch. With a view to facilitating recoating, the trough is attached by hooks so that it can be let down against the side of the stringer for cleaning and recoating. Similarly, the floor plates can be freed by slightly jacking up the track and (after removing the bolts which connect it to the adjoining plate) sliding a plate out like a drawer. When the plate is cleaned and recoated, it can be replaced in the same way. It is expected that the cost of recoating the portions of the floor subject to abrasion will be slight. The whole floor can be washed off with a hose, making it simple to clean it frequently. Reinforcing the floor system of the bridge has been completed at a cost of about $30,000. The drainage floor or "salt water floor" will cost about $25,000.—Engineer News-Record.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine Ld.—J. W. CORBETT, heretofore chief clerk, Purchasing Department, Canadian National Rys., Winnipeg, has been appointed Purchasing Agent, C.G.M.M. Ltd. Office, Montreal.

J. P. DOHERTY, heretofore in C.P.R. service, has been appointed Port Agent, St. John, N.B.

ALEX. HECTOR, heretofore Travelling Freight Agent, Canadian National Rys., Halifax, N.S., has been appointed Port Agent, C.G.M.M. Ltd., Halifax, N.S.

Canadian National Rys.—W. M. JACKLIN, heretofore Roadmaster, Toronto Terminals, Rosedale, Toronto, has been appointed Roadmaster, Muskoka and Orillia Subdivisions and that part of the Toronto Terminal Subdivision between Todmorden and Duncan, vice T. W. Brown, transferred to other service.

R. M. MITCHELL, heretofore Right of Way and Property Agent, Western Lines, Winnipeg, has been appointed Right of Way and Property Commissioner, with jurisdiction over all matters pertaining to right of way and railway property on the whole system. Office, Toronto.

Canadian Pacific Ocean Services Ltd.—A. W. ESSEX, heretofore ticket clerk at Montreal, is reported to have been appointed ticket agent, Canadian Pacific Ocean Services Ltd., at Quebec, Que., in summer and St. John, N.B., in winter.

Canadian Pacific Ry.—F. H. CLENDENNING, heretofore Assistant Foreign Freight Agent, has been appointed Foreign Freight Agent, with supervision over export and import Oriental and Australian traffic, and all export and import traffic through Atlantic ports from and to British Columbia. Office, Vancouver, B.C.

C. S. GOWANS, heretofore Import Freight and Agent, has been appointed Foreign Freight Agent, with supervision over export and import traffic through Atlantic ports. Office, Board of Trade Building, Montreal.

H. W. GILLIS, heretofore chief clerk to Vice President (Traffic), has been appointed Assistant Foreign Freight Agent, in charge of export and import freight, solicitation and rates through Atlantic ports. Office, Board of Trade Building, Montreal.

J. P. KELLY has been appointed Division Master Mechanic, Saskatoon Division, Saskatchewan District, vice R. A. Jones, transferred. Office, Saskatoon.

FRANK LEE, heretofore Engineer Maintenance of Way, Eastern Lines, Montreal, has been appointed Engineer Maintenance of Way, Western Lines, vice A. C. MacKenzie, transferred to Montreal. Office, Winnipeg.

A. C. MacKENZIE, heretofore Engineer Maintenance of Way, Western Lines, Winnipeg, has been appointed Engineer Maintenance of Way, Eastern Lines, vice Frank Lee, transferred to Winnipeg. Office, Montreal.

CAPT. ROBT. McKILLOP, formerly Superintendent, Laurentian Division, Quebec District, Montreal, who was granted leave of absence Feb. 29, 1917, to take command of he 2nd Section, Skilled Railway Employes, and went overseas Apr. 16, 1917, continuing as commanding officer of the section, which was renamed the 13th Canadian Light Railway Operating Co., and who returned to Canada May 22, 1919, when the company was demobilized, and his leave of absence extended for a further six months, returned to C.P.R. service Nov. 1, and left Nov. 3, for Chapleau, Ont., to relieve W. C. Guthrie, Superintendent, during the latter's three weeks holidays, after which he will report back to headquarters in Montreal for further instructions.

COL. C. W. P. RAMSEY, C.M.G., has been appointed acting Superintendent, Sudbury Division, Algoma District, during absence on leave of W. R. Boucher. Office, Sudbury, Ont.

Grand Trunk Ry.—JAS. SMITH has been appointed General Foreman, Toronto, vice W. B. Heath, resigned.

C. H. TILLETT, heretofore acting Signal Engineer, has been appointed Signal Engineer, vice R. F. Morkill, resigned. Office, Montreal.

The European Traffic offices staff has been reorganized as follows: General Agent and Assistant to European Traffic Manager, P. A. CLEWS; Passenger and Advertising Agent, H. V. CALDWELL; acting Ticket Agent, S. C. SHIPMAN, with offices at London, Eng.; General Agent, E. J. WEARING; Freight Agent, J. M. CHARLES, with offices at Liverpool, Eng.; General Agent, J. M. WALKER with offices at Glasgow, Scotland.

Grand Trunk Pacific Ry. — C. H. BROWN, heretofore Chief Dispatcher, Edmonton, Alta., has been appointed Assistant Superintendent, Biggar to Edmonton, and Calgary Branch, vice C. B. Thompson. Office, Edmonton, Alta.

Reid Newfoundland Co.—G. COBB, heretofore Assistant General Superintendent, has been appointed Superintendent, Western Division. Office, Bishops Falls, Nfld.

W. C. HARVEY, heretofore Marine Superintendent, has been Superintendent of Drydock and Marine Shops. Office, St. John's, Nfld.

E. J. HOSKINS, has been appointed Traffic Manager and Assistant General Superintendent. Office, St. John's, Nfld.

H. J. RUSSELL, heretofore, Superintendent, has been appointed Superintendent, Eastern Division. Office, St. John's, Nfld.

Marine Navigation Co. of Canada—P. J. MELVIN, heretofore Export Freight Agent, C.P.R., has been appointed Contracting Freight Agent, Marine Navigation Co. of Canada, which operates from Montreal during the summer, and West St. John, N.B., during the winter, to St. Nazaire, France.

Freight, Express and Passenger Rates on Intercolonial Railway.

The Minister of Justice stated in the House of Commons, Nov. 10, in answer to a question by J. F. Reid, M.P. for Mackenzie, Sask., that express rates on the Intercolonial Ry. are under the Board of Railway Commissioners' control. Freight and passenger rates in dispute have been referred to the Board of Railway Commissioners. When all government railways are consolidated with other systems, the rates will be on the same basis. Express rates have been under the Board of Railway Commissioners' control from the time the board was constituted, viz.: 1904, the I.R.C. local and through freight rates are not the same as are charged by the C.P.R. on its prairie sections.

Mr. Reid also asked: "Are the following figures as given by Hon. T. A. Crerar in the house on Oct. 20 correct, viz.: That the rate charged on the C.P.R. for freight was 18% higher than on the Intercolonial Ry., and the average passenger rate was 24% higher on the C.P.R. than it was on the Intercolonial Ry.?"

To this the Minister of Justice replied: "For year ended June 30, 1918, the average earnings per ton per mile, and per passenger per mile were, approximately 18 and 24%, respectively, higher on the C.P.R. than on the Intercolonial Ry.

Aerial Transportation Notes.

The Air Board at Ottawa has appointed two additional heads of branches, Lieut.-Col. J. Stanley Scott, M.C., of Quebec, has been appointed Superintendent of the Certificate Branch, and Major A. M. Shook, D.S.O., D.F.C., A.F.C., and Croix de Guerre with gold star, has been appointed Secretary. Lieut.-Col. Scott enlisted early in the war in the Canadian artillery. He later transferred to the Royal Flying Corps, and, after considerable service in France, returned to Canada, where he was in command at different times of several of the Royal Air Force camps, including the camp at Borden in 1918. Major Shook was, before he joined the Royal Naval Air Service in 1915, the principal of a school in Alberta, and his service in the Royal Air Force was most distinguished, as appears from his numerous decorations. Captain Frank Roy Smith of Barrie, Ont., has been appointed Medical Officer under the Air Board. He was attached to the Royal Air Force as a medical officer for over wo years, having, among other units, commanded a Royal Air Force special hospital for six months.

Traffic Orders by Board of Railway Commissioners.

Slack Coal Rates in Saskatchewan and Alberta.

The Board of Railway Commissioner's Secretary, issued the following letter to the parties concerned on Oct. 11:

"Referring to applications made to the board by various western municipalities that railway companies operating in Saskatchewan and Alberta be required to establish a lower basis of rates on slack coal than now published uniformly on all grades of coal, I enclose a copy of the report of the board's Chief Traffic Officer, dated Oct. 2, and am directed to say that on the facts as submitted the board does not feel justified in giving the direction as requested. The board, if the facts warranted it in directing a reduction in rate, could not direct that the rate should be limited to power companies alone. In the early days of the board, as far back as Oct., 1904, there was before it an application of the G.T.R. for a ruling as to whether it would be allowed to continue a lower freight rate basis on bituminous coal at certain points on its railway, to manufacturers, as compared with the rates charged to dealers or consumers; and the board there held that such differential treatment was not justified, and that a lower rate basis for manufacturers could be put in only if the same rate was made to all its patrons, dealers, consumers, and manufacturers alike."

Following is the report of the Chief Traffic Officer, Jas. Hardwell:

"These several applications ask the board to require railway companies operating in the provinces of Saskatchewan and Alberta to establish a lower basis of rates on slack coal than now published uniformly on all grades of coal. The railway companies oppose the applications.

"The present schedules originated under the board's judgment in the Western Rates Case, delivered April 6, 1914. The Fifteen Per Cent Case, effective Mar. 15, 1918, added 15c a ton, and the order in council, P.C. 1863, further increased the rates as follows:

Rate 49c a ton and under, increased	15c a ton
Rate 50 to 99c, increased	20c a ton
Rate 100 to 199c, increased	30c a ton
Rate 200 to 299c, increased	40c a ton
Rate 300c or higher, increased	50c a ton

"A similar application was heard by the board at Edmonton, June 11, 1918, and was refused by order 27,460, July 20, 1918, under judgment written by the ex-Assistant Chief Commissioner. The present applications appear to me to be in effect applications for some measure of relief from the provisions of the order in council, and to relate to questions of policy rather than rate fixing per se, this being referred to in Mr. Scott's judgment.

"The railways rely on the rate uniformity laid down in the Western Rates Case and on the board's more recent judgment, and also contend that a preferential rate would result in heavy freight undercharges; in other words, opportunity would be afforded for disguising run-of-mine coal in the cars with a top covering of slack. This may or may not be mere conjecture; but it occurs to me, although I may be wrong, that depreciation might result owing to intermixture of the slack with the good coal during transit, and if so, that this would operate as a set-off against the advantage gained by the difference in rates.

"Slack coal has no preferred rates in Canada. In April, 1918, when the previous case was under consideration, I wired the Chief of Tariff Division of the Interstate Commerce Commission as follows: 'Can you tell me in general way whether American carriers charge lower rates on bituminous coal screenings or slack than on lump or run-of-mine coal.' The following reply was received: 'Rates bituminous coal from eastern and central western collieries apply generally on all kinds, no distinction being made between slack, lump or run-of-mine, except in few isolated cases involving short hauls.'

"The list of preferred slack rates furnished by the Director of Public Service and Accounting, United States Railroad Administration, attached to the Saskatoon application and read into the evidence there, are probably examples of the 'few isolated cases' referred to by the Chief of Tariff Division. Disregarding the anthracite examples, the lack of underlying basis will be noted. From Johnstown, Pa., to Chicago and St. Louis, the rates apply to all sizes. From Palasade, Col., to Denver, the slack rate is the same as for lump, egg and run-of-mine; and to Montrose, Col., the nut and slack rates are the same. Where differences exist they are anything but uniform, running from 25 to 50 and even 90c in favor of slack. I have no doubt that local conditions dictated these exceptional rates.

"The opinion of the Interstate Commerce Commission is stated in 34 I.C.C. 414, Alpha Portland Cement Co. v. B. & O. and Penn. Rds. Complaint was made against a slack-coal rate as unreasonable, and request was made for differential rates between slack and other grades of bituminous coal. The case was dismissed, the commission saying: 'The remaining question is that of a differential between slack and other sizes of bituminous coal, complainant's contention being based on difference in value and the impracticability of storing slack coal. It has not been the custom of carriers in this section to maintain such a differential, and in view of the fact that the loading of slack is substantially lighter than that of other varieties of bituminous coal, and that it is coming more and more into demand due to the increasing use of mechanical stokers, there appears to be neither commercial nor transportation necessity for requiring its establishment. Difference in value, which it appears has decreased somewhat in the past few years, would not, in our opinion, justify it.'"

British Columbia Electric Railway Tolls.

28,946, Oct. 28. Re application of British Columbia Electric Ry. Co. Ltd., for approval of its standard tariffs of maximum tolls to be charged between points on its lines of railway other than the Vancouver & Lulu Island and the Vancouver Fraser Valley & Southern Rys., for which excepted lines standard tariffs have already been approved by the board; upon its appearing that the rates shown in the said standard maximum tariffs are these now being charged by the company, it is ordered that standard maximum freight mileage tariff C.R.C. 146, standard passenger tariff or maximum mileage tolls on interurban lines, C.R.C. 9, standard tariff of maximum tolls on street car lines (not including interurban lines), C.R.C. 8, and express tariff C.R.C. no. Ex. 1, and Supplement 1, thereto, of the applicant company and the Vancouver Power Co., be approved until further order.

Sand and Gravel Rates From Stamford.

28,954, Oct. 29. Re complaint of Robt. Patterson, of Stamford, Ont., against charge of 50c a ton on sand and gravel from his pit in Stamford to Niagara Falls, Ont., imposed by G.T.R.; upon hearing the complaint at Toronto, June 5, 1919, the complainant, the G.T.R. and the Michigan Central Rd. being represented, it is ordered that the complaint be dismissed.

Dominion Atlantic Railway Sleeping Car Fares.

28,967, Nov. 3. Approving under sec. 354 of the Railway Act the Dominion Atlantic Ry.'s standard passenger tariff of sleeping car tolls, C.R.C., 5-4.

Car Demurrage as Affected by Strikes.

29,009. Nov. 14. Re consideration by the board of Canadian Car Demurrage Rules as affected by strikes; upon hearing the matter at Toronto, Oct. 31, the Canadian Car Demurrage Bureau, Grand Trunk, Canadian National, and Canadian Pacific Railways, Michigan Central Rd., and Toronto and Montreal Boards of Trade being represented and what was alleged, it is ordered that the matter be dismissed.

Canadian Northern Railway Finances.

The Minister of Railways, replying to questions in the House of Commons recently said that the gross earnings of the Canadian Northern Ry. System from Oct. 1, 1917, to Aug. 31, 1919, were $93,502,669.27; the proceeds of notes sold to the public were $52,871,608; the advances from the Dominion Government for repayment of loans and notes, construction, betterment and new equipment, also interest on securities, were $71,606,463.58. The total disbursements during the same period were: Operating expenses, $93,188,470.58; expenditure on construction and betterments, also purchase of equipment, $56,346,558.85; repayment of coupon notes, and loans, also interest charge, $71,356,256.50. The net earnings from operation to Dec. 31, 1918, were $4,846,103.24, but after paying bond interest and all other charges, the deficit was, Oct. 1, 1917, to Dec. 31, 1917, $2,368,122.40; Jan. 1, 1918, to Dec. 31, 1918, $14,643,753.30; total, $17,011,875.70. The estimated operating deficit for tihs year is $5,587,028.

Where Ignorance Is Bliss.

"What makes you think our friend knows very little about running a railway?"

"The fact," replied Mr. Dustin Stax, "that he is so willing to try it."—Washington Star.

The British Columbia Lands granted to the British Columbia Southern Ry., which passed into the hands of the late F. August Heinze, totalling 701,543 acres, and which were put up for sale for taxes in 1918, have now reverted to the B.C. Government, according to an announcement reported to have been been made Nov. 10 by the B.C. Minister of Finance.

President Beatty of the C.P.R., Addresses the Toronto Empire Club.

E. W. Beatty, K.C., President, C.P.R., who was the Toronto Empire Club's principal guest, at a luncheon, on May 20, which was attended by nearly 800 persons, spoke as follows:

"I find it very difficult to express my deep appreciation of the kindness and courtesy of the invitation of your President that I should attend and speak at this luncheon. It is peculiarly gratifying in that this is the first occasion that I have been in Toronto, except on the company's business since I assumed the duties of my present office, and that the invitation comes from the executive of a club of such outstanding importance, formed in the city in which I formerly lived, and during 14 years enjoyed what most of us regard as the most pleasant time of our lives. It is over 18 years since I left Toronto to live in Montreal, and during those years, particularly during the lifetime of my late father and mother, I do not think that any one month passed without a visit to your city for a day or two days. Many of my friends are here, the old associations have not entirely disappeared, and my affection for my former home city remains unimpaired. These circumstances alone would afford ample justification for a feeling of pride in the invitation of your executive, but there is another reason why I have embraced, with such pleasure, the opportunity which has been afforded me, and that is the large and common interest which the company I have the honor to represent has with the City of Toronto and with the Province of Ontario.

"The C.P.R. operates within your province, 3,400 miles of railway, being, I think, at present the largest mileage under any single system within the province. The possession of this extensive mileage gives in itself a reason why the company's interests and those of the development of the province are closely correlated and inter-dependent. That interest is shared by the other systems which are to be consolidated in one unified operating organization, the mileage of the Grand Trunk in Ontario being 3,036, and of the Canadian National Rys., 1,852. Ontario offers perhaps the greatest variety of railway traffic possibilities of any of the Canadian provinces. You will appreciate that this is so when you recall the extent of the productions of the province which contribute to the support of the railway system operating within it. In manufactures' products, it, of course, leads the whole of Canada; in agricultural products it is prolific, and the products of the forests and mines are extraordinarily extensive. In manufactures' products alone, the province produced over thirteen hundred million tons in 1917, or over 51% of the aggregate production of Canada. Of the products of the mine, Ontario produced ores to the value of $80,000,000, or 46% of the total production of Canada, while the value of the agricultural production was $1,144,000, or about 22% of the whole production of Canada. In pulpwood Ontario produced 33% of the total production of Canada, and in paper 43%, while in dairy products it produced in value and in tonnage in excess of 62% of the whole Canadian production. In livestock production the figures are equally impressive, being 26% of horses, 34% of milch cows and 25% of sheep.

"That is the past, and the future holds still more in the way of traffic and railway possibilities. The total railway mileage in Ontario is slightly in excess of 11,000, or a little less than that of the State of Pennsylvania, while its area is five times as great. Ontario is likewise over five times as large as Ohio, and its railway mileage only 1,900 miles greater. With the increasing population and commercial expansion, more mileage must be constructed and existing facilities increased. The C.P.R. has not reached the limit of its development within Ontario, nor has any other railway company, if the future possibilities are as we have every ground for believing them to be.

"The Canadian National Rys. system will, in due course, develop into one of the largest single organizations in the world. It will possess, when the consolidations now in contemplation are completed, a system aggregating over 19,000 miles in Canada and 2,000 odd miles in the United States, while lines embraced in the C.P.R. system in Canada and the United States amount to more than 19,400 miles. Whatever divergence there may be in the views as to the advisability of the policies which have led to the acquisition of this extensive mileage and its operation under the aegis of government, there can be but one view as to the desirability of its success. I can, I think, say with perfect candor and honesty that no one desires its success more than I, and this is a hope which I think can fairly be re-echoed by anyone who desires the burdens of this country to be as light as possible, and the freight and passenger rates as low as possible.

"In addition to the federally incorporated companies, you have in Ontario local projects which are designed to accelerate development, and, while they are not yet in being, you may be fairly well assured that if carried out to a successful conclusion, none of the existing transcontinental railway systems can help but be benefitted by them. It is true that in local competition existing business may be more or less divided, but there will be new business attracted and developed because of them, and the advantage to the transcontinental systems secured from the haulage of additional tonnage over long distances will much more than offset any diminution of local earnings through the introduction of a new competitor. I make no comment on the advisability or inadvisability of proceeding with those projects now. I may conceivably have views on the economic expediency of them with do not conform with the views of others, but my great desire would be that, if carried out, they should be successful, because nothing, all suggestions to the contrary notwithstanding, is more discouraging than financially embarrassed competitors. The fact that competition is carried on with prosperity to all those engaged in it is the surest sign that general business conditions are healthy, whereas the failure of any large enterprise, especially one operated by the government, must of necessity mean heavier taxation on corporations and individuals to meet annual deficits. The burdens of the country are heavy as it is, and no one, no matter in what system of operation of public utilities he believes, can possibly welcome the advent of unsuccessful enterprises.

"I mention this because it has seemed to me that the impression is sometimes current in parts of the province that the C.P.R.'s activities are more widespread than is the case, and that opposition has been shown when not the faintest semblance of any has been indicated through any act of the company itself. I can imagine no issue of a transportation character being raised in Canada in which the C.P.R.'s attitude and position cannot be candidly and frankly stated. The company's first and principal interest must always be its ability to perform efficient transportation service, and its own resultant transportation prosperity. While Canada's political future is a matter which concerns all companies and individuals, the C.P.R.'s activities are so unimportant a factor that I am almost ashamed to mention them when so much which is flatteringly untrue has been said about them. In fact when you appreciate that in the C.P.R. alone, quite apart from its subsidiary enterprises, a sum in excess of $827,000,000 in cash has already been invested, of which more than $758,000,000 has been contributed directly or indirectly by the share and security holders, you will realize the magnitude of the company in the prosperity of Canada and every province in Canada. I can imagine no corporation of its size, with its numerous ramifications more aloof from political activities than the C.P.R. Its business and its interests, it is the duty of its directors and officers, to jealously guard and actively further, and in every commercial and economic issue the company is to some extent affected. Political machinations and intrigue, I am glad to say, it is free from, because its directors and officers appreciate that the measure of support which is given to it will be that which it gains through the character of the service it renders and the honesty and the integrity of the officers to whom its interests are confided.

"There is, as you know, a railway situation existing in Canada, and to a greater degree in the United States, which is without parallel in the history of either country. It would take too long for me to trace for you some of the history which has led up to the present condition, but it is sufficient for me to say that in the evolution of the U.S. railways, the railways themselves were not free from blame and in fact were initially responsible for the public attitude towards them, which led to their failing to receive support when public and judicial support was sadly needed. This attitude had resulted in the U.S. in a system of restrictive and too inelastic regulation, absolutely cramping in its effect upon the development of the companies and subversive of the public interests. The failure of the U.S. railways in 1917, and what we now know to have been their physical and financial breakdown, was a breakdown under the too rigid system of regulation to which during prior years they had been subject. In the conduct of these railway operations we are, as others, confronted with an extraordinary high cost ratio, due to high wages and costs of material of every description.

"To what extent the question of increased remuneration to railway employes in Canada is important is indicated most vividly by the enormous total of the wage increases granted during 1918 and 1919. The amount of those increases, which aggregated the enormous sum of $77,000,000 exceeds the interest on the whole war debt of Canada, exclusive, of course, of the loan just completed. In other words, even though the war expenses, due to the emergency of the situation, were extraordinarily heavy and extended over a long period, the interest on this debt to be paid by the Canadian people does not equal the increases granted in a single year to the employes in one branch of commercial activity, and additional requests are being made. It is axiomatic that these increases in operating expenses must be paid, and they can only be met in one way, viz.: by increasing the rates to the shipping public, unless the natural increase in traffic is such as to equal the increased operating costs. Unfortunately for the railways of Canada the rate increases granted last year fell short of equalling the increases in wages granted under what is known as the McAdoo award, and amendments. The increases in revenue due to increases in rates amounted approximately to $43,000,000, which means that $34,000,000 was spent in increased operating costs, due to increases in wages alone, which the railways have not been able to get back. If additional wage increases are granted in the U.S., then by reason of the parity of conditions which exists there as compared with Canada, similar increases will follow here, and, if to meet those increases, rates are again increased in the U.S., rates must again be increased in Canada. It must be obvious to you that this vicious circle, with the pyramiding of expenses and increasing costs to the ultimate consumer (the latter in many cases out of proportion to those directly resulting from the increases in wages and rates), must stop. Otherwise the burden will become too great for any community to bear, and prosper. The basis for all applications for wage increases has been the increased cost of living, and, while these increases have been great, the actual increases in the wages is, generally speaking, greater than the increases in the essential and staple commodities. The reason why the wage increases, even to the extent granted, do not place the recipients in a more favorable position is that the increased cost of necessities has been accompanied by a higher standard of living, and these extra and new expenses, which are the voluntary act of the individual and his family, have increased his general living expenses to such an extent that the increased wages have not offered sufficient compensation.

"This is not to be wondered at, because perhaps one of the last things any individual learns is how to spend money properly, once he reaches the point where there is a margin which can be spent as and when and in what way he wills. It is easy enough to be economical and sane in expenditures when one has no considerable monies to disburse beyond what he requires for necessary expenses of living. But while this may be all true and can only be corrected by education, there is an inflated cost to all staple commodities in Canada and the U.S. today which is not warranted. The history of the last few weeks in Great Britain and the U.S. is indicative of what can be done when it becomes apparent that the sentiment of the people as a whole demands action and expects remedies. I am of the conviction that once the results to the community of these increasingly high costs are brought home to those who produce and distribute, backed by the weight of accurate publicity, much will be accomplished in reducing or at least checking the increasing cost of living, which is rapidly getting beyond the point of endurance, to the man of fixed income or moderate means. It has been suggested by able financiers and others that tinkering with these questions is futile and that the solution depends upon and should be left to the operation of inexorable laws of supply and demand. No doubt under normal conditions we could afford to rely upon the corrective influence of these almost immutable economic laws, but the world is sadly out of balance, and the demand now for necessities, particularly foodstuffs, is beyond the supply, and the prices have been forced higher than the purchaser can afford to pay. As this is a purely artificial condition, due to five years of war, it requires artificial means to correct it. In other words, with the demand so much greater than the supply unreasonable costs cannot be exacted if the world is to pay for what it buys.

"The necessity for the moment, of course, is more production, which means more work and greater thrift. It means that the individual must produce in order that the supply will be increased, and he must save in order to bear safely his individual burdens. Never, too, perhaps was the need of individual efficiency more apparent than it is today. Efficiency in itself is one means of increasing production and lowering costs. Inefficiency is responsible for much waste, and how great it is and how lamentable its results can be indicated in the case of any large corporation. I am familiar with the figures of my own company, and therefore, I may be pardoned for using them as an example. The C.P.R. pay roll aggregates $7,500,000 a month, or roughly, $90,000,000 a year, and inefficiency of as little as 10% means a loss in labor production of $9,000,000 a year. One hundred per cent efficiency is a high mark to aim at, and 10% under par would be considered a high average, but yet in the case of one company alone, what I think would be considered much better than an average showing would mean in the result a wastage of effort valued at $9,000,000. When you consider these facts, it is not to be wondered at that the paramount consideration in all organizations today is the obtaining of this efficiency, the lack of which is so costly. It cannot be obtained through theories, or fancy experiments in different methods of organization. To my mind it is only capable of accomplishment in one way, viz.: through the everlasting struggle for results, because with them comes reward. With this knowledge and a high sense of duty, coupled with the maximum of effort and eternal vigilance, efficiency is secured.

"In concluding these remarks, which are intended to be only suggestive, I cannot refrain from mentioning the duty which your transportation companies, whether government owned and operated, or privately owned and operated, owe to the people of this country. I say 'owe,' because I know of no individual agency which can contribute to or mar prosperity to a greater extent than these huge transcontinental or semitranscontinental systems. The time was when your railway superintendent was a man of rough exterior, crude methods and indifferent, not only to the whims but the rights of the public. Public sentiment and the necessities of the situation have changed all that, and now one essential ingredient in traffic operation, or executive railway activities, is the appreciation of the exacting nature of the service which the public demands, and the everlasting ambition to inspire confidence in the service given, for the business rewards that follow from its successful accomplishment. Intelligent and serious discussion of all phases of transportation activity in connection with Canada's development are essential. Support of the railways is necessary if they are to be able to do their full part in Canada's trade expansion, because no other single agency to the same extent contributes to and reflects the general commercial prosperity of the country. In the course of these remarks I have mentioned at times matters which are peculiarly within my knowledge concerning the C.P.R. I did so intentionally, knowing that you would not disassociate me from the company I represent. If you think the references have been somewhat more frequent than is necessary, I would ask you to remember that there were many things I might have said which I did not say."

Canadian National Railways Earnings.

	1919	1918
January	$ 6,744,018	$ 4,696,[illegible]
February	6,000,342	4,421,704

Citadel Brick and Paving Block Co. has ordered 125 dryer cars from Canadian Car and Foundry Co.

Legislation Authorizing the Dominion Government to Acquire the Grand Trunk Railway System.

When Canadian Railway and Marine World for November went to press, the bill introduced in the House of Commons, by the Minister of Railways, providing for the acquisition of the G.T.R. system by the Dominion Government, and which was published in full on pgs. 593 and 594 of that issue, was still in the committee stage.

On Oct. 30, when the house was considering, in committee, sec. 5 of the bill, providing that the present guaranteed stock and the new guaranteed stock, or any part thereof, might be called in or redeemed by the government, at par, at any time after 30 years from the date of the appointment of the committee of management provided for in sec. 5, subsec. (a), on 6 months notice by advertisement to the holders thereof, the Minister of the Interior announced that the government had decided to reduce the period from 30 years to 5 years, and moved an amendment accordingly. Hon. W. L. M. King's previous amendment to a similar effect was then withdrawn, and Mr. Meighen's amendment was agreed to.

On the consideration of sec. 8, providing that the government might lend to the committee of management, upon G.T.R. notes or other obligations, such sums as the government might from time to time deem necessary, for carrying on the operation or improvement of the G.T.R. sysem, the Minister of the Interior said that, after listening to the Hon. W. S. Fielding's comments, and going more fully into the matter, the clause seemed so wide and sweeping a character that he did not think it necessary, and he moved its withdrawal, which was carried.

On the consideration of the bill's preamble, after considerable discussion, the Minister of the Interior moved to amend it by adding after the words "And whereas it is expedient that His Majesty should acquire the whole of the capital stock of the G.T.R. Co. of Canada, except the 4% guaranteed stock above referred to" the following words: "And should have power to acquire the said 4% guaranteed stock." This was adopted and the committee then reported the bill as amended.

On Oct. 31 the Minister of Railways moved the third reading of the bill, and Hon. W. S. Fielding moved in amendment:

"That the bill be not now read a third time, but that the house do come to the following resolution: That the G.T.R. system, which the government proposes to acquire, comprises over 8,000 miles of railway line, owned, controlled, or leased and operated by the G.T.R. Co. and its subsidiaries; that the parent G.T.R. Co. has numerous subsidiary companies, and the system includes, besides the railway mileage herein mentioned, the ownership and management of hotels, steamship lines and other property; that these railways and other property are partly in Canada, partly in the United States and partly in Great Britain; that the obligations of these companies in various forms run into vast sums, and the financial affairs of the several companies are interwoven by guarantees of securities; that the parent G.T.R. Co. and its chief subsidiary the G.T. Pacific Ry. Co., are admittedly unable to fulfil their obligations to the Dominion; that the information in possession of the house is insufficient to enable the house and the people to fully understand the complicated affairs of the G.T.R. system; that there has been no inquiry into the affairs of the G.T. system since that which was conducted by the Drayton-Acworth commission in the spring of 1917, which related to the Canadian railway situation generally, and incidentally discussed the affairs of the G.T. system; that this said Drayton-Acworth commission in its report say concerning the Grand Trunk Railway Company:

> " 'Even if the government were to relieve them entirely, as suggested by their President, of their unfortunate G.T. Pacific venture—and, as we have already said, we cannot think that the request can be reasonably justified— it is evident that the G.T.R. Co. is not and will not be for some time to come in a position enabling it to pay out any money at all in dividends. We regard the entire share capital as being intrinsically of but small value at the present time. On the basis of present value of maintainable income the fair compensation would be very small.'

"That of the stock thus described by the Drayton-Acworth report as of small value the bill proposes to place a perpetual government guarantee of interest at 4% on about $60,000,000, and to submit the valuation of about $180,000,000 to arbitration; that the house is of opinion that before taking further action towards the acquisition of the railways referred to the government should appoint a commission composed of persons of recognized ability and experience in railway management, railway finance, and railway accounting, to make a full inquiry into all the affairs of the G.T.R. Co. and its subsidiary companies, their assets and liabilities, the condition of the railway lines and their equipment, the physical value of the properties, the sums required to put them into efficient condition, their estimated earning powers, and generally into all matters in any way relating to the affairs of the companies herein referred to, and to make a full report thereon for the information of parliament." On Nov. 4, Mr. Fielding's amendment was defeated by 91 to 50.

Hon. W. L. M. King then moved an amendment: "That this bill be not read a third time, but that it be recommitted to the committee of the whole house, with instructions to amend it by adding to sec. 2, the following words: 'The agreement herein shall be submitted to and be subject to ratification by parliament.' " This amendment was defeated by 90 to 55.

J. A. Campbell, M.P. for Nelson, Man., then moved in amendment: "That all the words after the word 'That,' in the main motion, be struck out and replaced by the following: 'The said bill be not now read a third time but be recommitted to committee of the whole house with instructions to amend the same by adding another clause as follows:—'12. Notwithstanding anything contained in this act the value of the 4% guaranteed stock of the Grand Trunk, amounting to £12,500,000, shall be submitted to arbitration.' " On Nov. 5, this amendment was defeated by 83 to 57.

J. J. Denis, M.P. for Joliette, Que., then moved in amendment: "That all the words after the word 'That' in the main motion be struck out and the following substituted therefor: 'Bill no. 33 be not read a third time, but be referred back to committee of the whole house with instructions that they have power to amend same by adding at the end of sec. 6 the following words: 'No award of the arbitrators shall be final and valid until it has been approved of and ratified by the Parliament of Canada. This amendment was defeated by 85 to 53.

On the question being again proposed on the main motion, G. Parent, M.P. for Quebec West, moved in amendment: "That the said bill be not now read a third time, but that the house do come to the following resolution: 'That the G.T.R. system, which the government proposes to acquire, comprises many miles of railway lines on American soil; that the G.T.R. Co. has diverted most of its traffic from Canadian ports to its United States terminals; that a continuance of such policy by the Canadian Government would be injurious to Canadian trade and detrimental to our national welfare; that the ownership by the Canadian Government of the American section of the G.T.R. would involve this country into international troubles respecting labor administrations and public policy; that for the above mentioned reasons, the acquisition of these lines means a serious danger of the annexation of Canada by the United States; that the house is of opinion that before taking action towards the acquisition of the railway referred to, the government should give an immediate assurance to this house that it does not intend to divert Canadian trade from Canadian trade from Canadian ports' by taking over that portion of the G.T.R. situated and operated in the United States.' " This amendment was defeated by 87 to 43.

The question being again proposed on the main motion, J. A. Robb, M.P. for Chateauguay-Huntingdon, Que., moved in amendment: "That the bill be not now read a third time, but that it be read a third time this day six months." This amendment was defeated by 84 to 53.

The main motion for the third reading of the bill was then carried on the same division reversed, viz.: 84 to 53, and it was read a third time and passed.

In the Senate the bill was read a first time, Nov. 5, and on the motion for second reading, Senator Ross, Middleton, N.S., moved that its further consideration be deferred until the next session of parliament. This amendment was defeated Nov. 6, by 39 to 45, and the bill was read a second time. On Nov. 7 the Senate went into committee on the bill. Several amendments proposed were defeated, but the following were adopted:

Clause 6, line 19, after the word "Canada," add the following: "The value, if any, so determined shall not be greater than an amount on which the annual dividend at 4% per annum on the aggregate face value of the present guaranteed stock and the new guaranteed stock taken together would exceed $5,000,000. The fixing of this limit shall not be taken by the arbitrators as any admission or indication that the value to be determined is the amount so fixed, or any other amount." This refers to the 1st and 3rd preference stocks, and the common or ordinary stock.

The following clause was added as no. 12: "For the purpose of the valuation provided in this act, the obligations of the Grand Trunk as guarantors of any indebtedness of the Grand Trunk Pacific

Railway Co. or of the Grand Trunk Pacific Branch Lines Co., or otherwise, and the claims of the Government of the Dominion of Canada against eiher of the above mentioned companies or against any company forming part of the Grand Trunk Railway System shall not be treated as extinguished or affectedly by anything contained in this act."

The bill, as amended, was then read in the Senate a third time. The House of Commons, on Nov. 8, accepted the Senate's amendments by 57 to 28.

The further supplementary estimates for the year ending Mar. 31, 1920, passed at the Dominion Parliament's recent session include $50,000 to pay expenses in connection with acquisition of the Grand Trunk and associated railway systems.

The committee of management of five persons, two to be appointed by the G.T.R., two by the Dominion Government, and the fifth by the four so appointed, to ensure the operation of the G.T.R. system in harmony with the Canadian National Rys., so as to treat the two systems in the public interest as nearly as possible as one system, until the G.T.R. preference and common stocks are transferred to, or vested in, the Dominion Government, is not likely, according to an Ottawa press dispatch, to be appointed for some time. It is said that the appointment will not be made until the consummation of the agreement between the government and the G.T.R. shareholders.

Railway Rolling Stock Orders and Deliveries.

Canadian National Rys. have received 10 six wheel switching locomotives from Canadian Locomotive Co.

Canadian National Rys. have received 8 tourist cars and 500 stock cars from Canadian Car and Foundry Co.

Grand Trunk Pacific Ry. has received 799 repaired box cars from Canadian Car and Foundry Co., Fort William, Ont.

The C.P.R., between Oct. 14 and Nov. 11, ordered 200 automobile cars from its Angus shops, and 2 vans, 29 ft. long, from its Winnipeg shops.

The G.T.R. has received 277 repaired box cars, and 136 repaired hopper cars from Canadian Car and Foundry Co., making a total of 820 out of an order for the repair of 2,500.

The C.P.R., between Oct. 14 and Nov. 11, received the following rolling stock from its Angus shops: 2 steel baggage and express cars, 70 ft. long; 8 steel tourist cars, 1 freight refrigerator car, 189 steel flat cars, 41 ft. long; 1 Pacific type locomotive, and 1 Santa Fe type locomotive.

The Jamaica Government Railways have ordered 3 type 4-8-0 locomotives from Canadian Locomotive Co. Following are the chief details:—

Weight on drivers	109,769 lbs.
Weight, total	138,880 lbs.
Wheel base, rigid	12 ft. 9 ins.
Wheel gase, total	23 ft.
Wheel base, engine and tender	50 ft. 2 ins.
Heating surface, firebox	131 sq. ft.
Heating surface, tubes and arch tubes	1,819 sq. ft.
Heating surface, total	1,950 sq. ft.
Driving wheels diar	46 ins.
Driving wheel centers	Cast steel
Driving journals	8½ x 10 ins.
Cylinders, diar. and stroke	19 x 26 ins.
Boiler	Straight top, radial stayed
Boiler pressure	190 lbs.
Tubes, no. and diar	246-2 in.
Injectors	Sellers M 9½
Safety valves	2 consolidated 3 in. encased
Brakes	Westinghouse E. T. 6
Packing	Metallic
Fire brick	Security arch
Valve motion	Walschaert
Cab	Steel lined with wood
Pilot	All steel
Headlight	Schroeder electric
Sanders	Leach triple
Weight of tender, loaded	94,000 lbs.
Tank capacity	3,500 imp. gals.
Coal capacity	1,400 lbs.
Truck, type	4 wheel
Truck wheels, diar	33 ins.
Wheels	Steel tires, cast iron centers
Journals	M.C.B. 4½ x 8 ins.
Brake beams	M.C.B. steel

Canadian National Rys. orders for rolling stock during this year are summarized as follows:

50 colonist cars, ordered Dec. 18, 1918; delivery completed May 29; builders, Pullman Co., Chicago.

25 cabooses, ordered January; delivery completed May 22; builders, Preston Car and Coach Co., Preston, Ont.

550 general service cars, 50 tons capacity; ordered Jan. 24; delivery completed May 30; Eastern Car Co., New Glasgow, N.S.

500 flat cars, 40 tons capacity; ordered Jan. 25; delivery completed July 15; builders, Eastern Car Co., New Glasgow, N.S.

80 colonist cars; ordered Jan. 25; delivery completed July 2; 250 Hart-Otis ballist cars; ordered Jan. 25; delivery completed July 11; 150 refrigerator cars, 40 tons capacity; ordered Jan. 25; delivery completed Aug. 13; 500 stock cars, 30 tons capacity; ordered Jan. 25; delivery completed Oct. 29; 20 tourist cars; ordered Jan. 25; 15 delivered Nov. 15; builders, Canadian Car and Foundry Co., Montreal.

750 steel frame box cars, 40 tons capacity; ordered Jan. 25; delivery completed Aug. 6; builders, National Steel Car Co., Hamilton, Ont.

300 stock cars, 30 tons capacity; ordered Feb. 6; delivery completed Oct. 3; builders, National Steel Car Co., Hamilton, Ont.

18 sleeping cars and 9 dining cars; ordered June 26; builders, Canadian Car and Foundry Co., Montreal.

6 flangers; ordered July 29; builders, Preston Car and Coach Co., Preston, Ont.

13 observation buffet compartment sleeping cars and 20 mail cars; ordered Aug. 6; builders, Canadian Car and Foundry Co., Montreal.

6 steel snow ploughs; ordered Sept. 8; builders, Canadian Car and Foundry Co., Montreal.

25 six wheeled switching locomotives ordered Jan. 28; 19 delivered; builders, Canadian Locomotive Co., Kingston, Ont.

25 Pacific type locomotives; ordered Feb. 14; delivery completed Oct. 31; builders, Montreal Locomotive Works Ltd., Montreal.

Freight and Passenger Traffic Notes.

The Canadian National Rys. has put on 2 extra sleeping cars and a buffet car on the through train, operating over the C.P.R., the St. John and Quebec Ry., and the National Transcontinental Ry., between St. John, N.B., and Quebec City.

Following is a comparative statement of the number of loaded cars hauled over the Quebec bridge for the week ended Oct. 22:

	1919	1918
From Bridge Station to Chaudiere Jct	153	298
From Chaudiere Jct. to Bridge Station	255	189

The Board of Railway Commissioners has authorized the Canadian National Rys. to reduce its train service on its branch between Kinmount Jct., and Bancroft, Ont. (Irondale, Bancroft and Ottawa Ry.), from a daily service to a tri-weekly one.

J. D. McArthur, President, Edmonton, Dunvegan and British Columbia Ry., is reported to have said in Edmonton, Alta., Nov. 13, that it was not now a question of traffic to be created to and from the Peace River country, but of getting motive power and cars to handle it.

The Quebec, Montreal and Southern Ry., has been ordered by the Board of Railway Commissioners to restore the train service in effect prior to Jan., 1918, between Montreal and Sorel, Que. The board has approved the company's train service between St. Lambert and Fortierville, Que.

In connection with a press report, stating that the Canadian National Rys. was about to put in operation a night train service between Quebec and Chicoutimi, Que., over the Quebec and Lake St. John Ry., J. E. Morazain, General Superintendent, Quebec, is reported to have said, Nov. 19, that it was not contemplated to put on such a service until next spring.

The Canadian Pacific Ry. has put into effect a 6 days a week double train service between Montreal and St. John, N.B. The trains leave Montreal at 12.30 p.m., and 7 p.m., reaching St. John at 6.45 a.m., and 1.20 p.m., while the corresponding trains leave St. John at 4.20 p.m. and 7.45 p.m., reaching Montreal at 8.30 a.m. and 12.20 p.m.

The Dominion Parliament at its recent session, passed an act amending the Immigration Act, requiring that transportation companies shall provide immigration officers with whatever transportation they need in carrying out their duties. The new provision places immigration officers in the same class, in this respect, as customs officials.

The Dominion Atlantic Ry. has had a sleeping car tariff of 6 mills a mile with minimum charges of $1.50 for lower berths, and $1.25 for upper berths; $6 for drawing room, and $5 for compartments, approved by the Board of Railway Commissioners, in connection with he operation of its new train service between Halifax and Yarmouth, N.S., referred to in Canadian Railway and Marine World for November, on pg. 589.

The Edmonton, Dunvegan and British Columbia Ry. is reported to have taken into Edmonton, Alta., during the week ended Oct. 25, 770,000 bush. of grain from the Peace River country, in addition to 28 cars of cattle and horses, 15 cars of merchandise, 8 cars of hay, 19 cars of wood products and 7 cars of coal. The company carried out from Edmonton during the same week, 66 cars of merchandise, 9 cars of settlers' effects, 22 cars of cattle and 5 cars of horses.

The C.P.R. inaugurated on Nov. 20 a round trip service between Montreal and Halifax, N.S. A train leaves Montreal daily at 12.20 p.m., reaching St. John, N.B., on the following morning in time to connect with the Dominion Atlantic Ry. steamship Empress, leaving at 7.15 a.m., for Digby, N.S., reaching Halifax about 7 p.m. The through connection from Halifax to Montreal, via Digby, has been provided for some time, and now that provision has been made for this from Montreal to Halifax, thus making the round trip possible without a delay at St. John, N.B.

The Railway Association of Canada Succeeds the Canadian Railway War Board.

The Canadian Railway War Board, which succeeded the Canadian Railway Association for National Defence, which was organized in Oct., 1917, ceases to exist on Dec. 1, when its place will be taken by the Railway Association of Canada. One of the Canadian Railway War Board's officials is credited with the following statement:—"The Canadian Railway War Board was formed to perfect co-operation among the big railways in the interest of national efficiency in war time. There had not been any tie-up of Canadian railways up to that time and the board was created to serve as a clearing house for information, opinions and ideas and the exchange of mutual assistance. Any shortage of cars or equipment on one road was met through the board by loans from other members' lines having a surplus on hand.

"The co-ordination of railways in the United States and Great Britain had to be brought about by the expropriation of roads by the government. Canada, on the other hand, achieved much more nearly perfect co-ordination by a purely volunteer association of railways.

"The new organization, the Railway Association of Canada, is not a railway protective association, but is to be carried on with a view to maintaining the high degree of efficiency of Canadian railways and to promote still greater efficiency, in the interest of the shipper, the Canadian working man and the public in general.

"The Canadian Railway Board of Adjustment No. 1, formed to take care of labor matters, and which is composed of six members appointed by the railway workers through their unions, and six members appointed by the Canadian Railway War Board, will not be affected by the change, but will continue to operate as before."

The duties of the Railway Association of Canada will be recommendatory rather than administrating, as the Canadian Railway War Board's duties were. Article 2 of its constitution is as follows: "The purposes of the association are, consideration and recommendation upon matters pertaining to the operation of steam railways in the Dominion of Canada. To make such representations to the Government of Canada, the Board of Railway Commissioners for Canada, or to such other public bodies or other railway associations as in the opinion of the association may be desirable in matters of common interest to member companies. To act on behalf of member railways, either jointly or severally, as may be authorized, as the executive committee may from time to time approve."

The following officers and committees were elected at a meeting of railway officers in Montreal, Nov. 8:

Honorary Chairman, Lord Shaughnessy, Chairman, C.P.R. Co.

President, H. G. Kelley, President, G.T.R.

Executive Committee—D. B. Hanna, President, Canadian National Rys.; H. G. Kelley, President, G.T.R.; E. W. Beatty, President, C.P.R.; A. H. Smith, President, Ottawa & New York Ry.; J. N. Beasley, President, Toronto, Hamilton & Buffalo Ry.

Operating Committee — Grant Hall, Vice President, C.P.R.; W. D. Robb, Vice President, G.T.R.; M. H. MacLeod, Vice President, Canadian National Rys.; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry.; J. H. Walsh, General Manager, Quebec Central Ry.

Traffic Committee—C. A. Hayes, Vice President, Canadian National Rys.; J. E. Dalrymple, Vice President, G.T.R.; W. R. MacInnes, Vice President, Canadian Pacific Ry.; G. C. Martin, General Traffic Manager, T., H. & B.R.; Carl Howe, Traffic Manager, Canada Southern Ry.

Legal Committee—W. C. Chisholm, General Solicitor, G.T.R.; W. H. Curle, General Solicitor, C.P.R.; G. Ruel, Counsel, Canadian National Rys.; F. E. Robson, General Solicitor, Canada Southern Ry.; E. D. Cahill, General Solicitor, T., H. & B.R.

Financial Committee—I. G. Ogden, Vice President, C.P.R.; F. Scott, Vice President, G.T.R.; A. J. Mitchell, Vice President, Canadian National Rys.; W. H. Maund, Secretary-Treasurer, T. & N.O.R.; E. V. Barber, Comptroller, Algoma Central & Hudson Bay Ry.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The directors on Nov. 10, declared a dividend of 2½% on the common stock for the quarter ended Sept. 30, being at the rate of 7% per annum from revenue, and 3% per annum from special income, payable Dec. 31, to shareholders of record Dec. 1.

Timiskaming and Northern Ontario Ry.—

	Aug., 1919	Aug., 1918
Passenger earnings	$ 94,119.03	$ 64,798.36
Freight earnings	178,262.60	171,873.47
Total earnings	272,381.63	236,671.83

Canadian National Railways Board to Be Reorganized.

The following is the official report of the statement made on this question during the consideration of the bill for the acquisition of the G.T.R. in the House of Commons at the recent session:—

W. D. EULER, M.P. for North Waterloo: "I was very glad to read in Hansard the following remark made by the Minister of Railways a few days ago: 'There is another matter that I wish to mention in connection with this great railway undertaking. When these two railway systems are operated as one system it will be absolutely necessary for the government to select a management and a staff of the best men that can be found no matter where they come from, to operate this whole new complete system, and those who are decided upon must assume this responsibility.'

"I gather from that, and I would like to be corrected by the Minister of Railways if I am wrong, that it is his intention to appoint a new board to manage the enlarged national system.

Hon. J. D. REID, Minister of Railways: "The hon. member is absolutely right. I made that remark the other day, and if I can use any other words to make the expression stronger, I wish to be understood as doing so. I repeat that so far as I am concerned this road will be operated by the best railway men that we can get, no matter where they come from. The intimation or insinuation of a gentleman opposite—I think it was the member for North Cape Breton and Victoria (D. D. McKenzie)—that the management of these railways would be turned over to the present management was absolutely wrong. The whole board will be reorganized and a set of railway men will operate the system entirely independent of myself or any other man."

Mr. EULER: "I understand, then, that it is the intention to reorganize the whole board?"

Hon. J. D. REID: "Certainly."

Grand Trunk Railway's Indebtedness to Dominion Government.

In answer to a question as to the amount the Dominion Government claims the G.T.R. owes it, the Minister of Railways stated, in the House of Commons, recently, as follows:

Advance made to G.T.R. Co. prior to Confederation, $15,000,000.

Due Railways Department on rail account, $1,279,760.07.

Balance owing Canadian Government Rys. from Grand Trunk, Grand Trunk Pacific and subsidiaries and Grand Trunk Pacific receivership, Sept. 30, 1919, $1,040,346.79.

July 1, 1918, advance to enable company to meet interest payments on G.T. Pacific securities, $593,733.

Sept. 1, 1919, advance to enable company to meet interest payments on G.T. Pacific securities, $554,800.

G.T. Pacific Ry. Co., a subsidiary of the G.T.R.

Securities purchased by government under terms of the G.T. Pacific Implementing Act, 1913, £6,800,000, and being part of guaranteed securities issued under chapter 98, of acts of 1903, $33,093,000. Loan of $6,000,000 made against deposit of $7,500,000. Government guaranteed securities issued under chap. 34, acts of 1914, $6,000,000. Cash advances to company at various times as follows: Under G.T. Pacific Loan Act, 1909, $10,000,000; under G.T. Pacific Loan Act, 1913, $15,000,000; under Appropriation Act of 1916, $7,081,783.45; under Appropriation Act of 1917, $5,038,053.72; under Appropriation Act of 1918, $7,471,399.93. Total cash advanced, $44,591,137.10.

In addition to the above the G.T.P.R. owes the Dominion Government for interest on various advances as per statement rendered the company to Oct. 1, 1919, $7,568,983.83.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics, show the number of cars of grain inspected on railways at Winnipeg and other points in the Western Division, for Oct., 1919, and for two months ended Oct. 31, 1919 and 1918, respectively,—

	Oct., 1919	2 mons. to Oct. 31, 1919	2 mons. to Oct. 31, 1918
C.N.R.	8,645	15,745	15,182
C.P.R.	13,716	24,594	70,203
G.T.P.R.	4,508	6,887	15,311
G.N.R. (Duluth)....	210	340	1,025
Totals	26,629	47,566	137,721

Paving Charges—The London, Eng., County Council is planning to ask the British Parliament to relieve it of liability for the maintenance of roadways in thoroughfares on which there are tramways, and to provide that no part of street improvements be charged to tramway account, except such improvements as are solely and specifically required for the working of the tramway system.

Maintenance of Freight and Passenger Terminals.

The following report was presented at the Roadmasters' and Maintenance of Way Association's annual meeting at Chicago, recently, by a committee of which L. M. Denney, C.C.C.& St,L.R., Indianapolis, was chairman, and of which D. McCooe, Superintendent of Track, G.T.R., Toronto, was a member.

Never before in the history of our association have the burdens of those connected with terminal maintenance been greater than in the past two years, and particularly during the past six months of retrenchment. To assist in overcoming some of these troubles your committee offers the following report.

In large terminals, sections should be established so that yard gangs will be of a uniform size of 15 to 18 men, with a foreman and one assistant foreman. Main line gangs should not be as large as those employed in yards, as the work must be done to a higher standard and needs closer supervision. Section limits should be worked out by the supervisor or roadmaster on the equivalent mileage basis, giving due consideration to traffic and other local conditions. In terminals a regular force of laborers should be employed throughout the year to take care of regular maintenance work, with extra gangs for such work as rebuilding ladder tracks, laying rail and other special work.

Water being a natural enemy to good track, the subject of drainage cannot be too forcibly impressed upon the minds of those responsible for the upkeep of track. Drainage in terminals is generally confined to surface drains, and in most cases is not sufficient. To this is due the poor condition of many terminals in regard to surface, poor ballast and broken rails. In large and busy classification, freight house and locomotive house yards, surface drains should not be depended upon, but a sub drain system should be installed, with catch basins and lateral drains, where needed, to carry off the water. Sub drains, where installed, to be back filled with cinders or other porous material. Roadmasters and supervisors should see that all surface drains are free from obstructions and repeatedly recommend sub drains where needed.

In large terminals, a regularly assigned work train, with a work train gang, is necessary for the economical handling of material and supplies. The work train should have a designated headquarters, and a track or tracks assigned to work train equipment and maintenance of way material. Cars so placed can be obtained and handled by the work train without delay. With our present work day of 8 hours and limited forces, it is necessary that work trains be given more opportunity to do their work than in former times. Work trains are often idle for half an hour or more by the failure of some yardmaster to co-operate. Such delays should be shown to the management in the same way that the operating department shows delays to trains.

In many instances, passenger car, freight house and heavy team yards were designed and built years ago, using heavy curves and switches with nos. 4, 5 and 6 frogs. In those days such frogs and curves were not unsatisfactory, due to the fact that equipment and loads were light. In making extensive repairs to such tracks the layout should be changed where possible, so as to eliminate excessive curvature, thereby reducing future maintenance cost. In most train and classification yards, the layout has not been from the standpoint of maintenance, and in such yards maintenance work is heavy and expensive. When such yards are rebuilt, they should always be rearranged where possible, in order to improve both the transportation and maintenance feature, instead of relaying to the old layout.

It is generally the practice of railways to use any material in the terminal when it is of no further use on main line or branch divisions. For this reason rail in terminals is usually of poor quality. In heavy terminals, switching ladders should be laid with manganese frogs, manganese tip switch points and automatic safety switch stands. Bolts of the proper size and length should be used so they may be properly tightened without waste of labor or material. Sufficient emergency material should be on hand in each yard to take care of emergency ends.

The policing of yards is a problem of ever increasing seriousness and varies with the different yards and kind of freight handled. In some yards it is necessary to clean tracks every 2 months; in others every 6 months. Cleaning yards with a work train, with flat cars and a gang of 30 men, will cost approximately $15 per 1,000 ft. of track. Such tracks as station, passenger car yards and repair tracks should be cleaned daily by regularly appointed attendants, and the cleanings put in a rubbish car, if one can be conveniently placed. In yards where the daily accumulation is heavy, an incinerator plant would be advisable.

In heavy classification yards it is generally difficult to obtain a track to make repairs, and for this reason repairs are generally made out of face. Arrangements are made and a designated track is put out of service for the working period of the day; a car with necessary supplies, such as ties, angle bars and other material is set out on the track. The day's work is carried through, and all old ties and track scrap material are placed on the car, and track left in service for the night. Where sufficient force is available the track can be worked from both ends in the same manner.

In such yards the rebuilding of ladder tracks is the most difficult work in the maintenance of terminals. In doing this work it is necessary that everything possible be done in advance of breaking the track. All material must be checked, all rail cut and drilled for lead rails, all switch ties properly marked so lengths can be identified at a glance. Where conditions permit, all material should be placed on the ground opposite the ladder. Where this is not convenient all material should be assembled on cars so loaded that it can be unloaded as used. Arrangements should be made to suspend operation over the ladder for 4 hours, during which time a gang of 40 men, experienced in laying switches, can renew 3 switches. All old material to be removed to a place of safety same day work is done. On ladder tracks, where the use of the track cannot be given up for any definite period of time, it is necessary to renew the rail on the old ties, a switch at a time, and renew the ties singly. This work is very expensive and it is difficult to accomplish good work

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Bathurst Lumber Co.'s Development—We are officially advised that the Bathurst Lumber Co. has arranged to proceed with the development of the water power at the Great Falls of the Nipisiquit River, N.B., and that it has leased for two years the roadbed of the Northern New Brunswick and Seaboard Ry. from Nipisiquit Jct., 4 miles east of Bathurst for two years for use during construction. The rails on this line from Nipisiquit Jct. to the Canada Iron Corporation's iron mines, which were taken up during the war and laid temporarily on a section of the St. John and Quebec Ry., are being relaid, the work being about half completed when we were advised on Nov. 20. The contractors are Morrow and Beatty, Peterborough, Ont., who are using their own locomotives. The Bathurst Lumber Co. does not propose to buy any locomotives or rolling stock, and has no intention of keeping the railway in operation after the water power development is completed.

Canadian Niagara Bridge Co.—A press report of Nov. 15 states hat the C.P.R. has surveyed a line from north of Welland, Ont., to the Niagara River, a mile and a half above Black Creek, where an international bridge will be built across the river.

The first reference to any direct connection of the C.P.R. with railway activities in the Niagara peninsula was in April, when it was reported that the company had acquired 5,000 acres of land on Grand Island, Niagara River, opposite Bridgeburg, Ont. On April 4, Montreal officials of the company said they knew nothing of the matter. Nothing more has been heard about it until the statement of the present surveys having been made by the C.P.R. It may be taken for granted that the C.P.R. has nothing to do directly with the projected developments in the Welland-Bridgeburg district, but that it is interested indirectly through the Toronto, Hamilton and Buffalo Ry., which is owned by the New York Central Rd., the Michigan Central Rd., and the C.P.R. In 1918 the Dominion Parliament incorporated the Canadian Niagara Bridge Co., to build a bridge across the Niagara River, the Canadian end to be located between Chippawa and Fort Erie, and to build lines not exceeding 6 miles to connect the bridge with existing railways, the provisional directors of the company being Lord Shaughnessy, J. N. Beckley, E. S. Cahill and W. P. Torrance, all of whom are associated with the T., H. & B.R. Owing to the Michigan Central Rd., taking over for its own purposes certain lands, the bridge company obtained power from parliament at the first session of 1919, to build 12 miles of line instead of 6, the line to be built from Welland to Bridgeburg. The Senate was then advised that all arrangements had been completed for building the line, and the bridge, and that after the passing of the act, preparations for the work would be gone on with. The press report quoted above, no doubt, refer to the line from Welland to the Niagara River, at the Canadian end of the projected bridge. (Aug., pg. 431).

Esquimalt and Nanaimo Ry.—We are officially advised that a contract has been let to the Foundation Co., Vancouver, B.C., for clearing the right of way for a railway from two miles west of Port Alberni on the present line to Alberni, Vancouver Island, to Great Central Lake, 11 miles, and the work is in progress. The character of construction of the new line will be similar to that of the line to Port Alberni; the maximum gradient will be 1.5%. It has not been decided what weight of rails will be used.

We are advised that clearing of the right of way is about 40% completed. The work is under the supervision of R. A. Bainbridge, Division Engineer, E. & N.R., Victoria.

Nothing definite has been decided with regard to any extension of the line north of Courtenay, but plans are being prepared for improvements at Nanaimo wharf, and for the erecion of a new station at Nanaimo. (Nov., pg. 602).

Grand Trunk Ry.—The Board of Railway Commissioners has authorized the company to take certain lands at Gravenhurst, Ont., for additional tracks and terminal facilities.

The Board of Railway Commissioners has authorized the rebuilding of the overhead bridge at mile 92.50, district 20, London Division, carrying Mechanic St., over the rack at Drumbo, Ont., and also the renewal of the overhead bridge at mile 84.35 from Black Rock, District 20, London Division, carrying John St., over its tracks at Paris, Ont.

We are officially advised, in connection with the extension of the company's yards at London East, Ont., that 21,980 ft. of new track will be laid. The extensions of the several tracks are:—No. 1, 2,280 ft.; no. 2, 1,865 ft.; no. 3, 1,765 ft.; no. 4, 1,685 ft.; no. 5, 1,325 ft.; no. 6, 1,735 ft.; no. 6, 1,735 ft.; no. 7, 2,280 ft.; no. 8, 2,190 ft.; no. 9, 2,075 ft.; no. 10, 1,935 ft.; no. 11, 1,530 ft. Two new ladder tracks, one 815 ft. and the other 500 ft. long, have been laid. Approximately 50,000 center yards of material were used to fill into sub-grade. The tracks in the entire yard are now at 13½ ft. centers; the lead at the west end of the yard (Egerton St.), has been rearranged, and curves have been flattened out to give better operating conditions. (Oct., pg. 536).

Grand Trunk Pacific Ry.—The Board of Railway Commissioners has ordered the erection of a station building at Lorlie, Sask., mile 22 from Melville, on the branch from Melville to Regina, Sask. We are officially advised with respect to the diversions under consruction at Urling, mile 1,179, and Shere, B.C., mile 1,101 from Winnipeg, that they are simply changes in alignment, and the construction of fills in order to keep away from the sliding banks, which have given considerable trouble. The work was put in hand at the beginning of this year, and it is anticipated that it will be completed early in 1920. The contractors are Carleton and Fetter, Prince George, B.C. (Nov., pg. 602).

Great Northern Ry.—The Vancouver, B.C., City Council's railway committee has recommended that the company's application for permission to erect a cabin on the city boulevard, in which to operate the interlocking switch at the intersection of the British Columbia Electric Ry. and the G.N.R. tracks on Georgia St. E., be granted.

Hudson Bay Ry.—The Minister of Justice stated in he House of Commons, Nov. 10, in answer to an enquiry, hat the approximate estimate to complete track laying from Kettle Rapids, mile 332, to Port Nelson, mile 424, with permanent structures over Limestone and Kisemachisk Rivers, using 80 lb. steel ballasting, train filling, erecting tanks and telegraph line, is $1,750,000. In answer to the question, "Will the financial condition of the country now permit of this cost being incurred?" the Minister said that work on the H.B.R., and certain other public works, was closed down during the war.

Kettle Valley Ry.—A press report states that the branch line from Grand Forks to Lynch Creek, is being relaid with heavier rails, and is being reballasted. A number of additional side tracks are also being built. This branch serves a mining area only. It is reported that the company is negotiating with the British Columbia Government in regard to an extension of its lines south of Penticton, and that it is probable an agreement will be reached within the next few weeks, but the agreement would have to be ratified by the legislature before any action could be taken under it. (Nov., pg. 602).

Lacombe and North Western Ry.—We were officially advised recently that the Alberta Government, which owns the line, expected to have the track laid into Rimbey, Alta., by the end of November. With regard to the reports that the line might be acquired by the C.P.R., we are officially advised that although the latter company has made some preliminary investigations, both from physical and revenue producing standpoints, no advances or offers to purchase have been made.

Lake St. John, Que.—Chicoutimi and Lake St. John District residents have asked the Quebec Government to consider the question of building a belt railway round Lake St. John, with branches to connect with the Ha Ha Bay section of the Roberval-Saguenay Ry., and with the Quebec and Saguenay Ry.

Pacific Great Eastern Ry.—The Premier of British Columbia is reported to have stated recently that some trouble had developed near Lac La Biche, where the track was continually subsiding, and that piles and trestles were being put in as a temporary expedient, but in all probability the line will have to be taken from the present location along an old creek dam, to higher ground. With respect to the proposal to relocate the line near the Cottonwood River, in order to avoid shifting hillsides and to run the line through Quesnel, the Premier stated that surveys were about completed. The relocation of the line would involve the abandonment of about 15 miles of grading completed by the old company. The new survey would shorten the route by 4.73 miles; would lower the crossing between Ten Mile Lake and Cottonwood River by 37 ft., and would eliminate considerable curvature. The Cottonwood River crossing would require a bridge 400 ft. long, as compared with one of 1,800 ft. of steel work and 1,200 ft. of trestlework on the old location. The estimated cost of the 10 miles of new location, including bridge work, is $500,000. A. W. Vassir was the locating engineer in charge of the relocation survey.

The bridge at Deep Creek, mile 294 from Squamish, for which tenders were invited recently, will have a total length of 1,163 ft. 8 in. between parapet walls. The substructure will consist of 2 reinforced concrete abutments, and 24 pedestals of 1-2-4 concrete, set in 6 groups of 4 pedestals each. On these pedestals will be carried steel towers, 2 of 70 ft. span each, and the 4 center ones of 80 ft. span each; the towers being linked up to each other, and to he abutments by seven 100 ft. deck plate connecting girders. The two central towers, which will give the bridge a height of 290 ft. to base of rail, will have a spread of 89 ft. 11 in. center to center of pedestals, east to west, and 80 ft. south to north; the other towers being on rising ground will have a proportionately lesser spread east to west. The southern approach will be on a spiral, ending on the first tower. The construction of the bridge involves a diversion of the Deep Creek so as to carry it between the two central spans, a diversion of approximately 100 ft. to the south.

A press report states that Major Cecil Ewart has been engaged by the British Columbia Government to locate a branch from the P.G.E.R. at Clinton to Ashcroft. He was overseas with the 9th Battalion, Canadian Railway Troops. (Nov., pg. 602).

Pas, Man., to Flin Flon Mines—A press report states that engineers representing Hayden, Stone and Co., of Boston, Mass., have returned from making an investigation of the Flin Flon copper mining properties in Northern Manitoba; that they are favorably impressed with the properties, and that the negotiations for purchase will likely be concluded during December. For the future development of the property a railway about 70 miles long would have to be built from Pas, Man. Some negotiations for the building of this line have already been carried on with the Canadian National Rys., and it is stated that should these not be successful, the line will be built by the Manitoba Government. (Nov., pg. 602).

Quebec and Chibougamau Ry. Co.—The Quebec Legislature is being asked to incorporate a company with this title to build a railway from Quebec City northerly through Quebec, Montmorency, Charlevoix and Chicoutimi Counties to Chicoutimi on the Saguenay River, thence northwesterly through Chicoutimi and Lake St. John Counties to Chibougamau Lake. The provisional directors are: J. Cote, E. Parodes, Quebec; M. Paris, Montreal; D. Roy, Beaumont, Que.; W. J. Ewin, Richmond, Que.

Quebec, Montreal and Southern Ry.—Napierville Jct. Ry.—These two lines are controlled and operated by the Delaware and Hudson Co., of which F. P. Gutilius, formerly General Manager, Canadian Government Rys., is Federal Manager. Accompanied by the D. and H. Co.'s Chief Engineer, he spent some time recently in Quebec and is said to have gone over the country between the company's lines and Quebec, and also to have visited Murray Bay, and other points on the Quebec and Saguenay Ry. The visit was reported to be of a personal character, but press reports now connect it with an extensive plan of railway building in order to give the D. and H. Co. connection with Quebec and beyond. The reports state that the plan is to acquire the charter of the Quebec Eastern Ry., which was owned by the interests owning the Lotbiniere and Megantic Ry., and to buy the Quebec Ry., Light and Power Co.'s Montmorency Division and the Roberval-Saguenay Ry. The construction of the lines authorized under the Quebec Eastern Ry. charter would give the D. and H. Co. an entrance into Quebec over the bridge. The purchase of the Quebec Ry., Light and Power Co.'s Montmorency Division and the Quebec and Saguenay Ry., would give connection with Murray Bay, whence a line is projected to Ha Ha Bay and Chicoutimi, there connecting with the Roberval-Saguenay Railway. The reported project is an extensive one, but it is still in the rumor stage. (Aug., 1918, pg. 337).

Roberval-Saguenay Ry.—A Quebec press report states that terminals are being built at Ha Ha Bay on the Saguenay River to accommodate the Roberval-Saguenay Ry., and possibly other railways that may find it advantageous to use that point in lower Quebec. (Nov., 1918, pg. 488).

The St. George's Coal Fields Ltd.—A Newfoundland corporation is reported as planning extensive developments, including the building of railway lines. T. J. Freeman is the Manager.

St. John and Quebec Ry.—In a report to the New Brunswick Government the directors stated, Nov. 13, that construction on the line was practically completed; that the turntable at Gagetown is to be removed to Westfield, N.B., and submitted the contractor's final estimates for approval. Some small items of work, which had been delayed, owing to the difficulty of obtaining supplies, were being done by Canadian National Rys. section men.

Dominion Atlantic Ry.—Grant Hall, Vice President, C.P.R., who arrived in Halifax, N.S., Nov. 20, after a trip of inspection over the D.A.R., is reported to have said that before long the present light rails on the D.A.R. will be replaced with heavier ones. War conditions had delayed this work, but it will now be undertaken. Digby, N.S., citizens, at a meeting, held Nov. 17, decided to close a portion of Prince William St. to vehicular traffic in order that the D.A.R. may secure a suitable site for the projected new station building. It is said that the building will cost from $60,000 to $65,000, and that it will be completed during 1920. (Nov., 1918, pg. 488).

British Transport Ministry Organization—The organization of the staff of the Minister of Transport in Great Britain is reported to be proceeding. It is stated that there are to be nine separate departments, the head of each of which will be directly responsible to the minister for the work under his control. Following is a list of these departments with their heads:—Chief Mechanical Engineer, Col. L. Simpson; Director General of Civil Engineering, Sir A. Gibb; Director-General of Development, Sir C. de Bartolome; Director General of Traffic, Sir P. Nash; Secretary and Solicitor, Sir F. Dunnell; Director General of Finance and Statistics, Sir G. Beharrell; Director General of Public Safety and General Purposes, Sir W. Marwood; Director General of Roads, Sir H. Maybury; Director General of Transport (Ireland), H. G. Burgess.

Werner Horn, who claimed to be a German officer, has been found guilty by a New Brunswick jury, of attempting to blow up the C.P.R. bridge over the St. Croix River, N.B., Feb. 2, 1915, and has been sentenced to 10 years imprisonment. He was removed to the penitentiary at Dorchester, N.B.

United States Railroad Administration Notes.

President Wilson on Nov. 1[illegible] signed the bill restoring to the Interstate Commerce Commission its pre-war rate making power.

The Senate Interstate Commerce Committee, on Nov. 5, decided on temporary legislation to continue government guaranteed returns to railways, if they return to private control on Jan. 1, until Congress can enact permanent legislation.

The regional supervisor of eastern United States railways, reporting on the results of the national railway accident prevention drive from Oct. 1[illegible] to 31, gives the Grand Trunk Ry. lines the highest place, as during that period there were no accidents reported on its New England lines.

Representative Denison stated in the House of Representatives at Washington, Nov. 12, that under the permanent railway legislation proposed in the house bill, the Railroad Administration's estimate that Congress will have to appropriate $363,355,000, to square accounts for the period of government operation of carriers ending Dec. 31.

The Director General announced Nov. 2, that the administration was about to file with the Interstate Commerce Commission, effective upon 5 days notice, supplements to tariffs, providing for establishment of minimum weights on grain and grain products, designed to secure heavier loading, and to make available additional freight cars for transportation of grain and grain products.

A Washington, press dispatch states it was reported to the Senate Interstate Commerce Committee, Nov. 15, that in he event of the Cummins' bill being passed the government will be required to appropriate $415,451,000 in addition to the $1,250,000,000 already appropriated for railways, making the total indebtedness of the railways to the government $1,665,451,000. Under the provisions of the loan the rate of interest is to be 6% and the companies are to furnish such collateral sa the President may deem it advisable to require.

Victoria and Sidney Ry.—A British Columbia court on Oct. 31, directed the sale of the Victoria and Sidney Ry. right of way, upon an application by the trustee for the debenture holders. This line was built by a local company under a guarantee of bonds by the B.C. Government. It extends from Victoria to Sidney, Vancouver Island, 17 miles, and for a number of years was operated by the Great Northern Ry. (U.S.A.), a ferry service being maintained with the mainland. The line has not been operated for nearly two years, and negotiations for its continued operation, either in whole or in part, by the Canadian National Rys., or the British Columbia Electric Ry. having failed, the debenture holders are realizing the company's assets. The opening of the B.C.E.R. line to the Saanich peninsula and the Canadian Northern Ry. line between Victoria and Patricia Bay, cut off a good deal of the V. & S.R. traffic.

The Edmonton, Dunvegan and British Columbia Ry.—The Minister of Justice informed the House of Commons, Nov. 10, that the Dominion Government did not propose to purchase the Edmonton, Dunvegan and British Columbia Ry. "at the present time."

Mainly About Railway People Throughout Canada.

George Annand, who is said to have been the oldest pensioned G.T.R. employe, died at Oshawa, Ont., Nov. 12, aged 92. He entered G.T.R. service in 1856 and at various times was agent, at Coteau and St. Annes, Que., and Gananoque, Newcastle, Trenton and Oshawa, Ont.

William Edward Gladstone Bishop, whose appointment as Division Freight Agent and District Passenger Agent, Canadian National Rys., Cochrane, Ont., was announced in our last issue, was born at Central Clarence, N.S., Dec. 4, 1888, and entered railway service, Aug. 5, 1908, since when he has been, to Oct., 1910, stenographer, District Freight Agent's office, Intercolonial Ry., Halifax, N.S.; Oct., 1910, to Oct., 1914, in General Freight Agent's office, Intercolonial Ry., Moncton, N.B.; Oct., 1914, to May 1, 1916, chief clerk, District Freight Agent's office, Canadian Government Rys., Halifax, N.S.; May 1, 1916, to Oct. 1, 1919, Travelling Freight Agent, Canadian Government Rys., Halifax, N.S.

Earl Brassey, who was killed in London, Eng., Nov. 13, in a motor car accident, was a grandson of Thos. Brassey, a well known railway contractor between 1805 and 1870, and one of the builders of the original Grand Trunk Ry. and the G.T.R., Victoria bridge, Montreal.

Ernest Robert Bruce, whose appointment as Director of Exhibits, Colonization and Development Department, C.P.R., Montreal, was announced in our last issue, was born in England, Oct. 9, 1877, and entered C.P.R. service Mar. 1, 1910, since when he has been, to Mar. 1, 1912, in charge of farm development work, Natural Resources Department, and from Mar. 1, 1912 to Aug. 1, 1919, Director of Exhibits, attached to Publicity Department, Calgary, Alta.

Sir George Bury, President, Whalen Paper & Pulp Co., left Vancouver, Oct. 30, for China, accompanied by his daughter, Mrs. H. R. Drummond-Hay, of Winnipeg, and C. W. Harrison, Sales Manager, Whalen Pulp & Paper Co. He is not expected to return to Vancouver until the end of January, or early in February.

M. J. Butler, C.M.G., Managing Director, Armstrong Whitworth of Canada, Ltd., Montreal, has retired and taken up residence at Oakville, Ont. He was born at Deseronto, Ont., Nov. 19, 1856, and educated in the public schools and Toronto University. From 1878 to 1883 he was engaged on government surveys and in 1884 was one of the engineers on the Kingston and Pembroke Ry.; 1884 to 1885, Chief Engineer, Thousand Island Ry.; 1885, Chief Engineer, Napanee, Tamworth & Quebec Ry.; 1886 to 1887, engaged in water service engineering; 1890 to 1899, Chief Engineer, Bay of Quinte and Navigation Co.; 1900 to 1903, Chief Engineer, Locomotive and Machine Co., Montreal (now Montreal Locomotive Works Ltd.); 1903 to 1908, Assistant Chief Engineer, Eastern Division, National Transcontinental Ry.; 1908 to Jan., 1910, Deputy Minister and Chief Engineer, Railways and Canals Department, and from April, 1909, also Chairman of the Board of Management, Canadian Government Railways; January, 1910, General Manager, Dominion Iron and Steel Co., and subsequently Managing Director, Armstrong Whitworth of Canada, Ltd.

Jos. Carroll, assistant station master, Toronto union sation, died Nov. 9, aged 59, from pneumonia. He was born in Dublin, Ireland, and came to Canada at the age of 17. He entered G.T.R. service as a brakeman, and while a conductor, los his right foot through an accident in the Parkdale yards, and subsequently occupied the position which he held at the time of his death.

Hon. F. B. Carvell, Chief Commissioner, Board of Railway Commissioners, left Ottawa, Nov. 12, to preside at sittings of the board at various points in the prairie provinces and in British Columbia.

E. J. Chamberlin, ex-President, G.T.R. and G.T. Pacific Ry., and Mrs. Chamberlin, have left Ottawa for California, to spend the winter.

Frederick H. Clendenning, who has been appointed Foreign Freight Agent, C.P.R., Vancouver, B.C., was born at Montreal, Nov. 9, 1881, and entered transportation service Aug. 1, 1898, since when he has been, to June 30, 1902, junior clerk, Fourth Vice President's office, register clerk, and stenographer, successively, C.P.R., Montreal; July 1, 1902, to Mar. 31, 1903, stenographer and freight clerk, Commercial Agent's office, New York Central and Hudson River Rd., Montreal; Apr. 1, 1903, to Jan. 31, 1904, stenographer, rate and tracing clerk, General Freight Department, C.P.R., Vancouver, B.C.; Feb. 1, 1904, to June 30, 1905, chief clerk, City Freight Office, C.P.R., Victoria, B.C.; July 1, 1905, to Aug. 31, 1908, chief clerk, District Freight Office, C.P.R. and Esquimalt & Nanaimo Ry., Victoria, B.C.; Sept. 1, 1908, to Aug. 16, 1909, City Freight Agent, C.P.R., and District Agent, Esquimalt & Nanaimo Ry., Victoria, B.C.; Aug. 17, 1909, to Mar. 31, 1911, Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Apr. 1, 1911, to Jan. 31, 1914, District Freight Agent, C.P.R., Vancouver, B.C.; Feb. 1, 1914, to May 1, 1919, Division Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C. From Nov. 1, 1918, he was loaned to the British Ministry of Shipping (Canada), and in May, 1919, he was appointed Assistant Foreign Freight Agent, C.P.R., Vancouver, B.C.

George Cobb, who has been appointed Superintendent, Western Division, Reid Newfoundland Co., Bishops Falls, Nfld., was born at Coupar Angus, Scotland, April 21, 1885, and entered Reid Newfoundland Co.'s service Nov. 14, 1901, since when he has been, to Sept. 27, 1903, telegraph operator; Sept. 27, 1903 to May 1, 1905, agent, Gambo; May 31, 1905, to May 20, 1908, night dispatcher, St. Johns; May 20, 1908, to Nov. 11, 1910, emergency dispatcher and agent, Bishops Falls; Nov. 11, 1910 to Jan., 1913, Chief Dispatcher, St. John's; Jan., 1913 to May 26, 1919, Superintendent, St. John's; May 26 to Nov. 11, 1919, Assistant General Superintendent, St. John's.

James Colley, whose appointment as Publicity Agent, Colonization and Development Department, C.P.R., Calgary, Alta., was announced in our last issue, was born at Colchester, Eng., Sept. 19, 1881, and entered C.P.R. service in July, 1912, since when he has been, to March, 1915, clerk, Superintendent's office; March, 1915, to March, 1917, clerk, Natural Resources Department, Sales Branch; July, 1917, to Sept. 30, 1919, Assistant Publicity Agent, Colonization and Development Department, all at Calgary, Alta.

Albert Roy Curran, whose appointment as Paymaster, Eastern Lines, Canadian Northern Ry., Toronto, was announced in our last issue, was born there, July 3, 1887, and entered railway service Aug. 27, 1904, since when he has been, to Oct. 15, 1904, office boy, Chief Dispatcher's office, C.P.R., Toronto; Oct. 16, 1904, to Apr. 30, 1906, junior clerk, same office; Mar. 1, to June 25, 1906, junior stenographer, Division Engineer's office, C.P.R., Toronto; June 26 to Oct. 31, 1906, stenographer, Treasurer's office, Canadian Northern Ry., Toronto; Nov. 1, 1906 to June 30, 1908, clerk, Cashier's office, C.N.R., Toronto; July 1, 1908 to Oct. 30, 1917, Assistant Cashier, C.N.R., Toronto; Nov. 1, 1917, to Jan. 31, 1919, pay car clerk, C.N.R., Toronto; Feb. 1, to Sept. 30, 1919, Assistant Paymaster, C.N.R., Toronto.

Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, C.P.R., is one of the directors of Alberta Flour Mills Ltd., which is building a $5,000,000 flour mill at Calgary, Alta.

Jacob Lewis Englehart, whose resignation as Chairman, Timiskaming and Northern Ontario Ry. Commission, Toronto, was announced in our last issue, was born at Cleveland, Ohio, Nov. 2, 1847. He has been for a number of years associated with the oil industry in Canada and the United States, and in 1881 was elected Second Vice President of the Imperial Oil Co. He was appointed to the T.& N.O.R. Commission in March, 1905, and was associated with numerous financial and industrial undertakings in Ontario. In 1910 he founded the Charlotte Eleanor Englehart Hospital at Petrolea in memory of his late wife, and he also presented an X-ray apparatus to St. Michael's Hospital, Toronto.

J. H. Flock, K.C., who died at London, Ont., Nov. 20, aged 85, was Honorary Counsel for the Canadian Ticket Agents' Association for many years. He was responsible for the drafting of a franchise agreement between the London Street Ry. Co., and the city.

C. O. Foss, Chief Engineer, St. John and Quebec Ry., has been granted leave of absence to go to British Columbia for a rest and on private business.

F. C. Foy, formerly Canadian Passenger Agent, New York Central Rd., Toronto, who was transferred to the company's office at Buffalo, N.Y., when the Canadian office was closed, and who was afterwards stationed at Utica, N.Y., for some time, is on a short leave of absence, but is expected to return to the Buffalo office in the near future.

Spencer L. Furniss, Chief Assistant to the European General Manager, C.P.R., was married Oct. 25 in London, Eng., to Miss E. M. H. Booth. He was presented with an address, a case of cutlery, and a silver jewel box, by Sir George McLaren Brown, on behalf of the European staff.

William Garty, who died at Concord, Mass., Nov. 2, was for many years, New England Agent, Chicago, Burlington and Quincy Rd., Boston, Mass., with jurisdiction over Canadian territory.

H. W. Gillis, who has been appointed Assistant Foreign Freight Agent, C.P.R., Montreal, entered the company's service in May, 1905, and has been, to June, 1906, clerk, Mile End station, Montreal;

June, 1906 to June, 1908, clerk, Place Viger freight station, Montreal; June, 1908, to Dec., 1909, billing clerk, Outremont station, Montreal; Dec., 1909 to July, 1911, clerk, General Freight Department, Montreal; July to Sept., 1911, rate clerk, Division Freight Department, Montreal; Sept., 1911, to July, 1913, clerk, General Freight Department, Montreal; July, 1913 to July, 1914, rate clerk, General Freight Department; July, 1914 to March, 1915, assistant chief clerk to Freight Traffic Manager; March, 1915, to Sept., 1918, chief clerk to Freight Traffic Manager; Sept., 1918, to Nov., 1919, chief clerk, Vice President (Traffic), Montreal.

Grant Hall, Vice President, C.P.R., accompanied by a number of other officials, visited Quebec, Nov. 15, for a routine inspection.

M. A. Hutton, chief accountant, Maritime Coal, Ry. and Power Co., Joggins, N.S., has resigned, and removed to Moncton, N.B., where he has engaged in general auditing and accountancy.

Mrs. E. Langham, wife of the General Purchasing Agent, Canadian National Rys., died in Toronto, Nov. 18, aged 59, after a very long illness. Besides her husband, she left a son, Dr. J. D. Langham.

Frank Lee, who has been appointed Engineer Maintenance of Way, Western Lines, C.P.R., Winnipeg, was born at Chicago, Ill., Mar. 7, 1873, and entered railway service in Jan., 1895, as rodman and draftsman on location and construction of extensions to the government railways in Trinidad, British West Indies. He has been, from May, 1896, to Nov., 1902, on construction and maintenance, Chicago and Northwestern Ry.; Nov., 1902 to Jan., 1904, Signal Engineer, C.P.R., Montreal; Jan., 1904, to Aug., 1905, Assistant Engineer, C.P.R., Winnipeg; Aug., 1905 to Apr., 1912, Division Engineer, C.P.R., Winnipeg; Apr., 1912 to Nov. 20, 1917, Principal Assistant Engineer Western Lines, C.P.R., Winnipeg; Nov. 20, 1917 to Oct., 1919, Engineer Maintenance of Way, Eastern Lines, C.P.R., Montreal.

Mrs. W. R. MacInnes, wife of the Vice President in Charge of Traffic, C.P.R., and their daughter, Miss Judith MacInnes, returned to Montreal, Nov. 11, from England.

Lieut.-Col. Martin, of the 7th Canadian Railway Troops, entertained his officers at dinner in Toronto, Nov. 13, when it was decided to carry on the battalion's organization.

Hon. S. C. Mewburn, Minister of Militia, has been acting as Minister of Railways and Canals, during the absence from Ottawa of Hon. J. D. Reid.

Hon. Harry Mills, M.L.A., who has been sworn in as a member of the new Ontario Government, and will be appointed Minister of Mines when that department is created, was born at Birmingham, Eng., Oct. 11, 1873. He entered C.P.R., service at Fort William, Ont., in Aug., 1894, and was, to 1897, wiper; 1897 to 1901, locomotive fireman; 1901 to July 1, 1919, freight locomotive man, and from July 1, 1919, passenger locomotive man, running between Fort William and Ignace, Ont. At the time of his present appointment he was Chief Officer, Division 243, Brotherhood of Locomotive Engineers, and has been a member of the brotherhood's general legislative committee for several years. He was a member of the Fort William Board of Education for 7 years, and chairman for 3 years.

James Hunt Norton, whose appointment as Assistant General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., was announced in our last issue, was born at Shaftesbury, Eng., Apr. 21, 1884, and entered railway service June 1, 1899, since when he has been,. to Dec. 31, 1909, in various positions in Car Service Department, from messenger to Car Accountant's secretary, Intercolonial Ry., Moncton, N.B.; Jan. 1, to Sept. 20, 1910, clerk, General Freight Agent's office, same road, Moncton, N.B.; Sept. 20, 1910, to Apr. 30, 1912, secretary to General Freight Agent, Canadian Government Rys., Moncton, N.B.; May 1, 1912 to May 30, 1917, assistant chief clerk, General Freight Agent's office, C.G.R., Moncton, N.B.; June 1, 1917, to Jan. 22, 1919, Division Freight Agent, C.G.R., and from Jan. 22 to Sept. 30, 1919, Division Freight Agent, Canadian National Rys., Halifax, N.S.

J. H. Norton,
Assistant General Freight Agent, Canadian National Railways, Moncton, N.B.

Sydney John Lyle Potter, whose appointment as Local Treasurer, Eastern Lines, Canadian Northern Ry. System, Toronto, was announced in our last issue, was born at Burrington, Devonshire, Eng., Apr. 5, 1887, and entered railway service May 5, 1905, since when he has been, to Oct. 1, 1907, clerk, Great Northern Ry., King's Cross, London, Eng.; Oct. 18, 1907, to Oct. 1, 1915, clerk, Canadian Northern Ry., Toronto; Oct. 1, 1915, to Dec. 31, 1918, Assistant Paymaster, Eastern Lines, same road, Toronto; Jan. 1, to Sept. 30, 1919, Paymaster, Eastern Lines, same road, Toronto.

Norman S. Rankin, whose appointment as Special Publicity Agent, Colonization and Development Department, C.P.R., Montreal, was announced in our last issue, was born [illegible], Apr. 16, [illegible]. He was for three years private secretary and paymaster during the construction of the Cuba Rd., and subsequently was engaged in newspaper work in Havana for a year. He was later engaged as Traffic Manager of a steamship company operating between Santiago, Cuba; Kingston, Jamaica; Colon, Panama, and Cayman Islands. He entered C.P.R. service in Nov., 1909, as private secretary to J. S. Dennis, Assistant to President, Calgary, Alta., and has been from Oct., 1910, to Nov., 1911, publicity clerk, Natural Resources Department, Calgary, Alta.; Nov., 1911, to 1916, General Publicity Agent, Natural Resources Department, Calgary. He enlisted for active service in 1916, spent 2 years overseas, and was appointed Publicity Agent, Colonization and Development Department, C.P.R., Calgary, on his return to civil life, July 15, 1919.

D'Arcy Scott, formerly Deputy Chief Railway Commissioner, Board of Railway Commissioners, is reported to have announced in Ottawa, Nov. 7, that he will be a candidate for the mayoralty which he held previously.

J. G. Sullivan, formerly Chief Engineer, Western Lines, C.P.R., was elected an alderman for the City of Winnipeg, at the recent municipal elections.

Charles H. Tillett, who has been appointed Signal Engineer, G.T.R., Montreal, was born at Peru, Ind., Dec. 8, 1884, and entered railway service in Aug., 1907, since when he has been, to Nov., 1907, signal repair man, Pennsylvania Rd., Fort Wayne, Ind.; April, 1908 to Feb., 1910, signal repair man, Great Northern Ry., Seattle, Wash.; Feb., 1910 to July, 1913, Signal Inspector, Chicago and Eastern Illinois Rd., Chicago, Ill.; July to Oct., 1913, Signal Inspector, G.T.R., Montreal; Oct., 1913, to June, 1918, Supervisor of Signals, G.T.R., Montreal; June to Dec., 1918, Electrical Engineer, Signal Department, G.T.R., Montreal; Dec., 1918 to Nov., 1919, acting Signal Engineer, G.T.R., Montreal.

E. N. Todd is General Foreign Freight Agent, C.P.R., Montreal, his jurisdiction covering all lines, and not merely Eastern Lines, as erroneously stated under "Birthdays of Canadian Transportation Men," in Canadian Railway and Marine World for October.

R. C. Vaughan, Assistant to President, Canadian National Rys., left Toronto, Nov. 9, for Vancouver, accompanied by D. O. Wood, Traffic Manager, Export & Import Department, C.N.R., on business connected with Canadian Government Merchant Marine Ltd., and the operation of its ship which are being built at the Pacific Coast. They are expected to return to Toronto early in December.

N. M. R. Wilson, who has been appointed Chief Engineer of Waterworks, Brantford, Ont., was born at Bombay, India, Dec. 3, 1869, and educated in England. He was articled to the Chief Engineer of the Great Northern Ry., there in 1885, and was 5 years in general railway engineering. He was later engaged on the construction of the Highland Ry., Scotland, and for [illegible] years was Assistant Engineer, North Eastern Ry., engaged in the maintenance and construction of railways and docks. In 1901 he was appointed Resident Engineer, Dearne Valley Ry., now a part of the Lancashire and Yorkshire Ry. He came to Canada in 1907, and entered C.P.R. service as Resident Engineer on the construction of steel bridges, chiefly in New Brunswick, and left railway service in 1909.

Central Argentine Ry. is reported to be arranging to use fuel oil for locomotives instead of coal, and more recently wood.

Canadian National Railways Construction, Betterments, Etc.

Sydney Sidings—A press report states that the Sydney, N.S., City Council has before it the board of works recommendation to grant permission for the installation of a siding, 320 ft. long on Victoria Road.

New Glasgow Station—We are officially advised that the extension to the station at New Glasgow, N.S., for which tenders were invited recently, will be carried out by the railways' own staff, The work consists of the erection of a 2 story brick building 41 x 30 ft. with slate roof, and the remodelling of the interior of the present building.

Fredericton, N.B., Bridge—A press report states that it is proposed to ask tenders shortly for the erection of a new railway bridge across the St. John River at Fredericton, N.B.

Koospeganishe River Bridge — The Board of Railway Commissioners has authorized the rebuilding of the bridge over the Koospeganishe River, Caron Tp., Que., mile 186.2 from Quebec, on the Quebec and Lake St. John Ry.

Rouge River Bridge—The Board of Railway Commissioners has authorized the rebuilding of the bridge across the Rouge River, mile 3.3, on the China Clay spur, Montford Subdivision, Arundel Tp., Que.

Jacques Cartier Bridge—We are officially advised that the boring work for which tenders were, until recently, in connection with repairs to the foundation of the bridge across the Jacques Cartier River bridge, Que.

Beckets Creek Bridge—The Board of Railway Commissioners has authorized the rebuilding of the bridge across Beckets Creek, Cumberland Tp., Ont.; mile 94.25 from Montreal.

The Moira River Bridge over the east channel of Moira River, Stoco Lake, Ont., mile 31.75, Tweed Subdivision, for the renewal of which a contract has been let, consists of 2 through truss spurs, each 145½ ft., center to center, on stone abutments, and pier, and was erected in 1889. The superstructure being of very light design is not of sufficient capacity for present traffic. The bridge is to be renewed by using 3 half through plate girders, 100 ft., 85 ft. and 55 ft., respectively, with the addition of one new half deck span of 45 ft. at the north end. The 3 spans first mentioned are to be removed from the Toronto-Sudbury line. The weight of steel in the renewal structure will be approximately 220 tons, and the capacity will be equal to Cooper's E-46 loading. Two piers are to be built midstream, and the substructure of the present bridge is to be repaired.

Bancroft to Alice Tp.—A press report states that a project is under consideration for building of a line from Bancroft, Ont., to the main line in Alice Tp., Ont., 40 miles. Bancroft is the junction of the old Irondale, Bancroft and Ottawa Ry., with the old Central Ontario Ry., both of which were acquired by the Canadian Northern Ry., and the building of such a line would open up a considerable territory now without railway connection. The original project of the I.B. and O.R., included a line from Ottawa, to Georgian Bay, but the only section built extended from a junction with the G.T.R., Lindsay-Haliburton branch, just north of Kinmount, to Bancroft, 54 miles. The iron ore mining in he district failed to come up to expectations, and as the lumbering moved farther away, the railway business gradually fell off.

Parry Sound Subway and Bridge—The Board of Railway Commissioners has authorized the company to rebuild the subway carrying its tracks under Bowes St., and the bridge carrying the railway over William St., Parry Sound, Ont.

Grant to Long Lake, Ont.—A press report states that a plan is under consideration for building a line from Long Lake, Ont., on the Canadian Northern Ry. to Grant, Ont., on the Transcontinental Ry. This matter has been discussed in the press on several occasions within the past few years.

Mulvihill Station—The Board of Railway Commissioners has ordered the building of a station at Mulvihill, Man., mile 99, Oak Point and Gypsumville Branch.

Morris Pipe Line—Tenders are under under consideration for the installation of a 6-in. cast iron pipe line at Morris, Man.

Prince Albert to Paddock Wood—We are officially advised that it is not intended to proceed with any construction this year on the recently surveyed branch from Prince Albert to Paddock Wood, Sask. Surveys were made in September for this line, from Prince Albert northeasterly for about 40 miles.

Edmonton Station and Shops—An unconfirmed press report states that a new station building, costing approximately $1,000,000, will be built at Edmonton, Alta., that construction on the same will be started next spring and that the new building, which will be 5 stories high, will be located near the present station. The same report states that it is proposed to build large car shops, etc., at Edmonton, on which it is also expected to start work next spring.

Oliver-St. Paul de Metis Line—Track is reported to have been laid on 100 miles of the Oliver to St. Paul de Metis, Alta., line; tracklaying is expected to be gone on with on a further 20 miles. E. G. Richardson, engineer in charge of construction, is reported to have stated in Edmonton, Nov. 3, that a further 22 miles of grading was expected to be ready for tracklaying by Nov. 15.

Vancouver Station—With the inauguration of a daily transcontinental service over the Canadian National Rys., Nov. 1, the new Canadian Northern Pacific Ry. station at the False Creek terminals, Vancouver, was officially opened. The mayor of Vancouver, with a delegation of citizens, received the company's officials who arrived on the train and formally declared the station open. Following the ceremony, the city aldermen, railway officials, etc., were entertained at a dinner by the C.N.R., at which congratulatory speeches were made. A description of the building was given in Canadian Railway and Marine World in July, 1916, and a more detailed description was given Sept., 1916. A description of the train shed and platforms was given in Feb., 1918. (Nov., pg. 590).

Copenhagen, Denmark, Tramway Fares have been raised 50%.

Light Railways Projected for Northern Ontario.

A Cobalt, Ont., press report of Nov. 6, stated that a plan was under consideration to provide light narrow gauge railways for the outlying Northern Ontario mining districts. It was stated that temporary arrangements had been made with, presumably, the late Ontario Government by J. W. Solloway of Toronto, to build a light railway similar to those used at the front in France for the transportation of munitions, and that a charter would be applied for, for the construction of such a line between Elk Lake and Gowganda, Ont. Elk Lake is the terminus of a Timiskaming and Northern Ontario Ry. branch from Earlton Jct. The Gowganda mining district has been asking for railway connection for a number of years.

Another press report states that the principal mine in the neighborhood of the projected Elk Lake-Gowganda, is the Millar Lake-O'Brien, and that the promoters of the line are prepared to provide lines into West Shining Tree and Matachewan. A further report states that a line to the Kirkland district is also projected.

Canadian Light Ry. Construction Co. Ltd., has been incorporated under the Ontario Companies' Act with a capital of $500,000 and offices in Toronto, to carry on the business of contractors and builders, and to build, equip and construct a light railway or light railways in the unorganized districts of Ontario.

Toronto Union Station and Esplanade Viaduct Plans.

E. W. Beatty, K.C., President, C.P.R., while in Toronto, Nov. 20, is reported to have said that he did not think there was any likelihood of construction on the esplanade viaduct being proceeded with for some time, owing to the high cost of labor and materials.

As to the new union station, he is said to have expressed the opinion that it would not be ready for occupancy until May, 1920. There were questions in connection with both the union station and the viaduct which had assumed new phases, now that the G.T.R. is being acquired by the Dominion.

He is also reported to have said that there is no truth in the report that the C.P.R. own the "Mystery Block" on Yonge St., on which press reports recently credited the C.P.R. with planning to erect a new station and hotel.

Transportation Statistics—The collection compilation, etc., of railway, canal, express, telegraph, and telephone statistics carried on heretofore in the Railways and Canals Department by the Comptroller of Statistics, J. L. Payne, is about to be transferred to the Dominion Bureau of Statistics, Trade and Commerce Department, where it will be carried on under the direction of the Dominion Statistician and Controller of Census, R. H. Coats, B.A.

Quebec & Saguenay Ry. Operation—The Minister of Justice stated in the House of Commons, Nov. 10, in answer to questions, that the government did not intend to discontinue train service between Quebec and Murray Bay, and that the question of operating trains between those points only two or three times a week, was then under the management's consideration.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

28,883. Oct. 9.—Dismissing Canadian Association of Ice Cream Manufacturers' application for reduction in express classification of ice cream from first to second class.

28,884. Oct. 10.—Amending order 28,789, Sept. 16, re building of C.P.R. Russell Northerly Branch across highways between mileage 0 and 12.34, Man.

28,885. Oct. 8.—Extending to June 30, 1920, time within which Grand Trunk Pacific Ry. may build station, platform, stock pen and spur as required by order 21,937, May 29, 1914, between Tofield and Deville, Sask.

28,886. Oct. 9.—Relieving G.T.R. from providing further protection at Russell, or Long crossing, near Carlsbad Springs, Ont.

28,887. Oct. 9.—Ordering Grand Trunk Pacific Ry. to appoint caretaker at Lorlie, Sask., to see that station is kept clean, heated and lighted for accommodation of passengers.

28,888. Oct. 10.—Relieving G.T.R. from providing further protection at first crossing west of Cupar, Sask.

28,889. Oct. 8.—Authorizing C.P.R. to build its Leader Southeasterly Branch across highways between mileage 0 and 31.37, Sask.

28,890. Oct. 11.—Approving location of C.P.R. station at Harding, Man.

28,891. Oct. 10.—Ordering G.T.R. to restore its passenger train known as the Scoot between Richmond and Sherbrooke, Que., from Oct. 20, to May 1, 1920.

28,892 Oct. 10.—Ordering C.P.R. to refrain from leaving cars standing on north siding on either side of Renfrew St., Renfrew, Ont., nearer than 100 ft. from the street line.

28,893. Oct. 14.—Authorizing Canadian National Rys., and Montreal Terminal Ry. to operate over crossing at Longue Pointe, near Montreal, without first stopping.

28,894. Oct. 14.—Suspending, pending hearing complaint of Dominion Canners, Ltd., Canadian Canners, Ltd., and others, C.P.R., G.T.R., Canadian National Rys., Michigan Central Rd., Toronto, Hamilton & Buffalo Ry., and Pere Marquette Rd. supplements of tariffs cancelling special commodity rates on canned goods in carloads.

28,895. Oct. 8.—Authorizing C.P.R. to make changes in spurs serving Ogilvie Flour Mills Co., Winnipeg, and to build new spurs, one of them across Higgins Ave., and Winnipeg Electric Ry.

28,896, 28,897. Oct. 11.—Authorizing G.T.R. to operate, jointly with C.P.R., over siding and spurs built by G.T.R. for E. W. Gillett Co., and Canada Metal Co., Toronto.

28,898, 28,899. Oct. 11.—Approving Bell Telephone Co.'s agreements with Wellesley Tp., operating in Waterloo and Perth Counties, Ont., Oct. 1; and Head Lake Telephone Co., operating in Victoria County, Ont., Sept. 23.

28,900. Oct. 14.—Authorizing G.T.R. to build spur for London Shipping Containers, Ltd., London, Ont.

28,901. Oct. 14.—Rescinding order 20,901, Nov. 25, 1913, re G.T.R. spur for Harris Abattoir Co., Hamilton, Ont.

28,902. Oct. 14.—Relieving Canadian Northern Saskatchewan Ry. and Grand Trunk Pacific Ry. from maintaining signalman on Sundays to operate interlocking plant at Yorkton, Sask.

28,903. Oct. 10.—Ordering Edmonton, Dunvegan & British Columbia Ry., to build a 2 car loading platform at Fowler, Alta.

28,904. Oct. 14.—Dismissing complaint of Canadian manufacturers against general order 162 and the relieving of telegraph companies from responsibility for failure to transmit messages.

28,905. Oct. 15.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Northern Saskatchewan Co-operative Stock Yards Co. at mileage 111.25, Prince Albert Branch, Sask.

28,906. Oct. 11.—Disallowing G.T.R. Supplement 16 to tariff C.R.C. no. E-4024, and cancelling of item 195 in C.P.R. Supplement 14 to tariff C.R.C. no. E-3551, increasing rates on agricultural lime or stone dust from Kirkfield, Ont.

28,907. Oct. 14.—Authorizing Toronto, Hamilton & Buffalo Ry. to divert and join into one crossing, at grade, over its tracks, portions of certain highways in North Grimsby Tp., Ont.

28,908. Oct. 15.—Authorizing C.P.R. to divert road allowance in s.e. ¼, Sec. 29, and n.w. ¼ Sec. 21, Tp. 20, Range 28, west 3rd meridian, and to build its Leader Southeasterly Branch, at grade across road allowance at mileage 19.38, and to close diverted portion within limits of its right of way.

28,909. Oct. 16.—Authorizing Canadian National Rys. to cross Pembina Highway at Portage Jct., Winnipeg.

28,910. Oct. 14.—Authorizing G.T.R. to take certain lands in Pointe Claire Parish, Jacques Cartier County, Que., for changing location of Y to eliminate a facing point switch in its eastbound main track.

28,911. Oct. 16.—Relieving G.T.R. from providing further protection at Mooney's crossing, North Fredericksburg, near Napanee, Ont.

28,912. Oct. 16.—Ordering G.T.R. to erect whistle posts 80 rods from all flag stations where its tracks parallel C.P.R., between Montreal and Vaudreuil, Que.

28,913. Oct. 17.—Ordering C.P.R. to build a station at Dafoe, Sask.

28,914. Oct. 15.—Amending order 28,876, Oct. 8, re rebuilding of Canadian National Rys. bridge over Bolger Creek, Ont.

28,915. Oct. 18.—Approving Chatham, Wallaceburg and Lake Erie Ry. standard freight tariff C.R.C. 576, effective Nov. 8.

28,916. Oct. 18—Relieving C.P.R. from providing further protection at crossing six poles south of mileage 13, MacLeod Subdivision, Alta.

28,917. Oct. 18.—Relieving Canadian National Rys. from providing further protection at crossing at Johnston St., Minto, Man.

28,918. Oct. 22.—Authorizing C.P.R. to build spur for Crane Ltd., Calgary, Alta.

28,919. Oct. 16.—Dismissing application of City of Kingston, Kingston Board of Trade, Town of Brockville and others for order directing G.T.R. to restore trains 31 and 32, between Brockville and Belleville, Ont., discontinued Sept. 28.

28,920. Oct. 20.—Approving agreement Oct. 6, between Bell Telephone Co., and Wallacetown & Lake Shore Telephone Association, operating in Elgin County, Ont.

28,921. Oct. 20.—Amending order 28,891, Oct. 10, re G.T.R. passenger service between Richmond and Sherbrooke, Que., by substituting Coaticook for Sherbrooke in the fourth line of operative part of order.

28,922. Oct. 20.—Authorizing Grand Trunk Pacific Ry. to build spur for U.G.G. Saw Mills at mileage 1,222, Cariboo District, B.C.

28,923. Oct. 20.—Authorizing G.T.R. to rebuild overhead bridge carrying Mechanic St. over its track at Drumbo, Ont.

28,924. Oct. 21.—Ordering Canadian National Rys. to appoint caretaker at Pathlow, Sask., to see that station is kept clean, heated and lighted for passengers, and to care for l.c.l. freight and express shipments.

28,925. Oct. 23.—Relieving Canadian National Rys. and C.P.R. from maintaining signalman on Sundays to operate interlocking plant at Brookdale, Man.

28,926. Oct. 20.—Amending order 28,756, Sept. 10, re C.P.R. spur for Crescent Collieries, Bienfait, Sask., by striking out the word Manitoba, wherever it occurs in the order, and substituting therefor the word Saskatchewan.

28,927. Oct. 25.—Authorizing C.P.R. to build spur for Lachance Ltd., Quebec, Que.

28,928 Oct. 25.—Relieving G.T.R. from providing further protection at first crossing north of Newton station, Ont.

28,929. Oct. 21.—Amending order 28,917, Oct. 18, re speed limitation over crossing at Minto, Man.

28,930. Oct. 25.—Extending to Dec. 31, time within which half interlocker at crossing of Canadian National Rys., by Fort William Municipal Ry., at intersection of Victoria Ave. and Vickers St., Fort William, Ont., may be installed.

28,931. Oct. 22.—Authorizing Canadian National Rys. to rebuild bridge over Rouge River at mile 3.3, china clay spur, Montfort Subdivision Arundell Tp., Que.

28,932. Oct. 23.—Rescinding order 28,129, Feb. 28, re C.P.R. operating trains over crossing of Bull St., Woodstock, N.B. at [illegible].

28,933. Oct. 23.—Authorizing G.T.R. to discontinue sale of tickets at Hawtrey station, Ont., and to employ caretaker to see that station is kept clean, heated and lighted for passengers.

28,934. Oct. 2[illegible].—Extending to Dec. 31, time within which Lake Erie & Northern Ry. shall install interlocking plant at crossing of G.T.R. in Brantford, Ont.

28,935. Oct. 23.—Authorizing C.P.R. to build spur for St. Maurice Lumber Co., Three Rivers, Que.

28,936. Oct. 24.—Relieving G.T.R. from providing further protection at first crossing north of station at W[illegible], Que.

28,937. Oct. [illegible].—Authorizing C.P.R. to take certain lands of H. [illegible] in St. Sauveur Parish, Terrebonne County, Que.

28,938. Oct. [illegible].—Authorizing Grand Trunk Pacific Ry. to build spur for U.G.G. Sawmills Ltd., at mile 1,228, Cariboo District, B.C.

28,939. Oct. [illegible].—Amending order 16,601, June 4, 1912, authorizing City of Edmonton, Alta., to erect poles and wires to transmit power across Grand Trunk Pacific Ry. along 21st St., and intersection with Short and Nelson Aves.

28,940. Oct. 23.—Authorizing C.P.R. to build spurs for Northwest Milling Co., Strathcona, Alta.

28,941. Oct. 27.—Authorizing C.P.R. to divert road allowance in n.w. ¼ and s.w. ¼ Sec. 32, Tp. 23, Range 1[illegible], west 2nd meridian, Man.

28,942. Oct. 27.—Authorizing C.P.R. to build spur for McArthur Irwin Ltd., Outremont, Que.

28,943. Oct. 22.—Approving revised location of C.P.R. Langdon North Branch from Sec. 1[illegible], Tp. 29, Range 2[illegible], at mile [illegible] to Sec. [illegible], Tp. 30, Range 20, west 4th meridian, at mileage [illegible], Alta.

28,944. Oct. 2[illegible].—Authorizing Town of Dorval, Que., to make highway crossing over G.T.R. at Cote de Liesse Road.

28,945. Oct. 2[illegible].—Authorizing Alberta Public Works Department to make highway crossing over Canadian National Rys. in [illegible], Canadian Indian Reserve [illegible], Alta.

28,946. Oct. 2[illegible].—Approving standard maximum freight mileage tariff C.R.C. [illegible], standard passenger tariff of maximum mileage tolls on [illegible] C.R.C. [illegible], standard tariff of maximum tolls on street car lines [illegible], express tariff C.R.C. E[illegible], and Supplement 1 thereto, of British Columbia Electric Ry. and Vancouver Power Co.

28,947. Oct. 27.—Authorizing Canadian National Rys. to rebuild subway carrying tracks across [illegible] St., Parry Sound, Ont.

28,948. Oct. 27.—Approving location of C.P.R. Rosetown Southeasterly Branch from Sec. [illegible], Tp. 27, Range 16, at mileage [illegible] to Sec. [illegible], Tp. [illegible], Range 1[illegible], west 3rd meridian, at mileage [illegible], and authorizing C.P.R. to cross [illegible] highways on said location.

28,949. Oct. 2[illegible].—Ordering Grand Trunk Pacific Ry. to build station at [illegible], Sask.

28,950. Oct. 27.—Authorizing Saskatchewan Government to make highway crossing over Canadian National Rys. between [illegible] Sec. 31, Tp. 4[illegible], Range [illegible], west 3rd meridian.

28,951. Oct. 27.—Ordering Canadian National Rys. to build station at [illegible], Man.

28,952. Oct. 27.—Authorizing G.T.R. to build spur for Canada Foundries & Forgings Ltd., Welland, Ont.

28,953. Oct. 27.—Rescinding order [illegible] Sept. 18, relieving Algoma Eastern Ry. and Canadian Copper Co. from maintaining signalman at crossing at Copper Cliff Jct., Ont.

28,954. Oct. 29.—Dismissing complaint of R. Patterson, Stamford, Ont., re G.T.R. charge of 50c a ton on sand and gravel from Stamford to Niagara Falls, Ont.

28,955. Nov. 4.—Authorizing G.T.R. to take certain lands at Gravenhurst, Ont., for additional tracks and terminal facilities.

28,956. Nov. 4.—Relieving Canadian National Rys. from providing further protection at crossing of Main St., Newburgh, Ont.

28,957. Nov. 3.—Extending to Dec. 31, time within which Lake Erie & Northern Ry. may operate over crossing at Brantford, Ont., pending installation of interlocking plant.

28,958. Nov. 4.—Authorizing C.P.R. to build siding for J. H. [illegible] Ltd., Quebec, Que.

28,959. Nov. 3.—Authorizing G.T.R. to build spur for Interprovincial Brick Co. of Canada on Lot 29, Con. 5, Chinguacousy Tp., Ont.

28,960. Nov. 4.—Authorizing Canadian National Rys. to divert road on Lot 24, Con. 8, Marlborough Tp., Ont., at mile [illegible], Rideau Subdivision.

28,961. Nov. 4.—Authorizing C.P.R. to extend Provincial Reformatory spur to coal dump at mile 29.05, Hamilton-Goderich Subdivision, in lot 4, Con. 2, Guelph Tp., Ont.

28,962. Nov. 3.—Authorizing G.T.R. to build spur for Farmer's Dairy Co., Napanee, Ont.

28,963. Nov. [illegible].—Authorizing Saskatchewan Government to make highway crossing over Canadian National Rys. in [illegible] ¼, Sec. [illegible], Tp. [illegible], Range 2[illegible], west 2nd meridian, Sask.

28,964. Nov. [illegible].—Authorizing Canadian National Rys. to rebuild bridge over [illegible] Creek, [illegible] Tp., Ont., at mile [illegible] from Montreal.

28,965. Nov. [illegible].—Approving location of C.P.R. station at [illegible], Sask.

28,966. Nov. 3.—Authorizing G.T.R. to build spur for Chesley Furniture Co., Elderslie Tp., Ont.

28,967. Nov. [illegible].—Approving Dominion Atlantic Ry. standard passenger tariff of maximum mileage tolls C.R.C. no. S-4.

28,968. Nov. 4.—Extending to July [illegible], 1920, time within which Canadian National Rys. may install interlocking plant at junction with C.P.R. at mile 18.4, Kingston Subdivision, near Harrowsmith station, Ont.

28,969. Nov. 4.—Authorizing Canadian National Rys. to rebuild bridge over [illegible] road in Chatham Tp., Que., at mile [illegible] from Montreal.

28,970. Nov. [illegible].—Approving plans of superstructure of subway to be erected at St. Paul St., Brantford, Ont.

28,971. Nov. 4.—Relieving C.P.R. from providing further protection at crossing of road near [illegible] station, Man.

28,972. Nov. 4.—Approving agreement, Oct. 8, between Bell Telephone Co. and Russell Rural Telephone Co., operating in Russell and Carleton Counties, Ont.

28,973. Nov. 4.—Authorizing Quebec and Lake St. John Ry. (C.N.R.) to rebuild bridge over the [illegible] River, [illegible] Tp., Que., at mileage [illegible].

28,974. Nov. 4.—Authorizing Canadian National Rys. to rebuild bridge over William St., Parry Sound, Ont.

28,975. Oct. [illegible].—Authorizing Oshawa Ry. to build [illegible] sidings for General Motors of Canada Ltd., Oshawa, Ont.

28,976. Nov. [illegible].—Approving stress sheets showing steel girders of bridge over west branch of Yamachiche River at mile [illegible] from Quebec, on the Canadian Northern Quebec Ry.

[illegible] Vancouver, Victoria & [illegible] Ry. & Nav. Co. (G.N.R.) to widen out- [illegible] and move it at least [illegible] and run- [illegible] the work to be done at [illegible]

[illegible] Nov. 7.—Authorizing C.P.R. to build spur for Brett Manufacturing Co., Winnipeg, Man.

28,979. Nov. 7.—Authorizing Canadian National Rys. to build spur to ballast pit in Con. 1, Cramahe Tp., Ont.

28,980. Nov. 8.—Relieving G.T.R. from providing further protection at crossing 3 miles west of Chatham, Ont.

28,981. Nov. 7.—Authorizing G.T.R. to build spur for Canadian Vegetable Parchment Co., Grantham Tp., Ont.

28,982. Nov. 7.—Dismissing City of Toronto's application for order apportioning cost of alterations to Consumers Gas Co.'s mains, Toronto, necessitated by subways at 10 points.

The Shortage of Railway Cars Discussed in the House of Commons.

The Minister of Railways, Hon. J. D. Reid, said in the House of Commons, Nov. 8: "For some time I have been receiving telegrams from the west complaining about the shortage of cars for the shipment of hay, coal and wheat. That has been going on not only for the last few weeks, but for a year. The reason for the shortage is this: In the past there was generally a surplus of United States cars in Canada, but the U.S. Government since it has had charge of the situation, has been keeping our cars in the U.S., and there have been in the neighborhood of 20,000 more Canadian box cars in the U.S. than U.S. cars in Canada. Yesterday the way in which the car situation stood was this: There were located in the U.S., 18,030 Canadian livestock cars and 43,661 Canadian box cars, to offset which we have only 158 livestock cars and 21,240 box cars of U.S. railroads in Canada. In other words, yesterday there were 22,000 Canadian box cars in the U.S. over and above the number of U.S. cars in Canada. I have been taking the matter up by wire in the strongest possible terms with W. D. Hines, Director General U.S. Railroad Administration. The railways themselves have been doing everything possible to get those cars over here, but we have not yet been successful in reducing that great difference. We are still continuing our efforts, and I will read a telegram that I received yesterday that will show exactly the position I have taken as regards the shortage of empty cars in the west. I took the matter up with the Canadian Railway War Board on account of the complaints from the west about not getting cars for livestock, and this is the reply I received:

"Supplementing telegrams and telephone conversation yesterday re Alberta livestock shippers complaints, further report just received from C.P.R. reads as follows: 'There is undoubtedly a shortage of stock cars on the C.P.R. in Alberta and the cause of it is perfectly well known to Messrs. Kenny and McDaniels and to the Calgary Livestock Exchange, a great proportion of the stock market has been going to Chicago via Portland and U.S. connections are not in position to supply any cars for it. There are 1,500 C.P.R. stock cars south of the line and connections have been unable to make prompt return on account of delay in cleaning and disinfecting after unloading which delay they assert is due to shortage of labor and to the cold weather. The feed situation in Alberta was well known to everybody associated with the stock business, but they waited until the advent of winter to throw thousands of head of cattle on the railway companies for transportation. In addition to the movement via Portland there is a heavy movement to St. Paul and Chicago out of Union stock yards at Winnipeg. Other Canadian railways are supplying cars for this movement and U.S. connections state they are not in position to send up cars. The result is that the whole burden of the traffic is thrown on C.P.R. Our wire yesterday gave information showing considerable improvement in return of C.P.R. stock cars from Soo line. This board has been in touch with U.S. railway authorities continually about accelerating return of cars which efforts now appear to be bearing fruit. Stock cars have been and are being rushed from eastern Canada as fast as available. In absence of stock cars, box cars have been placed at disposal of Alberta shippers in ratio of 3 box for 2 stock when and where they would use them, and, in fact, investigation shows that railways have been leaving no stone unturned in their efforts to cope with extraordinary situation brought about by conditions already described. Board is informed that Kenny and McDaniels have telegraphed you withdrawing their complaint.' "

"I think it is an outrage and a disgrace for the U.S. railways to keep 22,000 Canadian cars over there and to use them, when they know that we in Canada are suffering for lack of those cars. I only want members and the people of this country to know that the Railway Department, the Canadian Pacific, the Grand Trunk and the Canadian National Railways have for a long time been taking every means possible to get those cars back. But W. D. Hines, who is in charge of this, seems utterly to ignore all appeals we make in the interest of humanity and doing justice to our country to give to us the cars to which we are entitled.

J. E. Armstrong, M.P. for Lambton, Ont., having asked whether it would not be possible for the Minister of Railways to increase the per diem rate charged for cars, to double, or treble, if necessary, the Minister replied:

"The international rates are fixed. Supposing you did that, how are you going to collect the rates? The cars are there, and if you start endeavoring to force the U.S. Government in the way the member states, or in some other way of that kind, they will put some restrictions on our traffic going into the U.S., and the result might be disastrous to international shipping. I am satisfied that if those means, or any other that might be suggested, could be adopted, the Canadian Pacific, Grand Trunk and the Canadian National Railways would take such means to get the cars."

On Nov. 10 the Miniser brought the matter up again in the Commons and said: "With further reference to the shortage of cars on Canadian railways, I had the Canadian Railway War Board meet on Nov. 8 and take the matter up. They have wired me as follows:

" 'Referring further your telegram yesterday. Several reports which have reached you with respect to car shortage as referred to therein dealt with at meeting this board today. As to coal situaion Canadian Pacific state full supply of cars at all mines on its line. Canadian National Rys. had excess supply of cars at mines they serve until Oct. 12, when there was slight shortage which existed for few days only. Since that time no shortage reported. Average daily shipments commercial coal from Canadian National mines since Nov. 1, 7,000 tons and at same rate of shipment for balance of month, total shipments during November will be double those of corresponding month last year. Would point out that despite warnings issued repeatedly by government and this board, coal shipments early part of season were greatly under amount shipped last year, with that total shipments from April 1 last to present are only 50% of quantity shipped during same period last year. This apparently due to failure of dealers to place orders and to short hours worked at mines account labor troubles. Total tonnage commercial coal shipped from western mines April 1 to Aug. 31, 1919, was 332,977 tons, compared with 1,703,792 tons same period 1918. Since Sept. 1 this year, shipments total 544,495 tons, as against 534,200 tons same period last year. As to stock cars situation, improved delivery of empty cars from U.S. roads within past few days has greatly improved condition, and with continued prompt return of Canadian equipment sent to St. Paul and Chicago railways will be enabled to handle heavy live stock traffic. Administrative sub-committee of this board at Winnipeg has been directed to confer at once with Mr. Stewart, of Wheat Board, with view to determining what is actual reason for movement of wheat being less than desired by Wheat Board and to take what action may be necessary, in so far as railways are responsible to meet situation. Regret board has no information available as to stocks of commercial coal stored in various parts of country, but understand Fuel Controller assembling this data with respect to movement coal from Canadian mines as mentioned in later portion your message. Assume this has particular reference to movement from Nova Scotia to Ontario. In absence of definite information as to what additional requirements may be placed on railways in this connection either as to territory or volume to be handled, it is difficulty to give specific report. Railways are prepared however to move coal from Maritime Provinces to interior to capacity of equipment made available.

"I might say, in reference to the last part of that telegram, that I asked the Canadian Railway War Board what the situation would be in case we had to bring coal from the maritime or the western provinces to the interior provinces of Ontario and Quebec, and that is why they mention the question of bringing coal from Nova Scotia or the west in case there was a shortage in the interior provinces."

H. M. SHAW, M.P. for Macleod, Alta.: "Has the minister had any more complaints regarding the Canadian National Rys. in the west refusing to give cars to parties wishing to ship hay to Canadian Pacific points, and if so, what is being done to remedy the situation?"

HON. J. D. REID: "I have not received any more complaints; but when the member brought this matter to my attention, I sent telegrams to the Canadian National Rys. and the Canadian Railway War Board. I shall likely receive replies during the day, and I will at once communicate them to the member."

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Baggage Shed—A press report states that it is proposed to build a baggage shed at West St. John, on the site of the old cattle sheds leased from the city. It is stated that the plans provide for the erection of a one story building, 475 x 60 ft., on a pile foundation, and that there will be a platform 12 ft. wide. along either side of the building for its entire length, so that 2 trains of 8 cars each can be accommodated at the same time. The contract is expected to be let at an early date. Matters in connection with the building of the shed came up at a meeting of the St. John City Council, Oct. 26, in connection with some other matters affecting the C.P.R. and were referred to Commissioner Bullock, the City Solicitor and the City Engineer with power to act.

Interprovincial and James Bay Ry.—An unconfirmed press report states that the company has under consideration the construction of this projected railway from Kipawa, Que., the terminus of a branch line from Mattawa, Ont., to the head of Lake Timiskaming, 65 miles.

Toronto—A Toronto daily paper stated recently that the C.P.R. was the purchaser of "the 'Mystery Block,'" from Yonge St., east and south of College St., and that it would build a large passenger station and hotel at a cost of $3,000,000 or more, and connect them by a tunnel with its Yonge St. station, and that the carrying out of this project would mean the withdrawal of the company from the Union Station. Grant Hall, Vice President, is reported to have said that "the report was premature to say the least about it."

Another unconfirmed report credits the New York Central Rd., and the Michigan Central Rd., which with the C.P.R., own the Toronto, Hamilton and Buffalo Ry., with being interesed in a project for the erection of terminal facilities in Toronto.

Harriston Station—The building of a new station at Harriston, Ont., on the Toronto-Teeswater Branch, is being considered.

Manitoulin Island—A press report states that Grant Hall, Vice President, and other C.P.R. officials, visited Manitoulin Island, Ont., recently to investigate the needs and possibilities of railway construction here. At present, beyond the terminus of the Algoma Eastern Ry. at Current River, there is no railway on the island.

Emerson Branch — The company is building a large concrete bridge on its line at Emerson, Man. A work train of 31 cars carrying concrete blocks for the bridge and a gang of men had an accident at the Higgins Ave. subway, Winnipeg, Oct. 27, William McGill, the foreman, being killed.

Prairie Stations—The Board of Railway Commissioners has approved of locations for stations a Harding, Man., on the Brandon-Lenore line at Marchwell, Sask., 176 miles from Portage la Prairie, on the line to Saskatoon, and at Dafoe, Sask., between Binscarth and Saskatoon.

Rosetown Southeasterly Branch—The Board of Railway Commissioners has approved location plans for the branch from Rosetown, southeasterly, from mile 20.56, in Sec. 27, Tp. 27, Range 16 to mile 45.76 in Sec. 31, Tp. 23, Range 15, both west of he 3rd meridian, and has authorized the crossing of highways.

Langdon North Branch—The Board of Railway Commissioners has approved revised location of the branch from Langdon, Alta., northerly, from mile 38.88 in Sec. 19, Tp. 29, Range 25, to mile 76.24 in Sec. 8, Tp. 29, Range 20, both west of the 4th meridian.

Connaught Tunnel—We are officially advised that the Carter-Halls-Aldinger Co. has finished its contract for lining 750 ft. of the Connaught Tunnel, Selkirk Mountains, with concrete.

Matsqui Bridge—A press report states that the C.P.R. has refused to entertain a project for using its bridge at Matsqui, B.C., for general traffic purposes as proposed by local residents through the British Columbia Government.

British Ferry Slip—A 3 track car ferry slip has recently been completed on the south shore of Burrard Inlet, Vancouver, recently. The plans were approved by the Minister of Public Works in February. The trestlework leading to the apron is 210 x 45 ft., and is supported on creosoted piles. The apron is 70 ft. long, and is composed of 6 deck trusses, with top cord and wooden posts. The apron is raised or lowered as required by hydraulic power; the counter weights being of 1-3-5 reinforced concrete.

Vancouver Pier—We are advised that plans for the new pier proposed to be built at Vancouver, are not yet available. The only work actually decided upon at present is the dredging of overlaying material at the site, and the raising of the bottom by a fill to reduce the unsupported length of piling when the other work may be gone on with. (Nov., pg. 603).

C.P.R. Employes' Enlistments, Re-Employment, Etc.

Following are figures revised to Oct. 31, showing C.P.R., employes who enlisted in the army and army men who have been given employment by the company on their return from overseas:—

Total reported as enlisting	10,774
Dead	1,031
Wounded	2,025
Re-employed in the service	6,060
Other soldiers given employment	6,973
Total soldiers given employment to date	13,033

Demurrage Rates—The Director General of the United States Railroad Administration has announced that, owing to questions arising as to application and interpretation of demurrage, it was determined some time ago to recodify the rules, with a view to improve their form so far as possible and avoid any questions. As a result this work was undertaken by the American Railroad Association, in connection with committees of the National Industrial Traffic League, and the results were submitted to the Railroad Administration's Traffic and Public Service Divisions, and finally to the Interstate Commerce Commission, which has given its tentative approval, subject to its right and duty to enquire into the legality or reasonableness of any rule or rules which may be subject of any complaint.

The Public Works Department, Ottawa, has moved its offices from the western departmental block to the new Hunter building, O'Connor St.

Quebec and Saguenay Railway Purchase and Operation.

The Minister of Railways gave the House of Commons the following information recently about the Quebec and Saguenay Ry., in reply to a series of questions: The Dominion Government has purchased the railway for $3,459,313.51; the first instalment, $667,862.70, was paid Feb. 27, and the balance, $2,791,450.81, was paid April 12. On Sept. 24, an order in council was passed, placing the railway under the Canadian National Rys. directors for operation.

The construction of the line has been completed under the supervision of Gordon Grant, C.E., of the Railways Department, who is engaged in transferring it to the Canadian National Rys. board. The line has heretofore been operated by the contractors, Hugh Doheny & Co. It is completed for operation, with the exception of some minor items, such as telegraph instruments, train order boards, road crossing signals, etc. No decision had then been reached upon the question of continuing the line from its present terminus near Murray Bay, north to Ha Ha Bay, and as to the government's intention to build a branch from Baie St. Paul to St. Urbain. Some claims for right of way, etc., have not been settled, as in some cases the amount demanded by land owners is considered exorbitant, and they have been referred to the Exechequer Court.

The Minister of Railways informed the House of Commons, subsequently, that 33,899 passengers had been carried on the Q. & S.R. from Aug., 1918, to Oct. 1, 1919, and that the net earnings for that period were $12,941.66.

Land Subsidies to Railways.

Canadian Railway and Marine World for November contained, on pg. 582, the reply given by Sir James Lougheed in the Senate to questions asked by Senator Casgrain, Oct. 21, as to the amount paid in subsidies to the Grand Trunk, Canadian Pacific Ry., Canadian Northern Ry. and Grand Trunk Pacific Railways. Similar information was given in the House of Commons, Oct. 22, by the Minister of Railways in reply to questions asked by P. F. Casgrain, M.P.; the minister adding that the following additional information is necessary to make the answers complete: The G.T.R. received no land subsidy. The C.P.R. received land as follows, for main line, 18,206,986 acres, of which 18,198,592.81 have been patented; Souris Branch, 1,408,704 acres, of which 1,406,932.02 have been patented; Pipestone extension, 200,320 acres, of which 3,104,146.18 have been patented. It also received as a subsidy for the Manitoba and Southwestern Ry., 680,320 acres, of which 679,746.07 have been patented. No land subsidy has been given to the Grand Trunk Pacific Ry.

Gold Coast Trade Opportunities—Lloyd Harris, Chairman Canadian Mission in London, Eng., is reported to have said in speaking in Toronto recently, that the newly appointed governor of the Gold Coast has told him that that colony would build some large docks and about 1,000 miles of railway. If this information was properly followed up, Canada could obtain the greater part of the construction contract, to say nothing of the commercial goods required immediately there.

Electric Railway Department

The Montreal Tramways Co.'s Service at Cost Plan.

By J. E. Hutcheson, General Manager, Montreal Tramways Co.

In 1916 the Montreal Tramways Co. possessed on the Island of Montreal, under its name, or under the names of the companies absorbed by it, franchises in 30 municipalities; 27 of which were exclusive; 23 terminable between 1922 and 1961; and 7 interminable. The contract with the City of Montreal, as it existed in 1892, was of 30 years duration, expiring in 1922. The company's system was operating under 14 municipal councils, charged with looking after the proper execution of their respective contracts. The consideration for the use of the streets in the City of Montreal was an annual payment on the basis of a percentage on the gross earnings which applied only to the revenue from operation within the city limits as they existed in 1892. The tariffs, with free transfers, in each municipality were fixed for the duration of the respective contracts. In 1916 the average fare per revenue passenger on the entire system was 4.12c, and for total passengers 3.04c.

From time to time, during several years prior to 1917, the city requested the company to make extensions of tracks in municipalities which had been annexed. The company quite properly replied that it was fulfilling every obligation under the contracts with the said annexed municipalities, and while admitting that, in certain sections, there was need of further service being given, the revenue from extensions in outlying districts would not be sufficient, for years after construction, to pay operating expenses, and furthermore, that the city could only order extensions beyond the contract requirements in the areas annexed, by making a new contract covering such annexed areas.

This led to negotiations between the city and the company and several conferences were held, with the object of making a new contract to cover greater Montreal, which in 1917, had grown to such an extent as to take in several adjoining municipalities where the company was established. Because of accusations and recriminations amongst the members of the civic government, and because of the activities of the unfriendly press, no progress was made, until matters were taken to the Quebec Legislature in 1917, where an act was passed creating a commission of five prominent citizens of Montreal to prepare a contract that would safeguard the interest of the citizens and the company's shareholders; such contract to become law when signed by the members of the commission and by the company, and ratified by the legislature.

The commission, after visiting many cities in Canada and the United States, and after hearing the views of the various municipalities interested, and of public bodies, such as the Board of Trade and Chamber of Commerce, were unanimous in the opinion that a form of service at cost plan was the only equitable basis upon which a street railway franchise should be made. The company after two years operations under war conditions, and because of the uncertainty of the future, was agreeable to negotiate on this basis. The commission took several months to study the subject, during which time a valuation of the company's physical assets was made on a basis of reproduction cost, pre war prices. Finally a contract, for 35 years, covering the company's entire system, was prepared and signed by the officials of the company and the members of the commission on Jan. 28, 1918, and ratified by the legislature on Feb. 9, 1918.

The new contract provides for the appointment of a commission of control, to be known as the Montreal Tramways Commission, which shall consist of three members appointed by the Lieutenant-Governor in council, for 10 years. The commission has control of the service; may fix speed of cars, establish routes, stopping and transfer points; fix passenger density per car mile, stipulate type of rolling stock and of track construction, and must approve of all renewals and extraordinary maintenance expenditures; is empowered to examine and audit all receipts and disbursements. The necessary expense incurred by the commission in the performances of its duties shall be paid by the company and shall form part of the operating expenses.

J. E. Hutcheson,
General Manager, Montreal Tramways Co.

Any party in the case, the company, the city or any municipal corporation interested, may appeal to the Quebec Public Utilities Commission from any decision of the commission on any question of law or jurisdiction relative to this contract, as well as from any decision rendered by the commission relative to the provisions of the contract. Such appeal shall be final, except on questions of law.

Within 60 days following the appointment of its members, the Tramways Commission shall, if necessary, amend the tariffs in order to give full effect to the contract. They shall make said tariff uniform for the territory comprising the city as it exists at the date of the contract, as well as in five municipalities within the limits of the City of Montreal. Such territory shall be known as the uniform tariff territory. Outside of the uniform tariff territory the commission may fix different rates for the various municipalities as well for local traffic as for traffic from one municipality to another, or from a municipality to the uniform tariff territory and vice versa, providing that such tariffs, or any of them do not unjustly burden the rest of the system, and providing further that such municipalities may, with the consent of the commission, agree to pay the company any part of the excess of their respective services for the purpose of obtaining lower rates. The Tramways Commission may, from time to time as required, but in conformity with the provisions of the contract, amend the tariff established in virtue of the present article.

Guarantee Fund—It is provided that the company, by yearly instalments of not less than $10,000, shall provide out of its own resources a special fund of $500,000 to be known as the guarantee fund, which shall be used to meet all liabilities and other debts (except mortgage debts) incurred by the company, prior to the coming into force of this contract, through the operation of its system, and to provide for the payment in each year of any portion of excess expenditure as hereinafter defined, which shall be found by the commission to have been unnecessary for the payment of penalties imposed upon the company, and also to guarantee fulfilment by the company of all obligations assumed by it under the contract. Such fund, when created, shall be maintained by the company at all times at $500,000.

The Gross Revenues are to be disposed of for the following purposes and in the following order: 1, operating expenses and taxes, grand operating profit; 2, maintenance and renewals fund; 3, return on capital value; 4, city rentals; 5, contingent reserve fund; 6, division of surplus.

1. **Operating Allowance**—Within 60 days after the coming into force of the contract, the commission shall, for the first year of operation, allow the company, out of gross revenues, a sum for each revenue car mile, exclusive of car house and car yard miles, made by the cars equipped with motors, except cars operated to carry materials used in the construction and repair work of the company itself, and other sums for each revenue car mile, exclusive of car house and car yard miles, made by the cars equipped with motors, except cars operated to carry materials used in the construction and repair work of the company itself, and other sums for each revenue car mile for trailers and freight cars, always exclusive of car house and car yard miles. Such sums shall be known as the operating allowance, and shall be used for the payment of all operating expenses (exclusive of maintenance,

renewals and depreciation) and all taxes levied against the company on its property.

The company shall so increase the transportation service, under the direction of the commission, that the permissible average density of traffic per car mile, during the first year of operation under this contract, shall not be excessive. Within 60 days after the close of the first year of operation under the contract, and annually thereafter, the commission shall redetermine and fix for the ensuing year, the amount of operating allowance and permissible average car mile density, and in so doing, it shall base its action upon the actual and necessary operating expenses accrued during the preceding year, with such adjustments as may be foreseen to be necessary on account of modifications of service, changing costs, or any circumstances tending to increase or diminish the necessary expenses of operation.

2. Operating Profit—If at the end of any year the commission shall find that the company has kept within the operating allowance, or shall not have exceeded same by more than 2½% of its amount, subject to the conditions imposed as to density of traffic being in the judgment of the commission reasonably observed, then the commission shall permit the company to take out of gross revenues, as a charge prior to all other charges except operating expenses and taxes, as hereinabove defined, a sum to be known as the operating profit, which shall be equivalent to ⅛ of 1%, on the total average capital value for that year, and such operating profit shall belong to the company.

In case the company shall have spent more than the operating allowance, plus the above percentage of 2½% during any year, then the excess over such allowance and percentage shall be known as the excess expenditure, and shall be taken from gross revenues up to an amount not exceeding ⅛ of 1% on the average capital value for such year, and the operating profit shall be reduced accordingly. And if the excess expenditure shall exceed ⅛ of 1% on the average capital value, then the company shall receive no operating profit, but on the contrary shall pay out of the guarantee fund the amount by which such excess expenditure exceeds the ⅛ of 1%, providing the company shall, during any such year, and in anticipation of such excess expenditure or immediately upon the close of such year, submit to the commission a detailed statement and explanation thereof, and if the commission shall find not later than 60 days after the close of such year, that the excess expenditure or any part thereof, was necessary and unavoidable, in the rendition of service as required by the commission, then the commission shall permit the company to take out of gross revenues the additional amount required to cover such excess expenditures, or such part thereof, and shall also award the company the full amount of the operating profit, less any part of such excess expenditures which may be found to have been unnecessary. But if such unnecessary part shall exceed the amount of the said profit, the balance shall be paid by the company out of the guarantee fund. The company, in determining the operating allowance for the ensuing year, shall take into consideration the excess expenditure incurred during the preceding year and found to be necessary as above provided. Any portion of the operating allowance which shall not be expended or needed for the expenses of the year, shall at the close of the year, with the approval of the commission, be returned to gross revenues to be disposed of as hereinafter provided.

3. Maintenance and Renewals Fund—The entire plant and property of the company used and necessary to provide the public transportation service, shall at all times be maintained at the highest practicable standard of operating efficiency. For the purpose of maintenance, renewals, replacements and substitutions, made necessary by wear and tear, age, obsolescence, inadequacy, accident or other cause, a sum shall be set aside for each revenue car mile, exclusive of car house and car yard miles, made by cars equipped with motors, and other sums, for each revenue car mile made by trailers and by freight cars, always exclusive of car house and car yard miles. Such sum shall be known as the maintenance allowance, and shall be placed in a fund to be known as the maintenance and renewals fund. Any items of property contained in the valuation, or added to the system since June 30, 1917, which shall become worn out or which for any other reason shall at any time be deemed no longer useful as a part of such system, shall be disposed of under the commission's direction, subject to the provision of any trust deed, upon the most advantageous terms obtainable, and the proceeds thereof shall be paid into said maintenance and renewals fund Out of said maintenance and renewals fund shall be paid from time to time the actual and necessary expenses of maintenance and renewals, and of replacements and substitutions as hereinafter provided, and any monies not needed for such purposes during any year shall remain in said fund and be held in reserve until required for such purposes, or for investment in betterments, additions and extensions as hereinafter provided. Whenever any portion of the plant is replaced or other property substituted therefor, the cost of such replacement or substitution up to the full reproduction cost of the unit or article so replaced or substituted for as fixed by the said valuation, shall be paid out of the maintenance and renewals fund, and any cost in excess of said reproduction cost shall be paid out of monies supplied by the company as hereinafter provided, and the amount thereof shall be added to capital value. In case the cost of any such replacement or substitution shall be less than such reproduction cost or actual cost, as the case may be, or in case any item of property included in said valuation or thereafter added to the plant shall become worn out or be abandoned or sold as hereinabove mentioned, and shall not be replaced or substituted for, then the difference in cost or the full amount of the reproduction cost or the actual cost, or the proceeds of the sale, as the case may be, shall except to the extent that capital value shall be reduced by the proceeds of the sale of land and buildings as hereinabove provided, be appropriated out of the maintenance and renewals fund from time to time with the approval of the commission, for the making of betterments, additions to and extensions of plant, as may be required, and the cost of such betterments, additions and extensions paid from such appropriations shall not be added to capital value.

If at the end of the first year of operation under the contract or at the end of any subsequent year, it shall appear to the satisfaction of the commission that the maintenance allowance herein fixed is insufficient, such allowance shall be increased for the ensuing year and from year to year as may be deemed necessary. If at the close of any year, the commission shall find that the maintenance allowance is excessive or that the maintenance and renewals fund is greater than prudent management of the tramways system required, then the commission may reduce such allowance to any extent which it may see fit, provided that the maintenance allowance shall never be so reduced as to cause a reduction in the maintenance and renewals fund, except temporarily, below $500,000, and in case such fund is, at the end of any year, to be reduced below such sum, then the commission shall forthwith increase the maintenance allowance in an amount sufficient to restore said fund to at least $500,000. Said fund shall be under the control of the commission, and no monies in it shall be paid out or loaned or invested except with the commission's approval. In case the monies in such fund are deposited in bank or invested, the interest thereon, or the revenues derived therefrom shall be added and become a part of said fund.

In case the city shall purchase or acquire the company's property at the termination of this contract, the maintenance and renewals fund, as then existing, shall become the property of the city, and the amount of such fund shall not be added to the purchase price, and any monies then due by the company to said fund, shall be deducted from the purchase price.

4. Return on Capital Value—The capital value of the tramways system is fixed at $36,286,295, said sum including all physical assets added to the system up to Dec. 31, 1919. As its usual return upon capital value so fixed, the company shall receive in quarterly payments out of gross revenues a sum equal to 6% of such capital value. From time to time thereafter, as money is needed for betterments, additions to and extensions of plant, required by this contract or approved by the commission, such money, except to the extent that monies for such purposes are payable at the time from the maintenance and renewals fund, as hereinabove provided, shall be supplied by the company, and the amounts so supplied and actually expended for such purposes under the supervision of the commission, plus net interest expenses during construction, be added to capital value, and the company shall receive out of gross revenues an annual return of 6% on such amount. For such purposes, however, the company shall be obliged to borrow temporarily from monies in the maintenance and renewals fund, except from monies already in that fund for the same purposes, and from the contingent reserve fund and the fare reduction fund, to the extent that in the judgment of the commission, the monies in all or any such fund, are available for loans, and upon monies so borrowed from such funds, the company shall pay into such funds, interest at the rate of 6% per annum. Monies so borrowed shall be reimbursed by the company, when and as ordered by the commission.

Upon all monies supplied for capital expenditures by the company, from other sources than the aforesaid funds, during the continuance of present world war, or within two years after its close, the company shall receive out of gross revenues an additional return of 1% per annum, provided such additional return shall not be paid for a period extending more than 5 years beyond the close of the war

As the capital hereinabove established at $36,286,295 does not include any working capital, it is agreed that any working capital required shall, as and when ordered by the commission, be furnished by the company. Upon such working capital so furnished, the company shall receive a return at the rate of 6% per annum. Should the commission so order, the company shall be obliged, for the purpose of creating or maintaining such working capital, to borrow from any or all the different funds, created by the present contract, in the same manner, and to the same extent, and under the same conditions as hereinabove established, for monies borrowed by the company from said funds for betterment, additions to and extensions of plant.

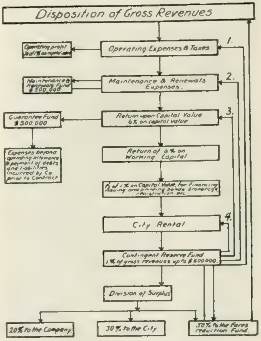
For the purpose of covering the expense to be incurred by the company, in procuring additional capital, the company shall, out of gross revenues, receive annually, $181,431.47, being equivalent to ½ of 1% of $36,286,295, provided said amount is expended solely for the following purposes, viz.: when issuing bonds or debenture stock for discounts, commissions, printing and engraving, exchange, legal and other expenses, incidental thereto; when issuing stock for printing, engraving, transfer and registration fees and listing on stock exchange. Any surplus over and above the said expenditure, and the interest or income therefrom, shall belong to the company, but shall be kept in a special account and shall not be distributed until the termination of this contract.

5. The city shall receive out of gross revenues, over and above all other amounts to which it may be entitled under this contract, or otherwise, $500,000 per annum, during the continuation of this contract, payable quarterly.

6. **Contingent Reserve Fund**—A sum equal to 1% of the gross revenues shall be paid annually into a contingent reserve fund, until such fund, with its accretions shall amount to $500,000, and thereafter no further payments shall be made to this fund, and the accretions thereof shall be paid into and become a part of the gross revenues; provided, that if said fund shall be diminished by any of the contingent payments hereinafter described, the accretions of the fund shall thereafter belong to it, and the payment of said 1% of the gross revenues into said fund, shall be resumed as soon as said percentage is available, and shall so continue until said fund is again restored to the full amount of $500,000. Said fund shall be used whenever it shall be necessary to make up any deficiency in the payments to be made under paragraphs 1 to 4 hereof, inclusive, in the order of priority herein established,—and allowance provided for in said paragraphs 1 to 4 inclusive, and in this paragraph shall be cumulative in the order herein established. Upon the termination of this contract, the company shall repay any monies borrowed from said fund, and not previously repaid, and the total amount then in said fund shall be distributed as follows:—to the city, 30%; to the company, 20%, and to the tolls reduction fund hereinafter established, 50%.

7. **Division of Surplus**—All the portion of the gross revenues remaining after the payment of the charges described in paragraphs 1 to 5 hereof, inclusive, shall constitute the divisible surplus, and shall at the end of each year be distributed as follows:—to the city, 30%; to the company, 20%, and to the tolls reduction fund, 50%. The portions distributed to the city and to the company shall belong to them and may be used or disposed of as they respectively see fit. The tolls reduction fund shall be held in trust for the patrons of the company for the reduction of tolls, and shall be administered by the commission as herein provided.

Fares Reduction—Whenever at the end of any year the amount in the tolls reduction fund shall exceed $1,000,000, the commission may, and whenever the amount in said fund shall exceed $3,500,000, the commission shall reduce the fares or tolls of the tramways system. For the purpose of effecting said reduction, an amount not exceeding 25% of the total amount in such fund, at the close of the year preceding the year when such reduction is to be made, shall be taken out of the tolls reduction fund, and added to gross revenues, and the commission shall thereupon reduce the tolls to an extent that in the aggregate for the year, is at least equal to the amount so taken out of the tolls reduction fund, but does not exceed such amount, plus 75% of the amount which during the last preceding year flowed from gross revenues into the divisible surplus. Thereafter, at the beginning of each year, an amount shall be taken from the tolls reduction fund and turned into gross revenues equal to the amount so taken from said fund at the time of the reduction of tolls; but when the total amount remaining in said tolls reduction fund at the end of any year is less than the amount taken annually from such fund for the increase of gross revenues as above provided, the appropriation from said fund to gross revenues shall for the time being be discontinued, but the tolls shall remain as previously reduced until it shall be necessary as hereinafter provided to increase them. If the tolls reduction fund, in spite of its depletion for such reduction in tolls shall again increase to an amount in excess of $2,500,000, the tolls shall be further reduced in the same manner as before.



Disposition of Gross Revenues
Operating profit ½ of 1% on capital value
Operating Expenses & Taxes
1.
Maintenance & Renewals Fund $500,000
Maintenance & Renewals Expenses.
2.
Guarantee Fund $500,000
Return upon Capital Value 6% on capital value
3.
Expenses beyond operating allowance & payment of debts and liabilities incurred by Co prior to Contract
Return of 6% on Working Capital
½ of 1% on Capital Value, for financing, issuing and printing bonds brokerage, registration etc.
City Rental
4.
Contingent Reserve Fund 1% of gross revenues up to $500,000.
Division of Surplus
20% to the Company.
30% to the City
50% to the Fares reduction Fund.

Principal Features of Montreal Tramways Co.'s Service at Cost Contract.

Insufficient Earnings—If in any year, the gross revenue shall be insufficient to provide for the payment of all sums payable under paragraphs 1 to 5, inclusive, and if the contingent reserve fund, is less than $300,000, the commission shall forthwith, from any monies in the tolls reduction fund, appropriate the amount necessary to bring the contingent reserve fund up to $500,000, all deficits in the payments provided for under paragraphs 1 to 4 hereof inclusive, being made up, or if sufficient monies therefor are not available in said tolls reduction fund, then the commission shall forthwith increase the tolls to the extent necessary to provide at least sufficient gross revenues to meet all the payments provided for under paragraphs 1 to 5 hereof, inclusive.

Fares Reduction Fund Property of the City—At the termination of this contract said tolls reduction fund shall be the property of the city, and any amounts borrowed by the company from said fund, and not previously repaid, shall forthwith, upon the demand of the city, be paid into said fund by the company, and in case of purchase by the city of the tramways system, any amounts then due from the company to said fund, shall be deducted from the purchase price.

Fares Fixed—In conformity with the provisions of the contract the Tramways Commission on June 24, 1918, set the rates of fare as follows:

(a) From midnight to 5 a.m., 15c.
(b) From 5 a.m. to midnight, 6c cash or 5 tickets for 25c.
(c) For school schildren from 5 to 16 years of age, on week days, and between 8 a.m. and 6 p.m., 7 tickets for 25c.
(d) Transfers shall be issued free to school children specified in clause (c), and to all passengers travelling on cars between 5 a.m. and 8 a.m. on week days only. At all other times a transfer shall be issued to any passenger paying his or her regular fare at a charge of 1c.

And the car mile allowance as follows:

Operating expenses and taxes, 22c per car mile for cars equipped with motors and 15c per car mile for trailers.

Maintenance and renewals, 7.9c per car mile for cars equipped with motors and 5.2c per car mile for trailers; for the first period of operation under the new contract.

This decision was appealed and the Quebec Public Utilities Commission rendered its decision on Sept. 29, 1918, fixing the rates as follows:

(a) Day tariff, 6c each or a ticket to be sold at the rate of 5 for 25c.
(b) School children, a ticket to be sold at the rate of 7 for 25c.
(c) Special day tariff of a ticket to be sold at the rate of 6 for 25c. to be good only between 6 and 8 a.m., and 5 and 7 p.m., on week days only.
(d) Night tariff, 15c cash.

Passengers paying fares shall be entitled to a transfer free of charge.

As the Quebec Public Utilities Commission did not fix any allowances per car mile for the expenses of operation as provided for in the contract, the Tramways Commission on Oct. 2, 1918, fixed these as follows:

Operating expenses and taxes, 20.1c per car mile for cars equipped with motors and 13.7c per car mile for trailers.

Maintenance and renewals, 7.33c per car mile for cars equipped with motors and 4.8c for trailers.

This gave an average allowance per car mile for:—

Operating expenses and taxes	19.98c
Maintenance and renewals	7.26c

The actual cost for the 12 months ended June 30, 1919, was:—

Operating expenses and taxes	21.74c
Maintenance and renewals	7.26c

As the company justified before the commission the over expenditures made during the year, the actual cost per car mile was allowed.

The company did not receive the full benefit of the increased rates of fare during the year, as they only became effective from Oct. 3, 1918. The average fare per revenue passenger increased from 4.1c to 4.8c after the new rates came into force.

For the year ended June 30, 1920, the Tramways Commission, by its decision, rendered Aug. 29, 1919, fixed the rates of fare as follows:

Uniform Tariff Territory.

(a) Day tariff—From 5 a.m. to midnight, 7c cash, or a ticket to be sold in series of 4 for 25c.

(b) Special day tariff. A ticket to be sold in series of 5 for 25c to be good only between 6 and 8 a.m., and 5 to 7 p.m. on week days only.

(c) The existing outside night tariff and school children's tariff remain in force.

The per car mile allowance being as follows:

Operating expenses and taxes, 21.[illegible]c per car mile for cars equipped with motors and 17.4c per car mile for trailers.

Maintenance and renewals, 8.54c per car mile for cars equipped with motors and 7.05c per car mile for trailers.

The above decision was appealed against by the city as being too high, and by the company as being too low. Experts from Bion J. Arnold's Chicago office, engaged by the city, were heard and they supported the company's figures. Arguments by counsel for both sides closed on Oct. 2, and judgment will be rendered in the near future, which I feel sure will not be more unfavorable to the company than to confirm the Tramways Commission decision of Aug. 29.

The foregoing paper was read before the American Electric Railway Association, at its convention in Atlantic City recently. Subsequent to its preparation the Quebec Public Utilities Commission gave judgment, on Oct. 14, somewhat modifying the Tramways Commission's decision. This judgment was given in full in Canadian Railway and Marine World for November, pgs. 606 to 608. It modified the Tramways Commission's decision as follows:—

"Day tariff: From 5 a.m. to midnight, 7c cash, or a ticket to be sold in a series of 5 for 30c, or a ticket to be sold in a series of 44 for $2.50, the former series to be purchasable either at the company's offices or such other places as it or the Tramways Commission may fix, or on the cars; the latter to be purchasable only at the company's offices or such places as it or the Tramways Commission may fix and alter from time to time."

Probably the most important point in the Quebec Public Utilities Commission's decision is the abolition of the special day tariff (workmen's tickets), fixed by the Tramways Commission.

The Quebec Public Utilities Commission also revised the Tramway Commission's estimate of expenditure for the fiscal year, from $10,757,303.13, to $11,005,629.24, by adding $248,326.11 for maintenance and renewals, as explained in the judgment.

The Question of Dominion or Provincial Jurisdiction Over the British Columbia Electric Railway.

As stated in Canadian Railway and Marine World for November, the B.C. Public Utilities Commissioner, on Oct. 14, suspended his enquiry into the question of fares on the B.C.E.R., his attention having been drawn to the Dominion Railway Act, 1919, sec. 6 of which is as follows:—

"'The provisions of this act shall, without limiting the effect of the last preceding section, extend and apply to

"'(a) Every railway company incorporated elsewhere than in Canada, and owning, controlling, operating or running trains or rolling stock upon or over any line or lines of railway in Canada either owned, controlled, leased or operated by such company or companies whether in either case such ownership, control or operation is acquired by purchase, lease, agreement or by any other means whatsoever;

"'(b) Every railway company operating or running trains from any point in the United States to any point in Canada;

"'(c) Every railway or portion thereof, whether constructed under the authority of the Parliament of Canada or not, now or hereafter owned, controlled, leased or operated by a company, wholly, or partly within the legislative authority of the Parliament of Canada, or by a company operating a railway wholly or partly within the legislative authority of the Parliament of Canada, whether such ownership, control, or first mentioned operation is acquired or exercised by purchase, lease, agreement or other means whatsoever, and whether acquired or exercised under authority of the Parliament of Canada, or of the legislature of any province, or otherwise, howsoever; and every railway or portion thereof, now or hereafter so owned, controlled, leased or operated shall be deemed and is hereby declared to be a work for the general advantage of Canada.'

On Nov. 7 the Minister of Justice introduced in the House of Commons, bill 41, an act to amend the Railway Act, 1919, as follows:

"1. Paragraph (c) of section 6 of the Railway Act, 1919, chapter 68 of the statutes of 1919, is hereby repealed."

The Minister of Justice, in introducing the bill, said:—"The whole purpose of this bill is to repeal subsec. (c) of sec. 6 of the Railway Act, as passed last session. That section provides, in effect, that any railway which is controlled or operated by a railway which is under the legislative authority of parliament, and any railway which controls or operates a railway which is under the legislative authority of parliament, shall be under the legislative authority of parliament, and all such railways are in general terms declared to be works for the general advantage of Canada. It has been found by experience that the clause overshot the mark at which it was aimed, and that it has produced the result that in certain instances tramways running in cities have come within the wide terms of that article, and have consequently been declared to be work for the general advantage of Canada, with the result that the fixing of their fares becomes a matter for the Board of Railway Commissioners and they are withdrawn from the control of provincial utilities boards and so forth, and in a large measure from municipal control. A special instance that brought attention to this was the case of the British Columbia Electric Ry. Co., which has been running a tramway in Vancouver and Victoria. The particular nature of the contract is not material, but the company does control and operate two very short roads, one of which was originally constructed by the C.P.R. and the other under a Dominion charter. That state of facts brings the tramways under the legislative authority of this parliament, and declares them to be works for the general advantage of Canada. There has been very strenuous objection on the part of the provincial authorities, as well as on the part of the municipal authorities of these cities. I think it is fairly obvious that it is undesirable that by an omnibus clause of that kind we should get tramways running in particular cities declared to be works for the general advantage of Canada and subject to the control of the Board of Railway Commissioners. Perhaps the wiser way, and probably even the only legal way, to make works which are purely local in their nature works for the general advantage of Canada, would be by specific declaration with regard to each work, although I do not want to commit myself absolutely on that proposition at the present time. This bill is to repeal that section, because it is considered that it was not contemplated to produce the results which it has produced, and which are open to serious objection. The section referred to was a new one in the revision of 1919. If my information is correct, what was principally in the mind of those who introduced it was the case of a regular steam railway in the Province of Quebec which had come to be operated in connection with the C.P.R., which it was considered highly desirable, and I think probably correctly so, to bring under the legislative authority of the Dominion and declared it to be a work for the general advantage of Canada. But, instead of proceeding by dealing with a particular railway, the method was taken of defining the whole class of railways as being for the general advantage of Canada, and subject to the legislative authority of Canada, with the result that in the net that was thrown out there were caught a good many fishes for which the fisherman was not looking at all."

The bill was then read a first time and was read a second time Nov. 8. On the motion to go into committee of the whole thereon, F. S. Cahill, M.P. for Pontiac, Ont., after calling attention to the discussion when the section proposed to be struck out, was originally passed, after a strong and persistent advocacy by labor interests, moved that the bill be sent to the railway committee for consideration of clauses suggested by the special railway committee.

The Minister of Justice agreed with much that Mr. Cahill had stated that the reason it was now proposed to repeal this section was that experience has shown that altogether too wide a provision was made when seeking to attain the particular end in view. A notable case that was brought up of the effect of the section as it stands was that the British Columbia Electric Ry., which is operating under lease two small lines of railway, one built by the C.P.R.—the Vancouver and Lulu Island Ry.—and the other built by the B.C.E.R., under the Dominion charter granted to the Vancouver, Fraser Valley and Southern Ry. By reason of the B.C.E.R. so operating those two lines, all the company's lines were withdrawn from British Columbia jurisdiction. This condition of affairs has given rise to very strenuous objection by the B.C. Government, and local authorities. It is also questionable whether it is, under the British North America Act, open to the Dominion Parliament, by general legislation of this kind, describing a class of works, to make every particular work come within the description of that class of work for the general advantage of Canada, without the slightest reference to whether as an actual matter of fact in each particular case it can at as [illegible] he suggested that that [illegible] work is a work for the general advantage of Canada. The remedy for the state of affairs outlined by Mr. Cahill, which had been provided, did not [illegible] the particular [illegible] to being under Dominion [illegible] a large class of works which it [illegible] safely be said, was not in contemplation at all at the time. The present condition called for a remedy.

The amendment was defeated, and the house then went into committee when H. B. Morphy, M.P. for North Perth, Ont., opposed the passing of the bill on the ground that while it was for the benefit of two local railways, it would wipe out of the statute a section which was inserted after a great deal of discussion, and he suggested that an amendment be inserted to the effect that the section should not apply to railways or tramways operated under a provincial charter, or otherwise of a local nature, not coming under the provisions of the Railway Act.

G. B. Nicholson, M.P. for Algoma East, Ont., also spoke in opposition to the bill, whereupon the Minister of Justice, after making some additional references, to the manner on which local railways and electric railways crossing Dominion chartered railways had been dealt with in the past, stated that he would not insist on the bill. Subsequently on his motion the committee rose without reporting; the effect being that the bill was killed.

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Railway—As stated in Canadian Railway and Marine World for November, the enquiry by the British Columbia Public Utilities Commissioner, into the question of whether fares on the company's Vancouver lines should remain at 6c, as authorized by the B.C. Legislature last session until such time as the commissioner should fix a rate, was suspended, owing to the question of jurisdiction having been raised, it being contended that the Railway Act passed by the Dominion Parliament at its first session this year, had transferred jurisdiction over the company from the Province of British Columbia. Following this the B.C.E.R. Co., and the Vancouver Power Co. filed several tariffs with the Board of Railway Commissioners at Ottawa and the board passed order 28,946, Oct. 28, approving, until further order, the company's standard tariffs of maximum tolls, to be charged between points on its lines, other than the Vancouver & Lulu Island and the Vancouver, Fraser Valley & Southern Railways, for which excepted lines standard tariffs had been approved by the board previously. The tariffs thus approved are standard maximum freight mileage tariff C.R.C. 146; standard passenger tariff, or maximum mileage tolls on interurban lines, C.R.C. 9; standard tariff of maximum tolls on street car lines (not including interurban lines), C.R.C. 8, and express tariff C.R.C., no. Ex. 1, and supplement 1, thereto of the B.C.E.R. Co. and the Vancouver Power Co. The principal tariffs are as follows:

B.C.E.R. CO. LTD., AND VANCOUVER POWER CO. LTD.—Standard maximum freight mileage tariff between all stations on the companies' lines (B.C.E.R., [illegible] C.R.C. 146)

[illegible] per 100 lb. governed by Canadian Freight Classification.

[illegible]	1	[illegible]	[illegible]	4	5	6	7	8	9	10
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	12	11	9	10	10	7½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	12	11	9	10	10	7½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	12	11	10	11½	10	7½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	11	11½	10	11½	11½	7½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	16½	14	11½	12½	12½	9
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	17½	14	11½	14	12½	9

[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	26½	[illegible]	17½	19	21½	15
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	27½	[illegible]	17½	19	22½	15
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	29	[illegible]	17½	20	21	16½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	29	24	17½	20	24	16½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	30	25	[illegible]	21½	25	16½
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	32½	25	20	21½	25	17½
[illegible]	[illegible]	66	47½	36½	32½	26½	20	22½	26½	17½
[illegible]	[illegible]	[illegible]	[illegible]	37½	32½	26½	20	22½	26½	17½

[illegible] rates for next greater distance.

B.C.E.R. CO. LTD., VANCOUVER POWER CO. LTD.—Standard passenger tariff of maximum mileage tolls to be charged between all stations on the company's [illegible] as specified below [illegible]. Between [illegible] Vancouver and municipality of New Westminster. Between municipality of Vancouver or municipality of New Westminster and points outside the said municipalities on the Central Park line, including Cedar Cottage and 10th Ave. New Westminster. Between points on the Central Park line outside of the municipalities of Vancouver and New Westminster. Between New Westminster station and Chilliwack station on the Vancouver Power Co.'s lines. Between Victoria station and Deep Bay station on the Saanich line, Vancouver Island. The maximum passenger fare between all stations will be 3c per mile or fraction thereof. In estimating the tolls to be charged, any amount not exceeding 2½c shall be waived, and above 2½c, and up to 5c shall be considered as 5c.

B.C.E.R. CO. LTD.—Standard tariff of maximum fares to be charged on the company's street car lines (not including interurban lines), B.C.E.R.

Vancouver—Between any two points both of which are within the municipality 23, C.R.C. 8. Cash fare, 6c per passenger.

Point Grey—Beween any two points on the Oak St. line, within the municipality; cash fare, 6c per passenger. Between any two points on all other lines within the municipality; cash fare, 6c per passenger.

South Vancouver—Between any two points both of which are within the municipality; cash fare, 6c per passenger.

Burnaby—Between Edmonds and New Westminster municipal boundary. Cash fare, 6c per passenger.

Hastings Road line—Cash fare, 5c per passenger.

New Westminster—Between any two points both of which are within the municipality; cash fare, 6c per passenger.

North Vancouver and district—Cash fare, 6c per passenger.

Victoria and surrounding municipalities—Cash fare, 5c per passenger.

Fraser Mills line—Cash fare, 6c per passenger between New Westminster municipal boundary and Fraser Mills.

Brantford and Hamilton Railway-Hamilton Radial Electric Railway — The Board of Railway Commissioners on Oct. 29, reserved decision in the application for an order directing these electric lines to refrain from charging increased fares for pupils attending business colleges in Hamilton, Ont. G. E. Waller, General Superintendent of Railways, Dominion Power and Transmission Co., owning the two lines, is reported to have stated that a line had to be drawn somewhere, and the company had decided to make a distinction between pupils attending schools under government supervision, and those in attendance at business colleges run as commercial enterprises. The company was, however, willing not to charge the increased rates to pupils under 18 years of age.

Fort William Electric Ry.—A press report of Nov. 8, stated that it was announced in Fort William, Ont., that application was about to be made to the Ontario Railway and Municipal Board, for permission to increase the fare on the electric railway within the city to 7c. Alderman G. Macdonald, chairman of the Public Utilities Committee, is reported as denying that the committee had then given the matter any consideration, and as stating that the deficit in the operation of the railway for the year was expected to be $50,000, and that it would not surprise him if fares had to be increased again.

Guelph Radial Ry.—A straight 5c fare was put in operation on this municipally owned railway, at the middle of October, except for children under 10, who are still sold 10 tickets for 25c.

Hamilton St. Ry.—The Hamilton, Ont., City Council's special street railway committee, has, according to a press report, asked the Hamilton St. Ry. to buy 10 new cars, and the company is reported to have said that it is not prepared to do so unless a straight 5c fare is permitted. The committee, at a later date, is reported to be considering this, and various other matters affecting the company, and expects to present a report early in Dec.

London St. Ry.—We are officially advised that Chief Justice Falconbridge did not give a written judgment on the application for quashing the bylaw passed by the London, Ont., City Council, authorizing the London St. Ry. to charge increased fares, but simply stated that the bylaw ought to be quashed and entered judgment accordingly.

As a result of the quashing of the bylaw, the company ceased collecting the increased fares and is now charging only the fares authorized by the original franchise. It subsequently gave notice to its employes that the old scale of wages would be reverted to from Nov. 1. Whether or not the men would go on strike was discussed, and after some negotiation, it was agreed that the increased rate of wages should be paid to Jan. 1.

Another question raised was as to the increased fares collected, and there are reports that actions will be taken against the city council to recover damages. The amount collected in excess of the original franchise fares is said to be about $30,000.

At a meeting of the city council, Nov. 17, it was agreed to take no action on the company appealing the case against the increased fare bylaw, and the clerk was authorized to secure information from the company respecting the service that will be given in return for increased fares so as to submit this in the form of a plebiscite to the electors.

Ottawa Electric Ry. — The Supreme Court of Canada heard arguments, Nov. 17 and 18, in the appeal of the Ottawa Elecric Ry. vs. the Nepean Tp. and others, against the Board of Railway Commissioners' refusal to approve an increased tariff of fares on the Britannia line. The company's application for approval of the tariff came before the board, Nov. 18, 1918, and the hearing of the case was concluded Dec. 2, 1918, judgment being reserved. The judgment, which was given by Sir Henry Drayton, then Chief Commissioner, was published in full in Canadian Railway and Marine World for March, 1919.

The company at once took steps to have the decision reviewed. The following questions were submitted to the court for decision:—Was the board, under the agreements with the city and Hintonburg, and the statutes, right in disallowing the tariff? Does the extension outside the city commence at Holland Ave. or the former westerly limit of Hintonburg? Had the board a right to consider the company's operations as a whole; or must it permit tariffs to be filed on a mileage basis covering services on the Britannia line without reference to the large part of the system covered by municipal agreements? The arguments were concluded Nov. 18, and the court reserved judgment.

Quebec Ry., Light and Power Co.—After having had the matter before it on several occasions, the Quebec City Council passed a bylaw, Nov. 15, authorizing amendments in the company's franchise to permit the charging of increased fares. The new sections in the agreement provide that a fare not in excess of 7c, with transfer privileges, be collected; infants in arms to be carried free; children less than 7 years of age to be charged 3c. Tickets are to be sold 4 for 25c and 17 for $1; children's half fare tickets at 10 for 25c; tickets for school children under 16 years of age, 10 for 25c. Tickets, for male and female employes, good between 6 and 8 a.m., and between 5 and 7 p.m. on all week days, are to be sold at 6 for 25c. These increases are to continue for five years.

It was reported, Nov. 17, that the new tariff will be put in operation within a few days thereafter and that the company would accept outstanding tickets for one month, when those remaining in the hands of the public will be redeemed at their original cost.

Saskatoon Municipal Ry.—Referring to the decision of the Saskatoon, Sask., City Council, to increase cash fares on the Municipal Ry., from 5c to 6c, and to sell tickets at certain rates as mentioned in Canadian Railway and Marine World for November, pg. 671, we are officially advised that there is no intention to increase fares to passengers who buy tickets. In order to popularize the buying of tickets, it has been decided to sell them in stores at 5 for 25c, and on the street cars at 6 for 35c, and to charge a cash fare of 6c. The previous fare was 5c straight, so that to the casual traveller on the lines, or to others who do not buy tickets, it means an increase of 1c.

Winnipeg Electric Ry.—In connection with the temporary increase of fares to 6c, granted by the Manitoba Public Utilities Commissioner, the city solicitor has filed a statement alleging the invalidity of the Public Utilities Act, in connection with the injunction proceedings. The company has filed its defence and also a counter claim, not naming any sum, for damages sustained through not being allowed to collect increased fares when so ordered by the Public Utilities Commissioner. The temporary injunction was granted Oct. 4, and was dissolved Oct. 8, so that the company's claim for damages covers the five days during which it was operative, and in respect of which the city promised to make good any loss sustained in the event of the company's contention being upheld. It was reported, Nov. 11 that the case was not likely to be heard before the new year. It is also reported that the Manitoba Government will take steps at the legislature's next session to make sure that the Public Utilities Act cannot be challenged.

It is reported that the valuator employed to make an appraisal of the company's property for the Public Utilities Commissioner has finished his work, his figures being approximately $20,000,000 against the $26,000,000 valuation placed upon the property by the company.

Proposals for Taking Over Electric Railways by Hydro Electric Power Commission of Ontario.

Dominion Power and Transmission Co.—Reports persist in recurring in Hamilton that negotiations are in progress between the Hydro Electric Power Commission of Ontario and the Dominion Power and Transmission Co., for taking over all that company's interests, and that an appraisal of its property has been made. It was reported Nov. 13 that arrangements for the conclusion of a bargain were approaching completion.

Guelph Radial Ry.—A report on this municipal railway, made by Hydro Electric Power Commission engineers, was presented at a meeting of the Guelph City Council, Nov. 3. It states that $150,000 will be required to put the line in thorough repair, and that under any system of separate operation there will probably be a loss of up to $17,000 a year, but that the line could be made to pay as a feeder to the commission's radial lines. The commission is prepared to take over the line for operation, but the city would have to assume all financial responsibility.

The Guelph Radial Ry. Co., on Nov. 27, received an offer from the Hydro Electric Power Commission of Ontario, to purchase the property, as of July 1, 1920, for $150,000.

Sandwich, Windsor and Amherstburg Ry.—The ratepayers of the City of Windsor, the Towns of Walkerville, Amherstburg, Ford City, Ojibway and Sandwich, and the Townships of Anderdon, Sandwich East and Sandwich West, will vote on Dec. 6, on bylaws and agreements between the various municipalities and the Hydro Electric Power Commission of Ontario, "for the construction, acquisition, equipment and operation of an electric railway under the Hydro Electric Railway Act of 1914, and amendments thereto." Schedule A, attached to the agreement, describes the route of the proposed electric railway as follows:—

Tecumseh-Ford Section—Leaving Tecumseh the line runs northerly along Lesperance Rd. to Riverside Drive, where it turns due west along private right of way to the end of Ottawa Ave., thence along that avenue to the easterly limits of Ford City.

Ford City Section—From the easterly limits of Ford City the line runs along Ottawa Ave., Strabane and Sandwich Sts., to the westerly limits of the municipality.

Walkerville Section—One line extends along Sandwich St. from the easterly to the westerly limits of the municipality. A second line extends along Ottawa St., between Lincoln and Walker Roads. A third line extends from the Essex Terminal Ry. tracks at Walker Rd., northerly to Wyandotte St., and west on Wyandotte St. to the municipal boundary between Walkerville and Windsor. A fourth line extends northerly from Wyandotte along Devonshire, Assumption and Victoria Roads to intersect the first line, above mentioned on Sandwich St.

Windsor City Section—One line extends along Sandwich St. from the boundary of the Town of Walkerville to Elm Ave., and then southerly on the said avenue to London St. A second line extends westerly from the Walkerville boundary on Wyandotte St. to Ouellette Ave. A third line extends southerly on Ouellette Ave., from Sandwich to the race track on Tecumseh Road. A fourth line extends westerly on London St. from Ouellette St. to the western boundary of the city. A fifth line extends southerly on Wellington Ave. from London St. to Tecumseh Road.

Sandwich Town Section—From the easterly boundary of the municipality the line extends westerly to the Springs loop near the Canadian Salt Co.'s plant at the west end of the municipality.

Sandwich-Amherstburg Section—From the Springs loop in Sandwich, the line extends along Bedford St. and Main St., Ojibway, to the River Rd. at Turkey Creek, and then due south along the River Rd. to the Town of Amherstburg, entering that town along Appsley and Richmond Sts.

Schedule B gives the amount of debentures to be issued in connection with the above mentioned lines as follows:

Sandwich East Tp	$ 260,685
Sandwich West Tp	251,570
Anderdon Tp	143,336
Ford City Town	64,582
Walkerville Town	200,940
Sandwich Town	262,173
Ojibway Town	44,315
Amherstburg Town	126,867
Windsor City	745,132
Total	$2,100,000

The agreement gives the commission power to acquire any existing electric lines, to form part of the system, and in that connection it is proposed to acquire the various lines owned and operated by the Sandwich, Windsor and Amherstburg Ry., the routes of which are described in Schedule A, quoted above.

Fort William Municipal Ry.-Port Ar-

thur Civic Ry.—In connection with the suggestion that a way out of the financial difficulties in which the Cities of Port Arthur and Fort William find themselves owing to continued deficits in operating their municipal railways, the two city councils decided recently to have the lines valued by the Hydro Electric Power Commission of Ontario with a view to their being taken over by the commission.

R. G. Sneath, B.A.Sc., of the commission's engineering staff, is reported to have arrived in Fort William, Nov. 20, to make a valuation of the Fort William Municipal Ry. He is reported to have said that he had not any instructions to make a similar valuation of the Port Arthur Civic Ry. as a request had not come from the council of that city.

Electric Railway Notes.

The Montreal and Southern Counties Ry. carried 2,355,236 passengers during the year ended June 30.

The Edmonton, Alta., Radial Ry., put in operation on Nov. 3, a new car schedule on its lines on the south side.

The Ottawa Electric Ry. put in force on Oct. 28, a new schedule on its Britannia line which gives a thorough car from Ottawa every 15 minutes.

The Winnipeg Electric Ry. will, according to a press report, put 8 large steel cars in operation. They are being built in the company's shops.

Winnipeg Electric Ry. employes are reported as contemplating the formation of a local street railwaymen's union and severing the present connection with the international union.

The Stone and Webster Co. of Boston, Mass., is stated to have reported to the Brooklyn Rapid Transit Co.'s receiver that the company will require a fare in excess of 8c in order to pay its operating expenses, and fixed charges, out of its income, before June 30, 1922.

The Brantford, Ont., Municipal Ry. Commission has bought from Preston Car and Coach Co., for its recently completed Terrace Hill line, 2 single truck, double end cars, similar to those already in use on the line. They have Westinghouse 101-B 2 motors, and extra heavy trucks.

The City of Montreal is reported to have entered suit against the Montreal Tramways Co. for $255,672, alleged to be due the city over and above sundry amounts due the company by the city. The amount is made up of charges for snow removal, repairs to pavements, etc.

The Regina, Sask., City Council, on Nov. 7, once more put off consideration of the bylaw to allow of the operation of one man cars on the Regina Municipal Ry. It was announced that a special meeting of the council would be called for Dec. 8, to finally decide the question.

The London and Port Stanley Ry., is, according to a press report, going to buy another electric locomotive for freight work. For this and other purposes, the London City Council is being asked to submit a bylaw to the ratepayers in Jan., 1920, to authorize the issue of $200,000 of debentures.

The Nova Scotia Tramways and Power Co. was reported, Nov. 20, to have ordered 24 new cars for its electric railway service in Halifax, N.S. The cars, it is stated, will be of the single truck type, fitted with air brakes and all modern safety devices. The cars are to be operated by one man, the entrance and exit being at the front.

Donat Matte, while a passenger on a Quebec Ry., Light and Power Co.'s car in Quebec City, Nov. 10, was expostulated with by the conductor for spitting on the floor. Matte assaulted the conductor, and was brought before the Recorder, Nov. 11, on charges of spitting on the car floor, creating a disturbance and with assault. He was fined $20 and costs for the assault and the spitting, and $5 and costs or 8 days imprisonment on the other charge.

The Montreal and Southern Counties Ry., which sometime ago curtailed the service on its line from Montreal, announced a further curtailment to take effect, Nov. 16. Residents along the line protested, and it was announced, Nov. 12, that the proposed reduced schedule of cars would be held in abeyance for further consideration. A press report states that the company will put on some additional trains, so as to bring the schedule as near normal as the traffic warrants.

The Fort William Electric Ry., as a result of a fire at its car barns, Nov. 13, was left with only 5 serviceable cars out of 23 to carry on its service. The Port Arthur Civic Ry. lent 7 cars to Fort William to augment the service. Of the 18 cars damaged by the fire only 2 are repairable, and these are being again put in order. In order to provide the cars requisite, it is reported that a number of the summer cars will be converted into winter cars, and some additional second hand cars purchased.

Stoney Creek, Ont., residents are reported to have asked the Hamilton, Grimsby and Beamsville Electric Ry. to run a car into Hamilton, at an earlier hour than at present. G. E. Waller, Grand Superintendent of Railways, is reported to have stated that such a service would not pay, but if it is desired, and the Saltfleet Township Council will guarantee the actual running expenses of the car, the company will put one on, and that if the traffic develops and pays expenses, the company will continue to operate the car.

The Fort William, Ont., City Council passed a resolution, Oct. 28, calling for a joint meeting of the two inter city committees to take the preliminary steps necessary for submitting to the ratepayers at the municipal elections in Jan., 1920, the question as to whether the two cities, Fort William and Port Arthur, shall unite and be governed by one mayor and one council. The amalgamation of the two cities might bring about a solution of many of the difficulties in connection with their city car lines, and the interurban connecting line, which have at present to be faced.

The Ottawa South Municipal Association on Nov. 13, discussed the car service given that district by the Ottawa Electric Ry., and concluded that there are three solutions of the problem: 1. To buy the line; 2. To extend the system, and 3, to introduce the service at cost system. F. D. Burpee, Superintendent, O.E.R., informed the meeting that with its franchise expiring in 4 years, the company had to give careful considerations to all demands for increased service. The company could not see its way to buy the 15 or 20 additional cars suggested. If 20 additional cars were bought, a new barn would be required for housing them, and additional power would be required for their operation.

Mainly About Electric Railway People.

R. R. Knox, who entered the Winnipeg Electric Ry.'s service in 1893, and had been Traffic Superintendent for 21 years, has been appointed Assistant to the General Manager, and is attached to the Vice President and General Manager's office for special assignments. He had been a member of the Winnipeg School Board since 1908, and was chairman in 1916-1917. He takes an active interest in sports and is President of the St. John's Curling and Lawn Bowling Association.

Alex. McDonald, heretofore in Montreal Tramways Co.'s service, has been appointed Traffic Superintendent, Winnipeg Electric Ry., vice R. R. Knox, appointed Assistant to General Manager.

Lieut.-Col. C. W. McLean, D.S.O., M.P. for Brigg, Eng., who has been appointed a parliamentary secretary to one of the Cabinet Ministers in England, is a son of Brig.-Gen. H. H. McLean, M.P., and formerly President, St. John Ry., St. John, N.B.

W. H. Moore, General Manager, Toronto & York Radial Ry., who received an honorary degree from Laval University a short time ago, addressed the Montreal Young Men's Canadian Club, Nov. 20, urging a better understanding between English and French speaking Canadians.

Sir Alfred Stanley, M.P. for Ashton-under-Lyne, Eng., who resigned the Presidency of the British Board of Trade a few months ago, and who was formerly an electric railway official in the United States, will, it is said, resign his seat in the House of Commons and be offered a peerage.

Ottawa Railway Terminals—N. Cauchon Chairman, Ottawa Town Planning Society, is advocating the electrification of all railway terminals in Ottawa. The electrification system, he says, may not be an immediate possibility, but the moving of the shunting yards outside the city should be done as soon as the government takes over the G.T.R. These yards should be constructed 2 or 3 miles outside the city. A system of freight distribution lines throughout the city would supply the merchants, while the bulk of the heavy work could be done in the outside yards.

Compressed Air for Railway Operation—A press report states that an invention has been submitted to the Italian State Railways for their operation by compressed air. The invention consists of a new method of compressing air by which big central tanks may store enormous power to be distributed to stations along the line by strong pipes. Isambard Brunel, who designed and constructed the Great Western Ry. in England, carried out plans for the operation of the South Devon Ry. by atmospheric pressure in 1844. The system was a failure and was abandoned after a year's trial, the great tower station at Exeter for compressing air remaining until recent years as a monument of an experiment which has not been successful.

The Hydro Electric Power Commission of Ontario's Electric Railway Projects.

While the present activities of the Hydro Electric Power Commission of Ontario are being more particularly directed to the promotion of the Toronto-Whitby-Bowmanville line, and the Hamilton-Elmira-Guelph line, the other projects have not been lost sight of, and preparations for construction work are being pushed forward. The full list of lines projected and centering on Toronto is a formidable one, and when laid out on a map, show that a very large area will be served by them. The lines include, one from Toronto, passing through Guelph, Kitchener and Stratford to London, the bylaws for which were voted on by the municipalities in Jan., 1916, a line from Port Credit, on the first mentioned line to Hamilton and St. Catharines, which was voted on in Jan., 1917, the revote in Hamilton and a couple of other municipalities being taken during this year; a line between Welland and Bridgeburg, on which the votes were taken in Jan., 1917; lines to Stouffville, Port Perry and Whitby, which were voted on in Oct., 1914, the Toronto-Whitby-Bowmanville line, on which some municipalities voted during November, and the Hamilton-Elmira-Guelph line, which will be voted on at the municipal elections in Jan., 1920.

In addition to these projects, which have taken definite shape, reports have been prepared on a line between St. Catharines, Niagara and Welland, which will be issued at an early date. A line has also been surveyed from London to connect with the lines in the Windsor Section. Numerous other surveys have been made of routes for probable lines, but none of these have yet advanced beyond the project stage.

Toronto Eastern Ry. and Connections—In connection with the project for the acquisition of the Toronto Eastern Ry., which is a present practically completed from Bowmanville to Pickering, Ont., and the building of such additional mileage as will give a continuous line from Toronto to Bowmanville, a bylaw will be submitted to Toronto ratepayers at the municipal elections, Jan. 1, to authorize the issue of debentures for $4,328,668 as the city's share of the projected expenditure. Pickering Tp. voted previously in favor of the project and the following municipalities voted approximately during November as follows:

	For	Against
Bowmanville Town	301	9
Oshawa Town	474	97
Scarboro Tp.	464	89
Whitby Town	347	47
Whitby East Tp.	301	44
Whitby West Tp.	158	22

The vote in Darlington Tp. will be taken Dec. 18, and it is expected that the vote in York Tp. will also be fixed for an early date.

In the course of the campaign in connection with the submission of bylaws for the issue of debentures to acquire the Toronto Eastern Ry. and to complete it to various municipalities, Sir Adam Beck is reported to have stated at Brookline, Nov. 11, that the construction and operation of electric railways would enable the commission to gradually reduce the cost of power; to an estimated extent of from $5 to $17 a horse power. Referring to matters connected with the acquisition of certain G.T.R. branch lines for electrification, Sir Adam is reported to have said these might be leased for a long term, probably 99 or 999 years; if a satisfactory lease could be obtained he saw no reason for the commission buying the lines outright. A press report also mentions the probability that some of the Canadian Northern Ry. lines might also be taken over by the Commission and electrified.

In connection with both of these matters, an Ottawa report states that the Dominion Government is quite ready to make a deal as soon as the commission is prepared to talk business on a fair basis. Where the proposed electric lines parallel existing lines owned by the Dominion Government, there would be a disposition to turn the government lines over to the commission at a fair valuation, conditional on the Canadian National Rys. getting the through traffic which might originate on them.

Under the agreement beween the Toronto City Council and commission, the city is to provide a right of way into the city. The entrance is planned over waterfront lands, which are not owned by the City of Toronto, but by the Toronto Harbor Commission. A press report states that the value of this right of way is over $6,000,000. Sir Adam Beck is reported to have said, Nov. 13, that the eastern entrance to Toronto will be from the north, and that the route will be southward, with a terminal on property owned by the Harbor Commission at the foot of Yonge St. The Hydro Electric Power Commission, Sir Adam is reported to have said, proposed to acquire either in whole or in part, the Toronto and York Radial Ry.'s Metropolitan Division, divert it from Yonge St., and carry it down east of Yonge St., to a junction with the entrance of the line from the east.

Hamilton-Elmira-Guelph Line—The report presented Nov. 6, in Galt, at a meeting of repprésentatives of the 17 municipalities interested in the construction of the Hamilton-Elmira-Guelph line, by F. A. Gaby, the commission's Chief Engineer, gave the following particulars as to route, cost, distribution of cost among the several municipalities and estimated receipts:

Estimated Receipts and Expenditure.

Passenger fares	$954,303
Freight and miscellaneous	16,944
Total	$971,247
Operating expenses	$416,342
Maintenance expenses	142,028
	558,370
Interest charges	336,533
	$894,903
Estimated net profit	76,344
	$971,247

Hamilton-Galt-Section — Commencing in Hamilton at a point on the Toronto-Hamilton-Niagara line, 0.75 of a mile west of the terminal at James St., the route extends westerly across Cootes Paradise, along the south side of the marsh and through Dundas Valley to Copetown; crossing the G.T.R. near Copetown the line continues northwesterly to the south end of Galt, entering the city along the Grand River.

Galt-Kitchener Section—Leaving Galt the line follows the general direction of the Grand River and Schneider's Creek into Kitchener.

Kitchener-Elmira Section—From Kitchener the line extends in practically a straight line through Waterloo to Elmira, crossing the line between Waterloo and Woolwich Tp., near Heidelberg station.

Preston-Guelph Section—From a junction located on the Galt-Kitchener section the line will extend through Preston and Hespeler and follow the general direction of the Speed River into the center of the City of Guelph. A spur from a point in this line between Hespeler and Guelph to Puslinch Lake, a distance of nearly 3 miles, will be built at a cost of $95,000.

The estimated cost of building the line and providing rolling stock is $[illegible], which is appropriated among the different municipalities as follows:

Tp. of Ancaster	$[illegible]
Tp. of W. Flamboro	[illegible]
Tp. of Beverly	[illegible]
Tp. of N. Dumfries	[illegible]
Tp. of Waterloo	[illegible]
Tp. of Woolwich	[illegible]
Tp. of Puslinch	[illegible]
Tp. of Guelph	[illegible]
Village of Elmira	[illegible]
Town of Dundas	[illegible]
Town of Waterloo	[illegible]
Town of Preston	[illegible]
Town of Hespeler	[illegible]
City of Hamilton	[illegible]
City of Galt	[illegible]
City of Kitchener	[illegible]
City of Guelph	[illegible]

The following particulars as to gradients, etc., on the projected line were given out in Hamilton, Nov. 22, by the city officials:

Commencing at the proposed Hamilton terminal, the line will extend westerly, south of the Desjardins canal, on a maximum 0.5 grade to Dundas and rise on a 1.8 compensated grade to Copetown, thence northwesterly, via Rockton and Sheffield, to Galt. Provision is made for private right of way, 100 ft. wide, with heavy construction throughout. It is the intention to use the large interurban terminal on James St. North, in Hamilton, that has already been projected for the Toronto-Hamilton-St. Catharines radial line, thus allowing convenient and desirable transfer arrangements at such a point for passengers going in both directions.

The ratepayers of the 17 municipalities named above, will vote at the January elections on bylaws authorizing the issuing of debentures for the amounts placed after their names for the construction and equipment of the line.

London St. Ry. Sale Negotiations—The London, Ont., City Council has been giving considerable attention, either directly or through its [illegible] committee, during the last month to the question of the purchase of the London St. Ry.'s franchise. It is reported that the company has offered to sell out at par, and it is stated that the city will not consider this. It was reported Nov. 14 that a valuation of the property was to be made by Hydro Electric Power Commission of Ontario engineers and that it is not therefore likely that a bylaw to purchase can be prepared so that the electors can vote on it at the municipal elections Jan. 1, 1920.

The Montreal Tramways Co. started, Nov. 1, operating [illegible] cars on the Glen line, running from Westmount station down to James St. It is reported that [illegible] cars will be put in operation on other lines in the city.

The Toronto Ry. has, after somewhat protracted negotiations, agreed to provide special badges for [illegible] to enable them to ride free on the cars.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—We are officially advised that the Terrace Hill line at Brantford, Ont., which has been completed and put in operation recently, serves a portion of the city that previously had no service, and also gives connection with a number of factories. It commences at the corner of Colborne St., runs up Murray St. to Elgin St., along Elgin St. to West St., along West St. to Dundas St., and along that street to St. Paul Ave., a distance of 10,400 ft. It is the Brantford Municipal Ry. Commission's intention as soon as the subway under the G.T.R. tracks at St. Paul Ave. is opened up, to continue the line down St. Paul Ave. to meet Brant Ave. The line is single track, with turnouts; laid with 80 lb. A.S.C.E. rails, 60 ft. lengths; on a ballast foundation; cedar ties, and gas weld bonds. The overhead work consists of 4% trolley wire carried on cedar poles.

Approximately 3,000 ft. of new track has been laid in West Brantford, but this will not be put into operation until a new bridge has been erected. (Nov., pg. 612).

Calgary Municipal Ry.—Commissioner Graves is reported to have stated recently that the proposed change of the Ogden line was undecided. It is proposed to take the line from the Sewer Pipe Co.'s plant straight across the prairie to a little east of the Canadian Malting Co. plant and from there it would parallel the C.P.R. to the bridge, and follow the same route as at present for the rest of the way.

Residents of Tuxedo district waited on the city commissioners, Oct. 31, to ask that the Tuxedo line be extended northeast to Fortieth Ave., thence west to Centre St., and to go back to the city that way. Commissioner Graves pointed out that this would necessitate the construction of 2 miles of new track, and Commissioner Samis suggested that rather than go to the expense of extending and maintaining the public utilities, the city should provide a house moving outfit and move the houses in the suburbs closer in. The Tuxedo ratepayers stated that if the extension asked for could not be granted, they would prefer to have the line left as at present, rather than that a suggested alteration should be made. (Nov., pg. 612).

Cape Breton Electric Co.—C. C. Curtis, General Manager, met a committee of the Sydney, N.S., City Council, recently, and informed it, that in view of the present situation of the tramway industry, and the Cape Breton Electric Co. in particular, it was impossible to make any extensions of lines in Sydney at present. He stated that the extension on Victoria Road, which had been asked for in particular, would be a convenience. Alderman McLeod suggested that a loop from the Dominion St. line would give the necessary accommodation. (Feb., pg. [illegible]).

Fort William Electric Ry.—The car barns at Fort William, Ont., valued at $85,000, were destroyed by a fire of unknown origin Nov. 13. The city council has decided to restore the damaged buildings at once. About 100 ft. of brick wall will have to be torn down and rebuilt; new steel girders put in to replace those twisted by the heat, a new roof will have to be put on, and all the internal wood work replaced. (Nov., pg. 612).

Grand River Ry.—The Board of Railway Commissioners has been asked for approval of a diversion of the company's line through Waterloo Tp., and the City of Kitchener, Ont. (Oct., pg. 553).

Grand River Ry.—In connection with recent press reports that the company proposed to abandon street operation in Galt, Ont., we are advised that the company's franchise expires in 1921, and that a renewal of it is not being pressed for. The company does not operate a street railway service in Galt in the ordinary sense of the term, and it is considered that the public can be better served by a line on private right of way than by one on the public street. The city has asked certain terms for a renewal of the franchise for 25 years. The matter is under consideration and no definite decision has been reached. (Oct., pg. 553).

Levis County Ry.—The Quebec Public Utilities Commission heard a complaint of the municipality of St. Romuald against the company recently. It is stated that the track level was to be changed in certain places, particularly in front of the St. Romuald city hall, and the municipality claims that the work has not been completed. One of the questions at issue was as to whether the company or the municipality was to pay for the work. The commissioners inspected the track in question, Oct. 29. (Nov., pg. 612).

London and Port Stanley Ry.—The commissioners are reported to have decided at a meeting Nov. 17, to ask the London City Council for authority to spend $218,000 on permanent improvements at London, St. Thomas and Port Stanley as follows:—$95,000 for an electric locomotive and 3 new cars; $16,500 for new car barn at London, $9,500 for scales for weighing cars and $7,000 for additions to shops, the balance being for general betterment work. Sir Adam Beck explained that the money may not all be spent next year, but that it is necessary to have the permission of the people to spend it. At a meeting of the city council in the evening the commissioner's request was referred to no. 1 committee for consideration.

Montreal and Southern Counties Ry.—We are officially advised that the following works are being done: Renewal of one mile of track on Victoria Ave., Montreal South, and at Montreal terminals; construction of loop line and connections with Montreal Tramways Co. at corner of Youville and McGill, and Common and McGill Sts. (May, 1918, pg. 211).

Montreal Tramways Co.—A press report states that an extension of the company's lines through Beaumont, Bremner and Ball Sts., in the Park Ave. district, is being asked for, and that the city commissioners are urging the Montreal Tramways Commission to order the company to start the work next spring. (Sept., pg. 501).

Niagara, St. Catharines and Toronto Ry.—D. B. Hanna, President Canadian National Rys., and E. W. Oliver, Superintendent, Niagara, St. Catharines and Toronto Ry., met the St. Catharines, Ont., City Council, Oct. 29, to discuss a renewal of the company's franchises. Mr. Hanna told the council that part of the local development proposed included the building of a new station on St. Paul St. W., at an estimated cost of $50,000 and the building of a line along Carlton St. to connect the Lake St. line with Ontario St.

In reply to a question as to the probability of the present lines becoming part of the hydro electric railway system being organized by the Hydro Electric Power Commission of Ontario. Mr. Hanna stated that the whole question of the H.E.P.C.O. taking over electric lines would be dealt with at one time at a later date. At present the Canadian National Rys. board was simply concerned with getting local franchises renewed so that they oculd proceed with the development of the system on its own account.

An extension of the franchises to 1937 is asked. A further conference on the matter will be held. (June, pg. 324).

Nova Scotia Tramways and Power Co.—The Halifax, N.S., City Council agreed, Nov. 6, to the company laying a temporary track across the common, in connection with the extension of the line between Gottingen and Windsor Sts. This will enable the line to be put in operation this year. The laying of a concrete bed for the tracks, and the paving of the roadway will be stone later. (Nov., pg. 612).

Ottawa Electric Ry.—F. D. Burpee, Superintendent, waited on the Ottawa Board of Control recently, and asked permission to lay a second track on Bell Ave., from Raymond St. to the terminus at Ernest St. The matter was referred to the Works Commissioner for investigation and report. (Nov., pg. 612).

Quebec Ry., Light and Power Co.—We are officially advised that the company has under construction a line in Limoilu Ward, from 3rd Ave. along 10th St., to the Canadian Northern Ry. tracks, on Beauport Road, about 1,400 ft. The route was described in Canadian Railway and Marine World for June, pg. 324. (July, pg. 392).

In connection wtih the increase of fares granted by the Quebec City Council, Nov. 15, referred to elsewhere in this issue, the agreement provides for an extension of the car service in Belvedere Ward; the extension of tracks on Beauport Road, the operation of a line from Stadacona to the line on Dorchester St., over the Lavigueur bridge; a direct line from Domaine Lariet to Crown St.; a line from Lamontagne Ave., to Commissioners St. and a subway under the Canadian Northern Ry., tracks at Beauport St. This latter work is to be done under the Board of Railway Commissioners' supervision and the Q.,R.L.& P. Co. is to pay one-third of the cost.

Saskatoon Municipal Ry.—A press report states that the Saskatoon, Sask., City Council has decided to extend the Twentieth St., line to the north side of Avenue H., at an estimated cost of $1,818. (April, pg. 208).

Sherbrooke Ry. and Power Co.—We are officially advised that under its new agreement with the Sherbrooke, Que., City Council, the company has built a second track on its line from Strathcona Square along Wellington St. to King St., and for 200 ft. east on King St. An extension of the lines in the West Ward, provided for in the agreement, was started Sept. 15, and the work is expected to be completed in June, 1920. (Nov., pg. 612).

Toronto Civic Ry.—The Toronto board of control has decided to recommend that the city council apply to the Ontario Legislature for authority to issue $160,000 of debentures for building of a second track on the West Bloor St. line from Quebec Ave. to Runnymede Rd., without seeking the approval of the ratepayers thereof.

Toronto Ry.—The Ontario Railway and Municipal Board has directed that the company commence the construction of the long projected car line on Pape Ave., not later than April 15, 1920, and complete it by July 15.

Waterloo-Wellington Ry.—A press report of Nov. 18, stated that an offer had been submitted to W. H. Brenthaupt, President, Waterloo-Wellington Ry., to the Mayor of Guelph, Ont., for the building of a line from Kitchener to Guelph, passing through Bridgeport, Bloomingdale, New Germany, and Marden, and entering Guelph over the Elora Road, 15.5 mile. The estimated cost of the line is $280,000, and it is suggested that the cities of Kitchener and Guelph should each guarantee bonds for $140,000.

The Waterloo-Wellington Ry. was originally the Berlin and Bridgeport Ry., a title which was changed in 1912 to the Berlin and Northern Ry., and again in 1918 to the Waterloo-Wellington Ry. The company has 3.5 miles of line from Kitchener to Bridgeport, Ont. It has power to extend its line from Bridgeport to Elora and Fergus. Negotiations were in progress recently with the City of Kitchener for the sale of the line. (Oct., pg. 533).

Winnipeg to Rice Lake, Man.—A press report states that an electric power line will be built from Winniueg to the Rice Lake mining district, to supply power to the mines, and that possibly an electric railway will be built in connection. The Bruce Consolidated Mining Co. is reported to be interested.

Electric Railway Finance Meetings, Etc.

Cape Breton Electric Co.—

	Aug., 1919	Aug., 1918	12 mons. to Aug. 31, 1919	12 mons. to Aug. 31, 1918
Gross	$50,926.78	$44,716.17	$566,918.04	$495,112.55
Expenses	38,022.50	33,745.61	436,124.19	356,036.62
Net	12,904.28	10,970.56	130,793.85	139,075.93

Hamilton St. Ry.—The Hamilton, Ont., City Treasurer received $19,030.36, Nov. 11, as the city's percentage on the company's receipts for the quarter ended Sept. 30. The percentage for the corresponding quarter of 1918 was $17,810.83. The receipts on which the percentage is calculated, were, for the three months ended Sept. 30, $221,880.04.

The Nova Scotia Tramways and Power Co., has applied to the Nova Scotia Public Utilities Commission for power to issue new securities for $440,000, the proceeds to be used, according to a press report, to pay for Dartmouth Electric Light and Power Co.'s property, $104,586; to defray engineering expenses, $280,147, and legal expenses, $56,217.

Regina Municipal Ry.—City Commissioner Thornton, in a report on the financial condition of the civic public utilities, recently stated, with reference to the street railway department, that he believed that by the end of the year the financial showing would be well within the estimates, though at the time, the deficit was higher than the proper proportion of the year's estimate. During the previous two weeks the earnings had been sufficient to provide for all expenses, including overhead charges.

The deficit on the operation of the street railway department for the nine months, ended Sept. 30, according to the city auditor's report, was $25,753.92.

St. Thomas Street Ry. (Municipal)—

	Oct., 1919
Receipts	$1,707.53
Operating expenses	2,050.74
Power	312.76
Deficit	655.97

Toronto Civic Ry.—	Oct., 1919	Oct., 1918
Revenue	$11,374.79	$25,313.30
Passengers carried	2,457,091	1,497,595

Regina Municipal Railway's Financial Position.

The Regina, Sask,, City Commissioners, H. Black and L. A. Thornton, reported recently on the city finances for the 10 months ended Oct. 31. Referring to the municipal railway, they said:

"The financial status of this utility shows a steady improvement in spite of greatly increased opperation costs as regards both labor and material. The utility will finish the year within its estimate, which provided for a deficit of $27,900. The deficits for the years 1914-15-16-17 and 1918, were $95,752.42, $109,755, $76,145.03, $63,912.19 and $67,407.21 respectively. With the end of the war and the population on the increase traffic conditions will soon demand better service on some lines which will call for more cars. The following table indicates concisely the improvement in the operating statements as compared with former years. The figures for 1916, 1917 and 1918 are actual and for 1919 are based on the actual results for 10 months increased proportionately to cover the whole year:

	1919	1918	1917	1916
"Revenue	$323,546.00	$248,637.76	[illegible]	[illegible]
"Expenditures	253,546.00	218,459.09	[illegible]	[illegible]
"Operations surplus	70,000.00	30,178.67	32,154.47	[illegible]
"Fixed charges	97,911.00	97,585.88	96,066.66	[illegible]
"Deficit	27,900.00	67,407.21	63,912.19	76,145.03

The interim balance sheet signed by the city auditors, and accompanying the commissioners' report, gave the following figures:—

Revenue.	
Fares, advertising, etc	$258,362.42
Balance net deficit	26,985.89
	$285,348.31
Expenditures.	
Operating expenses	$203,755.61
Fixed charges	81,592.70
	$285,348.31

The New Brunswick Power Co. and the City of St. John.

Under an act passed by the New Brunswick Legislature in 1918, a commission was appointed by the government to investigate matters relating to the New Brunswick Power Co., owning the electric railway, etc., in St. John. The commission decided, among other things, that the original cost of the company's properties used, Jan. 1, 1919, in railway, gas, electric light, and power service, was $2,800,000. The correctness of this finding having been questioned, an act was passed at the legislature's last session referring the matter to the N.B. Court of Appeal, to determine whether or not the commissioner's finding was justified by the evidence before them, and if not, then to determine what amount should have been found as the original cost of the property. The case was first on the list for the court's sittings, which opened in Fredericton, Nov. 11, but by consent of counsel was postponed.

Electric Ry. Employes' Wages, Working Conditions, Etc.

British Columbia Electric Ry. — The Board of Conciliation, appointed Sept. 29 to deal with wages, etc., of employes, represented in the Vancouver, New Westminster and Victoria divisions of the Amalgamated Association of Street Railway Employes of America, filed a unanimous report, Oct. 25, signed by H. A. Stone, Chairman; T. W. Fletcher, representing the company and T. Coughlin, representing the men. The report is divided into three parts: 1, Wages; 2, Cost of living; 3, Working conditions. The award fixes the wages of conductors and motormen, and other employes engaged in the operation of cars as follows, per hour:

City lines.	New rate	Old rate
First 6 months	[illegible]	[illegible]
Second 6 months	[illegible]	[illegible]
Third 6 months	[illegible]	[illegible]
Thereafter	[illegible]	[illegible]
Interurban lines.		
First 6 months	[illegible]	[illegible]
Second 6 months	[illegible]	[illegible]
Third 6 months	[illegible]	[illegible]
Thereafter	[illegible]	[illegible]
Freight.		New rate
First 6 months		[illegible]
Second 6 months		[illegible]
Third 6 months		[illegible]
Thereafter		[illegible]
Passenger brakemen.		
First 6 months		[illegible]
Second 6 months		[illegible]
Third 6 months		[illegible]
Thereafter		[illegible]
Brakemen, freight		[illegible]
Trolleymen		[illegible]

The increases in the other departments very from 3c to 7c an hour The board considered the position of the men employed on the Sandwich Division, and those of the 16th St. yards as outside their jurisdiction. The award has been accepted by the company and the employes.

London St. Ry.—See under "Increases in Electric Railway Freight and Passenger Rates."

Winnipeg Electric Ry.—We are officially advised that the company informed its employes, Oct. 22, that it was prepared to accept the Mathers' award and pay the rate of wages therein specified as long as it is permitted to collect the increased fares authorized by the Public Utilities Commissioner's temporary order. The arrears of increased pay from June 1 to the date of the award which are said to have amounted to about $60,000, are reported to have been paid on Nov. 12.

The Saskatoon, Sask., Municipal Ry., has, we are officially advised, effected an exchange with the Calgary, Alta., Municipal Ry. of 6 double truck cars for 7 single track cars. From three of the double truck cars two motors and one controller were removed. The single track cars are to be repainted, both inside and out, and are to be forwarded to Saskatoon as soon as completed, ready for running, and the double track cars are to be sent to Calgary in their present condition. Both sets of cars were purchased by the respective cities in 1913. The reason Saskatoon is getting rid of its double truck cars is due to the fact that they cannot be operated over the steel traffic bridge across the Saskatchewan River, that bridge not being capable of carrying such a load.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships—The acting Minister of Marine, Hon. A. K. Maclean, gave the following information in the House of Commons, Nov. 3, in answer to an enquiry by J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S. Fifty-three steel cargo steamships had then been ordered by the Marine Department for Canadian Government Merchant Marine Department for Canadian Government Merchant Marine Ltd.; 13 had been delivered and were in service, 8 more had been launched and would be in service in a few weeks thereafter. The last contract then given was on Sept. 30, to Canadian Vickers Ltd., for 33,400 d.w. tons. (Editor's note, 4 ships of approximately 8,350 d.w. tons each) at $170 a ton. They are to be delivered June 15, July 31, Oct. 15, and Nov. 1, 1920, respectively.

Following are particulars of orders for steamships for which authority has been given by order in council in addition to those referred to by Canadian Railway and Marine World in previous issues:—

Marine Department contracts 50 to 53, both inclusive, dated Sept. 30; four steel cargo steamships; builder, Canadian Vickers Ltd., Montreal; builder's yard nos. 77 to 80, both inclusive; approximately 8,350 d.w. long tons each, at $170 a ton, approximate launching dates May, June, Sept., and Oct., 1920, approximate delivery dates, June, Aug., Oct., and Nov., 1920. The keels for builder's yard nos. 77 and 78, will be laid before the end of December, and for builder's yard nos. 79 and 80, next spring.

One steel cargo steamship; builder, Midland Shipbuilding Co., Midland, Ont., approximately 3,950 long d.w. tons, at $180 a ton.

Two steel cargo steamships; builder, Wallace Shipyards Ltd., North Vancouver, B.C., approximately 8,350 d.w. long tons each, at $167.50 a ton.

The foregoing are all the orders which had been officially announced as decided on up to Nov. 21, but it is probable that some more orders will be placed in the near future, which in addition to the 56 already ordered, will bring the total up to 60 or more.

The Nova Scotia Steel and Co., New Glasgow, N.S., which is building 2 steel cargo steamships of approximately 2,800 d.w. tons each for Canadian Government Merchant Marine Ltd., has been negotiating for approximately 5,100 d.w. tons.

Deputations from Collingwood and Kingston interviewed the Minister of Marine recently to urge the giving of further orders for steel cargo steamships to Collingwood Shipbuilding Co., which has plants at both those places. A member of the deputation expressed the opinion after the interview that orders would probably be secured for 2 more ships.

J. J. Coughlan, of J. Coughlan and Sons, Vancouver, B.C., has been in Ottawa for some little time with a view to obtain orders for 2 steel cargo steamships of approximately 8,100 d.w. tons each, in addition to the 4 of that size which they are already building for Canadian Government Merchant Marine Ltd.

Harbour Marine Co., Victoria, B.C., which has orders for 2 steel cargo steamships for Canadian Government Merchant Marine Ltd., is endeavoring to obtain orders for 2 more.

A Victoria, B.C., press dispatch of Nov. 6 said it was reported there that the Dominion Government planned to give contracts to British Columbia shipyards for building 50 wooden schooners. We are officially advised from Ottawa that the government has never given any contracts for wooden schooners, and that its programme does not include any for the future.

Oil Fuel—The question of equipping the 4 steel cargo steamships of approximately 8,350 d.w. tons each, which were ordered by the Marine Department from Canadian Vickers Ltd., for Canadian Government Merchant Marine Ltd., on Sept. 30, to use fuel oil instead of coal, is being considered by the Marine Department.

Keels Laid—Since Canadian Railway and Marine World for November was published, we have been advised of the laying of the following keels for steel cargo steamships for Canadian Government Merchant Marine Ltd.

S.s. Canadian Farmer, Marine Department contract 46; builder's yard no. 65; approximately 3,950 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; Sept. 3, 1919.

S.s. Canadian Observer; Marine Department contract 47; builder's yard no. 66; approximately 3,950 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; Sept. 12, 1919.

S.s. Canadian Thrasher; Marine Department contract 43; builder's yard no. 2; approximately 8,100 d.w. tons; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., Oct. 20.

S.s. Canadian Forester, Marine Department contract 16; builder's yard no. 8; approximately 5,100 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que., Nov. 1.

Marine Department contracts 48 and 49; builder's yard nos. 10 and 11; two ships of approximately 3,500 d.w. tons each; Dominion Shipbuilding Co., Toronto, Nov. 8.

S.s. Canadian Prospector; Marine Department contract 37; builder's yard no. 14; approximately 8,100 d.w. tons; J. Coughlan & Sons, Vancouver, B.C., in September.

Names of Steamships—Since the last list of names chosen by the Marine Department for steel cargo steamships for Canadian Government Merchant Marine Ltd., was published in Canadian Railway and Marine World, we have been advised of the following additional ones.

Canadian Artificer; Marine Department contract 48; builder's yard no. 10; approximately 3,500 d.w. tons; Dominion Shipbuilding Co., Toronto.

Canadian Engineer; Marine Department contract 49; builder's yard no. 11; approximately 3,500 d.w. tons; Dominion Shipbuilding Co., Toronto.

Canadian Victor; Marine Department contract 50; builder's yard no. 77; approximately 8,350 d.w. tons; Canadian Vickers Ltd.

Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; approximately 8,350 d.w. tons; Canadian Vickers Ltd., Montreal.

Canadian Commander; Marine Department contract 52; builder's yard no. 79; approximately 8,350 d.w. tons; Canadian Vickers Ltd.

Canadian Leader; Marine Department contract 53; builder's yard no. 80; approximately 8,350 tons; Canadian Vickers Ltd.

Launchings of Steamships—Since Canadian Railway & Marine World for November was issued we have been advised of the following launchings:

S.s. Canadian Gunner; Marine Department contract 12; builder's yard no. 64; approximately 3,750 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.; Oct. 4.

S.s. Canadian Rancher, Marine Department contract 14; builder's yard no. 6; approximately 5,100 d.w. tons; Tidewater Shipbuilders Ltd., Three Rivers, Que.; Nov. 1.

S.s. Canadian Spinner; Marine Department contract 27; builder's yard no. 71; approximately 8,350 d.w. tons; Canadian Vickers Ltd., Montreal, Nov. 8, 1919.

S.s. Canadian Planter; Marine Department contract 28; builder's yard no. 72; approximately 8,100 d.w. tons; Canadian Vickers Ltd., Montreal; Nov. 22.

Delivery of Steamships—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to the Marine Department by the builders, and were transferred to Canadian Government Merchant Marine Ltd., for operation, on the dates mentioned.

Oct. 29, s.s. Canadian Adventurer; Marine Department contract 19a; builder's yard no. 41; approximately 3,400 d.w. tons; Port Arthur Shipbuilding Co. She sailed from Montreal, Nov. 14, with general cargo for St. John's, Nfld.

Nov. 6, s.s. Canadian Gunner; Marine Department contract 12; builder's yard no. 64; approximately 3,750 d.w. tons; Collingwood Shipbuilding Co. She was loaded at Montreal for Trinidad and Demerara.

Nov. 15, s.s. Canadian Aviator; Marine Department contract 6; builder's yard no. 101; approximately 5,100 d.w. tons; Wallace Shipyards Ltd., North Vancouver, B.C., builders. She was loaded with a cargo of lumber for the United Kingdom.

Nov. 18, s.s. Canadian Sower, Marine Department contract 20A; builder's yard no. 42; approximately 3,400 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur Shipbuilding Co., Port Arthur, Ont., builders.

Officials Appointed—J. W. Corbett has been appointed Purchasing Agent, C.G. M.M., at Montreal.

J. P. Doherty has been appointed Port Agent, C.G.M.M., at St. John, N.B. He was for some years with the Allan Steamship Co., then with Canadian Pacific Ocean Services Ltd., and during the last year with the C.P.R.

Alex. Hector has been appointed Port Agent, C.G.M.M., at Halifax, N.S. He was formerly in the Intercolonial Ry. Service, then with the Halifax & Southwestern Ry., and when that company's office was closed in Halifax, he was transferred to the Canadian National Rys.

Officers of Steamships—The following officers, appointed by Canadian Government Merchant Marine Ltd., in addition to those mentioned in Canadian Railway and Marine World for October. The first column contains the name of the vessel, the second that of the captain, and the third, that of the chief engineer:

Canadian Ranger	Wm. Bradley	R. Blair

Operating Results—An Ottawa press dispatch credited the Minister of Marine with having stated, to a Collingwood, Ont., deputation, which waited on him on Nov. 7 to secure further orders for steel cargo steamships for the Collingwood Shipbuilding Co., that the business done by the ships built for, owned by, and operated by the government, through Canadian Government Merchant Marine Ltd., under the Canadian National Rys. management, was so remunerative that the net profit from their operation during their first year, would repay their cost price, that if the government desired to dispose of them it could do so at a profit, that all the ships built for the government on the Great Lakes, and placed in ocean service, had been booked for full cargoes until June next, and that if the government had not possessed a number of ships to carry products to foreign countries, Canadian trade would have been seriously hampered during this year. We are officially advised that Mr. Ballantyne did no state that the ships would repay their cost out of the first year's operation, but that what he did say was that during war time this could easily have been done and that they are doing very well at the present lower rates.

Offers for Steamships—The Gulf of St. Lawrence Shipping Co., Quebec, Que., made an offer to the Marine Department for the 2 steel cargo steamships of approximately 2,800 d.w. tons each, which are being built by Nova Scotia Steel Co., but it was declined.

The British American Shipbuilding Co., Welland, Ont., is building 2 steel cargo steamships, of approximately 4,350 d.w. tons, under orders from the Marine Department, for Canadian Government Merchant Marine Ltd., viz.: Canadian Otter and Canadian Squatter; Marine Department contracts 44 and 45; builder's yard nos. 4 and 5. The keel for s.s. Canadian Otter was laid Mar. 29, and the keel for s.s. Canadian Squatter was laid July 14. It is expected that the former will be launched early in 1920.

Canadian Vickers Ltd., Montreal, launched the s.s. Canadian Spinner; Marine Department contract 27; builder's yard no. 71; approximately 8,350 d.w. tons; on Nov. 8, the christening being performed by Mrs. Alex. Johnston, wife of the Deputy Minister of Marine, during which music was rendered by the company's employes' orchestra. This is the seventh steamship built by the company for Canadian Government Merchant Marine Ltd. The chief details are: length, 400 ft.; breadth, moulded, 52 ft.; depth, moulded, 31 ft.; i.h.p., 3,000.

On Sept. 30 the Marine Department gave Canadian Vickers Ltd., contracts for 4 more steel cargo steamships of approximately 8,350 d.w. long tons each, at $170 a ton; Marine Department contracts 50 to 53, both inclusive; builder's yard nos. 77 to 80, both inclusive. We are advised that the keels for ships, builder's yard nos. 77 and 78 will be laid before the end of December and for ship builder's yard nos. 79 and 80, next spring.

Canadian Vickers Ltd. launched the s.s. Canadian Planter; Marine Department contract 28; builder's yard no. 72; approximately 8,100 d.w. tons; Nov. 22; the christening being performed by Mrs. W. J. Alderson, wife of Lloyd's Surveyor for the Port of Montreal.

Collingwood Shipbuilding Co., Collingwood, Ont., launched the s.s. Canadian Gunner; Marine Department contract 12; builder's yard no. 64; approximately 3,750 d.w. tons; Oct. 4 and delivered her to the Marine Department, Dec. 6, when she was transferred to Canadian Government Merchant Marine Ltd.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the seven different types of steamships being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton
Length, overall	280 ft.	260 ft.	260½ ft.	333 ft. 7 ins.	344 ft.	413 ft. 1 in.	415 ft.
Length, bet. perpendiculars	270 ft.	251 ft.	251 ft.	320 ft.	331 ft.	400 ft.	430 ft.
Breadth, moulded	38 ft.	43½ ft.	43½ ft.	44 ft.	46½ ft.	52 ft.	56 ft.
Depth, moulded	20½ ft.	23 ft.	26 ft.	25 ft.	25½ ft.	31 ft.	38 ft.
Draft, loaded	17¼ ft.	20 ft.	22 ft. 2 in.	21 ft. 2 ins.	21 ft. 8 ins.	25 ft. 1 in.	29 ft.
Type	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	Lake, s.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	2d., p.b. & f'c's'le	3d., p. & f'c's'le
Engines—Type	Tri-compound	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion	Triple expansion
Cylinders, diar.	17½ x 28¾ x 47 ins.	20½ x 34 x 56 ins.	18 x 30 x 50 ins.	25 x 41 x 67 ins.	25 x 41 x 68 ins.	27 x 44 x 73 ins.	29½ x 50 x 80 ins.
Stroke	33 ins.	40 ins.	36 ins.	45 ins.	45 ins.	48 ins.	54 ins.
Ind. h.p.	875	1,300	1,200	1,800	2,500	3,000	4,000
Boilers—Type	Single ended	Single ended	Single ended	Single ended	Single ended	Single ended.	Single ended

Furnaces—No.	2	6	6	6	9	9	12
Grate surface	80 sq. ft.	135 sq. ft.	100 sq. ft.	132 sq. ft.	156 sq. ft.	198 sq. ft.	270
Heating surface	3,000 sq. ft.	4,670 sq. ft.	3,900 sq. ft.	5,162 sq. ft.	7,275 sq. ft.	7,743 sq. ft.	10,[illegible]00 sq. ft.
Speed	8½ knots	9 knots	9 knots	11 knots	11 knots	11 knots	12 knots
Classification	Lloyd's	Lloyd's	Brit. Corp.	Lloyd's	Lloyd's	Lloyd's	Lloyd's

The company laid keels as follows for the 2 steel cargo steamships of approximately 3,750 tons each, ordered from it by the Marine Department Sept. 11, for Canadian Government Merchant Marine.

S.s. Canadian Farmer, Marine Department contract 46; builder's yard no. 65; Sept. 3.

S.s. Canadian Observer; Marine Department contract 47; builder's yard no. 66; Sept. 12.

J. Coughlan & Sons, Vancouver, B.C., who have contracts from the Marine Department for 4 steel cargo steamships of approximately 8,100 d.w. tons each, for Canadian Government Merchant Marine Ltd., laid the keel of the fourth one, s.s. Canadian Prospector, Marine Department contract 37; yard no. 14, in September.

Dominion Shipbuilding Co., Toronto, laid keels on Nov. 8 for 2 steel cargo steamships, for Canadian Government Merchant Marine; Marine Department contract 48 and 49; builder's yard nos. 10 and 11; each 3,500 d.w. tons.

Port Arthur Shipbuilding Co., Port Arthur, Ont., delivered the s.s. Canadian Adventurer; Marine Department contract 19a; builder's yard no. 41; approximately 3,400 d.w. tons; to the Marine Department, Oct. 29, and she was transferred to Canadian Government Merchant Marine Ltd., for operation.

The company delivered the s.s. Canadian Sower; Marine Department contract 20A; builder's yard no. 42; approximately 3,400 d.w. tons, to the Marine Deppartment, Nov. 18, for transfer to Canadian Government Merchant Marine Ltd.

The Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., has contracts from the Marine Department for building 2 steel cargo steamships of approximately 8,100 d.w. tons each, for Canadian Government Merchant Marine Ltd. As stated previously in Canadian Railway and Marine World, the keel for one of these, s.s. Canadian Reaper; Marine Department contract 42; builder's yard no. 1; was laid Sept. 27, 1919. The keel for the other one, s.s. Canadian Thrasher; Marine Department contract 43; builder's yard no. 2; was laid Oct. 30.

Tidewater Shipbuilders Ltd., Three Rivers, Que., has contracts from the Marine Department for 4 steel cargo steamships, of approximately 5,100 d.w. tons each, for Canadian Government Merchant Marine Ltd. The keel for the s.s. Canadian Settler; Marine Department contract 13; builder's yard no. 5; was laid Jan. 8, and she was launched Sept. 20. The keel for the s.s. Canadian Rancher; Marine Department contract 14; builder's yard no. 6; was laid Jan. 10, and she was launched Nov. 1. The keel for the s.s. Canadian Fisher; Marine Department contract 15; builder's yard no. 7, was laid Sept. 20; and the keel for the s.s. Canadian Forester, Marine Department contract 16; builder's yard no. 8; was laid Nov. 1.

Wallace Shipyards Ltd., North Vancouver, B.C., delivered the s.s. Canadian Aviator; Marine Department contract 6; builder's yard no. 101, approximately 5,100 d.w. tons, to the Marine Department, Nov. 15, and she was immediately transferred to Canadian Government Merchant Marine Ltd., and loaded with lumber for the United Kingdom.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out.

The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contractions are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p. poop; b., bridge; f'c's'le, forecastle.

Contract	Contract date	Name	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed knots	Keel laid	Launched	Delivered
1	Mar. 4, 1918	Canadian Voyageur	Canadian Vickers Ltd.	66	*4,575	$207.	$ 947,025	S.d., p., b. and f'c's'le	Lloyd's	11	June 11, 1918	Nov. 23, 1918	Feb. 22, 1919

General Shipbuilding Matters Throughout Canada.

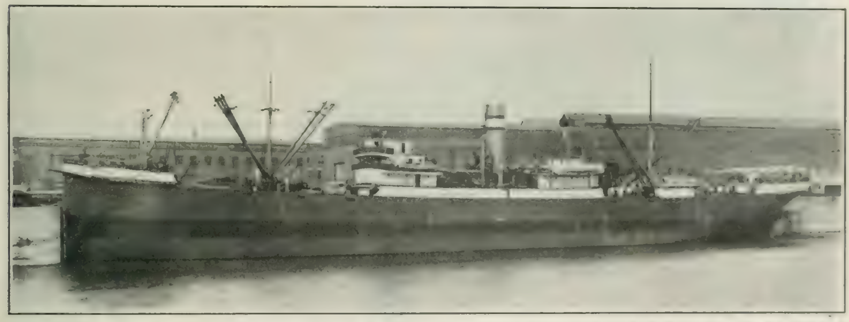
Steamships for French Government—Ottawa press dispatches of Nov. 19 stated that the French Government, being badly in want of ships for its colonial and Mediterranean trade, and to build up its commerce generally, had tried unsuccessfully to buy the steel cargo steamships being built for the Dominion Government, to be operated by Canadian Government Merchant Marine Ltd., and that it is prepared to order 121 steel cargo steamships, of various sizes, to be built in Canada, at $170 a d.w. long ton; also that in this connection it has arranged with New York financiers for a credit of $180,000,000.

Bridgewater Shipping Co., Bridgewater, N.S., launched the trawler Versailles, Nov. 11; armistice day; the name being chosen from the place where the armistice was signed. Her dimensions are: length, overall, 136 ft.; beam, 26 ft.; depth of hold, 11 ft. This is the fourth similar ship launched at this yard this year.

Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., is building 2 steel steamships of approximately 2,500 d.w. tons each, of a similar type of those built recently for the British Government, under orders from the Imperial Munitions Board. It is expected that they will be completed about the reopening of navigation next year. Negotiations for their sale are in progress.

Canadian Car and Foundry Co., Fort William, Ont.—The s.s. E. D. Kingsley built at this yard for the Kingsley Navigation Co., Vancouver, B.C., sailed from Fort William Nov. 20, with a cargo of barley for Montreal.

Canadian Vickers Ltd., Montreal—The s.s. Alsace, illustrated on this page, has been built and equipped complete, by this company, for Cie. Francaise d'Armement d'Importation de Nitrate de Soude, Paris, France. She is of the single screw cargo type, with 2 decks, poop, bridge and forecastle, straight stem and elliptical stern. There are 4 cargo holds and 6 watertight compartments. She is rigged with 2 masts, with special double system of derricks and an arrangement of winches for the expeditious handling of nitrate cargoes. She was built under Lloyd's 100 A1 classification, and is of the following dimensions: length, b.p., 400 ft.; breadth, moulded, 52 ft.; depth, moulded, 31 ft.; 8,400 d.w. tons. The propelling machinery consists of triple expansion, surface condensing engine, placed about amidships with cylinders 25, 41 and 68 in. diar., by 45 ins. stroke, and steam is supplied by 3 single ended Scotch boilers, each 10½ ft. long by 15½ ft. diar., working under natural draft. Her speed is 11 knots an hour at sea under load. She is equipped with the contraflo condensing and feed heating system, to ensure maximum economy in fuel consumption. The auxiliary machinery consists of a pair of feed pumps, general service pump, ballast pump and circulating pump, all made in Canada.



Steamship Alsace, 8,400 d.w. tons, built for Compagnie Francaise d' Armement d' Importation de Nitrate de Soude, Paris, France, by Canadian Vickers Ltd.

Cholberg Ship Co., Victoria, B.C.—The third 4 masted schooner built by this company for the Porsgrund Damp and Seil Co., Porsgrund, Norway, was launched Oct. 25, and named Vancouver.

J. Coughlan and Sons, Vancouver, B.C.—It is reported that this company is arranging to build a number of steamships on yard account unless the Dominion Government places further orders for steamships for Canadian Government Merchant Marine, Ltd., and that they will be of approximately 8,800 d.w. tons. A concrete dry dock is also planned for Burrard Inlet at an approximate cost of $3,658,000, to be 700 ft. long, 100 ft. wide at entrance, 32 ft. depth of water over sill at ordinary spring tide, and to accommodate any vessel which can pass through the Panama Canal. It is said a ship repairing plant will be built in connection with the graving dock and also a marine railway capable of handling vessels up to 9,000 d.w. tons.

Dominion Shipbuilding Co., Toronto, during this year, built and delivered 8 steel steamships of the single deck type, with poop, bridge and forecastle, and approximate capacity, including bunkers, of 3,550 tons each. Six of these ships were completed and delivered during the last six months, or at the rate of one a month. The company has under contract for 1920 delivery, 8 ships of a similar type, 2 of which are for Canadian Government Merchant Marine, Ltd., the balance being for private account. Two of the steamships built by this company during this year, viz.: s.s. Hessa and s.s. Skolma, are illustrated in this issue. Full descriptions of these vessels have appeared in previous issues.

Foundation Co., Victoria, B.C.—The contract for building 20 wooden steamships of approximately 3,000 d.w. tons each for the French Government was completed during October, with the launch of the last hull named Nouvelle Ecosse. The contract was entered into in Nov., 1918, and called for ships of the following dimensions: length, overall, 293 ft.; length, b.p., 276 ft.; beam, extreme, 47½ ft.; beam, moulded, 46½ ft.; depth, moulded, 23½ ft.; draft, 21¾ ft.; d.w. capacity, 3,000 tons; displacement, 5,655.5. The ships are of the single deck cargo type, with hulls of pine, hold beams, wood deck houses and rails. They have the cruiser stern, with long poop deck aft, and raised forecastle forward. There are 5 hatches, 4 watertight bulkheads, 1 bunker bulkhead non-watertight, and 1 screen bulkhead. Feed water tanks of full capacity are located aft of the engine room. Accommodation for officers is provided in deckhouse on poop deck and the crew are accommodated in the forecastle. There are 8 cargo winches, one of which is a warping winch, and the windlass of the forecastle head is for handling anchors and is also arranged for warping. The propelling machinery consists of two 550 h.p. vertical inverted, direct acting, 3 crank triple expansion marine engines, supplied with steam by 2 Scotch boilers, with a heating surface of approximately 3,500 sq. ft. for a working pressure of 225 lb. a sq. in. The ships are also equipped with electric lighting plant, and pumping and auxiliary machinery, all according to Bureau Veritas classification. A full description of these ships was given in Canadian Railway and Marine World for Dec., 1918.

Halifax Shipyards Ltd., Halifax, N.S.—As stated in Canadian Railway and Marine World for November, J. F. Paige, General Manager, Port Arthur Shipbuilding Co., Port Arthur, Ont., has resigned to enter the Halifax Shipyards' service as Operating Manager. He will have charge [illegible] the company's operating departments, including new construction and [illegible] E. McLurg continues as General Manager.

R. H. Howes Construction Co., Meteghan River N.S., launched the s.s. Granville III., at the end of October, for the Valley Steamship Co., to replace the s.s. Granville, which was sold recently to D. Owen and others for an expedition to Labrador. The keel of the new vessel was laid in August, and her machinery was installed when she was on the stocks, so that she was launched practically complete, the boiler alone remaining to be placed.

Steel Cargo Steamship Skolma, 3,550 d.w. tons, built by Dominion Shipbuilding Co., Toronto.

Steel Cargo Steamship Hessa, 3,550 d.w. tons, built by Dominion Shipbuilding Co., Toronto.

J. W. Kirkpatrick, Eatonville, N.S., launched the tern schooner J. L. Ralston, Oct. 30. She has been classed for 12 years with Bureau Veritas, and is 462 tons register.

E. LeBlanc and Co., Wedgeport, N.S., launched a 146 ton schooner early in November, which was named W. L. Mackenzie King. Her dimensions are, length, over all, 127 ft.; breadth, 25.2 ft.; depth, 11.6 ft. She was launched fully rigged and ready for sea, and loaded cargo at Yarmouth for the West Indies.

The Wm. Lyall Shipbuilding Co. Ltd., North Vancouver, B.C., is offering for sale its plant and equipment, including machine shop tools, joiners tools, derricks, hoists, boilers, engines, compressors, motors, etc. The yard consists of 6 shipbuilding ways, and was originally operated by Wallace Shipyards, Ltd. The Lyall Co. commenced operation there July 1, 1917, and built several wooden steamship hulls for the British Government, under orders from the Imperial Munitions Board, and later built auxiliary power schooners on its own account and some wooden steamship hulls for the French Government.

Polson Iron Works, Ltd., Toronto—On account of the completion of shipbuilding work, in hand at the time this company went into liquidation, the works were closed down, Oct. 29. Negotiations are being proceeded with for the disposal of the property by private sale, and we are advised that if they are not consummated, the assets will be advertised for sale under a court order.

Port Arthur Shipbuilding Co., Port Arthur—John H. Smith has been appointed General Manager, succeeding J. F. Paige, resigned to enter Halifax Shipyards Ltd. service. Mr. Smith was formerly General Superintendent, and later General Manager, of Western Drydock & Shipbuilding Co. at Port Arthur, being General Manager when the lake freight steamship, W. Grant Morden, and the lake passenger steamship, Noronic, were built by that company. He resigned soon after these ships were complete, and went into partnership with his brother, Allan A. Smith, as Smith Bros., marine architects, surveyors and appraisers, Cleveland, Ohio.

St. John, N.B.—It is reported from St. John, N.B., that a British shipbuilding firm will establish a large shipbuilding and repairing plant in the vicinity of the drydock now under construction at Courtenay Bay, St. John. The Courtenay Bay improvement work, and the construction of a drydock there are being carried out by the St. John Drydock and Shipbuilding Co., and it was announced some time ago that that firm intended laying out shipbuilding and repairing yards there.

St. Lawrence Dock and Shipbuilding Co. Ltd., has been incorporated under the Dominion Companies' Act with $100,000 authorized capital and office at Levis, Que., to buy in whole or in part the shipbuilding and repairing businesses carried on there by the National Shipbuilding Co. Ltd., and by W. H. Hutchinson, Goderich, Ont., and C. A. Chauveau, Quebec, Que. The incorporators are: W. H. Hutchinson, Goderich, Ont., C. A. Chauveau, A. Marshand and A. Rivard, Quebec, Que., and C. H. Carrier, Bienville, Que. The company is said to have secured several shipbuilding orders.

Shelburne Shipbuilders Ltd., Shelburne, S., launched the tern schooner Donald II at the end of October, for W. and T.

Hollett, Burin, Nfld. She is 230 tons register and has been classed for 12 years in Bureau Veritas.

Vancouver, B.C.—An unconfirmed Vancouver press dispatch says:—It is understood that David Rodgers, formerly Superintendent of the Skinner & Eddy shipbuilding plant at Seattle, will manage a large ship construction undertaking here. He is now on his way to Europe to obtain orders for ships. He is supported by $12,000,000 of United States capital, and his company already has a number of contracts closed, but wishes to have an assurance of two or three years work before they actually commence operations. Their plant will be located on a 160-acre plot on the north shore of Burrard Inlet, opposite the second narrows.

Yarrows Limited, Victoria, B.C.—The steel ferry, which this company is building for the British Columbia Government, as mentioned in our last issue, will be of the double ended type, arranged for carrying automobiles and farm produce on deck. The dimensions of the hull will be: length, 90 ft.; beam, 26 ft.; depth, 5 ft. The propelling machinery will consist of two 80 h.p. 6 cylinder, 4 cycle internal combustion engines, and the ferry will be equipped with 2 propellers at each end, connected to the engines by clutches, the engines being arranged to drive the ferry in either direction with the forward propellers idle. The ferry will be completely equipped by the builders, except for the engines, which will be installed at New Westminster.

Canadian Hydrographic Officers' War Services.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, has authorized the publication of the following information prepared by W. J. Stewart, Chief Hydrographer of the department, in connection with the service of Dominion Government hydrographic officers with the Admiralty during 1918-1919:

In Feb., 1918, the Naval Service Department learned that the British Admiralty Hydrographic Office was rather short of surveyors and advised the Hydrographer, Admiral Parry, that if necessary, the department could spare some of its staff from the hydrographic survey, for service in connection with the war. This offer the Admiralty gladly accepted and granted commissions in the R.N.V.R. to R. J. Fraser, J. L. Foreman, L. C. Prittie, M. A. MacKinnin, C. G. Smith, and W. K. Willis.

O. R. Parker, who was a Royal Naval Reservist before the war, was put in general service and later appointed to H.M. S. Endeavour, in the Mediterranean. After considerable service there he was transferred to home waters and served in the Straits of Dover on the surveying trawler Esther, and after the armistice to service mine clearing off the Yorkshire coast. He returned to Canada in Aug., 1919.

C. G. Smith, originally with the Canadian Expeditionary Force, and after transfer to the Admiralty Surveying Service, was employed at various points off the English and Scottish coasts, in connection with harbor improvement and aids to navigation demanded by the war. He also saw service on surveying ships mine laying.

L. C. Prittie was appointed to H.M.S. Endeavour in the Mediterranean, operating in the vicinity of Malta. After the collapse of the Turks, they were ordered to the Aegean and later to the Dardanelles, where they prepared an anchorage and laid moorings for the allied fleets off Constantinople. Just previous to this service the commanding officer of the Endeavour was killed on some special duty. Mr. Prittie also saw service on the Egyptian and Palestine coasts and returned to Canada in the early summer of 1919.

J. L. Foreman was appointed to H.M.S. Hearty, engaged in the lengthy and difficult re-survey work in the waters of The Wash on the east coast of England. Later the ship and party were transferred to the Scottish coast, working out of Inverness and Aberdeen. He returned to Canada in the spring of 1919.

M. A. MacKinnin went overseas originally with the Canadian Expeditionary Force and was transferred early in 1918 to the Admiralty surveying service employed in the Firth of Forth.

R. J. Fraser was at first attached to H.M.S. Osea coastal motor boat base on the Essex coast, as Assistant Surveying Officer to Lieut. Commander Maxwell, R.N. During the summer of 1918 he was appointed to the submarine boom defence at Brigthlingsea and put in charge of surveying in the Thames Estuary until the armistice was signed. In Nov., 1918, he and Mr. MacKinnin were appointed to the newly commissioned surveying ship Melisande and worked throughout the winter and spring at Folkestone in the Straits and the Medway River, surveying channels and mooring berths for the laying up of the Nore reserve fleet, and sounding out the Thames Estuary. In June, 1919, they were appointed to H.M. S. Kellett, the first of the new class of surveying ships designed to replace the ancient vessels still in service. They joined their ship on the Clyde and proceeded to Chatham, where the ship was prepared as an exhibit for the visit of the inter allied conference of hydrographers July 1. They made a survey of the approaches to Chatham dockyard, in connection with the berthing of the Queen Elizabeth class of battleships. They returned to Canada on the completion of this work.

W. K. Willis went overseas in Nov., 1918, there still being a shortage of trained Admiralty surveyors. He was appointed to H.M.S. Hearty and worked off the east coast of England and Scotland in connection with the mine clearance work in these waters returning to Canada in July, 1919.

Much valuable experience was gained by all the Canadian surveyors whilst employed with those of the Royal Navy. Besides being surveyors, they had at all times the many responsibilities of watch keeping officers, both at sea and in harbor, and quite often were in sole command of their respective ships. The interchange of ideas and insight into the methods of working and the standards of accuracy adopted by the surveyors of the two countries will go far in the future towards a clearer understanding of each others work.

Frauds by Stevedores—A Montreal press dispatch states that a system of defrauding the Wheat Export Co. has been uncovered at Montreal in connection with the improper handling of grain used for trimming vessels.

United States Shipping Board Notes.

The board has issued a statement that its fuel stations will soon girdle the world, and that U.S. steamships will be able to make a world circuit without needing to take fuel at other than U.S. owned fuel stations.

The House of Representatives' merchant marine committee, on Nov. 5, completed a bill for the disposition of the government merchant marine fleet, providing for continuation of the U.S. Shipping Board as a regulatory body, and prohibiting sale to foreign interests of ships needed in the U.S. fleet.

The German s.s. Vaterland, owned formerly by the Hamburg American Steamship Co., and seized by the U.S. Government during the war, has been handed over to the United States Shipping Board for operation, after having been used by the navy since April, 1917, as a troop transport. She has been docked at Hoboken, N.Y., to be re-equipped after her war service, and it is said that she will be placed in the Atlantic passenger trade.

The U.S. Chamber of Commerce has submitted to its 1,236 member organizations, its ocean transportation committee's report, recommending that Shipping Board ships, under 6,000 d.w. tons, be sold both to U.S. and foreign bidders; that ships over 6,000 tons be restricted to U.S. registry for a period of years, to protect U.S. ship owning interests, and that the government absorb the difference between cost and sale price of 2,000 ships owned by the board.

A. Washington, D.C., press dispatch of Nov. 20, stated that U.S. Shipping Board officials had announced that the former German s.s. Imperator would be tendered to Great Britain immediately, thus disposing of a controversy as to the future of this vessel. Action with regard to 7 other German steamships had not then been determined, it being deferred pending the final disposition of the tank steamships, U.S. owned, but which had been operating under the German flag, and which are now held by Great Britain.

C.G.S. Champlain, the Acting Minister of Marine stated in the House of Commons, Nov. 10, in answer to an enquiry that the government had received a demand from the Gulf of St. Lawrence Shipping & Trading Co., to charter the C.G.S. Champlain to the company, but the Marine Department had no present intention of chartering, or selling, the ship. In answer to an enquiry as to the government's intention in regard to the operation of a line of steamships by the government between Murray Bay and Tadoussac, the acting minister stated that the C.G.S. Champlain was then operating on that route.

In connection with the foregoing, we are advised that the C.G.S. Champlain, formerly running between Riviere Ouelle, Ste Irenee, Murray Bay and Cap a l'Aigle, has had her service extended to Tadousac calling at way ports and that she will be run on a tri-weekly service in connection with railway service from Murray Bay to Tadousac.

The C.P.R. s.s. Minnedosa, 13,972 tons, was the largest ship which received Lloyd's classification during 1918-1919. She was fitted with a combination of reciprocating and turbine engines.

Atlantic and Pacific Ocean Marine.

The Osaka Shosen Kaisha s.s. Borneo Maru reopened its regular service from Japan to Vancouver during October, the service having been interrupted by the war.

The British steamship Winnipeg, from Victoria, B.C., for Queenstown, Ireland, was reported disabled off the west coast of Ireland, Nov. 9. She was towed into Queenstown for repairs.

Canadian Pacific Ocean Steamships' s.s. Melita has been requisitioned by the British Admiralty to carry troops to India. This is the only C.P.R. steamship now under government requisition.

The Red Star Line announces that it will resume its sailings between New York and Antwerp, Belgium, via Southampton, Eng., Dec. 11. This will be the first of this line's sailings on this route since the occupation of Belgium by the Germans in 1914.

The British s.s. Rio Neigero, which grounded on Pointe des Monts, Que., Nov. 17, was examined by divers, but in order to make a more thorough examination, she was taken to the Davie Shipbuilding and Repairing Co.'s drydock at Lauzon, Que., Nov. 20.

The British s.s. Germanicus, owned formerly in Germany and latterly operated by the British Ministry of Shipping, ran ashore, Nov. 7, near Father Point, Que., and was reported to be in bad condition. She was built in 1901 at Stockton-on-Tees, Eng., for German owners.

The Grecian s.s. Platea, which was wrecked on Sable Island, early in November, is believed to be a total loss. She was owned formerly by Wm. Thomson and Co., St. John, N.B., and was built at Glasgow, Scotland in 1897. She was bound for Montreal, light, for a cargo for Greece.

A direct steamship service between Vancouver, B.C., Marseilles, France, and Genoa, Italy, was inaugurated early in November with the sailing of the Mont Cenis, a 4,900 ton ship operated by La Societe Generale de Transport Maritimes a Vapeur, for which Dingwall Cotts and Co. are local agents.

The Canadian Robert Dollar Steamship Co. which is reported to have bought frontage on the East River, New York, intends inaugurating a steamship line between New York and Shanghai, China, via the Panama Canal. Two steamships will be placed on this service for the present, and it is expected that a call will be made at San Francisco. This service will be additional to that operated across the Pacific by this company from Vancouver.

A London, Eng., press dispatch of Nov. 10, states that the British Parliament is to be asked to grant powers to make Galway on the west coast of Ireland, a trans-Atlantic port, which would thus reduce the sea passage between Canada and the United Kingdom by about 700 miles. It is said that in addition to the harbor works, the project involves the construction of a tunnel about 30 miles long between Ireland and Scotland, or the operation of a train ferry, so that passengers may be carried from Ireland to points in Scotland and England without transshipping. This matter has been under consideration for several years.

The s.s. Polar Land, owned by the United States Shipping Board, and operated by the West India Steamship Co., foundered off Sable Island, about 600 miles from Halifax, N.S., Nov. 9, when outbound to Genoa, Italy. She was towed into Halifax, and after being repaired, again sailed on Nov. 2. Wireless calls were received at Cape Sable station, and were picked up by the steamships Kanawha and Strathfillan, bound for London, Eng., and New York, respectively, and both vessels proceeded to the point indicated, but before reaching it, a further wireless message was received, to the effect that the vessel was sinking and had been abandoned, the crew taking to the boats. No trace of the vessel was discovered, nor have any of the boats or members of the crew been found.

Maritime Provinces and Newfoundland.

The steam tug Merrimac, owned by G. S. Campbell and Co., Halifax, N.S., was sunk in the harbor, Nov. 9, when she was struck by the s.s. Mesaba, which she was towing out of a berth.

Six U.S. steam tugs arrived at Halifax, N.S., Nov. 12, from the Great Lakes en route to U.S. ports for harbor use. They were built by the U.S. Government for use as mine layers for war purposes, but will now be diverted to peace time use.

The longshoremen at St. John, N.B., ceased work early in November on a demand for an increase in wages to 80c an hour. An offer of 65c an hour by the companies was declined, and on Nov. 15 a compromise was made, and a new rate of 70c an hour decided upon.

The s.s. Lady Evelyn, owned formerly by the Dominion Government, and operated latterly between Pictou, N.S., and the Magdalen Islands, by the St. Lawrence Navigation and Transportation Co., ran aground on a reef near Pictou Island, Nov. 13. She floated off without assistance, a little later, and it is reported was undamaged.

The two attendants at the lighthouse on Big Island, about 70 miles from Quebec, were reported to have been drowned while crossing from the lighthouse to the main land, during a gale in the early part of November. Complaints had been received that the light had not been burning for three nights, and an investigation by government officials found no one in charge at the lighthouse and the boat used by the men to get ashore was discovered upturned on the beach at Riviere Ouelle.

The litigation in connection with the collision of the steamships Premier and D. J. Purdy, in the St. John River, on Oct. 5, 1918, was concluded, Nov. 8, on an appeal from the New Brunswick Admiralty District Court to the Exchequer Court of Canada. The original judgment found both vessels to blame and condemned the s.s. D. J. Purdy to pay to the s.s. Premier one-half of the damages claimed. An apppeal and a cross appeal were entered, and final judgment was given Nov. 8, in favor of the s.s. Premier, allowing its appeal, and dismissing the cross appeal, both with costs.

Provinces of Quebec Marine.

A contract for repairs to the Public Works Department's dredge, no. 106, has been awarded to A. Lacouture, Sorel, Que.

Canada Steamship Lines' s.s. Malton ran on the rocks, near Lachine Rapids, early in November, through the breaking of the steering gear.

The Webster Steamship Co.'s s.s. Howard W. collided with the s.s. Lakeport in Coteau Lake, Oct. 30, both vessels being considerably damaged.

A Quebec press report states that a wharf to accommodate three ocean going steamships is being built at Baie des Ha Ha, which is considered as a step towards making a winter seaport in the province.

The corner stone of the Sailors' Memorial, erected by Montreal Harbor Commission at Victoria Pier, Montreal, was laid by the Prince of Wales, Oct. 31. He was given a card tray, made of Canadian gold, commemorating the occasion, on behalf of the Harbor Commissioners by W. G. Ross, Jr., the young son of the President of the commission.

Canada Steamship Lines Ltd., closed its Saguenay service, Nov. 1, when the s.s. Murray Bay made the last trip for the season. The steamships Quebec and Saguenay were scheduled to complete their season's service between Montreal and Quebec, about Nov. 28. The traffic on these routes was heavier this year than for several years past.

The Montreal Sand and Gravel Co.'s steam tug, St. Louis, sank in 30 ft. of water in Lake St. Louis, near Beauharnois, during a storm, Oct. 29. She was built at Buffalo, N.Y., in 1875, and practically rebuilt at Montreal in 1907, and was valued at $20,000. She was screw driven, by engine of 24 n.h.p., and had the following dimensions, length, 69.4 ft.; breadth, 15.8 ft.; depth, 7.2 ft.; tonnage, 56 gross, 35 net.

Ontario and the Great Lakes.

The Public Works Department received tenders to Nov. 29 for rebuilding the dam at Lakefield on the Trent Canal.

Canada Steamship Lines Ltd. has bought the s.s. Nipigon from U.S. owners, and has had her name changed to Maplehill, and registered her in Canada.

The C.P.R. s.s. Athabasca was docked at Collingwood, Nov. 10, for repairs made necessary by the ship touching bottom on a shoal in Lake Superior, several plates being damaged.

The International Ferry and Ry. Co.'s franchise for ferry service between Fort Erie, Ont., and Buffalo, N.Y., expires May 1, 1920. Negotiations are proceeding for a renewal of the charter and general improvement of the service.

The Chicago, Duluth and Georgian Bay Transit Co. is reported to have sold the two steamships North American and South American to the Goodrich Transit Co., Chicago, Ill. Prior to the war these ships called at Fort William.

The Hamilton Harbor Board made its annual inspection towards the end of October, after which it was announced that plans for the complete laying out of the harbor properties will be ready in December, and the work commenced early next year.

The Great Lakes Steamship Co., Cleveland, Ohio, has entered action, at Toronto, against the Maple Leaf Milling Co., for $40,516, for damages caused by the latter company's alleged default in unloading the s.s. John Dunn, Jr., at Port Colborne, Dec. 9, 1918.

The s.s. N. J. Nessen, owned in Chicago, Ill., which struck a rock and sank as she was entering the harbor at Meaford, Oct. 17, was raised by a wrecking crew from Midland, after which she left for Collingwood, under her own steam, where the necessary repairs will be carried out by the Collingwood Shipbuilding Co.

Canada Steamship Lines s.s. Ionic, with a general cargo from Montreal for Hamilton, ran aground in the Morrisburg Canal, Nov. 8, and suffered considerable damage. It is said that she will be floated as soon as possible, but that she will not be operated again this year.

The Dominion Government s.s. Tipperary, a small vessel which was utilized at Port Weller, in connection with the making of a harbor at the entrance to the Welland Ship Canal, was swept from her moorings there, during a storm, Nov. 19, and driven ashore. It is expected that she will be a total loss.

The Toronto Harbor Commission secured the consent of the City Board of Control, Nov. 10, subject to the city council's assent to the issue of $4,000,000 of debentures for harbor development. It was announced that 80% of the amount would be spent on revenue producing projects, and that the amount will be available for expenditure during 1920.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level, for October, as follows,—Superior, 602.47; Michigan and Huron, 580.63; St. Clair, 575.39; Erie, 572.50; Ontario, 246.35. Compared with the average October stages for the past 10 years, Superior was 0.15 ft. above; Michigan and Huron, 0.19 ft. above; Erie, 0.42 ft. above, and Ontario, 0.57 ft. above.

The s.s. Homer Warren, owned by Milnes Coal Co., Toronto, foundered during a storm, near Sodus Point, N.Y., Oct. 28, the crew of 9 being lost. She was a wooden vessel built in 1863, and was originally named Atlantic. She was rebuilt in 1900, and considerable repairs were made in 1911. Her dimensions were, length, b.p., 176½ ft.; breadth, moulded, 30 ft.; depth, moulded, 12 ft.; tonnage, 448 gross, 281 net. She was equipped with a steeple compound engine, with cylinders 21 and 42 in. diar., by 36 in. stroke, supplied with steam by a Scotch boiler 11½ x 13 ft. at 130 lb. She was owned originally in Saginaw, Mich., and was bought by the Peninsula Tug & Towing Co., of Wiarton, Ont., and later passed to the Milnes Coal Co.

British Columbia and Pacific Coast.

The C.P.R. is reported to be contemplating buying a steamship for the British Columbia Coast Service, to replace the s.s. Princess Sophia, which was lost in the Lynn Canal about a year ago.

Lumber shipments from British Columbia to Europe continue high; it being stated that about 12,000,000 ft. is en route to England, and that a further 40,000,000 ft. will be on the way before the end of the year.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., is reported to have stated, in connection with rumors, that the company would place its larger vessels on the Alaska run next year, that it has no intention of entering the Alaska tourist service.

Plans are reported ready for the construction of new offices for the Dominion Marine Department on the Songhees Reserve, Victoria. It is said that the building will cost between $50,000 and $100,000 and that work will be commenced as soon as there is some assurance that the Johnson St. bridge will be built.

British Shipping Losses During the War.

The Deputy Minister of Marine, Alex. Johnston, has issued the following statement:—

British merchant ships lost by enemy action during war, 2,479; gross tonnage, 7,759,090. British merchant ships destroyed by submarines, 2,099; gross tonnage, 6,635,059. British merchant ships destroyed by mines, 259; gross tonnage, 673,417. The remainder were sunk by torpedo boats, air craft, etc. Lives lost on foregoing, 14,287. Fishing vessels lost, 675; gross tonnage, 74,765. Lives lost on these, 434. Ships damaged but not sunk, 1,885; gross tonnage, 8,007,967. Lives lost on these, 592.

Losses of Canadian merchantmen, which are included in the total of British losses have not yet been segregated.

Against these losses the net merchant tonnage launched in the United Kingdom, for British owners, was: 1915, 374,000 tons; 1916, 386,000 tons; 1917, 752,000 tons. The launchings in Great Britain for foreign owners were: 1915, 36,000; 1916, 38,000, and 1917, 20,000 net tons.

World Shipbuilding Statistics.

The world's shipbuilding activities for the third quarter of 1919 include the building of 2,328 vessels, aggregating 8,048,592 tons, excluding Germany. In the United Kingdom there are vessels aggregating 2,816,733 tons under construction, an increase of 293,000 tons over the record for the preceding quarter. The United States ranks first in the extent of work under way. Japan, Holland and Italy, including Trieste, exceed Canada. Including approximately 87,000 tons for other British Dominions, the category under which Canada is placed ranks next to Great Britain, with a tonnage of 308,465. Canada's record for the quarter shows that 23 vessels with a total tonnage of 53,833 were being built on the Great Lakes. Coast shipbuilding amounted to 29 steel vessels with a total tonnage of 108,020, as well as 49 wooden steamships with a total tonnage of 48,950, and 26 wooden sailing vessels with an aggregate tonnage of 10,745.

Contracts Let for Marine Public Works.

The Dominion Public Works Department has let the following contracts:

Island of Orleans, Que.; repairs to wharf; Nap. and Jos. Trudel, Ste. Irenee, Que.; Oct. 31; schedule of prices.

Pointe Pizeau, Sillery, Que.; repairs to wharf; Jos. Gosselin, Ltd., Levis, Que.; Oct. 20; unit prices.

G. S. Tyrian; repairs; T. Hogan & Co.; Halifax, N.S.; Oct. 30; $19,890.

Naramata, B.C., construction of wharf; Sam Mills, New Westminster, B.C.; Nov. 3, 1919; schedule of prices.

St. John, N.B.; dredging in deep water berths; J. A. Gregory, St. John, N.B.; Nov. 4; class B, 33c per cu. yd. (scow).

Notre Dame des Sept Douleurs, Que.; extension to wharf; N. Letourneau and J. A. Fortier, Montmagny, Que.; Nov. 6; schedule of prices.

Vancouver Dry Dock Proposals—In addition to the three applications to the Dominion Government for aid in the construction of dry docks for Vancouver harbor, particulars of which were given in Canadian Railway and Marine World for November, pg. 621, it is stated that a proposal to build a floating dry dock of 12,500 tons capacity in Vancouver harbor is under consideration by interests in Seattle, Wash. It is stated that the dock will consist of 6 wooden pontoons, with steel wings, and cost approximately $550,000. It is said that a company will be formed for the purpose, by a union of Puget Sound shipbuilding concerns, and that financial assistance will be asked of the City of Vancouver.

International Mercantile Marine.—A press dispatch from London, Eng., Nov. 24, stated that control of the International Mercantile Marine Ltd., had been placed in British hands, by the decision of the directors to ratify an agreement with the British Admiralty and the Board of Trade, whereby it is made compulsory that British subjects shall manage the company's general business and vessels, and that the directors shall be British subjects and residents in the British Empire. It is also stated that in future the names of directors are to be submitted to the British Government for approval.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1919:

ARTICLES.		Can Canal	U.S. Canal	Total
	Eastbound.			
Lumber	m. ft. b. m.	2,188	[illegible]	[illegible]
Flour	Barrels	518,660	[illegible]	[illegible]

German Steamships Interned in South America to Be Repaired in Germany Instead of in Canada or the United States.

London, Eng., Oct. 26.—Further details of the story of the award by the Ministry of Shipping of a contract for the repair of 33 German steamships interned in South American waters to the Germans have come to light. They show that this decision was a very important one indeed, and one which sacrifices not only the interests of a Canadian company, but interests of Canada itself. The story as first told to the Montreal Gazette correspondent by a member of the Anderson Co., of Montreal and New York, made it appear that the company would be the only one to benefit if the offer to repair the vessels at cost plus $5 a ton was accepted. It now develops that a prior proposal of the company was to purchase the steamships for $30,000,000, the purchase money to be used as credit in Canada for the supply of foodstuffs to Germany, and some of the vessels to be allocated to Canada to augment her merchant marine. The German owners were willing to accept the offer on the first condition. The proposal was made shortly after the armistice, when Canada sadly needed the ships, and the Canadian Government therefore recommended it to the British Government, attaching a condition regarding the use of 10 ships for the Canadian Merchant Marine.

J. H. Anderson, a Canadian, and head of the company, appeared before the Ministry of Shipping under these auspices. He had sounded other allied governments regarding the plan and obtained their sanction. It only remained for Britain to consent. Canada's part in the negotiations was prompted solely by a desire to obtain extra tonnage for relief of her export trade, which was very badly needed at the time. It is said Premier Borden had personally interested himself in the matter for this reason. The Ministry of Shipping, however, flatly refused the offer. It is said the chief reasons were that it had been decided the ownership of the ships was still vested in Germany and that the allocation of German merchant tonnage had already been made. These arguments are rather remarkable since the German owners are willing to sell and the other allied governments are favorable to the Anderson Company's offer. It was after this refusal that Anderson made a new offer to repair the vessels and which, in turn, was rejected in favor of German interests.

The Anderson Company acted for the French Government during the war for the purchase of tonnage in America and also for the United States Shipping Board, as well as for the British Government. A precedent for the purchase of enemy shipping had also been established in 1917, when the U.S. bought Austrian and German ships. In any case, the second Anderson proposal for the repair of the ships seemed clearly a feasible one, which would place this particular tonnage at the disposal of Britain, and, as a Canadian, recommended by Canada, it might have been expected that the contract should be given to him, or at least his claims given priority over the enemy countries. It is also stated that the time taken, according to the German plans, to reconstruct this service will be greatly in excess of that of the Anderson Company, according to the particulars of the plans of repairs as covered by their proposal. The cost of these repairs, under the arrangement with Germany, cannot be much less than proposed by the company, inasmuch as the proposal called for on a basis of actual cost for all repairs and the company asked only $5 a ton to cover its outstanding expenses.

London, Oct. 30.—The Ministry of Shipping's reasons for awarding the contract for the repair of 33 German ships interned in South American waters to Germany instead of a Canadian firm were given to the Montreal Gazette's correspondent today by T. Lodge, Secretary of the Ministry. The statement contained one new point, that the vessels are to be towed all the way to Germany for repair. Its essence was that Britain did not wish to allow the purchase of the vessels in the interest of Canada because under the peace treaty it was expected these ships would be allocated to the United Kingdom, and in the second place, they did not consent to the repair of the vessels by a Canadian firm because it was considered the Germans could do the work better. As an allowance for the value of the vessels is to be made Germany, according to Mr. Lodge's statement, even though Britain is allocated them, and as the cost of the towing the vessels to Germany will be greater than the cost of repair in United States ports under the Anderson plan, it can scarcely be said an adequate case has been made out against a year's delay involved in the present arrangement, and the whole thing looks like a striking example of bureaucratic ineptitude.

Mr. Lodge said he was not acquainted with the first offer made by Anderson for the purchase of the ships. "However," he said, "it is easy to see that under the circumstances the British Government could not have authorized the sale of German ships to anyone. They were not our ships, they belonged to Germany."

"But were not the Germans willing to sell?" the correspondent asked.

"The Germans would have been glad to sell all their ships, but it was not in Great Britain's interests to allow it, inasmuch as we stood to gain a large portion of this tonnage under the peace treaty," the Secretary replied.

"But is not Germany to receive something in return?" he was asked

"Yes, their value will be allowed for," was the reply.

As to the offer of the Anderson Company to repair the ships, for cost, plus $5 a ton, Mr. Lodge said an agreement had been arrived at between the allies for the repair of the German ships in the Dutch West Indies by the British, in Spain by the French, and in South American waters by the United States. Most of the vessels allocated under the first two heads had been repaired, but the U.S. had done nothing with the ships in Chile and Argentina. Two months ago the responsibility for these ships was transferred to Britain. As the Germans were responsible for putting other of their tonnage in shape under the peace treaty, the Ministry thought it wise to include the South American ships. They will be towed to German ports and there repaired.

"But will that not be a very expensive proceeding?" the correspondent asked.

"The Germans who owned these vessels should be able to repair them," Mr. Lodge replied. "We will get the ships under the same conditions as the others regarding carrying foodstuffs to Germany."

The foregoing cablegrams are copyrighted by the Montreal Gazette.

The Toronto Harbor Commission's Work.

The following summary of what the Toronto Harbor Commission has done since 1912 at a cost of $9,764,800, has been given out:—

Acquired 257.5 acres of water lots by patent from Dominion Government.

Acquired 4,700 feet of frontage of riparian or water-frontage rights between Bathurst and York Sts.

Reclaimed 1,057 acres of waterlots and marsh lands, requiring handling of 16,000,000 cu. yds. of material, divided as follows: 11,000,000 cu. yds. for business and industrial properties, and 5,000,000 cu. yds. for park purposes.

The above yardage reclaimed 272 acres of park lands and 785 acres of business and industrial properties.

Built 13,000 ft. of approximately 2½ miles of commercial dock walls. With the exception of the Don retention walls, all of this work is in the inner harbor.

Built in the eastern harbor terminals—11,630 ft. of sidewalk, 9,350 ft. of concrete pavement of various widths, 9,500 ft. of storm sewers from 12 in. to 42 in. in diameter 4,500 ft. of storm overflow sewers, sizes 6 x 18 ft., 6 x 8 ft. and 6 x 16 ft.

Built administration buildings at Bay and Cherry Sts., together with miscellaneous construction buildings.

Built Sunnyside pavilion.

Built 6.6 miles of railway trackage, together with construction plant, such as derricks, scows, tugs, pile drivers, etc.

Acquired property and property rights in eastern harbor terminals.

Maintained harbor and dock properties in eastern harbor terminals dredging channels, sewer outlets, etc.

General engineering, surveys, construction, administration and overhead operating expenses.

Paid interest charges on bonds and sinking fund.

Steamships for Canadian National Railways Pacific Coast Service—An Ottawa press dispatch stated recently that the Minister of Marine has announced that he would call for tenders shortly for 2 new steamships to run on the triangular route between Vancouver, Victoria and Seattle, in conjunction with the Canadian National Rys. and in competition with the C.P.R., and that they would be 50 ft. longer than the C.P.R. ones, and several knots faster. It appears that this report may by, at the least, somewhat premature. The question of obtaining steamships to operate in connection with the C.N.R. on the Pacific coast has, no doubt, been under discussion, but as far as can be ascertained no decision has been arrived at. When the G.T. Pacific Railway becomes a portion of the Canadian National Rys. system, the G.T. Pacific Coast Steamship Co.'s ships, Prince Albert, Prince George, Prince John, and Prince Rupert, now operating between ports from Seattle on the south to Prince Rupert on the north, company's motorship, Tillamook, and its tug, Lorne, will come under the C.N.R. management.

The Dominion Government's Policy as to the Shipbuilding Industry's Future.

The Ottawa Journal, which is a Union Government supporter, said on Nov. 19 as follows:—"During the next week the government is likely to consider closely the question of its shipbuilding policy. The two ministers most interested are, naturally, the Minister of Marine, who has been responsible for the government's shipbuilding policy; and the Minister of Finance, who will have to provide the funds necessary for carrying it out. The government, so far, has built, or has under contract, over 50 ships. Some 12 or 15 of these are completed; and before the first of the year 10 or 12 more will be ready for sea. They are on various trade routes in all parts of the world and the government is well satisfied with the result. They have opened up business for Canada at a time when there was a world shortage of shipping; and it is estimated that the vessels will all have paid for themselves in three years time, if rates continue near to their present height.

"The question now arises as to future construction, and a continuation of the policy of building government owned vessels. It is felt in official circles that the government cannot indefinitely continue its building programme; and that, for the future, it should be a matter of private enterprise. However, with the present high cost of building and uncertainty as to the future, private capital is somewhat timid. This leaves the Canadian shipbuilders in an awkward position. They have built up on both coasts, and on the great lakes a magnificent industry, with a great organization, and it is felt that this should not be allowed to languish. If the government is not going to continue its building policy, and it apparently does not intend to do so, except on a limited scale, the question arises as to what form encouragement to shipbuilding should take in the future. This will be one of the matters under discussion by the ministry during the week.

"The plan of a bonus to the shipbuilding industry has been the one generally advocated; but there are strong objections to such a policy. The farmers particularly are against the bonusing principle in any industry. Two interesting suggestions have been put forward and there is good reason to believe that they will be given consideration by the ministers concerned. One proposal is that the government should assist ship buyers in financing. It is pointed out that in Great Britain there are companies which make a regular business of financing construction by underwriting the bonds of ship owning companies. There are no such facilities in Canada, as the industry is comparatively new. It is suggested that the government might undertake this method of encouraging the industry in preference to bonussing. Another suggestion is that the government should encourage the purchase of ships by private capital, and hence the shipbuilding industry, by allowing a substantial amount annually for depreciation, which should be taken into consideration in estimating business profits in income taxation. It is pointed out that at present the cost of ships is very high. Consequently private capital hesitates to commit itself too heavily in the purchase of vessels, fearing that in a few years hence values will be reduced heavily. In the meantime, it is admitted that while profits will be high, a large share of the same will go to the government. It is proposed, to meet this loss, that the government should allow a certain figure for this depreciation, which would otherwise go to the country in taxation.

"It is understood that the Minister of Marine may shortly call a conference of shipbuilders from both the Atlantic and Pacific coasts to consider the carrying out of the government's shipbuilding policy and also the bonussing of the shipbuilding industry."

We are advised that the Minister of Marine does not contemplate calling such a conference as referred to above, but that shipbuilders have asked for an interview with him and other members of the government in order to urge a bonus for steel shipbuilding.

Sorel Government Shipyard Superintendency.

The Civil Service Commission advertized recently for applications to be sent in by Nov. 24 by residents of the Province of Quebec only, for the position of shipyard superintendent for the government shipyard at Sorel, Que., Marine Department at an initial salary of $3,000 a year. Candidates must have education equivalent to graduation in engineering from a school of applied science of recognized standing; at least 5 years of experience in ship design and construction, 2 years of which shall have been in responsible charge of such work; thorough knowledge of various types of ships and ship machinery and the construction and repair thereof; firmness, tact, good judgment, and ability to manage men; preferably a knowledge of both French and English. No special age limit is fixed for this position, but the appointee must be of such an age as to ensure a reasonable period of satisfactory service after appointment. The successful candidate will be required to perform the following duties: under direction, to have charge of the Sorel shipyard; to be responsible for the design, estimate, construction, and repair of ships; to supervise the buying and safekeeping of stores and stock and the work of all employes, and to perform other related work as required. An examination will be held in education and experience along the lines indicated above. An oral examination of the best qualified candidates will be held, if necessary in the commission's opinion.

The vacancy was caused by the resignation of W. S. Jackson, who was appointed Superintendent, May 12, 1912.

F. A. Willsher, Assistant Naval Constructor, of the Marine Department, at Ottawa, has been acting as Superintendent.

The Head Lines s.s. Melmore Head, which left Montreal, Nov. 21, light, developed turbine trouble in the St. Lawrence, and was delayed at Quebec for four or five days making temporary repairs, after which she left under escort for Halifax, N.S., where permanent repairs were carried out, after which she proceeded to St. John, N.B., to take on a general cargo for Belfast, Ireland.

Exemption of Pacific Coast Shipping From Pilotage Dues.

The Canada Shipping Act, Revised Statutes of Canada, 1906, chap. 113, provides in sec. 477, what ships shall be exempted from compulsory payment of pilotage dues. Bill 42, passed by the Dominion Parliament at its recent session, provides further exemptions, by adding the following paragraph to the Canada Shipping Act, sec. 477, subsec. 1.

"(h) Ships registered in Canada employed in voyages between any port in the Province of British Columbia, and the port of San Francisco, or any port of the United States of America on the Pacific, north of San Francisco, and between any port in the Province of British Columbia and any port in Alaska."

On the motion for the second reading of the bill in the House of Commons, the acting Minister of Marine, Hon. A. K. Maclean, said: "The bill is to enable Canadian registered shipping operating between British Columbia and United States ports as far south as San Francisco, and sailing as far north as Alaska, to be relieved of pilotage. We are simply giving the shipping owned in British Columbia the same relief that years ago was given to Nova Scotia and New Brunswick and later to Quebec and Ontario shipping. As a matter of fact, the law has been evaded for many years in British Columbia, and the class of shipping to which this bill refers has not paid any pilotage.

Exchange on Freight Charges on Canadian Goods Collected in Great Britain.

Ottawa press dispatch, Nov. [illegible]:—The practice of shipping companies in Montreal, in applying the New York rate of exchange for determining freight charges collected in Britain on goods shipped from Canada, has brought a protest from the Canadian Trade Commission. The commission points out that British importers naturally believe Canada should be independent of the United States in these matters, and has asked the shipping companies to apply the Canadian rate of exchange. This would mean a saving of about 16c in the pound sterling, representing the 4% premium enjoyed in this country. The Canadian Government Merchant Marine Ltd., has already adopted the Canadian rate of exchange. It is now hoped that the Shipping Conference will take similar action.

Esquimalt Drydock.—As stated in Canadian Railway and Marine World for November, a Victoria, B.C., press dispatch of Oct. 16, said that, following negotiations which had been in progress for several weeks, Skinners Cove, Esquimalt, had been selected as the site of a drydock to be built by the Dominion Government, and we pointed out that we had previously been advised that the government in 1914 had acquired a site at Langs Cove, Esquimalt, for the purpose of erecting a drydock of the first class. Langs Cove is at the northeast corner of Esquimalt harbor, and Skinners Cove, where it is said the new drydock will be located, is adjacent to it. We are advised that the reason given for changing the site is in order to obtain a rock foundation for the keel blocks and also to secure a better entrance.

Cargo Shipbuilding in Canada for British Government.

Steamships War Hamilton and War Hydra, built by Polson Iron Works, Toronto, for the British Government, under order from the Imperial Munitions Board, have been sold to the Mount Royal Steamship Co., Montreal, and their names have been changed to Belchers and Baffin, respectively. They are of approximately [illegible],500 d.w. tons each. The War Hydra was launched Oct. 15, 1918, and the War Hamilton, Dec. 21, 1918. The latter was originally named War Aquila.

Steamship War Fury, 3,450 d.w. tons for British Government.

The s.s. War Fury, which was launched by the Midland Shipbuilding Co., at Midland, Ont., Oct. 16, and a full description of which appeared in Canadian Railway and Marine World for November, pg. 618, is the last of the steamships ordered by the Imperial Munitions Board to be built in Canada for the British Government. She sailed from Midland, Nov. 1, for Port Colborne, Ont., where she loaded grain for Montreal, and we were advised, Nov. 13, that she was at the latter port, in process of being drydocked for examination.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—The 2 steel steamships, War Magic and War Vixen, built for the British Government under order from the Imperial Munitions Board, completed their trial trips on Lake Erie recently. The War Vixen left Bridgeburg Nov. 13 for Port Colborne, where she took on a cargo for Montreal. The s.s. War Magic left Bridgeburg Nov. 20.

J. Coughlan and Sons, Vancouver, B.C. The s.s. War Chariot, which completed her trial trips, Oct. 29, is the last of the ships built for the British Government.

Mainly About Marine People.

Hon. C. C. Ballantyne, Minister of Marine, and of the Naval Service, who had been absent from Ottawa, since early in the summer, on account of illness, returned there Nov. 4, and resumed his official duties. He received a hearty ovation on appearing in the House of Commons on Nov. 6. He expected to visit the Pacific coast on official business after parliament was prorogued, but will probably not be able to go for some months, possibly not before spring.

J. R. Binning, heretofore Manager, Furness, Withy & Co., Montreal, has been appointed Manager for Canada and Newfoundland, vice J. E. Furness, who has returned to England. Prior to entering Furness, Withy & Co.'s service, he was in the Foreign Freight Department, C.P.R., and resigned in 1898 on his appointment as Assistant Manager, Furness, Withy & Co., Montreal. He occupied that position until 1903, when he was appointed Manager there. He is a director of Canada Steamship Lines Ltd., and Vice President of the Northern Navigation Co., one of the Canada Steamship Line's subsidiaries.

F. Carter-Cotton, who was first chairman of the Vancouver Harbor Board, died in Vancouver, Nov. 20. He went to Vancouver in 1886, and established the News-Advertiser the following year, subsequently occupying several elective positions.

Sir Nathaniel Dunlop, formerly Chairman, Allan Line Steamship Co., died in London, Eng., Nov. 16, aged 89.

M. P. Fennell, Secretary, Montreal Harbor Commissioners, was elected Secretary of the American Association of Port Authorities, at its eighth annual convention at Galveston, Tex., Nov. 10. The 1920 convention will be held at Chicago, Ill.

John E. Furness, Canadian Manager, and a director, of Furness Withy and Co., has resigned as Canadian Manager, and in future will reside in England. He was born in Sweden in 1878, and educated there. He entered Furness Withy and Co.'s service at West Hartlepool, Eng., and was transferred subsequently to the London office. In 1904, as head of the Freight Department, he came to Canada as Assistant Manager, and in 1905 was appointed Manager, and was located at Halifax, N.S. He was interested in civic affairs there, and was, for a time, one of the aldermen. He was also associated with the Board of Trade, the Sailors' Home, and several local organizations.

Capt. J. W. Harrison, heretofore master of various steamships operated by Furness, Withy & Co., has been appointed Marine Superintendent for Canada and Newfoundland, for the company, with office at Halifax, N.S.

Alexander Hector, who has been appointed Port Agent, Canadian Government Merchant Marine, Ltd., Halifax, N.S., was born there, Sept. 12, 1882, and entered transportation service in June, 1898, since when he has been to Oct., 1902, clerk, freight department, Dominion Atlantic Ry.; Nov., 1902, to Oct., 1906, clerk, freight department, Intercolonial Ry.; Nov., 1906 to Nov., 1917, telegraph operator, city ticket and express agent, and chief clerk, Traffic Department, consecutively, Halifax and South Western Ry.; Nov., 1917 to Jan., 1919, Travelling Freight and Passenger Agent, Canadian Northern Ry.; Jan. 1, to Sept. 30, 1919, Travelling Freight Agent, Canadian National Rys., all at Halifax, N.S.

Hiram McLean, who died at Truro, N.S., Nov. 7, aged 49, from typhoid fever, was a partner in the shipbuilding firm of McLean and McKay, with shipyard at Economy, N.S.

Patrick John Melvin, who has been appointed Contracting Freight Agent, Marine Navigation Co. of Canada, which operates from Montreal during the summer and West St. John, N.B., during the winter, to St. Nazaire, France, was born at Trim, Ireland, Mar. 3, 1872, and entered railway service in Oct., 1888, since when he has been, to Aug., 1889, junior clerk, Freight Department, Great Northern Ry. of Ireland, Omagh; Aug., 1889 to Mar., 1894, clerk, Freight Department, same road, Newry; May, 1894 to Apr., 1898, clerk, Audit and Claims Department, G.T.R., Montreal; Apr., 1898 to Feb., 1906, clerk, Foreign Freight Department, C.P.R., Montreal; Feb., 1906 to Sept., 1918, chief clerk, Export Freight Department, same road, Montreal; Sept., 1918 to Mar. 15, 1919, acting Export Freight Agent, same road, Montreal; Mar. 15 to Nov., 1919, Export Freight Agent, C.P.R., Montreal.

J. F. Paige, whose resignation as Manager, Port Arthur Shipbuilding Co., Port Arthur, Ont., was announced in our last issue, together with his appointment as Operating Manager, Halifax Shipyards, Halifax, N.S., was born at Pictou, N.S., Dec. 13, 1873, and commenced his shipbuilding career with the Truro Foundry & Machine Co., Truro, N.S., as an apprentice, and entered the engineering department in 1892. In 1896 he was employed by the Perth Amboy Shipbuilding Co. of New Jersey and returned to Truro in 1897. From 1898 to 1902 he was consecutively junior and chief engineer, Dominion Atlantic Steamship Co., and from 1904 to Dec., 1916, was Superintendent, Fore River Shipbuilding Co., Boston, Mass. He was appointed Manager, Port Arthur Shipbuilding Co., in Feb., 1907, and during the time he was with the company, 27 ships were launched.

Capt. J. R. Philp, who died at Toronto, Nov. 19, aged 85, was stated to be one of the oldest sailors in Canada. He came to Canada from England in the early days, in a sailing vessel which took 19 days to make the trip, a comparatively fast time. He served as master of a number of boats on the Great Lakes and retired from active service in 1884.

G. D. Robinson, whose resignation as European Freight Agent, Canadian Pacific Ocean Services, Ltd., Montreal was announced in our last issue, has opened an office at Coristine Building, Montreal, where he is carrying on business as steamship freight broker, shipping, forwarding and chartering agent.

H. B. Smith, President, Collingwood Shipbuilding Co., who left on Sept. 15 for England and France, in connection with shipbuilding matters, returned to Owen Sound, Ont., Nov. 19. He was accompanied on his trip by J. S. Leitch, General Manager, Collingwood Shipbuilding Co., and Paul G. Chace, Vice President, Port Arthur Shipbuilding Co.

Cameron Stanton, Assistant Deputy Minister of Marine, has returned to Ottawa, after a brief visit to England.

Capt. W. Turnbull, master of the White Pass and Yukon Ry. s.s. Dawson, died suddenly at Vancouver, Oct. 30, very shortly after leaving the s.s. Princess Mary, on which he had come down from the north. He was born in Scotland in 1868, and had been in W.P.& Y.R. service since 1898, during which time he had been master of practically every one of its vessels on the Yukon River.

R. C. Vaughan, Assistant to President, Canadian National Rys., left Toronto, Nov. 9, for Vancouver, accompanied by D. O. Wood, Traffic Manager, Export & Import Department, C.N.R., on business connected with Canadian Government Merchant Marine Ltd., and the operation of its ships which are being built at the Pacific coast. They are expected to return to Toronto early in December.

Col. A. W. R. Wilby, C.B.E., who returned to Canada recently after nearly four years on active service, has resumed his position as District Engineer, Dominion Marine Department, Victoria, B.C. He left Canada in Mar., 1916, with the 62nd Battalion, C.E.F., which was broken up in England shortly after, and he was transferred to the 48th Battalion (3rd Canadian Pioneers, and went to France, where he served as a major until May, 1917, when the battalion was broken up. He was then appointed Deputy Assistant Director, in connection with the labor directorate for the Canadian Corps, and on its reorganization in the early part of 1918, he was promoted to Colonel with the title of Labor Commandant, at Canadian Corps headquarters. He was mentioned in dispatches on two occasions and was made a Commander of the Order of the British Empire for services at the front.

Vancouver's Recommendations for Harbor Improvements, Etc.

The Canadian Manufacturers' Association's British Columbia Branch, has made a number of recommendations to the Vancouver Harbor Commission, for the improvement of harbor facilities there. These recommendations, which were to be taken up with the Dominion Government, by the Commission, during its visit to Ottawa in November, comprise the construction of large dock and freight sheds on Burrard Inlet; a terminal railway system, as recommended in what is known as the Swan report; provision for 2 fireboats to be equipped for no other purpose than to protect wharves and industries on False Creek and Burrard Inlet; keeping of the port charges as low as possible, to induce trade; and the submission that dredging and maintenance should not be a direct charge upon the port's traffic, but should be met out of general revenue; immediate construction of a dry dock capable of repairing any vessel which might come into the port; all possible steps to be taken to encourage export trade, the operation of government owned steamships and the continuation of shipbuilding.

Non Rolling Ship—E. A. Sperry is reported to have stated, at the Society of Naval Architects and Marine Engineers' annual meeting in New York recently, that plans are in progress for extensive adoption of a new principle so that benefits and economies resulting from a ship guaranteed against rolling will be available to the travelling public.

Gladys H.-Eric W. Collision—An enquiry was held at Ottawa, Oct. 20, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Capts. C. Lapierre and C. J. Stuart as nautical assessors, into the collision between the barge Gladys H., tow and the Webtser Steamship Co.'s s.s. Eric W., in the Lachine Canal recently. The court found that the master of the Eric W. violated article 29 of the Rules of the Road for the Great Lakes, causing the barge Gladys H. to swerve to port, when her steering was nullified through her keel nearing or touching bottom, due to disturbed water caused by the Eric W. The certificate of the master of the Eric W., Capt. Marchant, was suspended for one month from its receipt by the court, and he was cautioned that the regulations framed for guidance of navigating canals and narrows stretches of water must be strictly adhered to.

Edward Stone, General Advertising Agent, Canadian Pacific Ocean Services Ltd., Montreal, formerly General Agent, Passenger Department C.P.O.S., Yokohama, Japan, in sending in a subscription order, writes: "I enclose my subscription to your valuable paper. It is on file in the Yokohama office and is read very diligently by the staff there."

Shortage of Certificated Masters and Mates.

The acting Minister of Marine, on Nov. 5, moved, in the House of Commons, as follows: "That it is expedient to amend the Canada Shipping Act, chap. 113 of the Revised Statutes, 1906, by providing that,—

"1. Notwithstanding any provision in the Merchant Shipping Act, 1894, or any amendment thereto, or in the Canada Shipping Act, or any amendment thereto, the Minister of Marine and Fisheries of Canada may grant permission to the following vessels to clear from any port in Canada on any voyage even though the master and mate of any such vessel, or either of them, do not hold valid certificates of competency or service, provided that the said minister is satisfied that properly certificated men cannot be procured and that the acting master and mate are competent and have sufficient experience:—

"(a) Canadian registered vessels other than vessels carrying passengers;

"(b) Canadian registered vessels carrying passengers not exceeding 100 registered tons, which ply exclusively within what the Minister of Marine and Fisheries may deem to be sheltered waters within the inland waters or on the sea coasts of Canada;

"2. These provisions shall continue in operation for one year from the date of the passing of the act to be based upon this resolution and no longer."

The resolution was carried, and a bill founded on it was read a first time, Nov. 7. On the second reading of the bill, Nov. 8, the acting Minister of Marine said that if the bill was acceptable, he purposed amending it, so that it would be restricted to sailing ships, and operative only for 6 months. During the war an order in council was passed permitting vessels to sail from Canadian ports without certificated masters and mates, if it were shown that it was not possible to get them, and that the men engaged were competent. Now it is impossible to get the required number of certificated masters and mates for trans-Atlantic voyages, there being more Canadian ships, particularly sailing ships, in trans-Atlantic business than for the past 25 years. In the U.S., sailing ships up to 700 tons gross can leave any U.S. port without certificated officers, and in the United Kingdom any freight vessel may engage in the coasting trade without certificated officers. All that the bill was intended for was to continue for 6 months after the proclamation of peace what was permitted under the war time order in council, but if any substantial objection developed, the bill would be withdrawn.

There was a considerable amount of objection from members of the opposition, chiefly on account of the late date on which the bill was brought forward, precluding what was regarded as full and adequate discussion, and the bill was withdrawn.

The White Transpportation Co.'s s.s. H. E. Runnels of Buffalo, N.Y., ran aground at Grand Marais on the south shore of Lake Superior, Nov. 13, during a heavy storm and was pounded to pieces, the crew being rescued by coastguards. She was built at Port Huron, Mich., in 1893. The hull was of wood, and her dimensions were: length, b.p., 182 ft.; breadth, moulded, 35 ft.; depth, moulded, 13 ft.; tonnage, 889 gross; 629 net.

Legislation and Regulations Respecting Compulsory Equipment of Radio Telegraph Apparatus on Ships Registered in Canada and Great Britain.

Canadian Railway and Marine World has been favored by the Deputy Minister of Naval Service, G. J. Desbarats, C.M.G., with the following summary:—

1.—Canadian legislation and regulations.

(a) Radiotelegraph Act, Statutes, 1913, chap. 43, sec. 4. The provisions of this section are limited to vessels carrying or licensed to carry passengers. Vessels coming under one of the following categories must carry a radiotelegraph equipment and one operator:

When carrying 50 or more passengers and crew and plying between ports more than 200 miles apart.

When carrying 250 or more passengers and crew and plying between ports more than 90 miles apart.

When carrying 500 or more passengers and crew and plying between ports more than 20 miles apart.

The above provisions are subject to a few minor exceptions.

(b) Temporary war measures—Defence of Canada order 23A, effective Jan. 1, 1918, prescribes that "Every steamer registered in Canada of 1,600 tons, plying to Europe, must be equipped with a radiotelegraph set and carry two certificated operators." This order automatically cancels when the War Measures Act is annulled.

2. **International regulations**—The provisions of the Convention on Safety of Life at Sea, 1914, prescribed that "All merchant ships which carry 50 or more persons, whether they carry passengers or not, must carry a radio equipment and one or two operators, subject to the exception that any of the contracting parties may exempt ships which in the course of their voyage do not go more than 150 miles from the nearest coast."

This convention, while signed by all the leading mercantile powers, including Canada, has not yet been declared effective; it will probably become effective in Great Britain on Jan. 1, 1920.

3. **Existing British Legislation**—(a) Defence of the Realm Regulation 37B, 1916, prescribed as follows:—"Every British ship of 3,000 gross tonnage or more which has been granted a license to install wireless apparatus, must be fitted with such apparatus and provided with one certificated operator."

(b) On Oct. 23, 1917, the provisions of the above regulation were amended as follows:—"Every British seagoing ship of 1,600 gross tonnage or more, which has been granted a license to install wireless apparatus, must be fitted with such apparatus and provided with two certificated operators." This latter regulation is still in effect (Nov., 1919).

(c) Canadian Regulation 23A, mentioned in paragraph 1 (b), is practically identical with this British Regulation, with the exception that the provisions of our regulation are limited to Canadian ships plying to Europe or in European waters.

4. New Legislation by Great Britain—"An act to make further provisions with respect to wireless telegraphy on ships" has been passed by the British Parliament. It becomes effective on the cancellation of the British Defence of the Realm Regulation dealing with the compulsory equipment of radiotelegraph apparatus.

Every seagoing British passenger steamer and every seagoing British steamer of 1,600 tons gross or upwards, shall be provided with a wireless equipment and with one or more certificated operators, the number of operators to be governed by the regulations contained in the convention for Safety of Life at Sea.

The Board of Trade is given power to exempt any ships or classes of ships in which they consider the installation of a radiotelegraph equipment is unnecessary or unreasonable.

A passenger steamer is defined as one which carries more than 12 passengers.

Three months after the act comes into force, its provisions shall apply equally to ships registered in foreign countries and to British ships registered elsewhere than in the United Kingdom.

With the annulment of the Canadian War Measures Act, in the near future, compulsory equipment in Canada will be limited to passenger ships affected by the provisions of the Radiotelegraph Act, Sec. 4, and will, accordingly, be less drastic than the British legislation in this reference. Canadian ships plying to Great Britain will, nevertheless, be affected by the new British legislation.

It is probable that the convention for Safety of Life at Sea will be approved by Canada in the near future, and when its provisions are placed in effect, every ship carrying more than 50 persons, and plying on voyages which take her more than 150 miles from the coast, must be equipped with wireless apparatus.

The Great Lakes Transportation Co. has bought the s.s. F. P. Jones, from the United States Shipping Board. She was owned formerly by Geo. Hall Coal Co., Ogdensburg, N.Y., and is now at Midland, Ont., where alterations are being made by the Midland Shipbuilding Co. She is a steel ship and was built in 1913 at Wyandotte, Mich., on the channel system, with steel tank top where no wood ceilings are fitted. She has 3 watertight and 2 non-watertight bulkheads, stee lboiler house, steam pump well and electric light. Her dimensions are: length, 244 ft.; breadth, 43 ft.; depth, 21 ft.; tonnage, 1,706 gross; 1,059 net. She is equipped with triple expansion engines, with cylinders 18, 29 and 48 in. diar. by 40 in. stroke, 900 i.h.p., at 85 r.p.m., supplied with steam by 2 Scotch boilers, each 12 x 11½ ft., and 170 lb. She has been renamed Glencadam, and transferred to the Canadian register, and will be operated to South American ports.

Canada Steamship Lines' Earnings—A London, Eng., cablegram of Nov. 19, credits W. Grant Morden, M.P., one of the company's London advisory committee, with stating that the company had had record earnings for this year, and that there would certainly be a bonus to the shareholders.

Seal Cove Marine Ways, Ltd., has been incorporated under the British Columbia Companies Act with $10,000 authorized capital, and office at Prince Rupert, B.C., to own and operate dry docks, marine ways, shipbuilding plants, steam and other vessels, etc.

Gulf of St. Lawrence Shipping and Trading Co.'s Service.

A recent press report from St. John's, Nfld., said:—"The Gulf of St. Lawrence Shipping and Trading Co. will have a regular fortnightly service of steamships between Montreal and St. John's next summer. The St. John's agents are A. Harvey & Co., who have the use of Shea's wharf for discharging cargoes. All this autumn they are running the service under a temporary arrangement with United States steamships. The Ellerslie and Lake Elon have already made trips from Montreal with general cargo, but instead of going back to Montreal, return to the United States. The s.s. Galatea is now on the way here. The two regular boats for the service are being built and will be 2,800 tons each, with first class accommodation for about 60 passengers. One will be ready by June next, the other in July.

"The company's travelling agent, Mr. Keating, of Montreal, who is now in the city, states that the new ships will be up to date in every particular and special attention will be given to passenger accommodation."

Canadian Railway and Marine World understands that the Gulf of St. Lawrence Supply Co. made an offer to the Marine Department recently for the 2 steel cargo steamships of approximately 2,800 d.w. tons each, which are being built by Nova Scotia Steel and Coal Co. for Canadian Government Merchant Marine, but that it was declined.

The s.s. John Owen, owned by the Owen Transportation Co., Detroit, Mich., is presumed to have been lost during a storm on Lake Superior, in the early part of November, together with her crew of 22. Search has been made for any trace of the ship or crew, and some wreckage has been found southwest of Caribou Island, bearing the vessel's name, but no trace of the crew has been discovered. The s.s. John Owen was built at Wyandotte, Mich., and was of composite construction, with diagonal strapping on frames, 2 watertight bulkheads, steel boiler house, steam pump wells, bow sheathed for operation in ice, and with center board and electric light equipment. Her dimensions were: length, b.p., 281 ft.; breadth, moulded, 41 ft.; depth, moulded, 21 ft.; tonnage, 2,127 gross; 1,609 net. The propelling machinery consisted of triple expansion engines, with cylinders 19½, 33 and 56 in. diar., by 42 in. stroke, 1,500 i.h.p. at 80 r.p.m., supplied with steam by 2 Scotch boilers each 12½ x 11 ft. at 160 lb.

Manchester Liners, Ltd., report for the year ended June 30, shows that after providing for depreciation, and all charges, and including balance brought forward, there was a surplus of £137,369. Of this, £50,000 has been placed to reserve account, a dividend of 15% paid absorbed £66,780, and £6,678 was placed to first debenture reserve fund, leaving £13,911 carried forward to the current year. The company's steamships were operated during the year free of serious accident, and two new ones were added to the fleet, viz.: Manchester Brigade and Manchester Division. The company operates between Manchester, Eng., and Canada.

The Marine and the Naval Service Departments, Ottawa, have moved their offices, from Mackenzie Ave., to the new Hunter building, O'Connor St.

Canadian Notices to Mariners.

The Marine Department has issued the following notices:—

Ontario—Lake Huron and Georgian Bay, sailing directions—A new edition of "Sailing Directions for Canadian shores of Lake Huron and Georgian Bay," has been published; copies may be obtained from the Hydrographic Survey, Naval Service Department, Ottawa, for 25c each.

Ontario—Kaministikwia River, Fort William—The small shoal extending out from the south side of the Kaministikwia River at the lower end of the Westport turning basin has been removed by the Public Works Department to a depth of 25 ft. The temporary black spar buoy marking the shoal will be discontinued.

United States—Lake Superior, St. Marys River, Cedar Point range lights moved to Round Island—Front light, on northerly end of Round Island; fixed white light; 2,500 candles; elevation, 50 ft.; black, pyramidal, skeleton structure, with white slatted oval daymark. Back light, on southerly end of Round Island; fixed white light; 2,500 candles; elevation, 70 ft.; black, pyramidal, skeleton structure, with white slatted oval daymark.

Nova Scotia—Bay of Fundy, Minas Basin—The operation of lights and fog alarms in the Bay of Fundy and Minas Basin on the north coast of Nova Scotia, east of Margaretville, with the exception of Ile Haute, will be discontinued while navigation is closed for the winter, normally from about Jan. 10 to about April 1, each year, without any special notice being given. Any or all of these lights may be relit, at any time, if the Department deems it in the best interests of navigation through the absence of severe weather or if navigation is possible.

Quebec—Gulf of St. Lawrence, Magdalen Islands, Grand Entry Harbor—New back range light to be established, on or about Nov. 1, 1919; 240 ft. 40° 30′ (N. 67° E. mag.) from front light. Fixed red catoptric light shown from a locomotive headlight lantern; elevation, 37 ft.; pole, with shed at base, on concrete foundation; color, white.

Quebec—Chaleur Bay, St. Omer—The outer portion of the breakwater at St. Omer has been carried away and the lighthouse now stands on the extremity of the remaining portion, 135 ft. shoreward of its former position. Mariners should give the light a berth of 150 ft. until the debris has been removed.

North Atlantic Ocean—Floating mine—A floating mine was sighted on Oct. 9, in lat. n. 45° 39′, long. w. 29° 19′.

North Atlantic Ocean—Floating derelict—The wreck of the s.s. Venezina, which was abandoned on fire in lat. n. 43° 32′, long. w. 45° 4′, is reported to be a menace to navigation.

Nova Scotia—Port Medway, Voglers (Conrads) Cove—Buoys established on west side of channel leading up to the cove; wooden spar buoy; red. On east side of channel at entrance to cove; wooden spar buoy; black. On west side of channel inside the cove; wooden spar buoy; red.

Prince Edward Island—Murray Harbor, Irvine Point—A channel, 65 ft. wide and 7 ft. deep, has been dredged by the Public Works Department, through the bar in front of Irvine lane, about 800 ft. west of Irvine Point. The dredged channel begins at the north side of the bar and extends shoreward for 1,000 ft. The inside 200 ft. has been dredged to a width of 200 ft. to form a basin.

Prince Edward Island—Naufrage Pond—The channel between the breakwaters at the entrance to Naufrage Pond, and the basin inside the breakwaters, have been dredged by the Public Works Department to a depth of 5 ft.

Quebec — River St. Lawrence, St. Thomas channel — Black gas buoys 73½B, 75B, and 77B, have been moved southward 250 ft. giving the channel a width of 750 ft.

Ontario—Great Lakes and River St. Lawrence—All Canadian lights and fog alarms on Lake Superior will be kept in operation this autumn until the close of navigation, with the exception of Caribou Island, Quebec Harbor, Davieaux Island, and Michipicoten Island east end, which will be closed on Dec. 15, and with the exception of Gargantua, Michipicoten Harbor, Corbeil Point, and Ile Parisienne, which will be closed on Dec. 20. Also Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island, and Victoria Island, which will be closed after the last sailing to or from Port Arthur and Fort William.

All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario, and connecting waters, will be maintained in operation until the close of navigation, excepting the Southeast Shoal lightship, Lake Erie, which may be removed after Dec. 1, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All Canadian lights on the River St. Lawrence will be maintained in operation until the close of navigation.

All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

New Brunswick—Bay of Fundy, Mascabin Point—The steam fog horn has been replaced by a diaphone, operated by air, compressed by an oil engine, giving one blast 3½ seconds duration every 30 seconds.

Nova Scotia—Green Island Fog Alarm, additional particulars. On west side of island. Bombs exploded every 15 minutes, and every 5 minutes when vessels' signals are heard in dangerous proximity.

United Kingdom Wireless Telegraphy Requirements—This contains the text of the Merchant Shipping (Wireless Telegraphy) Act, 1919, an abstract of which is given under "Legislation and Regulations Respecting Compulsory Equipment of Radio Telegraph Apparatus of Ships Registered in Canada and Great Britain," on another page of this issue.

Elder, Dempster & Co., Montreal, state that they are replacing part of their heavy losses sustained during the war and have already added to their fleet 5 new steamships of 10,500 d.w. tons each, viz.: New Brunswick, New Texas, New Toronto, New Georgia and New Mexico, also the s.s. Bassa, of 8,500 d.w. tons. They are also building several other steamships, including some 12,500 ton ships, which are expected to be ready next spring. The steamships mentioned above are specially adapted to suit the Canadian South Africa service.

Upbound and Downbound Courses on Lakes Huron and Superior.

On the Dominion Marine Association's recommendation resulting from consideration given to correspondence on the subject, the Canadian Lake Protective Association decided recently that the observance of separate courses upbound and downbound in Lake Huron and on the south shore of Lake Superior shall be an official requirement under normal conditions for all vessels enrolled in the association, the one exception to the rule being that in stress of weather the master should follow his own judgment as to deviation from the prescribed courses. The regulation as to Lake Huron has been in force in the association for a number of years, and masters are directed to pay careful attention to the rule with a view to additional safety for their ships.

On Lake Huron a line is to be drawn on the chart from Detour Passage to a point 10 miles e.n.e. of Thunder Bay Island light, thence to a point 10 miles off Harbour Beach, thence to Lake Huron light vessel; and on Lake Superior a line is to be drawn from point of departure to a point 6 miles north of Devil Island, thence to a point 10 miles north of Copper Harbour, and thence to Whitefish.

All upbound ships are to keep to the westward of this line on Lake Huron and to the southward on Lake Superior, and all downbound ships are to keep to the northward of this line on Lake Superior and to the eastward on Lake Huron, giving the line a good margin of leeway, and deviating from this rule only when in the master's judgment weather conditions require it.

Improvement Expected in Atlantic Shipping Situation.

London, Nov. 4.—T. Lodge, Secretary to the Ministry of Shipping, says a steady improvement is expected in the Atlantic shipping situation. The ministry will not state what percentage of liner cargo space it will require for December, but thinks the situation will gradually improve during the winter. The ministry will not carry Canadian wheat for the allies in controlled cargo space. This means that Belgium, France, Italy and Portugal, and possibly Poland, will have to make their own arrangements if they take Canadian wheat. The Hudson's Bay Co. will probably carry the French and Belgian wheat and the Italians will put on a service of their own. Contracts for the supply of large quantities of Canadian flour to Scandinavia are under negotiation and separate arrangements are necessary for this. Special copyright cablegram to Montreal Gazette.

Trent Valley and Welland Ship Canals. J. A. Campbell, M.P. for Nelson, Man., asked in the House of Commons, Nov. 10, whether the financial condition of the country permits of the expenditure on the Trent Canal of $1,[illegible],000, and on the Welland Ship Canal of $[illegible] this year. The Minister of Justice replied as follows: "Work on the Trent and Welland Ship Canals, together with other works were closed down during the war. During the current year work was resumed on the Welland and Trent Canals for the purpose of giving work to the unemployed civilians and returned soldiers in the districts affected."

Rumored Shipping, Shipbuilding and Steel Merger in Canada.

Reports are current of a merger of steel and shipbuilding interests in Canada, it being stated that the companies involved are, Dominion Steel Corporation, Nova Scotia Steel and Coal Co., Steel Co. of Canada, and Canada Steamship Lines. At a meeting of the directors of the Dominion Iron and Steel Co., one of the constituent companies of the Dominion Steel Corporation, at Montreal, Nov. 20, it was announced that it had been decided to sell 50,000 shares of common stock in the Dominion Steel Corporation Ltd., to a London, Eng., syndicate, at $70. Mark Workman, the President, in making the announcement, stated that it was felt that the business could be greatly extended and assisted by enlisting the cooperation of men influential in shipping, coal and steel circles. He also stated that an advisory committee for the purpose of co-operating with the Dominion Steel board in connection with its interests in Great Britain, would be formed. The syndicate mentioned includes Sir William Beardmore, of William Beardmore and Co., shipbuilders, etc., Glasgow, Scotland; Lord Furness, head of Furness Withy and Co., and Honorary President, Canada Steamship Lines Ltd.; Sir Trevor Dawson, of Vickers Ltd., Canadian Vickers Ltd., and of the Canada Steamship Lines, London advisory board; Sir Harry McGowan, Benjamin Talbot and Henry Steel.

British Columbia Coast Steamship Service, C.P.R.—J. W. Troup, Manager, Victoria, B.C., authorized the statement, in August, that the construction or acquisition of further car barges and passenger steamships for the company's service was being considered, but that no definite plans had then been made, and no expenditure had been authorized. We are now advised that nothing definite has been decided on and that the cost of construction appears to be almost, if not absolutely, prohibitive.

The Dredge Canada P.W.D. No. 7, was offered for sale by tender, by the Public Works Department up to Nov. 27, as she lies moored at Liverpool, N.S. She was built of iron in 1872 at Renfrew, Scotland, and is being sold, as it is found that it is no longer economical to operate her as a dredge, but that it may be possible to convert her into a steamship or a barge. She is 132 ft. long with 20 ft. beam. There are 2 simple engines 22 x 21 in. with one Scotch boiler, 9 ft. long by 10 ft. diar.

Inspection of Ships' Tackle—The Civil Service Commission asked applications recently for the position of Inspector of Ships' Tackle. Applicants are required to have had a primary school education and at least 2 years experience as rigger or stevedore and to be familiar with all kinds of ships' tackle The salary will be $1,200 a year, which may be supplemented by such bonus as may be voted by parliament The duties cover the inspection of ships' tackle, life jackets, etc.

The International Transportation Co. Ltd., has been incorporated under the Dominion Companies Act, with $500,000 authorized capital, and office at Montreal, to carry on a general mercantile business, and also a general ticket agency for transportation by land and water and a general shipping business, including chartering vessels.

Amendments to Radiotelegraph Regulations.

The acting Minister of the Naval Service, Hon. A. K. Maclean, submitted in the House of Commons, on Nov. 3, an amendment to the Radiotelegraph Regulations as follows:

Regulation 88 of the regulations made by the Minister of the Naval Service in accordance with the Radiotelegraph Act, statutes of 1913, chap. 43, sec. 11, as enacted by the Minister of the Naval Service on Oct. 12, 1916, is hereby repealed and the following is substituted therefor:—

"88 (a) No person shall be permitted to attend examination for any class of certificate of proficiency in radiotelegraphy who is not a natural born British subject; who has at any time been of enemy nationality, or whose parents or either of them, have at any time been of enemy nationality. Provided, however, that any naturalized British subject, who has not, or whose parents, or either of them, have not, at any time, been of enemy nationality, may be admitted to examination if his application be approved by the Minister of the Naval Service.

"(b) Candidates for examination for first class certificates of proficiency must be not less than 18 years of age.

"(c) For the purpose of this regulation a person shall be deemed to be of enemy nationality if he has at any time been a subject of a state with which Great Britain has been at war within a period of 10 years, immediately proceeding the date of this regulation."

The Canadian Deep Waterways and Power Association was organized at Windsor, Ont., Nov. 19, to promote a deep water route from the ocean to the head of the lakes, and incidentally to encourage various power development schemes along the route. The officers elected for the current year are: Honorary President, W.M. German, K.C., Welland, Ont.; Honorary Vice Presidents, Sir Adam Beck, London, Ont., and the Mayor of Toronto; President, O. E. Fleming, K.C., Windsor, Ont.; Vice President, E. L. Cousins, Toronto.

Government Steamship Tyrian—The Dominion Public Works Department gave a contract, Oct. 30, to T. Hogan & Co., boiler makers, etc., Halifax, N.S., for repairs to the ships machinery and boilers, at a cost of $19,890. The Tyrian was built at Glasgow, Scotland, in 1869, and is screw driven by engine of 108 n.h.p. Her dimensions are: length, 237.5 ft.; breadth, 30.2 ft.; depth, 10.9 ft.; tonnage, 1,039 gross; 667 registered. She has been utilized for some time as a cable repair ship.

International Bridge Assessment—The assessment of the property of the International Bridge Co., owned by the G.T.R., which has been under discussion for some months, was settled Nov. 5. The assessment was formerly $300,000, but early this year the Bridgeburg assessor increased it to $1,200,000. The company appealed, and after negotiation the Bridgeburg, Ont., Town Council, consented to fix $600,000 as the value for assessment purposes.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Ragged Rapids and Tionaga, Ont., Val Jalbert, Que., and South Edmonton, Alta.

The Canadian Ex. Co., which is a subsidiary of the G.T.R., is included in the deal whereby the Dominion Government will acquire the G.T.R. properties.

The Dominion Ex. Co. has notified its agents of the increased premiums for money orders issued for payment in the U.S. on account of the difference in exchange. The increased premium due to the difference in exchange is 5¼%.

The Quebec Supreme Court, in the case of Benard vs. Canadian Ex. Co. for $350 claimed on the ground that a quantity of furs had not been delivered to plaintiff, held, Nov. 10, that the company was not liable, as the furs had been seized by the Game and Fisheries Department.

The American Ex. Co. has created a Canadian Division, with headquarters at Montreal, and A. C. Heffernan as Manager. All the United States express companies are, at present, being operated as the American Railway Express Co., under the United States Railroad Administration.

The Canadian Ex. Co. was charged Nov. 20, at Ottawa, with unlawfully importing intoxicating liquors into the Provinces of Ontario on Nov. 18. The charge arises out of the shipment of wines from Montreal to the Ottawa Country Club near Aylmer, Que., and owing to a misrouting of the shipment it entered the Province of Ontario. The hearing of the case was adjourned.

The Canadian Ex. Co.'s European Traffic office staff has been reorganized as follows: General Agent and Assistant to European Traffic Manager, P. A. Clews; Advertising Agent, M. V. Caldwell; with offices at London, Eng.; General Agent, E. J. Wearing; Freight Agent, J. M. Charles, with offices at Liverpool, Eng.; General Agent, J. M. Walker, with office at Glasgow, Scotland.

Registration of Cable Addresses.

The C.P.R. Co.'s Telegraphs and the Great North Western Telegraph Co. have issued the following circular to cable patrons:

Commencing Jan. 1, 1920, a fee of $2.50 a year will be made for recording a registered address. Upon that date all existing registrations will lapse, unless renewal has been previously made and the fee paid for the succeeding year. All registrations will automatically expire 12 months from date of registry and must be renewed, if a continuation of the registration be desired. Thirty days prior to expiration of any registration, a formal notice will be sent by one of the telegraph companies in order that the registration and subscription may be renewed, if desired. It will be necessary to register with one telegraph company only, as each company will at once record registrations with the other and render any desired assistance to patrons in making same. Reversible addresses will be discontinued, but customers may retain present addresses by making local registration, and arranging with their correspondents to make similar registration with the telegraph administrations abroad. Upon receipt of this advice please forward to one of the telegraph companies at your place verification of your existing selected address or addresses. It must be accompanied by a remittance to cover the registeration, of each address, for the year from Jan. 1, 1920.

Telegraph, Telephone and Cable Matters.

The Postal Telegraph Co., which is to lay a new cable in the Pacific Ocean between America and China, announces that it hoped to have the work completed and the cable in operation within two years. President C. H. Mackay, who returned recently from Europe, where he conducted the negotiations, is reported to have stated that the matter was progressing satisfactorily.

The Great North Western Telegraph Co. has opened offices at Restigouche, Que., Norwood, Ont., Erickson, Man., and Entrance, Alta., and has closed its offices at Bristol, Bryson, Cape d'Espair, Gilbert des Caps, Little Metis Beach, Montmagny and Pointe au Pic, Que., Attercliffe, Bala Park, Breslau, Clifton House (Niagara Falls), Dwight, Lake Joseph, Sparrow Lake and Wanstead, Ont., and Alberta Beach, Alta.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Davis-Bournonville Co., Jersey City, N.J., has issued an 8 page circular, describing portable outfits for oxy-acetylene welding and cutting, including cabinet truck, large wheel open truck, and small wheel open truck. It has also issued a circular respecting its institute at Jersey City, for teaching the theory and practice of welding and cutting with the oxy-acetylene torch. The many requests received for skilled welders have made it imperative to meet the general present and future needs.

Davis-Bournonville Co., Jersey City, N.J., has issued a circular describing Davis acetylene flare light generator and referring to some of its many possible uses.

Independent Pneumatic Tool Co., Chicago and Montreal, has issued a folder, "Thor Super-Power Electric Drills," describing and illustrating its line of portable electric tools.

The Wellman-Seaver-Morgan Co., Cleveland, Ohio, has issued bulletin 38 "Mechanical handling of cargoes at the U.S. Army Supply Base, Boston, with W-S-M cranes," describing and illustrating the installation of 4 semi-portal bridge type cranes, to handle freight to and from ships.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club Meets each Tuesday, 7.30 p.m. F. A. Pinkston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, 909 Shaughnessy Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 131 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Offices, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.

Niagara Frontier Summer Rate Committee, James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.

Railway Association of Canada—W. M. Neal, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 257 Roxton Road, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church St., Vancouver, B.C.

Transportation Conventions in 1920

Feb. 10-12—American Wood Preserveds' Association, Chicago, Ill.

Mar. 16-18—American Railway Engineering Association, Chicago, Ill.

May—Association of Railway Claim Agents, Atlantic City, N.J.

May—International Railway Fuel Association, Chicago, Ill.

May 5-7—Air Brake Association, Chicago, Ill.

June—American Association of Freight Agents.

June 9-16—American Railroad Association's Mechanical Section, Atlantic City, N.J.

Customs Requirements in Connection with coastwise shipping, of which some complaints have been made in regard to the situation on the Pacific coast, is being dealt with locally, with the cooperation of the Dominion Marine Association. Vessel owners on the Great Lakes are not affected to such an extent as those on the Pacific coast, and in the former case, it has been found possible to transact business without the difficulty complained of. The suggestion is that the requirements for clearing vessels at customs, where purely coasting business is concerned, should be abolished, as they throw a much heavier burden on vessel owners than is justified by the benefits received. It is believed that satisfactory arrangements can be made in consultation with the customs officials.

The Marine Stevedoring and Contracting Co. of Canada, Ltd., has been incorporated under the Dominion Companies Act, with $10,000 authorized capital, and office at Montreal, to carry on a general stevedoring, contracting, wrecking and salvaging business. The incorporators are, J. Mazzala, J. Maura, New York; E. Burke, Westmount, Que.; T. P. and J. H. Dillon, Montreal.

CANADIAN PACIFIC RAILWAY COMPANY

Dividend Notice.

At a meeting of the Board of Directors, held today, a dividend of two and one-half per cent on the Common Stock for the quarter ended 30th September last, being at the rate of seven per cent per annum from railway revenue and three per cent per annum from Special Income Account, was declared payable on 31st December next to shareholders of record at 3 p.m., on 1st December next.

By order of the Board.

ERNEST ALEXANDER,
Secretary.

Montreal, 10th November, 1919.

THE VICTORIA ROLLING STOCK & REALTY CO., OF ONTARIO, LIMITED.

Notice is hereby given that a dividend of four per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 29th, 1919, has been declared payable Dec. 1st, 1919, to the shareholders on record as of the 29th of Nov., 1919.

G. T. CHISHOLM, Secretary.

Toronto, Nov. 22nd, 1919.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. [illegible], No. 93127, No. 96276, and No. 97778, issued to Young and Townsend, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

ESTABLISHED 1849.

BRADSTREET'S

Capital and Surplus, $1,500,000.
Offices throughout the Civilized World.

Executive Offices:
NOS. 346 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.
